THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN, FEBRUARY 15, 1943 No. 1.

SOME BRIEF FACTS ON THE 1943 FOOD FOR FREEDOM GOALS

A. L. HOLSEY HAS MADE COMPILATION

Field Officer, So Division of the Agricultural Adjustment Agency

Tuskegee Institute, Ala.—

1. The Secretary of Agriculture, Mr. Claude R. Wickard, has said that "food will win the war and write the peace."

2. The job ahead for American farmers in 1943 is to produce enough food to supply 10 1-2 million pounds **each day** for our fighting men, as well as food for our industrial workers and civilian population. Under the provisions of Lend-Lease, we have already shipped to our Allies over 8 billion pounds of food and, in 1943, this must be stepped up because as countries now occupied by Axis oppressors are freed, their peoples must be fed and, thus, enabled to join our fighting forces.

3. Farmers in the Southern States are generally in a better position to respond to this appeal for increased production because for the past 10 years, with the aid of the AAA and other Government programs, their economic position has gradually improved. Cash farm income in 10 Southern states increased from $820,000,000 in 1932 to $1,700,000,000 in 1939 or $70.00 per farm person in 1932 to $145.00 per farm person in 1939. This improved financial status while still below that of comparable non-farm groups, has meant improvement in health and greater physical stamina, resulting from the produc-

WICKARD PRAISES FARMERS

Says Carver Should Be Inspiration to All

Washington, D. C.—Urging the all-out mobilization of the Nation's 6,000,000 farmers to meet the increased wartime demands for food and fiber, Secretary of Agriculture Claude R. Wickard said this week that the job calls upon all of us, small farmers as well as large farmers, colored farmers as well as white farmers, women and youths as well as men to make every hour count for more in farm production.

Referring to the 680,000 Negro Americans on the farm, Secretary Wickard said that they had played an important role in the 1942 agricultural production record.

Continuing, he said, "However, the job will be more difficult this year because of the shortage in farm production facilities. And as soldiers of the soil they will need increased courage and perseverance. The example in perservance set by the late Dr. George Washington Carver, who contributed so much to agricultural research, should be an inspiration to them and to other farmers as well."

Following Farm Mobilization Day, highlighted by an all-network broadcast on which Secretary Wickard spoke, and on which a message from President Roosevelt was read by James F. Byrnes, director of Economic Stabilization, the Nation's farm-

FARMERS URGED TO ACTION

More Food for War Should Be Raised

WASHINGTON, D. C.—Having helped achieve in 1942 the greatest agricultural production in history, the Nation's 680,000 Negro farmers joined in the Farm Mobilization Day observation proclaimed by President Roosevelt for Tuesday, January 12.

Mobilization Day, which will signal the starting gun for a new agricultural record production to meet the increasing needs of our fighting men, our allies, and our civilian population, will be highlighted by a nation-wide all network radio program.

In proclaiming Farm Mobilization Day, the President asked the farmers of the country to gather, wherever possible, with Department of Agriculture representatives Extension Service agents, vocational agriculture teachers, state officials, and farm organization leaders to discuss ways and means of assuring the maximum production of vital foods in 1943.

Said President Roosevelt, "The people of this country may well be grateful that for three successsive years the farmers of the United States have given us record harvests. Every pound of food finds use in wartime. Our soldiers, sailors, and marines require large supplies of food both in this country and abroad, and these three record-smashing years of farm production will mean much for victory."

Farmers may justly be proud of the production record of agri-

FIRST ALL-NEGRO DIVISION

Jack Lefler Says They Are Eager to Fight

By Jack Lefler

FORT HUACHUCA, Ariz., Jan. 15—(Ap)—The first all-Negro division activated by the U. S. Army in this war is approaching combat condition with eagerness and determination.

Maj. Gen. Fred W. Miller, commanding general of the 93rd division, declared today that his men are developing into hard, efficient, resourceful and dependable fighters.

"I believe they will go to town for us," he said with confidence.

At the outbreak of war, the American Negro clamored for an active part in the nation's war effort. In the training fields surrounding this huge southern Arizona military post, Negro soldiers are making good on that desire.

All-Purpose Division

The 93rd is designed to be a hard-hitting all-purpose division.

The rigid training on the desert and in the mountains is fitting it for almost any assignment.

The division, which came into existence last May, is completing the second phase of its training and soon will embark upon the third and more intensive phase.

Probably the greatest handicap in training has been that many of the Negroes have not had the educational advantages of most white soldiers. The draftees and volunteers came from every state in the Union and from all walks and stations of civilian life.

Recruits who have had less than a fourth-grade education are placed in a special unit in which they are

NEGRO MOTHERS ACTIVE

Heroic Efforts In War Industries Made

Washington, D. C.—Although the Food Stamp Program is being suspended March 1, youngsters, colored and white alike, need have no worry about the school lunch program as Secretary of Agriculture Claude R. Wickard has assured the continuance of commodities to schools and child day care centers for lunches.

Said the Secretary: "We have long recognized that millions of our school children do not receive adequate diets. The problem has become more acute as increasing numbers of mothers have taken jobs in war industries.

"As part of its war food program the Department will continue to provide milk and other commodities for school lunches and child day care centers. Lunches prepared from these commodities will be available not only to children certified as needy, but to all children. Parents who can afford to contribute will assist state and local agencies in furnishing equipment, facilities, labor and supervision."

Of the 2,700,000 youngsters who are now receiving lunches at schools and child day care centers, more than half a million of them are colored. This helps thousands of mothers engaged in war work. The program reached a peak last March when 6,000,000 children were participating, of this number, over a million were colored.

Going further, Secretary Wickard said: "Children are a special group in our population which must receive special attention in the distribution of a limited food supply. As shortages develop it becomes parti-

(Continued on page 16)

Mother's Got A War Job

Thousands of mothers now have war jobs which keep them away from home most of the day, but the youngsters, like these cute little twins, are not complaining too loudly, because they are getting fruit, milk and hot lunches at school every day through the School Lunch Program, and Secretary Wickard has assured its continuance. Through this program, in which more than a half million colored children are participating, the Government is trying to insure adequate protective foods for youngsters. Milk and other commodities for the lunches are supplied by the Food Distribution Administration of the U. S. Department of Agriculture.

Advancing Corn Prices Are Halted

U. S. Acts for Profit Margin Between Feed Costs and Livestock

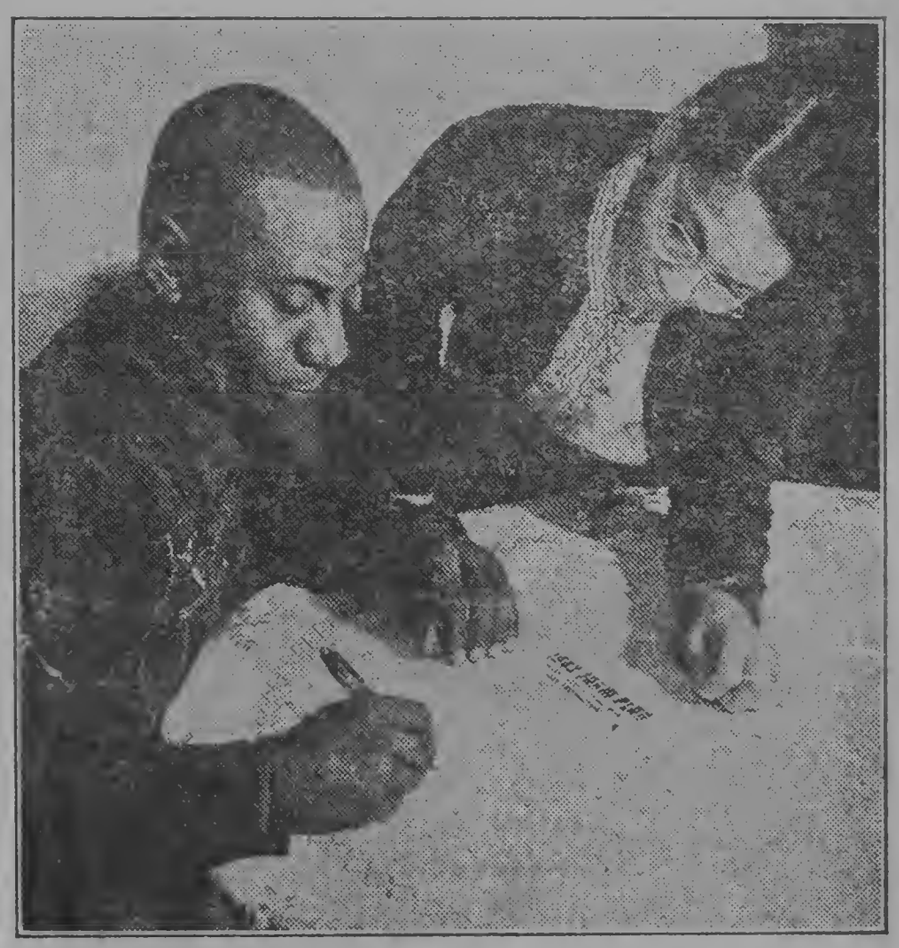
Washington, Jan. 12—The government called a halt today to sharply advancing corn prices in a move designed to maintain a "profit margin" between livestock and feed prices and thereby encourage farmers to produce maximum quantities of meats, milk, poultry and eggs for ward food needs.

The Office of Price Administration, acting with the approval of Secretary of Agriculture Wickard and at the direction of Economic Stabilization Director James F Byrnes, placed a ceiling on corn prices on all exchanges and in every cash and local market over the country, generally at levels at which sales were made yesterday. It was the first time price ceilings have been applied to a major farm commodity.

The ceilings become effective tomorrow. They were described as temporary ceilings to be followed withing 60 days by permanent ceilings which will not permit any increase in the general level of corn prices.

Corn futures slumped on the Chicago board of trade after the OPA order became known, and other grains declined as well. At the close, declines in corn ranged from 2 3-8 to 2 5-8 cents, with May at 97 1-8-97, July 97 1-2-2-8, September 98-97 7-8. Yesterday's prices, highest reached in five years, were: $1.00 for May, $1.00 3-8 for July and $1.00 7-8 for September.

Enlist Their Farm



Among the first to enlist their farm in the 1943 Food-for-Freedom campaign launched by the U. S. Department of Agriculture were Mr and Mrs. Sydney A. Moore of P[illegible]dywine, Md. They signed up [illegible] 365-acre farm early Wednesda following Farm Mobilization Day. Between now and January 30 all of the Nation's 680,000 Negro farmers, large and small, are expected to sign up to produce on their farms this year more of the things Uncle Sam needs to win the war.

Georgia Farmers Meeting The Needs Of 1943

Industrial College, Ga.—That the majority of Negro farm families in Georgia are going to wholeheartedly back the theme—"Meeting the Needs of 1943"—of the annual conference of Negro farm and home county agents in Georgia was strikingly exhibited at the epochal sessions held at Georgia State College, beginning January 4th through to the 9th.

Realizing that wholesome co-operation of the Negro rural families is indispensable for climate victory of this country and its allies every session of the conference was devoted to intensive training and pertinent discussions for the arduous task assigned to Negro extension workers.

The sustaining answer to the request made of the populous Negro rural sections of Georgia to help reach the production goals for 1943 was practically accentuated by the inspiring opening address by President B. F. Hubert of Georgia State College, where the agents, under the excellent guidance of P. H. Stone, Negro State Agent, and his administrative staff, assemble annually to discuss and plan for the Negro farm families they are successfully reaching every year.

During the week the agricultural staff members of the college have done much through timely demonstrations in contributing to the program for the agents. It was revealed, in no uncertain way, that the cooperative activities between these well-trained and progressive agents and the college are doing much to help rural families to contribute substantially to the food goals sought last year and the goals for 1943 .

How the AAA could be used in the program for 1943—limited farm practices with war and essential crops—was discussed by C. L. Walker, Field Representative AAA. During the first part of the week addresses were delivered by Dr. Thomas W. Roberts, Special Assistant to the Director of Personnel, U. S. Department of Agriculture, Washington, D. C.; J. G. Woodruff, Regional Director Tenant Purchase Section of FSA. "The Production Picture in 1943" was the subject of the address by Kenneth Treanor, Extension Economist for Georgia. L. I. Skinner, Assistant Director Georgia Extension Service, in his address emphasized the type of organization especially needed in meeting the food production requirements for Georgia.

Critical food production problems affecting the 1943 program were comprehensively discussed to the extent that the objectives of the year would be made clear to Negro farm families in Georgia, and it was evidenced that the average Negro farm family would potentially become a desirable factor in the sustaining program. Participating in this phase of the vital program were a number of specialists from Athens, Georgia.

The FSA and its food production program was ably discussed by W. E. Street, Field Representative FSA. The 4-H Club conference was highlighted by W. A. Sutton, State Leader; Miss Emma Nelson and L. W. Eberhardt, Assistant State Leaders, Athens. Since there are approximately 33,000 Negro boys and girls in Georgia members of this outstanding rural organization, desirable results are anticipated for the plans agreed on for putting the 4-H Club program on an all-out war footing for 1943.

It was potently stressed during the conference that the organization for production necessitated all existing groups, and especially the Neighborhood Leadership System, to carry out plans decided at this conference. It was revealed in the address of Mr. Skinner of Athens that the Negro agents were distinguishing themselves by their prompt response by setting up the Neighborhood Leadership System among Negro farm families in Georgia.

One of the events of the week, fitting into the campaign of enlightenment to help meet a certain imperative need created by the global conflict, was the impressive play given by the home economic department of the college. The objective of the dramatic effort, with two intriguing scenes, was to emphasize the importance of the program of 1943 for the conservation and preservation of clothes in order to help the production program.

Processed Foods To Be Rationed to Restaurants But Customers Need Not Turn In Coupons

Washington—Restaurants will be rationed on processed fruits and vegetables but customers will not have to turn in ration coupons at such places, the Office of Price Administration announced today. Patrons will be able to use all their coupons for food to eat at home.

Giving further details of the food rationing plan scheduled to start in about six weeks, the OPA said this rule will apply to all restaurants, cafes, hotels, railroad dining cars, roadside stands, drug stores and similar commercial eating places open to the public. Separate rules will be announced later for boarding houses and institutions.

Restaurants will be given quotas of "points" to spend on processed foods, the same as housewives, and will use them with the safe freedom of choice as among specific foods. However, in the case of a restaurant, a special formula has been devised to determine the point quota according to the number of customers. Families will get their quotas by adding up the individual rations of each member of the family.

The restaurant formula starts with the number of meals served in December and makes adjustments for establishments with a growing patronage.

No government restriction will be made on the contents of restaurant meals, leaving owners to make up their own menus and rules within the limits of their rations and the availability of unrationed foods, especially fresh fruits and vegetables. No limit will be placed on the number of persons that a restaurant may serve, the announcement said. "OPA is interested primarily in the amount of rationed foodstuffs served per customer, just as in the case of the household consumer."

It also was announced that there would be no "differential rationing" providing more food to certain workers than others.

Profitless Coal

Record wages are being received by workers in all lines of endeavor, but the coal industry leads the parade. By contrast, lack of profits have prevented the industry from earning anything on its invested capital for the last 17 years. In fact, for long periods coal operators ran in the red.

In the 12-year period from 1928 to 1939, inclusive, an average of 587 coal companies in the nation made an average yearly profit of $17,600. But in the same period an average of 1,440 companies suffered an average yearly operating loss of $43,690! These are the government's own figures, from United States Treasury reports on corporations.

The reasons for the losses are not hard to find. Sixty-two cents out of every dollar received from the sale of coal is paid out in wages. Taxes take 11 cents; supplies and equipment, 10 cents; selling costs, 6 cents; royalties, 3 cents; power, 3 cents; depreciation, 2 cents; depletion, 1 cent; insurance, 1 cent; and administration, 1 cent.

Unless coal men are allowed to earn a little more profit, the alternative will ultimately be government subsidies, and they are costly for the taxpayer in lieu of a legitimate profit to an industry.

No Surburban Trouble For Submarine Crews

The crew of an American submarine on prowl in enemy waters sometimes does not see the sun for a month or longer, so great is the caution the commander must observe. The sub stays submerged during daylight, comes up only at night. Crew members often lose as much as 20 pounds on a cruise.

There Is A Difference

Captain Eddie Rickenbacker, after returning from his grueling experience in the South Seas and his inspection of fighting fronts, is the only man who has said what the American people needed to hear in connection with production problems. In the newspapers and in the news reels he said that if the soldiers could be transferred from the hell holes they occupy on the battlefronts, to the factories, and if the employes in the factories could be transferred to the battlefronts, production in this country could double in thirty days.

By the tone of his voice and his expression, you could see that he was digested with the Pollyanna talk about workers at home being classed as filling "battle stations."

Captain Rickenbacker emphasized that nothing the people in this country can do will in any measure equal what the boys on the battle lines are doing. They don't get overtime pay and they work day and night if necessary.

The people agree with Captain Rickenbacker. Just because some of us wear "tin hats" at home, we don't want to become swelled up with the idea that we are filling "battle stations"—we are not. Battle stations are where the bullets fly and men are dying; where men work as long as there is something to do; where orders are obeyed; where overtime pay and profits are not an issue; and where the perpetuation of liberty and freedom for the individual are the guiding stars.

Clarksville Leaf Averages $16.11

Clarksville, Tenn., Jan. 8—(Special)—The tobacco market here got off to a good start here today in the fourth auction sale of the season. Generally better prices reported today follow the rising trend set by yesterday's $16.11 average.

Season's high price was set yesterday by a basket sold by B. T. Dunnegan of Bon Aqca, Tenn., bringing $32. Today's market is expected to run slightly better than yesterday's totals which were $16,042.42 for 99,234 pounds.

Peggy Meets Any Situation

If there were many hens in the nation like Peggy, a large red fowl of doubtly ancestry belonging to Mrs. Lee Gaines of near Franklin, Ky., there'd probably be no egg shortage, at least for awhile anyway.

Every other day, Peggy lays a double-sized egg with two yolks, but last week she apparently decided to do the thing up brown. She came through with a model that dwarfed all her other efforts.

The egg measured six inches around the short way and eight inches lengthwise.

Mrs. Gaines has 80 hens in her flock, and averages 36 eggs a day.

WHEN TUNA FISH IS BEST

(Atlanta Two Bells)

Chef: "We finally found out who has been taking those pieces of chicken that have been disappearing."

Restaurant Owner—"Fine, who was it?"

Chef—"The new cook. He's been using them to make chicken salad."

Two-Way Cooperation Needed

Government authorities have asked producers and distributors to cooperate to the maximum of their ability in the task of supplying necessities to cilivians and military personnel. They have been told that they must also prepare to supply these necessities to other nations, all from the resources of the United States. This is a big order. It can only be fulfilled if cooperation comes from both sides, from the government as well as from the private citizen. It cannot be fulfilled if the private citizen is threatened with jail every time he makes a mistake. It cannot be fulfilled unless common sense is a part of government policy.

A good example of how to create more chaos recently came to light in the nation's capital. A large department store has been named defendant by the Office of Price Administration in legal proceedings for alleged violation of price regulations. In view of the facts, the question of whether the store was actually guilty is more or less academic. According to news reports, the store's price bureau now has on hand three bound volumes of price regulations which total 13,423 pages of closely printed, small-type text, and contain an estimated 11,275,000 words. The store is now spending more than $40,000 a year in direct costs to maintain its own "price compliance" bureau. This bureau has 27 full-time employes. Working full time in addition to these, is a mimeograph operator who in the last six weeks has turned out 50,000 forms. A regulation involving the price of toilet paper took a lawyer and three store executives five days at full time to make it understandable. In another case, picked from scores, 106 pillows were purchased. Before they could be sold, 104 different and distinct forms had to be filled out establishing 104 price ceilings because there were 104 different styles among the 106 pillows.

The manager of the store in question has been in business 31 years. He said that: "We are not antagonistic toward the price ceiling, nor do we want to be arrayed against the OPA." This manager is like thousands of other retail merchants throughout the country. He is like millions of farmers who produce the food we and our Allies eat. They are trying to get a job done. They will get it done quicker and more efficiently if they are not treated as criminals by a lot of bureaucrats. All they ask is a common-sense plan reasonably enforced. There are signs that we are on the way to achieving that end.

Moral In West Virginia Coal

In 1941 the coal industry of West Virginia employed directly about one-third of the state's workers, at an average of $1,723 per worker.

Coal paid 15 per cent of all property taxes in the state, millions of dollars of sales taxes, additional millions to the workmen's compensation fund, and nearly $8,000,000 in payroll taxes of unemployment compensation and old-age benefits.

These figures illustrate a condition that prevails in practically every state. That is. either coal, iron, oil, timber, transportation, utilities, agriculture or some other basic industry is the backbone of the employment, the tax revenue, and progress in that particular state. In every case, labor and public treasuries are the greatest beneficiaries of successfully operated industries.

Without private enterprise, the states would be "busted". Schools would close, labor would be unemployed, roads would remain unbuilt and taxes on land and homes would be so high that property would revert to the state.

The people have no more important task before them than to work for state and national conditions which will keep basic industries in a healthy condition so that they will be able to employ labor and provide their share of the tax load during the years ahead when a steady job and tax payments will be a major problem for every man and woman.

Feed Supplies Top Year Ago

Tennessee Farmers Report Increase of 10 Per Cent Over 1942.

Tennessee farmers have a 10 per cent larger feed supply on their farms as of January 1, 1943, than they did on January 1, 1942, according to figures released yesterday by the Tennessee Department of Agriculture.

It was estimated that January stocks of corn, wheat and oats aggregated 52,550,000 bushels on January 1, an increase of 29 per cent over the ten-year (1931-40) average stocks of 40,837,000 bushels

Corn Stocks Up

The Tennessee corn stocks are estimated at four million bushels more than the 46,263,000 bushels that were on farms in the state January 1, 1942.

Oat stocks are substantially above those of a year ago, the report said. The estimated 994,000 bushels on farms of the state Januray 1 is an 18 per cent increase over the stocks of a year ago. While the wheat stocks in the nation on January 1, 494,662,000 bushels, were said to be the greatest of all time, the supply on Tennessee farms this year was 15 per cent below the 1942 stocks.

Picture Encouraging

The picture throughout the nation with reference to feed supplies is particularly encouraging. With the mumper 1942 production, supplemented with the grain held on farms under seal for government loan and making rough allowance for barley and grain sorghum stocks, there was an 86 million-ton stock on farms of the nation January 1. This was a 13 per cent increase over the previous year.

It was also reported that milk production on farms in December reached an all-time high for that month and rounded out a year in which every month's production was at a record level.

The report would also indicate that the hens and pullets were giving generously of their talents in the food for victory campaign, laying 2,910,000,000 eggs in December, 11 per cent more than the previous December record in 1941.

Retail Food Price Increases Listed

Washington, Jan. 12—Retail food prices rose 16 per cent in the past year and in the 12 months ended November 15 stood 31 per cent above the 1935-39 average, the Federal Reserve Board reported today.

For the most part, the board said, increases were much greater in commodities not subject to maximum retail prices and most of the increases shown by individual items occurred before they were subject to direct control.

Watchdogs Of The Treasuries

Beginning the first of January with the Victory Tax, and the 15th of March with income taxes, millions of Americans will get over the idea that taxes are something that just "the other guy" has to pay.

This will be one of the best things that ever happened to the country. Millions of citizens who never took an interest in government before, will begin to watch the financial policies of government to see that public money is not wasted.

Boondoggling political schemes will be less popular as vote-getters.

A Strong Nation Needs Strong Railroads

In reply to charges by price officials and others that railroad rates are too high, the railroad managements point out that: "This nation can be strong in peace, and most especially in war, only if it has strong railroads . . . . They cannot continue to do their indispensable job and keep themselves in condition to meet imperative national needs if, at the first sign of adequate earnings, their rates are to be cut forthwith without regard to low earnings of the past or prospects of the future."

Granted that at last the railroads are making the reasonably adequate earnings permitted by law, they are also rendering an extraordinary service for which the nation can be deeply grateful. They are hauling more tons of freight more miles than ever before—33 per cent more than in 1941, 55 per cent more than in 1918, the peak year of the first world war. They are carrying more passengers more miles than ever before—80 per cent more than in 1941, 24 per cent more than in the other war year of 1918. Such unprecedented service costs money to maintain. It requires unusual road and equipment investments running into the billions of dollars. Since the present war started in Europe, the railroads have spent $1,650,000,000 improving their facilities to meet war needs. Not a dime of this money came from the public treasury. It came from the railroads themselves. Railroad men fully realized that modern war is a war of transportation as well as production.

Voluntary rate reductions to meet special war situations and conditions have fully offset rate increases granted by the Interstate Commerce Commission last year. If the reduction now requested by price officials is put in force, rail rates would actually be reduced below the so-called stabilization date of September 15, 1942, and this would be in the face of steadily increasing costs which the railroads must pay for labor, materials and fuel.

A cut in rail rates in these circumstances would be as foolish as reducing wages without regard to the rising cost of living.

Match This Record

More than 28,000 physicians volunteered their services without pay to the Selective Service boards. More than 40,000 physicians gave up their careers in civilian practice to serve with the armed forces. The directing board of the Procurement and Assignment Service for Physicians, and its many representatives throughout the naiton, serve without one cent of remuneration. The hundreds of physicians on the consultant committee of the Division of Medical Science of the National Research Council, and in the Office of Research and Development, contribute time and income without one cent of remuneration. Throughout the nation, thousands of doctors furnish countless services in connection with civilian defense, without one cent of remuneration. It would be interesting to know what other trade or profession can match this record of public service.

And yet proposals are made to throw American medicine in the political arena, and level it off to the standards prevailing in European countries where experiments in socialized medicine have utterly failed to produce the healht records and benefits to the general public which are the rule rather than the exception in the United States. Fortunately for the people of this country, such efforts seem to have failed.

American medicine is marching ahead unselfishly and scientifically in its determination to maintain for our armed forces and the people at home the highest medical standards in the world—not for this year, or next year, but for every year.

Pay Now

Twenty-seven million Americans will soon be paying heavy income taxes that as time goes on will become even heavier. To all but a mere fraction of this number, personal income taxes will be a new experience. In fact, according to recent surveys, a good proportion of these people do not yet realize they have been included in the taxable brackets. They are making no preparations to pay taxes. They are spending their money as fast as they earn it. The threat to government authority and solvency by a mass of potential tax delinquents, is serious.

A practical solution is the prompt adoption of a pay-as-you-go arrangement such as the Ruml plan. Mr. Ruml, former dean of social sciences at the University of Chicago, and Chairman of the Board of the Federal Reserve Bank of New York, observes that: "Nothing can be gained by arguing that people ought to have saved the tax on last year's income out of last year's income. The fact is that they did not do it and now they cannot do it."

Every taxpayer must realize that we cannot survive war, and return to a system of individual freedom unless the government remains solvent. If it is to do that, the people will have to pay taxes and buy bonds on a devastating scale. Tax laws must be mercilessly far-reaching and efficient.

Community Medical Problem Answered

The medical problem of many cities which have grown rapidly due to war industries, is pretty much like the problem of the growing boy who spent his summer doing farm work—when he tried to put on his old school suit in the fall, he found he couldn't get into it.

With the astounding Kaiser shipyards alone adding tens of thousands to Portland's population, not to mention other war industries, the city found itself facing a growth from something over 300,000 to between 450,000 and 540,000 persons.

Here was a perfect set-up for waste and experimenting in medical facilities. Following a conference with Edgar F. Kaiser, the Oregon War Emergency Health Committee, organized under the leadership of the Oregon State Medical Society, set a record in working out a plan to meet this situation. It immediately secured the cooperation of doctors, nurses, public health services and hospitals.

Instead of building expensive new facilities, it found that the 1,650 beds of its principal hospitals could be expanded by 307 beds, with little construction cost. With the shortage of nurses, doctors and all manner of new equipment due to war demands, the utilization of existing buildings, heating plants, personnel and equipment, would thus require a minimum of additional outlay. If the 307 beds are not enough for the proportionate increase in population, plans are ready for adding a total of 520 beds.

Thus has the Oregon War Emergency Health Committee, in cooperation with industry, and through intelligent utilization and expansion of existing resources, met the health needs of an abnormal war industry population. Portland has set an example for medical care that could well be followed by other communities.

Free Competition The Test

Thurman Arnold, the big bad wolf of the Justice Department's Anti-Trust Division, does not snap his jaws on Little Red Riding Hood when he finds her intentions are good.

In stating his ideas on business-destroying legislation such as the recently defeated Utah Chain Store Tax, he said, in addressing the Boston Conference on Distribution:

"We will attack no chain stores where they contribute to lower costs through their efficiency and economy of operation. Nor do we attack them where they initiate their own lower cost brands to compete with the established national brands. But where they attempt to prevent local business from getting into the field regardless of efficiency, we will attack them. One of your local Boston merchants told me that he needed no restrictive aid, that he could compete successfully against the chains if he had a guarantee of free competition. I believe he can. We do not like any legislation which keeps efficient, economical competition from its place in the market. Insofar as efficient type of operation is concerned, the chain stores should not be allowed to be discriminated against."

Mr. Arnold's opinion must be the conclusion of anyone who takes time to think straight on the operation of business, as did the voters of Utah.

Unrestricted opportunity for any legitimate industry, regardless of size, to compete for business on a basis of equality with any competitor, is the incentive that has enabled American merchants to give American consumers the lowest prices, the greatest selection of goods and the finest retail service in the world.

Shun Night Club Fire Traps

After the Boston night club fire tragedy, the best way to help eliminate a repetition of such a holocaust would be for patrons of amusement centers to complain to managements about flammable decorations and improper exits. Cash customers get results.

"Cities which have modern fire prevention ordinances and building codes, both properly enforced, can feel quite safe from the possibility of a flash fire, such as the one in Boston," says George W. Booth, Chief Engineer of the National Board of Fire Underwriters. "This security results from the fact that a model ordinance provides for the flame-proofing of otherwise flammable decorations and draperies usually found in night clubs, and also gives authority to the fire department to require the installation of suitable fire protection equipment and to maintain adequate fire exits.

"In view of the fact that the deaths in the Boston fire were about equal to those suffered by our armed forces in the landing in North Africa, it might be advisable to study all fire prevention ordinances, even modern ones, with a view of requiring more stringent safeguards against fire in taverns, night clubs and similar places.

"Usually such places are poorly lighted have flammable decorations, frequently do not have automatic sprinklers and seldom have sufficient exits. Usually passageways and stairways are narrow and exits poorly lighted. Such conditions can readily cause panic and serious loss of life in case of a fire.

"During the past 14 months, 31 American cities have protected their residents against the likelihood of such a holocaust by enactment of modern fire prevention ordinances."

The next question is to see that such ordinances are enforced.

Subsidized Bungling

Nobody likes the word subsidy. It too often indicates failure or privilege. Farmers are opposed to subsidies simply because they do not feel that they are either failures or privileged.

A resolution adopted by the National Cooperative Milk Producers' Federation which recently met in Chicago said: "We are uncompromisingly opposed to subsidies in whatever guise . . . We believe a policy of subsidization will not thwart inflation but that such subtle use of tax money is placing a yoke on the neck not only of this but future generations. The pretense of administrative policy to keep down the cost of living in a time when purchasing power is high, is a deliberate fraud practiced upon the American public."

Subsidies are no answer to rising costs. The real answer lies almost wholly in prompt correction of political bungling.

Politics And Production Won't Mix

Peter F. Drucker, writing in the Saturday Evening Post, observes that: "The production battle is not being won in Washington. The engineers in Detroit and Cleveland, the chemists in West Virginia's Kanawha Valley, the foremen and merchanics in thousands of plants all over the country have converted this country in a few months from the least armed into the best armed of the great powers . . . The individual American worker has taken the initiative and made war production his own individual enterprise."

The men who manage or work in the industries that produce the raw materials, no less than the men who turn out the finished guns and tanks, are war producers. Coal and iron, crude oil, timber and electric power may appear no different at the source, in war than in peace. But the men who produce them know that, like food, they are the key to victory. The natural resource industries are the efficient backbone of the war effort. They are efficient because like all other industry they are worked by individuals with a burning desire to win the war. After the war they will be operated with the same kind of efficiency to rebuild civilization.

As Mr. Drucker pointed out, Washington is not producing the machines to win victory. It sets the goals. It regulates the flow of orders and distribution of materials. Its task is as essential as that of industry. But it should never be confused with the task of industry. Production hinges on the drive of independent citizens. Industry is run by independent citizens. The problem in the future will be to see that it stays that way.

Ready To "Deliver" When Needed

The story of the development of aviation in the United States gives any red-blooded person a thrill. Only a few short years ago large crowds gathered at local airports to see pioneer pilots take off in open cockpit planes, to carry the early mail.

Through trials and tribulations, America's modern airlines were born. When the present war started they were reaching every section of the nation, flying millions of miles annually and carrying passengers and mail on schedules as regular as the clock.

Building this service developed techniques, personnel and experience which were invaluable to our government when we entered the war. Many of the commercial planes were immediately pressed into Army service for transporting supplies and men to all parts of the country. The commercial pilots were ready to take on that job.

Today, the Air Transport Command of the Army, under the able leadership of Major General Harold Lee George (erroneously referred to as Major Harold Lee George in a previous article), utilizing the trained personnel of the commercial airlines, is reaching the four corners of the earth, in hours or days, with men and equipment, where it used to take weeks and months. Again, an industry, pioneered by private enterprise and private capital to a point of world supremacy, was ready to "deliver" when the emergency arose.

Private enterprise, working in its production and service sphere, in full cooperation with our armed services, can match its strength against any dictatorship yet devised. More power to the record being made by the Air Transport Command of the Army under Major General Harold Lee George, and to the personnel and equipment of our commercial air lines. They are helping to win a military victory on the one hand, and demonstrating the ability, the versatility and the soundness of our free enterprise system, on the other hand.

In this country there are 200,000 blind people and only about 20 per cent of this number can read Braille.

Learning From Experience

Efforts are being made to bring about the repeal of the punitive chain store tax law in Texas. Like other class legislation of its kind, it is not designed for any purpose other than impairment of chain store efficiency on the theory of limiting competition. The voters of Utah recently repealed a similar law. And significantly, the independent merchants of Utah formed no organized opposition to its repeal. They had learned from experience that punitive laws benefit no one in the long run.

Special chain store tax laws are punitive. They are a penalty tax against a single group. Wherever they are in force, they represent a precedent that may at the whim of a disgruntled minority be used as a background for an attack on another group.

Spokesmen in agriculture, industry, universities, and public life have warned that this type of taxation is a direct threat to free enterprise. And they did not mean alone. They meant all enterprise, the free enterprise of "bigness" from the one-man grocery store to the largest corporation.

Aside from the issue of principle chain store taxes are indefensible from the standpoint of revenue. Punitive chain store taxes in 1941 yielded only a trifling amount in proportion to all taxes. Of total tax yields in states having punitive chain store taxes, the latter accounted for only 0.43% of revenue. This is infiinitesimal compared with 30.9% from Federal, state and local property taxes, and more than 25% from income taxes.

Taxation has long been an instrument of politics. It cannot be so in the future if the country is to service a two or three hundred billion dollar war debt The citizens of Texas could render no better service to the cause of sound taxation than to insist on the removal of the Texas chain store tax.

FISH POND ON EVERY FARM WHICH CAN MAINTAIN IT IS ADVOCATED BY GOVERNMENT AS FOOD SOURCE

Washington, Jan. 9—(AP)—"A fish pond on every farm which can maintain it" was advocated by the government today—primarily to supply more food, although the prospectus recognized "intangible recreational values" as well.

"It is now possible to place in the hands of the farmer a set of simple, workable instructions which will enable him to operate a fish pond as an integral part of his farming schedule and to realize from it 200 or 300 pounds of usable fish per acre for a period of several years," said the current issue of Fishery Market News published by the Interior Department's Fish and wildlife service.

"The species employed are generally large-mouth black bass and blue-gill sunfish, but crapple or other members of the sunfish family, as well as catfish, may be used as the seed stock."

Sponsors of the program said it would add "tens of millions of pounds of protein to the nation's food war chest" if carried out on an extensive scale.

The proposed fish ponds would be one of the five acres and could be constructed by the farmer "with his own facilities and with a minimum cash outlay," the article said. The Agriculture Department has indorsed the plan and will supply technical advice and guidance.

The soil conservation service estimated that if 15 out of every 100 farms in six Southeastern States developed ponds, they could yield 40,000,000 pounds of fish and that "Texas alone may support enough ranch ponds and stock tanks to yield an output of 35,000,000 pounds of fish."

"The estimates are based upon an analysis of actual data and not upon guess work," the article added.

The program was summed up as a "merging of agricultural and aquicultural activities."

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, Tennessee.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

The Political Checker-Board

There has been much comment on the $25,000 salary limitation, twice turned down by Congress, and then given the force of law by Executive order.

The most astounding statement made in connection with it was that of ex-U. S. Supreme Court Justice James F. Byrnes, Director of Economic Stabilization, when he said: "The salary limitation in 1942 would affect only 3,000 persons. From the fury of the protests one would think it affected 3,000,000 persons."

To hear our Director of Economic Stabilization, fresh from the U. S. Supreme Court, say that the order affects only 3,000 persons, is almost inconceivable. The very heart of our government is based on a foundation of equality and protection for minorities.

If Congress and laws and minorities can be shifted on the political checkerboard to suit popular whims, what security is there for the individual? How many more than 3,000 persons would have to be affected to entitle them to consideration?

NO SUBSTITUTE FOR FREEDOM

As free American citizens we have found we can meet the test of war. We have the ability to get things done. We have courage and daring. Our men have shown in stark heroism that on the military front we are not soft. We can fight with the tricks our forefathers learned from the Indians, and we can fight with machines. Guadalcanal and North Africa have proven that. In brief, we can win the war.

But there is more than the military front. There is the home front. And here, except for the production miracle of industry, there is evidence of softness, of confusion of ideals. Group bickering has put the attainment of personal comfort and security ahead of the national welfare. In many quarters a desire to eliminate human want at one fell swoop has become an obsession. An agency of government has even prepared a new bill of rights, the basic tenet of which is economic security. This new bill is proposed as a supplement to the old bill defining our liberties at the time the United States Constitution was adopted. It puts security on a par with freedom, on the theory that the American people will abandon freedom if they are not guaranteed three square meals a day. It implies that the American people, bitter from the "great depression" and fearful of post-war uncertainty, do not propose to go hungry; that if they cannot have their freedom with full stomachs, they will do without freedom.

If such is true, we have drifted far from the ideals the Pilgrims carried ashore at Plymouth Rock. Even as our men on the battlefields are now dying, the Pilgrims died and suffered hardship for just one reason: to preserve a spot on this globe where the individual could be free. And they got that freedom. They get it because they were tough. Their ideals came first their stomachs second Our men are winning battles now because they are tough They are thinking of freedom.

A year ago there was a grave question in the minds of millions as to whether we could arm fast enough to stem the tide of aggression. There was an equally grave question of whether we could do it without destroying free enterprise and representative government. There were those who believed it would take total dictatorship to beat the dictators.. The challenge fell on industry. The machines had to be built to industry. Our natural resources and our factories had to be mobilized for war on a scale that wrought shattering changes in technique and precedent. Industry knew that the cracker-box agitators were waiting to pounce upon the country with revolutionary schemes at the slightest sign of failure.

It is to the credit of thinking government officials that revolutionary changes in government and industry were not forced before free enterprise had a chance to show what it could do to prove that our democracy was not a failure. Our factories did a magnificent job. In a matter of months, they underwent retooling and conversion. Today tanks, planes, guns, ships, are rolling off the assembly lines by the scores of thousands. Our war production has caught and passed the dictator enemy who spent years producing for war under an elaborate "economic security" program which by its very completeness had destroyed individual freedom— the same years that our industries continued to produce for America's unregimented, peaceful millions. Back of the manufacturers stand American farm producers and distributors, together with the metal and coal mines, the oil, the power and transportation industries. They feed our war workers and keep the materials moving into the assembly lines.

The end of the war may be distant still, yet it is in sight. Again free enterprise faces a challenge. And again it faces it against a backdrop of threats. Those threats are cloaked in the prevalent idea that a full stomach is an inalienable right. Far-sighted leaders know that the challenge of the post-war world will be the toughest of all. It will be far tougher than the facts justify because of demagogic attempts to soften our people with illusory social dreams of total "economic security."

But industry is making its plans. These plans will have to be daring. Industry must go on the offensive. It must show that unprecedented production under a system of free enterprise is the only sure way to build a lasting peace under the banner of individual freedom. It must lay the groundwork for this production now. And it must have all Americans on the home front. There is no room for the labor racketeer any more than for the exploiting capitalist or the faithless politician.

We on the home front must do a lot to clear thinking. We must now be hardened by a determination that above all else we must save the right of the individual to be free. We must realize now in the peace to come, that individual freedom is more important than individual comfort. Bitter experience has demonstrated that without freedom there can be neither comfort nor security. We must reaffirm our belief in our Constitutional government.

AN OPPORTUNITY AND A CHANCE

By Ruth Taylor

A few weeks ago I made a trip to some of the National Youth Administration training centers. Up to Quoddy Village, out to Wilberforce and through Ohio and Illinois. It wasn't just a show inspection. I really looked for flaws and I talked not only with those in charge, and with students, but with people in the community; and I want to tell you what impressed me most in the work.

In these war training shops, there is what the Negroes have always wanted—no discrimination, an opportunity to train, excellent equipment, unexcelled leadership —and a thorough training for a future career.

Those who are taking these courses are doing good work and are happy, well balanced youth— but do enough Negroes realize the full extent of the opportunity before them?

Let's face the facts as they are. We all know the Negroes have been discriminated against in industry—but can we truthfully say it was altogether because of race prejudice. Wasn't it because too many Negroes had lacked training not merely in mechanics but in shop practice?

Every boy and girl who completes his National Youth Administration training can go out from the shops not only prepared to earn a living in industry, but prepared to be a good advertisemen for his race, to open new doors to the employment of Negroes by proving he or she is a careful, conscientious, reliable worker. In helping themselves they can help others.

That is what I thought when I watched the girls in the machine shop at East St. Louis and listened to their carefully modulated, clear and intelligent explanaitons of what they were doing and why; when I watched the Negro boys on the Student Council at Quoddy—elected by their fellow students who were predominantly white; and when I talked to as keen a group of youngsters as you could find anywhere, in a forum at Wilberforce University.

The National Youth Administration has given to Negro Youth an opportunity to help themselves and their people. It is up to Negro Youth to meet the challenge and make the most of the opportunity!

Approximately 120,000 American women are now engaged in transportation work.

Negro Farmers Took Part in Mobilization Day Observance

Having helped achieve in 1942 the greatest agricultural production in history, the Nation's 680,000 Negro farmers joined in the Farm Mobilization Day observance proclaimed by President Roosevelt held Tuesday, Jan. 12.

Mobilization Day, signaled the starting gun for a new argicultural record production to meet the increasing needs of our fighting men, our allies, and our civilian population, was highlighted by a nationwide all-network radio program.

In proclaiming Farm Mobilization Day, the President asked the farmers of the country to gather, where ever possible, with Department of Agriculture representatives Extension Service agents, vocational agriculture teachers, state officials, and farm organizaton leaders to discuss ways and means of assuring the maximum production of vital foods in 1943.

Said President Roosevelt, "The people of this country may well be grateful that for three successive years the farmers of the United States have given us record harvests. Every pound of food finds use in wartime. Our soldiers, sailors, and marines require large supplies of food both in this country and abroad, and these three record-smashing years of farm production will mean much for victory.

"Farmers may justly be proud of the production record of agriculture. They have achieved this record in spite of many handicaps, and the country owes them a debt of gratitude. Although they have produced much this year, the nation will require even more of them during the year that is now before us. In full realization of the many difficulties affecting farm production during wartime, the people of this nation place reliance on the zeal, devotion, and unstinting efforts of farmers to do their part toward ultimate victory.

"Food is no less a weapon than tanks, guns and planes. As the power of our enemies decrease, the importance of the food resources of the United Nations increases. With this thought in mind, we must further mobilize our resources for the production of food."

In the Mobilization Day broadcast, speakers urged the farmers to attain the production goals for the year. Farm groups, colored and white, gathered in various communities throughout the agricultural area, turned on their radios to hear these speakers. Following Mobilization Day an intensive campaign was launched to get farmers to sign-up, or agree to produce their share of the vital foods and fibers needed for the war effort.

Despite the shortage of farm machinery, labor, fertilizer, and insecticides, it is believed that agricultural production in 1943 will be sufficiently high to meet our wartime needs. In view of the unprecedented food production achieved last year by Negro farmers, it is thought by Department officials that colored farmers, together with other small farmers who face no labor problem will carry a large part of the increased production.

T. M. Campbell, Extension field agent, who works with farmers in seven Southern states, points out that thousands of Negro farmers, who had never had a garden, chickens, pigs, or a milk cow, began raising their own food at home last year. He says that in Georgia alone 5,310 obtained their first milk cow. 3,540 began raising pigs, 7,670 began raising chickens, 8,850 started their first garden, and 12,980 raised peanuts to help overcome the vegetable oil shortage.

Mr. Campbell believes that almost all of Georgia's 59,000 colored farmers will begin growing a large part of their food at home this year. He also points out that colored farmers everywhere are not only growing enough food to meet their home needs, but many of them are also producing extra pigs, beef cattle, chickens and eggs for market.

Too Many Cooks— Too Many Recipes

Public officials, from the President, Vice President and Secretary of Agriculture down to the soap box orator, have promised that this country is going to feed the world when the war is over; in fact a lot of feeding is planned before the war is terminated. The hungry peoples of Europe have been led into counting on us to save them from starvation. Yet we are rapidly approaching the tragic position of being unable to feed ourselves, not because we don't have the land and resources, but to put it bluntly, because too much bureaucracy is discouraging and hampering industries that produce and distribute our food.

The farmer, the processor, the distributor have been stymied by an avalance of red tape and a lack of realization that their efforts are vital to the prosecution of the war. It sometimes takes months to get machinery repaired or replaced. Key men are still being drafted. Rationing of gas and tires to essential vehicles is cumbersome. And on top of these handicaps, from Washington come blustering threats and questionnaires by the tens of millions that only succeed in creating more "shortages." As Senator Vandenberg says: "It would take a Philadelphia lawyer and an Indian crystal gazer to answer some of these forms."

John A. Logan, president of the National Association of Food Chains emphasizes the need for a centralized food plan, and points out that the food industry cannot meet basic civilian requirements unless soul governmental policies are established immediately. Said Mr. Loban: "Too great emphasis cannot be placed on the vital importance that recognition be given in high government quarters to the essential character of food production, processing and distribution Orders must be brought out of a situation that rapidly is approaching chaos. A coordinated policy must be formulated quickly under a centralized administration with sufficient authority to deal effectively with food supply."

Mr. Logan is not an alarmist. But conditions he describes in the food industry can be found in practically every branch of production and merchandising. He knows that he is speaking to millions of intelligent Americans whose collective opinion has forced decisive action on more than one occasion, after officialdom had failed. There is a crying need for intelligent action now.

Ahead Of The Regulators

Fred H. Sexauer, President of the Dairymen's League Cooperative Association, recently urged a full survey of the dairy industry by representatives of the industry as a preliminary step in eliminating duplication and the resultant waste in manpower and equipment. Mr. Seuxauer pointed out that "in a total war such as our country is now fighting, waste of manpower, vital materials and accessories cannot be tolerated in any section of our industrial, economic or social life. Every single factor that contributes to winning the war—manpower, machinery, plant space, motor trucks, gasoline, oil, rubber, coal, electric power and rail transportation—all can be used in much more economical and efficient manner to the end of gaining victory for ourselves and the forces of democracy throughout the world. . . .

"As conservative landowners with a substantial stake in the welfare of the country, as farmers with a record of staunch patriotism to uphold, and as citizens with a ready spirit of sacrifice for the nation's good, it is up to us who are in the dairy industry to study the situation carefully. . . . We must learn how our resources and facilities can be applied with the least waste of manpower, motion and materials, and apply them in just that fashion."

Other industries could well emulate this program and keep ahead of the regulators.

An Unpleasant Picture

L. A. Warren, President of Safeway Stores, and a nationally known figure in the food supply field, has presented some interesting figures for public consideration. Following the government's announced plan for rationing of canned foods, Mr. Warren said:

"Somewhere along the line a lot of canned goods have disappeared. I don't believe that food has been consumed. It is around in packed pantries or in warehouses of speculators, or still in the canneries.

"One of the situations is the disappearance of the pea pack. The pack in the past has been between 22,000,000 and 23,000,000 cases. This year the government said it wanted 12,000,000 cases. So the pack was upped to 35,000,000 cases. Yet the supply of canned peas has disappeared in sixty days."

All people must join in plans to save or distribute needed food supplies. Grocery stores are doing their best to apportion food fairly to make supplies go around, before compulsory rationing is inaugurated. All of us can cooperate and help in this necessary task.

We all know what a run on a bank will do. A run on a food supply will accomplish the same result—misery for all the people.

Some Will Die

A brief news item from a Western city reports an auto accident. The driver was burned to a crisp. In his car were found heat-seared containers that had held gasoline. Before gas rationing these containers would not have been there; that man would not have died.

A five-gallon can of gasoline in the home, in the garage or in the back of the car can bring almost instant death to anyone in the vicinity. Gasoline does not merely burn. Its fumes in a confined space have the force of dynamite. ing, one detonator often being an invisible spark incurred by static electricity.

As spring and summer approach, the temptation will be strong to "save" a little gas for a trip to the mountains or the seashore. A percentage of those who succumb to this temptation will meet a horrible death. In all probability there will be cases where entire homes are destroyed and members of families killed or maimed. They will have learned about gasoline—too late. But there are millions of others who will avoid tragedy by heeding the warnings of fire prevention experts; experts who have studied the dangers facing the gasoline hoarder. These experts have pointed out that no gasoline container is really leak-proof. A little water in the bottom is sufficient to rust through the best can. They also point out that gas fumes in a basement in which a furnace is operating are nothing less than a time bomb. Even pouring gas into the car tank may prove disastrous, for here again static electricity flashing from tank to funnel could result in instant oblivion.

These warnings have been issued in an endeavor to save lives and property. They are not appeals to patriotims. Good excuses by the gas hoarder might avoid the issues of patriotism. But no amount of rationalizing can avoid the prospect of death.

Pigs And Dollars

As of April 2, 1942 , 137.2 billion dollars has been appropriated by Congress to pay for the war. Of this amount, 35 billion represented inflated prices, according to the Office of Emergency Management.

Inflated prices are a direct result of public spending of borrowed money. Each billion that the government borrows from the banks and pumps into circulation through the pay windows of our war plants, in effect adds to the total supply of money. As the money supply increases in excess of goods and services available, its value goes down. Any farmer knows what happens when the market is glutted with too many pigs. The value of pigs drops. On the other hand as pigs become scarce and money becomes plentiful, the value of money drops.

The old law of supply and demand is inexorable. It applies to the dollars in our pockets just as to the produce of the farms. The only difference is that we call it inflation when there is too much money. Also, too much money is not an act of God, as in the case of pigs. Too much money of the kind we have in this country today, is due solely to playing politics instead of following sound financial policies.

The people of America and their politicians have avoided paying for war through taxes and war bonds. In trying to escape their duty they have permitted government to pay for guns, planes and tanks by borrowing from the banks in a way that "creates" new money. As a result, the value of money has gone down. The country is in the midst of "inflation." High war wages are increasingly illusory. Prices are steadily rising. No one is cheating us but ourselves. We are literally throwing away financial integrity along with our standard of living, our savings and our self-respect.

If the figures of the Office of Emergency Management are correct, we had, as of last April, squandered $35,000,000,000. There is no other name for it because the bulk of that vast sum represents an unnecessary addition to the cost of winning the war. And by this time we have squandered many more billions of good American dollars for two-thirds of the war cost is still being financed the easy way—through the banks.

"Reverses in a war are part of war . . . . neither side in a war tells its people just what it is up against. At a time when truth is most needed, truth becomes illegal."—J. French Robison, President, East Ohio Gas Company.

Divided They Fall

Surrounded by big government, big business and labor organizations, the farmer who tries to struggle along by himself today is rather helpless. He finds agencies on every side telling him what to do, what not to do, when he can do it, and when he can't do it.

Planting a crop, milking a cow, raising a hog or selling a steer have all become acts which virtually require a lawyer's advice.

So today more than ever, a farmer needs the help of cooperative marketing organizations. He needs the advice of experts. Acting individually, he is sunk. Acting collectively, he can compete with the power and the influence arrayed against him.

It is up to the farmer to solve his own problems by intelligent action through his own farm organizations speaking for him.

Strength In Democracy

Under a dictatorship, the cost of war can be shrugged off with printing press money. Under a democracy, the cost of war is second only in importance to winning the war. The cost of war can destroy just as mercilessly as a military defeat. Sound money and a sound credit structure are the heart of a free society.

This war must be financed and won without undermining the nation's credit. Every citizen must realize that taxes and War Bonds are the only weapons that can win the war on the home front. During the coming year the government will spend 1.6 billion dollars every week. This means real hardship, because this vast outlay will not be used to create wealth. It will be blasted out of existence in the smoke of bombs and shells and in the wreckage of planes and ships.

In the months to come, thousands of banks will be pushing the sale of Bonds as never before. The banker realizes the necessity of sound finance. He knows that the value of the money in his keeping and the individual freedom of the people who own that money are at stake. They are the strength of democracy. And he knows that by his efforts to sell War Bonds directly to the people he is doing his part to save both.

They Were Ready

American doctors have been criticized for bungling the medical manpower problem. The incongruity of the criticism is apparent when it is realized that it comes from the same sources that have at least helped to bungle manpower in every activity. The food problem is becoming critical, due largely to lack of manpower; transportation, mining, manufacturing, processing and distribution are all seriously handicapped by the manpower jumble And in none of these undertakings have the needs of the military drawn as heavily on manpower as in the field of medicine.

It is a dead certainty that if the medical men had been no better prepared for war than those who now criticize them so loudly, the medical situation would indeed be serious. Long before there was much thought of war coming to this country, the doctors were mobilizing their resources. When war came they knew almost to a man the number of doctors available to the home and military fronts. They met the requirements of the military front. They are now in the process of meeting the requirements of the home front.

Admittedly, there has been hardship in some areas. Emergencies have arisen. Tempers have been frayed. But the background of American medicine has given it the tools to do the job. That background is freedom; the tools are the same tools that enabled American industry to outproduce the world in twelve months. They are the tools of competence, integrity, and faith—faith in the ideals of individual opportunity that have made this the greatest nation on earth.

The Modern Farmer

OFFICIAL ORGAN of

Nashville Federation of Colored Farmers

Obeys The Law

We feel that every reader of this publication is anxious to do likewise. The Postal Laws and Regulations provide that all subscriptions should be collected for the year.

If they are not paid, then under the law this paper, the Modern Farmer, must discontinue sending it to any person who is not a paid subscriber.

Since the Modern Farmer is obeying the law, may we insist upon you, Dear Reader, not to be guilty of disobeying the law yourself? We feel that it is the duty of every American citizen to live above the law, so before your subscription expires, and we have already sent you a notice by mail, forward to us a post office money order for $1.00.

If you are not near the post office, send the cash by registered mail or send us your bank check.

USDA ADDS 109 NEGRO WORKERS TO STAFF; PROMOTES 6 OFFICIALS

USDA Personnel Director T. Roy Reid revealed in his 1942 annual report to Secretary Wickard that the number of Negro employees in the Washington office was increased by 109 between July 1941 and July 1942. However, it is estimated that the number is now in excess of 200. The report also showed that several Negro workers had been promoted.

In addition to those who received routine Ramspeck promotions, six Negro administrative officers were advanced one to two full grades. Those receiving such promotions were: Thomas N. Roberts, special assistant to the Personnel Director; Raymond J. Weir, and William E. Weir of the Office of Plant and Operations; Frank E. Pinder, J. Jerome Robinson, and Samuel D. Greer all of Farm Security Administration.

Raymond Weir was promoted from chief of Administrative Services Division to assistant to the chief of the Office of Plant and Operations: his brother, William Weir, was promoted from chief of the budget section in Plant and Operations, to chief of Administrative Services Division. Mr. Pinder of Farm Security Administration was promoted from assistant cooperative specialist to assistant field supervisor; Mr. Robinson was promoted from an assistant in the office of public relations to assistant to the FSA personnel director; and Mr. Greer was promoted from manager of the Delmo migratory labor homes in Southeast Missouri to administrative assistant to the director of FSA, succeeding Mrs. Constance E. H. Daniel who resigned last July.

Said Mr. Reid in his report: "An effort was made during the year to improve the status of Negro employees. In the Washington offices the number of Negro employees increased by 109. In addition, some Negroes have been employed in or promoted to key positions within the Department.

"The Office of Personnel informed Negro colleges and universities of the types and kinds of positions available in the Department. Visits were made to several of these institutions, and suggestions for revisions of courses were given upon request. Information was given as to preparation for Federal employment through civil service examination and as to opportunities for career work in the Federal civil service.

"A representative was sent to a number of national and State Negro meetings at which agricultural, business, educational, and civic affairs were discussed. The work of the Department, with special emphasis upon its services to Negro agricultural producers and consumers, was stressed at these meetings."

A recent report from cooperative Extension Service shows that the Negro staff makes up 14 percent of the Extension personnel in the South. Twenty colored farm and home agents were added in 1942, bringing the total to 573.

Victory Gardens

Your Victory Garden is going to be increasingly important this year, and here's why: (1) certain foods will be scarcer, and if food is not produced at home, your family may not have an adequate diet. (2) Meat and many canned foods will be rationed, so the vegetables from your garden will stand you in good stead. (3) The armed forces are consuming larger quantities of fresh and processed fruits and vegetables than during civilian life, which means that there will be less for the home front. (4) The Government will take a larger percentage of certain kinds of fruits and vegetables from the 1942 and 1943 commercial pack and less amounts of these products will appear in grocery stores.

It is not only important that farmers have Victory Gardens, but equally important that city folks, who have adequate plots, also have them. It is believed that thousands of persons living in towns and suburbs will start Victory Gardens this year. For information on how to start and care for a garden, write your County Extension agent, or consult your State Extension Service office at the State agriculture college.

Farmer's His Name

Mr. and Mrs. Leonard Farmer of Parkin, Arkansas, paused a couple weeks ago to take stock of their farming success. Said Mr. Farmer, "We have been farming 32 years, but we have made more progress in the last four years than all the other years put together."

Curious by-standers wanted to know how he accounted for the success he enjoyed during the last four years. Without hesitating a moment he said, "I give all the credit to the Farm Security Administration; it has really helped me get on my feet."

Mr. and Mrs. Farmer now gross about $5,000 a year, and they are growing the things that the Government needs to win the war. Mr. Farmer is a former State Plant-to Prosper champion, and he is president of the Cross County Negro Farm Association. Now don't believe Mrs. Farmer sits around holding her hands. In 1941 she canned right out of her garden and from her small orchard 944 quarts of food, last year, she canned 1,010 quarts. The Farmers have enlisted their farm in the 1943 Food-for-Freedom drive to help meet the food and fiber needs of our fighting men.

Loans for Cotton Seed

The Department of Agriculture announced last week at Commodity Credit Corporation loan of $72 a ton on 1942 crop registered and certified American-Egyptian cotton planting seed. Loans will be obtained by eligible producers during one month, May, 1, 1943 to June 1, 1943—after the 1943 planting season. Only one loan will be made to each individual borrower. No loan will be made upon less than one ton of seed. Loans will be at 3 percent interest and will mature February 1, 1944. The loans will carry an offer to purchase the seed on February 1, 1944 at $74 a ton.

Buying Bonds

Negro farmers are not only going all-out to produce food and other agricultural material for the war effort but those who can are also buying war bonds and stamps. The attitude of Junius C. Cole of Jonesboro, North Carolina is typical.

Said Farmer Cole in discussing war savings bonds and stamps, "I am buying bonds and stamps because I want to do my full part to help win the war. The stamps and bonds I buy are more than an investment, they are helping to hurl tanks, ships, guns and planes against the enemy."

Did You Know

That we may soon be eating potatoes from silver plated vines? Well, silver sprays to take the place of copper sprays as fungicides have been developed. In view of the shortages in copper, this development is doubly important.

That more than 4,000 Negro farmers are buying farms of their own through Farm Security Administration?

That 12 shetarlings or sheep skins are required to outfit an army pilot?

That South Africa has gone in for dehydrating fruits and vegetabies? Last season, 12,000 tons of pears were dehydrated in five months. A larger quantity of perishable fruit is expected to be preserved in this way this year.

That it's time now to begin planning your Victory Garden?

Wickard Pays Tribute To Dr. George W. Carver

Dr. George Washington Carver, collaborator in the U. S. Department of Agriculture's Research Administration, and one of the world's great scientists, is dead.

"Tuskegee and the Nation suffer an irreparable loss," said Secretary of Agriculture Claude R. Wickard in a telegram to Dr. F. D. Patterson, president of Tuskegee. "However, we may take comfort in the fact that his great contribution to the science of agriculture, and to scientific research will continue to serve mankind."

Dr. Carver was appointed collaborator in the Department's Bureau of Plant Industry, division of mycology and disease survey, Aug. 1, 1935, by Vice President Henry A. Wallace, then Secretary of Agriculture. His wide knowledge and experience contributed tremendously to the Department's research program.

Since 1935 the Department has maintained close contact with Dr. Carver, calling upon his rich research background from time to time to assist in the solution of various knotty farm problems. And a few months ago when Food Distribution Administrator Roy F. Hendrickson, representing Secretary Wickard, went to Tuskegee to address the Farmers' Conference he spent half an hour visiting with the eminent scientist.

Said Mr. Hendrickson upon his return to Washington, "One of the vivid memories of the time I spent at Tuskegee is my visit with Dr. Carver and the strong impression he gave me of fine scholarship and scientific integrity. He impressed me as a remarkable man, who despite his great age, had never grown old."

Last year in recognition of the great scientist's achievements in agricultural research, The Progressive Farmer magazine presented him with its annual award as "The Man of the Year in Service to Southern Agriculture." The award was presented last June, six months ahead of time. Because of Dr. Carver's ill health the magazine thought it best not to wait until December when it usually makes the presentation.

Dr. Carver is the only Negro American to have received The Progressive Farmer award. Other recipients of the award are Dr. Charles H. Herty, researcher in pine for paper making; Dr. A. J. Pieters, lespedeza development; Edward A. O'Neal, president of the Farm Bureau Federation; Dr. H. A. Morgan, Tennessee Valley Authority leader, and Oscar Johnson, president, National Cotton Council.

In presenting the award to the plant wizard, who has worked miracles with peanuts, sweet potatoes, and the red clay soil of Alabama, **The Progressive Farmer** pointed out that in addition to recognition of Dr. Carver's outstanding achievements the award was also being given as a contribution to racial peace and goodwill.

Shortly before Dr. Carver received this award he made his last important public address when he appeared as the commencement speaker at Selma University, white Alabama college.

Lamenting the war, he said: "It is asking too much of the Great Creator of all things to reverse the whole order of nature to accommodate our ignorance, or willful misunderstandings. The fundamental law of the universe is to reap what we sow. If we sow oats, we expect to reap oats, if we plant corn, we do not expect to reap potatoes."

In his long years of service to the South and to the Nation. Dr. Carver's laboratory creed was perhaps this: "Whatever helps the Southern farmer helps the entire South, and whatever helps the South helps the world." And despite fabulous offers from the late Thomas A. Edison, and from Henry Ford, he remained in the South he loved.

Correction Please

In our report on the passing of Mrs. Jennie B. Moton a typographical error was made in the date of her appointment. Instead of 1940, it should have been 1936. Mrs. Moton began serving as field representative for AAA on October 16, 1936.

Signing Up

Farmers, colored and white, are now signing up with AAA committeemen to grow more of the things this year which will count most toward winning the war. This year's farm production drive will be the most intensive in history.

Food-For-Freedom Edition

The Department received a letter this week from Editor A. G. Shields, Jr., of the Arkansas World, who says that his December 12 Food-for-Freedom edition was liked so well that it is being encored. March has been set as the month during which his staff will turn out another Food-for- Freedom edition.

Mrs. Moton Passes

"With the passing of Mrs. Jennie B. Moton, the Department of Agriculture loses one of its ablest workers," said Secretary of Agriculture Claude R. Wickard in a telegram to the bereaved family.

Mrs. Moton, widow of the late Robert Sussa Moton, successor to Booker T. Washington as president of Tuskegee Institute, was a field representative in the Agricultural Adjustment Agency. She had held this position since 1936, traveling throughout nine of the Southern states working with farm groups to help improve agricultural conditions in that region. One of her outstanding efforts was the mobilization of farm women toward increased gardening and canning goals.

I. W. Duggan, director of the Southern Division of the AAA, said in a wire of condolence, "The Southern Division and the white and colored people of the South have suffered a distinct loss. However, the ideals of Mrs. Moton and her work will continue to live."

E. A. Miller, white, of the AAA represented the Department at the funeral service which were held Sunday in Memorial church at Hampton Institute, Hampton, Va.

Mobilization Day

Negro farmers are joined in the Farm Mobilization Day observance proclaimed for Tuesday, Jan. 12, by President Roosevelt. In thousands of communities farmers of both races gathered to discuss ways and means of achieving the productive goals set for 1943. The outstanding feature of the day's program was a nation-wide all-network broadcast.

You know, Mobilization Day is like getting set for a race: digging your spikes in to get a firm hold, limbering up your leg muscles, timing your breathing and making the final preparation before springing into action. Only, in this race, losing doesn't mean simply missing a ribbon or a cup, but rather a lack of supplies for the home front and our allies, and a slacker stomach for our army to travel on.

Following Mobilization Day an intensive campaign will be launched to get farmers to sign-up or agree to produce their share of the vital foods and fibers needed for the war effort.

South's Egg Market

Farmers, colored and white, in 12 Southern states who have increased their egg production to help meet war time requirements, need have no worry about a market. Through the Food Distribution Administration, and cooperating egg dealers, marketing facilities will again be available this year.

States included in the program are Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia. The program will operate during the months of heaviest production and will continue as long as is necessary in 1943.

The marketing program, believed to be more effective than the 1942 plan, is designed to: (1) provide price supports needed to encourage adequate egg production (2) facilitate the acquisition of eggs to meet Government needs, and (3) encourage better marketing methods in the Southern states.

The Food Distribution Administration will purchase eggs at announced price, in lots as small as 10 cases. Qualified dealers who have contracted with the FDA will purchase eggs from producers at the designated prices and assemble them in 10-case lots for sale to the FDA.

Cooperating dealers may sell the eggs to Army camps, to defense plants, or to any local trade that may develop, but the FDA will stand ready to buy them at the announced price, plus four cents a dozen to cover costs of grading, inspection, packaging and storing.

Behind The Lines

The most far-reaching speech of the past generation from the standpoint of preserving individual liberty under our American form of government, was made by United States Senator O'Mahoney of Wyoming, Democrat, on December 8, 1942.

Without rancor or partisanship, he shows that we face a danger at home, not so much from our enemies "as from the ideology which made those enemies prepare and precipitate the war, the ideology of the authoritarian state."

We are rapidly drifting toward the totalitarian idea that the state is the master and that the individual has no rights which the state must respect. The Senator traces the growth of bureaucracy in our country up to the moment, and shows that it is but a short step from the point at which we now are to the European theory of the authoritarian state.

"If we believe, as the founders of this nation did, in a separation of the powers of government into the legislative, the executive and the judicial, and if we look for the restoration of that balance after the war, then it is imperative that we should at least make ourselves acquainted with the recent trends of government," said Senator O'Mahoney.

He then cites from the record to demonstrate how executive orders and acts of bureaus have developed a new executive legislative function. He shows how "a new manifestation of the expansion of executive power became evident, namely the tendency, by interpretation, to expand the power and authority given by statute. The recent remarkable salary limitation by the Director of Economic Stabilization is a case in point. Again the re-written by regulation of the provisions of the recent price control production, by which the intent of Congress was defeated to make effective the intent of the bureaus, is another illustration.

"To say that Congress intended to surrender its legislative function would, of course, be the sheerest nonsense.

"Advocates of a new order opposed to democracy have reached their conclusions because they believe that the modern world has become so complex that people can no longer govern themselves as they did in the handicraft era, but must be governed by experts who will tell them what they ought to do and also what they must do."

Senator O'Mahoney then points out that government by executive order, and bureaucratic pronouncements which sidetrack Congress, is dangerous because a pattern can be set "whereby weak executives surrounded by tremendous concentrated power, will become the instruments of a permanent bureaucracy."

Cotton Insurance Deadline

Cotton farmers, who want to insure their crops this year against droughts, floods. boll weevils, and other unavoidable hazards, including military operations or war damages have 15 days more to apply this year than they had last, according to the Department's Federal Crop Insurance Corporation.

Cotton crop insurance is available to any person, sharecropper, tenant, and owners, with an interest in a cotton crop at the time of planting. Applications must be made before the seed is planted and before the closing date in the county where the farmer is located.

The deadlines for making applications for insurance range from February 15 to April 15. During 1942, the first year of federal cotton crop insurance, 172,000 farmers insured their cotton crops.

The Pacific Ocean is more than four times as large as North and South America together.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN - - MISSISSIPPI

Service to Youth, the Farm and Home Since 1871

COURSES OFFERED LEADING TO THE BACHELOR'S DEGREE in the Following Divisions

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges.

NATIONAL DEFENSE COURSES

WELDING
BLACKSMITHING
MARINE PIPEFITTING
AUTO MECHANICS
TRUCK AND TRACTOR SERVICE
APPLIED ELECTRICITY

For Further Information Write the Registrar

WM. H. BELL, President

BOWLES HALL--SOUTH ENTRANCE DEVOTED TO AGRICULTURE & SCIENCE

THE COLLEGE IS "EXPENDABLE"

By Wm. H. Hall, President

For several years before Pearl Harbor a complete student health service program had been initiated as part of the General education pro gram of the college. The benefit of this program to national defense may be noted in the fact that according to our knowledge, out of approximately 251 young men students and these staff members of this institution examined and military service since June 1940, only two have been turned down because of any preventable or remedial physical deficiency.

When our country joined the allied Nations in the fight against the enslavement of the greater part of the human race, in cooperation with the State Department of Education we relieved two of our staff members, W. A. Flowers, Teacher-Trainer, Vocational Agriculture, and F. O. Woodard, Teacher-Trainer, Vocational Trade and Industrial Education--To organize and supervise Defense training courses for Negroes for the entire state. Since the summer of 1941 Mr. Flowers has organized for out-of-school youth 906 classes with approximately 13,-991 enrolled, taught by 906 instructors, and in addition to available shops, has built with NYA assistance 17 new ones and supplied Tools and equipment valued at approximately $101,409.24. Mr. Woodard has organized 48 classes at 22 different points in the state in woodconcrete, electric welding, auto mechanics, marine pipe-fitting and applied electricity which have been in session a total of 330 months with 2,086 enrolled, tools and equipment valued at approximately $47,-000.00. Many of the men who have taken these courses are now employed at shipyards on defense construction work.

It has already been mentioned that 251 of our regnlarly enrolled students are in the armed services with some already stationed at the most distant allied nation's outpost. There are 7 local committees composed of teachers and students functioning under the Civilian Defense authorities. We have made several contributions to the USO. Every student and teacher last year bought stamps bonds or both and the salary alotment plan is followed by every instruction and employee this year. The college has furnished 20,495 pounds of scrap and has several thousand more pounds for Hitler and his henchmen. The President is a member of the Special Defense Savings Committee for Mississippi also the Special Defense Savings Committee for Claborne County.

Space does not permit discussion of course content modifications to direct our major activities toward the war effort, such as emphasis upon Food and Feed for Victory and Nutrition by the Divisions of Agriculture and Home Economics. For sometime we have had a "War Information Corner" in the Library, but this year in addition we have organized a committee made up of faculty and students on War Information Service whose duty will be to: (1) Organize and lead discussion groups; (2) Arrange Radio-Listening programs; (3) Post reading suggestions on the war; (4) Analyze and evaluate trends and developments and make a weekly report to faculty and students at general assembly.

"The Four Freedoms guide us on, because they belong to all peoples everywhere, Freedom of speech and religion, Freedom from want and Freedom from fear. The earth shrinks in upon itself and we adjust to a world in motion, holding fast to the truth as we know it, confident that as long as the love of freedom shows in the eyes of men, it will show in their deeds." Look in our eyes, observe our acts and read our hearts.

HOME PORK PRODUCTION, GEARED TO MEET THE NEEDS OF A NATION AT WAR

By Alan T. Busby
Department of Animal Husbandry

Centuries of experience, research, trial and practice have proven beyond questionable doubt, without fear of successful contradiction, that from the carcass of the home grown hog we have our most practical, economical, and available source of farm meats and meat products. There is no type of farming program in which it is impossible to include a swine enterprise. There is no farm so large, nor is there any farm so small, that there is no place for a carefully planned swine unit. It is not the intent of the author to consider even for a moment the production of pork as a source of cash income, but rather to discuss the topic in the light of the facts that in the present war emergency, every pound of pork produced on the millions of little farms thru-out the nation will permit a pound of pork, or of pork products, to be sent to those parts of the nation, and to other nations, where for vividly apparent reasons the production of this necessary food-stuff is entirely out of the picture.

There is no mystery in the business of producing home grown pork, as there is no mysterious process connected with any other enterprise that concerns itself with nature and natural things. There are certain basic laws which govern all natural phenomena; to obey them is the first step to the successful culmination of any enterprise which utilizes in any way any of nature's products, be they of the plant or of the animal kingdom. In order to obey them is the first step to the successful culmination of any enterprise which utilizes in any way any of nature's products, be they of the plant or of the animal kingdom. In order to obey these laws, one first must learn them. This article will allow no time not any space to the consideration of the scientifically technical phases of swine production. Instead of nutrition we will concern ourselves with practical feeding problems. Instead of benetical research we will concern ourselves with practical breeding problems, instead of processing we will concern ourselves with practical slaughter methods and simple, but safe and time provtn, curing practices. Thus we hope to outline on these pages such a clear picture of the job of producing pork for home consumption, that any farmer on farm boy, after careful study--and in some cases with the assistance of his vocational teacher, or his county agent--can make himself an important cog in the great production machine that our farms must become, if we are to assure to ourselves and to the nation the ultimate victory over the forces that now offer serious challenge to our right to our American way of life.

To properly organize and to successfully operate a home pork production enterprise the following facts, rules, and suggested practices will prove, in all cases, helpful, and, in most cases very essential.

The foundation principles of any animal enterprise, and particularly true in the case of swine production, are all contained in the following statement--a careful study of which will prove well worthwhile--"THE GREATEST SUCCESS WILL BE HIS WHO BEST FEEDS THE BEST BRED ANIMALS UNDER THE CLEANEST CONDITIONS."

As to breeding problems:

1. Select your Breed--The author will hold no brief for any one of the several recognized standards breeds, as they have all been developed to the place that it has become merely a personal matter of reference. The Poland-China, the Duroc-Jersey, the Hampshire, the Chester, the Berkshire offer more or less equal opportunity to the home pork producer. A suggestion, which may be taken for what you may value it, would be to use a breed that is common enough in your vicinity so that you may have available the services of the very best when you consider your replacement program. Experience and observation both indicate that perhaps as a source of farm pork the first generation cross of any of the above mentioned breeds will generally give us more vigorous and faster growing pigs than any other breeding process.

2. Plan your breeding program--The home production of pork is not and should not be a short time enterprise, in spite of the fact that one can cover the entire cycle from breeding through farrow, suckling, growing, and fattening within one calendar year. In order that he may make an all-out effort to accomplish the ends desired in this "Feed Yourself to that our Nation can feed the world program" the home pork producer should build his enterprise on the sound basis of one or more good foundation brood sows.

Sane breeding practice will allow the breeder to get two litters of pigs ffom his sow each year, without jeopardizing the health of either the sow or her litters as usually occurs if he tries to crowd her to the extent of producing three litters in any one calendar year (this can be done under certain management practices). Sows should be bred so as to farrow in the spring and in the fall, the spring pigs being dropped from February 15th to March 15th, and the fall pigs from September 15th to October 15th. Such a farrowing schedule fits in better than most any other with the general farming program, and with the most desirable climatic conditions. The average length of the gestation period in the sow is 112 to 114 days, or as it is sometimes computed 3 months plus 20 days. The facts being true, A little study of the following table should enable the breeder to properly time his farrowing dates:

If the sow is to farrow between	She must be bred between
Feb. 15 to Feb. 20th	Oct. 24th and Oct. 29th
Feb. 21st and Feb. 25th	Oct. 30th and Nov. 4th
Feb. 26th and Mar. 3rd	Nov. 5th and Nov. 10th
Mar 10th and Mar. 15th	Nov. 11th and Nov. 16th
Mar. 10th and Mar. 15th.	Nov. 17th and Nov. 21st
Sept. 1st and Sept. 6th	May 10th and May 15th
Sept. 6th and Sept. 12th	May 16th and May 20th
Sept. 13th and Sept. 18th	May 21st and May 26th
Sept. 19th and Sept. 24th	[illegible] and June 7th
Sept. 25th and Sept. 30th	June 2nd and June 7th
Oct. 1st and Oct. 6th	June 8th and June 13th
Oct. 7th and Oct. 12th	June 14th and June 19th
Oct. 13th and Oct. 17th	June 20th and June 25th

The above table is limited to include the farrowing dates suggested as best suited to the program under our immediate consideration: 1. E. a spring and a fall litter from each sow. However, the date upon which any given sow is most likely to farrow can be easily figured, if the breeding date is known, either by adding 112 days to the breeding date (as for example)--sow bred February 4, 1943:

Feb. 4th to Mar. 4th is 28 days
Mar. 4th to April 4th is 31 days
April 4th to May 4th is 30 days

Total of 89 days which taken from 112 days leaves 23 days to be added to May 4th—thus the above sow will probably farrow on May 27th.

Or by using the formula, 3 months plus 20 days, we get:

Feb. 4 to March 4th—1 month
To April 4th—2 months
To May 4th—3 months

Plus 20 days will fall on May 24th. In the case that the month fo February is one of the months considered, the time may be a day or two short, but in the case of all the rest of the months; it would come out more nearly accurate.

As under actual conditions the length of the gestation period varies from 109 to 120 days, the major issue is that the breeder knows just about when to expect the sow to farrow so that he can make proper preparation for the event. Proper preparation, under normal circumstances means merely that the sow is provided with a farrowing place that will be safe for her and the new born litter. Just what type of farrowing place it will be may vary from the portable "A" type house, used by the large breeders (plans for which will be furnished on request) to a simple covered pen provided with the following essential features:

1. Rain tight covering.
2. Dry floor (sloped to drain)
3. Three tight sides (to prevent drafts)
4. Ample ventilation
5. Every square foot of floor accessible to sunlight some part of the day—preferably in middle of day.
6. Substantial guard rails to protect pigs.

Because of the incontestable fact that the only pigs that will be available for the smoke-house and the lard barrel are the pigs that are saved and raised from each litter, it is of the greatest importance that the home pork producer pays particular attention to item No .6 above Stimulated by nature and instinct, your sow will prepare her own farrowing bed. If left to her own devices, she will root and scoop out a saucer-shaped depression usually in the lowest place she can find in her lot. Into this "home" will she deliver her new family. If all conditions are absolutely perfect, she may greet you with a large and "all alive" litter; but, because conditions are generally not perfect, the chances are that, if the litter was normal or large, you will find that some of the pigs are dead when you first reach them. New-born pigs are quite helpless; the sow, while in labor, is both clumsy and awkward. The saucer-like shape of the bed makes it very easy for the little pigs to roll down under the sow, and when this happens, as is most often the case, you will find one more dead pig. This waste of pigs is inexcusable, because by your taking the time and needed effort the sow may be provided with a farrowing place in which she will be unable to scoop out her "pig masher"; and beneath the protection of whose guard rails, pigs fenders, or what ever you choose to call them, the little pigs will be safe from being crushed as the sow moves about. Then, too, it often happens that the farrowing occurs just before or during a heavy rain in which case the farrowing "dowl" becomes indeed a death trap, drowning most, if not all, of the new litter, or if not deep enough in water to actually drown the pigs it does become a cold, stickv, muddy bed in which they soon succumb to chills, resulting in death.

As true as the Biblical expression, "The eye of the Master fattens his cattle" is this one, "The eye and the hand of the Master will save his new-born pigs." The man who will make a success of his Home Pork Production Program must grown up, mentally, and leave behind him the antiquated notion, so prevalent throughout certain rural sections, that his sow is going to "find" some pigs "shortly." This notion lets him wait complacently by until said sow "comes up" one morning followed by six, or five, or four, of a litter of pigs which originally numbered nine or ten. He must face the fact that an accurate knowledge of the date when the sow was bred, will enable him to prepare the proper sort of a place for her to farrow, and at an early enough date so that she can spend the last few days of her gestation period in the pen becoming accustomed to it. Because of the fact that the farrowing sow can not get into much trouble within any five hour period, it is good "hogology" to make it a point to make periodic visits to her at least every five hours, starting with the 109th day of her gestation period, and continuing until she completes the delivery of her litter.

3. Management of sow and litter—Be sure that the pen and its surroundings are clean and comfortable, as it is of greatest importance that the baby pigs are warm and dry during the first week of life, when they may be easily chilled and weakened. During these first few days it is well to observe whether or not the sow has enough teats to provide one for each pig, and if this is not so, and you do not have another sow with a smaller to whom you may transfer the extra pig or pigs as is sometimes the case, good swine practice suggests that the weaker and smaller pigs be eliminated. It is far better for a sow to care for ten strong pigs than for

twelve pigs among which are a couple of runts.

Good practice further suggests that the male pigs be castrated at as early a time as is possible, and this time should occur before the pigs are to be weaned. Just as soon as the testicles are developed so that the operation can be done, it would be well to perform it. The pigs will recover from the slight shock with no appreciable period of set-back, and will be well healed and ready when they are weaned.

If the pigs are growing off normally, and you have provided ample grazing and feeding facilities, it will be time to wean them when they have reached the age of from seven to nine weeks; but in order to upset them the very least at this time it is important that you have prepared them for this by having made use of a pig "creep" for at least four week prior to weaning. A pig "creep" means any sort of device (preferably some type of fence), which will allow you to feed the pigs separately from the sow. This can be accomplished by enclosing a small trough within a fence through which the little pigs can go, but which will restrain the sow. The pigs will soon learn to use this trough and when the time arrives to wean them, they will hardly miss the milk. Unless this is done there will be a period of varying length through which they will suffer a slight set-back in growth progress while becoming accustomed to the new feeding routine.

Too much can not be said about the provision of good clean water for your sow and for the pigs and the fact that such water must be readily available at all times. This does not mean the usual mud-hole, but rather a drinking trough which can be kept reasonably clean. In this same connection it might be well to remind the Home Pork Produce that if he would avoid infestations of kidney and intestinal worms (which will render un-usable the "chitterlings" he will not let his meat hogs have access to damp swampy places where earth worms may be found. The hog is particularly fond of the earthworm as an article of diet; and although the earthworm itself is not harmful to the hog, the earthworm happens to be host to another worm which is harmful. Any time that hogs have access to earthworms you will find that heavy infestations of kidney and intestinal worms will result.

Because the writer firmly believes in keeping his hogs well, rather than curing them after they get sick, very little mention will be made in this article in regard to the matter of doctoring "on" your hogs. In fact all that will be said on this matter will be concerned with advising that preventive vaccination for Cholera, Septicemia, and any communicable disease that may be prevalent in your locality, is good swine practice, and that this vaccinating should be done while the pigs are small, thus making the cost low and possibly saving the pig or two that you might lose if you wait until the illness shows up in your lot. The one other health factor that will be mentioned concerns the practicality of providing your hogs with free access to charcoal (a well charred log), calcium (some form of ground limestone—not quicklime,) phosphorus. (steamed bone meal—or ground **clean** bones) and tankage, or some other source of animal protein (meat scraps—household garbage).

One very good method of keeping to a minimum the worm infestation, makes use of common commercial lye. Any of the popular brand names will prove equally efficient, if used according to the following directions: Thoroughly dissolve in 2 gallons of boiling water a measured quantity of lye sufficient to allow 1 tablespoon of lye to each animal. After lye has been thoroughly dissolved—and not until then—pour the solution into the slop or mix it into the feed. Do this periodically, at least once every two weeks, although once per week is not too often. Combine with this treatment the practice of moving your swine from one lot to another at least once every sixty days, and if possible plow and replant the area from which they were moved.

4. Feeding the swine herd—This very essential information has been made the subject of lengthy volumes, and naturally all that will be said on these brief pages will be a sketchy summary, designed for use as a guide to the feeder, rather than a source of factual knowledge of the art of feeding swine. To this end we will take up first the feeding practices that if followed sensibly will result in producing pigs that may later be grown and fed into slaughter hogs. For the sow and her litter the following rules and rations will prove acceptable. Rule one being that you provide an acre of grazing space for each sow, and plan and plant this area so that it will yield enough green feed for your sow and her pigs. Excellent practice will be to so divide the area in order that you may control the part upon which the grazing will take place at any one time. In simpler terms, so divide the lot that on one half the crop may be growing while the animals are grazing on the other section. Plant the following crops in this area, each in its season—oats, barley, rye, crimson clover (all may be planted together). Rape, sorghum and corn may also be used in this grazing area. You cannot have too luxuriant a growth on this lot, and every hour and every dollar you spend on its development will return to you tenfold. Although a heavy grain supplement is not needed while the sow has good grazing facilities, it is good practice to provide a minimum of some clear grain or grain mixture even during this time.

If planned carefully your lot should enable you to separate the weanlings from the sows without having to take either of the groups off a good grazing area; in fact, in the interest of producing most economically your pork for the home, you should so arrange your swine enterprise. As soon as you wean them you must start to push your meat pigs so that they will acquire suitable size and condition at the earliest possible date. The longer you have to feed them the more your meat will cost. It is possible, and has been proven any number of times, that you can make a two hundred pound hog out of a March pig by the middle of September, and out of an October pig by the middle of May. There is no need nor purpose in feeding a hog for a whole year to do what can be done in six or seven months. In this section of the South your meat hogs should be grown and fattened on some of the following grains or combinations thereof, as best suits your individual case. Corn—hogged down in the field—or fed on the ear—or shelled oats—usually grazed when ripe, barley—grazed, wheat middlings—feed them dry in self feeder, or as slop. Any one of the manufactured hog supplementary high proten feeds will speed up your production schedule, if fed according to manufacturer's directions.

If any general rule for feeding could be made it would perhaps embody the following ideas, which if considered sensibly will be a reasonable guarantee for a successful job. Provide the hog with all of the best feeding material that he will consume, making sure that he gets at least fifty percent of it from growing plants and at least half of this amount from leguminous plants.

Because this article is to concern itself with the production of pork, the writer will conclude with the above statement. At some time in the very near future a companion article—Home Pork Products, How to Prepare and Preserve Them—will be released. If any reader desires further details in regard to any of the practices mentioned in this article, or would like to receive plans for the construction of any of the devices listed, a letter to the Department of Animal Husbandry, Alcorn A. and M. College, will receive prompt and cordial attention.

Among other material, mimeographed working plans will be available, covering construction of the following devices: (1) "A" type farrowing houses, (2) Full Monitor type farrowing houses (3) Colony type farrowing pen, (4) Practical swine feeding troughs, (5) Economical pig creep, (6) Practical Self-feeders, (7) Breeding, and loading racks, (8) Sanitary watering devices, (9) "Battery" hog fattener.

A normal charge to cover cost of materials used will be made for these items.

YOUR JOB AND MINE

By E. S. Burke, Poultry Dept.

It was not just an ordinary challenge that Secretary of Agriculture Wickard gave to the Poultry Industry when he asked for 200,000,000 extra chickens and 10 per cent more eggs for this winter; it was a special assignment. It is your job and mine to make that goal as nearly as possible a reality.

To meet these goals. those of us who are left on the farm will not only have to work longer hours, but, will have to do a better job of management than we have ever done before. All of us are aware of the fact that there is a labor shortage and many agriculture products will have to be reduced. But we must increase the essential ones. Poultry is one of the essential foods to our war effort.

We must get started now. It is more important this year than ever before that we have two broods of chickens for the spring. Start one in February and the other one in April; use the same equipment twice. Equipment will be very short in 1943; maybe, you will have to share some of yours with your neighbor.

We must help spread out the hatchery season in 1943. There won't be enough hatching eggs or incubator capacity to produce all the chicks poultry raisers will want in March and April. The peek can be reduced by broadening the base. The base may be broadened by your raising two groups of chickens instead of one. Start one on February 1st and the other on April 15th. Early starting will help to get much of the brooding out the way before the rush of the spring work. Order your chicks now, so you can have them when you want them.

Those of us who are feeding laying hens, are going to be faced wit many feeding problems in 1943 because of the shortage in many poultry feeds. This is the time to seek the most authoritative advice on feeds and feedings; do not guess on changes in the ration. Many poultry men are, no doubt, faced with the problem of whether to use commercial or home-mixed feeds. The major point in consideration should be, "Do I have the time, equipment, ability and inclination to mix my own feed?" You will give good results. If you decide to mix your own feed, by all means get the most recent information on the formulas you plan to use. Formulas in circulars or leaflets printed several years ago should be carefully re-examined, in the light of present prices and availability of feedstuffs. Above all, when the country needs the eggs, do not sacrifice on the quality of the ingredients used.

When more work is to be done with less help, the poultryman should by all means see that his equipment is meeting the needs of his birds. Each 100 hens should have at least 24 feet of feeding space (two 6-feet hoppers, each with two sides available), enough fountains to provide them with six gallons of water daily, grit and shell hoppers sufficient to hold 20 pounds or two week's supply and twenty to twenty-five nests to provide adequate nesting space.

Three Ways To Get More Eggs Economically Are:

1. By better breeding, feeding and management.
2. More hens per house--having the poultry house filled to capacity.
3. More days per layer--reducing laying house mortality, which means more eggs per flock.

It is difficult to produce more eggs per hen, if the house is over crowded. Over crowded poultry houses are one of the several mistakes made on the poultry farms. A safe allowance is four square feet per hen.

Many poultrymen are asking this question: "With all these changes should I change my way of feeding poultry?"

Briefly There Are Four Methods Or Systems Of Feeding Birds

1. Hopper-Fed. Mash with hand fed grain. Good poultrymen probably can get the best results from this method. Most mashes are formulated with the idea that the birds eat about equal parts of mash and grain during the year; more mash than grain in the summer and more grain than mash in the winter. Hand feeding is the best method of equalizing the grain and mash fed.

2. Hopper-Fed Mash and Hopper-Fed Grain. If the farmer cannot spend much time with his poultry, this method will give the birds enough to eat, with the probability of the production of eggs being decreased somewhat.

3. All Mash (No Grain or Scratch). This system gives good results. The grain is all ground for the birds so they have no choice in the matter.

4. Cafeteria System. In this system all grains are fed in different hoppers and the proteins, minerals, and vitamin supplement are fed in separate hoppers; this allows the bird to choose what she wants.

When one goes over the whole business of feeds and feeding systems for laying hens, there is one thing that stands out paramount. When the proper conditions, such as housing, equipment ,and nutrition are made, the hen cares little how the feeding is given her. She does demand comfort, protection and all she wants to eat all the time. So your job and mine, is to keep 'em laying and keep 'em flying.

Controlling Internal Parasites

A parasite is an animal or plant that lives wholly at the expense of another animal or plant without contributing anything toward its maintenance. In a broader term all disease producing organisms are parasites regardless of whether they are virus, bacteria or worms. The more common meaning of internal parasites refers to (1) cecal worms, intestinal round worms, capillaria worms, gizzard worms; (2) tape-worms and flukes. Worms are one of the important problems that the poultry man has to deal with. It is not difficult to detect evidences of worm infestation in a flock. Birds that show unthriftiness, loss of appetite, low vitality, poor growth, poor egg production, lameness, and diarrhea may be suspected to having worms. Worms are most serious in the early life of the chickens. Round worms in particular, are a menace to young chicks. Many people have thought of worms as a fall and winter problem, planning to let their chickens go without attention during the summer and merely worming them in the fall before going into the laying house. Such a policy has not been to the best interest of the poultryman.

When birds have been infected with worms for some time, those that survive develop some degree of immunity; and, therefore, reinfestation is not as serious as the original infestion. However, the immunity is not specific in character, nor lasting in duration; therefore it cannot be depended upon to keep birds free from worms. The problem of reinfestation is of utmost importance in the control program. It is not enough to treat chickens for worms, there must be a well planned system of control.

Worms vary in size from microscopic dimensions to several feet in length. The great majority of worms are easily seen when the intestine is open either in post-mortem or when the chicken is dressed for the table.

The common round worm which infests the small intestines is the most widely distributed parasite of poultry. It is found in nearly all localities and in birds of all ages. Practically all classes of animals, including man, harbor some species of round worm.

The large round worm (Ascaridia Lineata) reaches the length of one and a half to two inches, is white in color, as large in diameter as an average knitting needle and infests the small intestines of chickens, turkeys, ducks, and geese. These worms live partly by utilizing the feed that should have been used by the chickens and partly by absorbing vital fluids already predigested. These worms rob the bird of food both before and after digestion. They may be present in sufficiently large numbers to stop the passageway of the bowels.

Round worms are very prolific; they may produce as many as 10,000 eggs. These eggs are laid in intestinal tract of the chicken and passed out with the dropping. The egg shell of the worm is thick and resists weather conditions. These eggs go through a systematic development of cell division and tissue differmentation, similar to the other eggs before hatching. Chickens become infested at this stage by feeding on contaminated ground and litter. The worms are hatched and begin their development between the villi of the small intestine where they cause inflamation and hemorrhage. The inflamation produces thickening of the intestinal wall, secretion of mucous and pressure on the active and functional cells of the intestines. As a result the intestine lose a great deal of their normal function of digestion. The worms reach maturity in twenty-eight days and continue their cycle.

At post-mortem, acute inflamation and minute hemorrhage may be found in the lining of intestines shown by the reddened, thickened mucous membrane. Worms may easily be seen free in the intestine varying in size, depending upon the stage of development and number present. The greater the number, the smaller the size of each worm. Female worms are larger than the male.

In very thin birds or in the last stage of sickness no worms may be found at the time, because worms leave a sick bird. The evidence of previous worminess will be the thin shrunken heart, atrophied or small firm liver, small spleen and swollen intestines. In such cases a person looks more for evidences of what worms have done than for the actual worms.

Preventative measures for worms involve the use of a sanitary yarding system with alternating yards on which green grass or other vegetation is grown followed by cultivating and reseeding. Sanitary houses combined with the removal of litter at intervals of ten days will help to prevent the round worm eggs from developing into the infectious stage. Sanitary yards and houses for growing chicks are of the utmost importance, a necessary prerequisite being the complete separation of growing chicks from adults.

The Tobacco-Dust Treatment for worms, may be given when the flock becomes heavily infested. The Pennsylvania Experiment Station recommends the use of 2 per cent tobacco dust placed in the mash after the chickens are nine weeks of age or whenever they are put on the range. Individual treatments of chickens for round worms have been worked out by the writer, and the medicine, in the form of tablets, should prove very effective for individuals with small flocks. Further information regarding the use of these tablets may be secured by contacting the writer.

DOINGS IN THE GARDEN

CHAS. A. ELLIOTT, HORTICULTURIST

Slogan: "Throw away the can opener and pick up the hoe."

With our latest government report on foods that will soon disappear from civilian consumption, we can easily see why the can opener will soon become a gadget of the past. The hoe, a more ancient and essential tool to help in this globular crisis, can easily be put to work to aid in winning this war.

Since this month is the month of fest, it will be well that we make plans to replace those pumpkins, sweet potatoes, and ex- extra food used to entertain the guest. This can best be started by preparing the garden plan and seed order. The plan will serve in several ways: First, it facilitates planting; second, it saves time and labor; and, third, it saves unneces-

Continued on Next Page

sary ordering of seeds. The seed order, if sent in this month, will be given careful and immediate attention, and in most cases it will be completely filled. The seed will also arrive in time for the early January planting.

It is essential that the garden should be rich in plant food in order that the food harvested will possess the essential minerals and vitamins. Adding of barnyard manure to the garden spot is one of the best methods of supplying plant food for the soil. If added this month, the manure will have time to decompose and be in an available state for the young growing plants in the early spring. The manure will not only add fertility or plant food, but it will also help the texture of the soil. Because barnyard manure is deficient in phosphorus, it is usually advisable to add about fifty pounds of superphosphate to each one-fourth acre of garden spot.

Few crops can be planted this month, because they will not attain a size large enough to withstand the cold weather.

Spinach, radish, onions, swiss chard and luaf lettuce are among the "chance vegetables" for this month. If your garden spot is protected, these crops will thrive well; otherwise, if severe weather prevails over a long period, the crop might completely freeze.

Although in the locality of the college this fall has been too dry to do much successful gardening, we do have a very prosperous outlook for our spring garden. Very little can be successfully planted now for the winter garden as the cold weather is just around the corner. We can, however, plant certain crops that will winter-over and come out for early spring crops.

Spinach, a frost and cold resistant crop, can well be planted this month. It is a productive healthgiving vegetable and is quite palatable when cooked. It is also very rich in vitamins and minerals.

Kale, another cold resistant crop, thrives and improves in quality when attacked by frost. If you have not planted any in your garden it would be wise to seed at least one row immediately.

Swiss Chard—A delicate and delicious and Summer green, may be planted now to winter-over and give very early greens for Spring use.

Onions—This crop should be found in every garden. They should be of two types: the potato onion or the annual type produced from bulbs planted in fall, and the multiplier type. The latter is very easily grown and can be used as green onion for flavoring and for pickles, once they are established they will multiply and thrive with little attention.

Radish is a good crop to have in the garden for the purpose of adding color to the diet. If the white icicle variety is used, it can be grown during the winter months.

Along with planting of the above it will be also advisable for you to do your cultivation and addition of manure and leaves to the garden spot this month. Now is the time to clean out the old fence corners and places where rubbish and weeds might act as harbors for insects.

Speaking of insects, if you have collards in the garden now, you might find that green worms have eaten holes in the leaves. If they show these signs, an application of derris dust or rotengne, two nonpoisonous substances, will rid you of these pest. If you already have any of the arsenicals from the cotton dusting, you might mix one part of the arsenate, lead, calcium, or magnesium to nine parts of lime and dust the plants. This mixture is poisonous and the plants should not be used until the collards have been washed thoroughly.

Now is the time to get that old hot-bed and cold frame back into action. If you don't have one already and do not know how to make one, then, consult your county agent. Next month will find our hot-beds in full use. Please be ready to start with us.

WHAT MISSISSIPPI N. F. A. CHAPTERS ARE DOING TOWARD THE "WAR EFFORTS

In response to a questionnaire sent to advisors of the N. F. A. chapters in the State from the Teacher Trainer's office, data were received from 34 chapters. This data showed in detail what each chapter was doing to assist the war effort. The items most frequently reported as contributing towards the war effort were the purchasing of war bonds and stamps, production of victory gardens, repair of farm machinery and equipment, inclusion of food production in the supervised farming program, sponsoring joint projects, collecting scrap material and spreading the "gospel" of the rural war production program among adult farmers of the community.

The greatest number of members to buy bonds and saving stamps in any one of the chapters was 46, reported by the Port Gibson chapter; the greatest value of bonds and saving stamps purchased was $693.05, reported by the Madison County Training School chapter; the greatest estimated value of repairs to farm machinery was $526.50, reported by the Louise chapter; and the greatest number to carry victory gardens was 53, reported by the Scott chapter. The Walton Chapel chapter reported that its members are sponsoring two joint projects, a Boar Circle and a Bull Circle, to improve and increase pork and beef production. This was perhaps the most outstanding joint project reported by any chapter.

The advisor of the Port Gibson chapter is Mr. E. W. Reeves; of the Madison County Training School chapter, Mr. Sylvester Barnes, Jr.; of the Louise chapter, Mr. R. A. Fisher; of the Scott chapter, Mr. C. L. Gibson, and of the Walton chapter, Mr. L. G. Williams.

Summary of the N. F. A. Chapter War Efforts

Total number of chapters reporting	34
War Bonds and Stamps:	
Members buying	343
Total value	$3,949.85
Repaired Farm Machinery:	
Number of chapters	34
Estimated value	$6,776.10
Carrying Victory Gardens:	
Number of chapters	31
Number of members	515
Number of Chapters Sponsoring	
Joint projects	27
Scrap Collection in Drives	32
Food Production in Project Programs	32
Moral Building Programs	28

HOPEWELL SCHOOL CLEARS $607.00 PICKING COTTON AS LABOR AID

Early in September, the patrons and students of Hopewell School met and set up a $600.00 goal to be reached. It was decided that the school should help out in the labor shortage as a large number of men who produced our bumper cotton crop were now in the armed service of our country.

It was decided to take one day each week as community-wide cotton-picking day. Interested farmers were contacted. The community was divided into groups and put under the leadership of teachers, trustees ond other community leaders.

132 Cotton Pickers

On the fourth day 132 of us came together on Mr. W. W. McArthur's farm.

In a meeting following the 4th day's picking it was revealed that we had cleared $415.00, which was an average of $103.75 per day. We had picked cotton 35 farms—20 colored and 15 white. Even though we had raised the surprising sum of $415.00 we were still $185.00 from our goal.

The next step was decided upon. As most of the cotton in our immediate section had been picked, it was arranged for Prof. W. F. Calbert and Prof. E. H. Sumpter to take a group of agricultural boys to the delta for o week. We picked cotton during the day and held school at night.

The U. S. Employment Office at Greenville was contacted and a plantation was selected where we were to spend the week. We were fortunate in getting located on the Erwin Plantation, Erwin. Mississippi. The very efficient manager, Mr. W. J. Shutts, spared no pains to make our stay there pleasant and profitable. We had a group of twenty-six pickers. The boys were given 4-7 of the amount that each made. The other 3-7 went to the school. After paying our food and transportation costs, the school cleared $155.80 in the delta. The group at home spent a day out during that same week and cleared $37.40. This gave the school $192.00 for the last week's activity. $415.00 plus $192.00 gave us a total of $607.00. $400.00 of this amount has been used to pay off the debt on the teachers' home. The other $207.00 will be used for repair work.

The patrons, students and teacher gave their hearty cooperation to the project. The adventure was education and enjoyable. The agricultural boys got their first experience of delta life and delta farm practices. The other group of children was given a trip to Jackson to visit the zoo, state capitol, state fair and other points of interest.

(Editorial Note: The above article, written by Wayne Calbert of Hopewell School, reveals a most worthy undertaking and one that could well be followed by many other groups.)

—The Neshoba Democrat

OPPORTUNITIES OF THE NEGRO FOR EMPLOYMENT IN NATIONAL DEFENSE INDUSTRIES

By P. S. Bowles

Naturally at a time like this when there is national regimentation in so many areas in which the average citizen has been wont to revel at will and do as he pleased; when there is rationing in the amount of land that a man is allowed to cultivate in certain crops; rationing in the sum total of certain crops which may be produced without penalty; rationing in the amount of certain commodities which each individual is permitted to use, there is an obviously increasing spread in the individual awareness and acceptance of the fact, that, in the language of Holy Writ, "No man exactly liveth to himself," and that the interests of each are inextricably bound up with the interests of the other, and the welfare of all the parts is best preserved and protected when each gives major consideration to the welfare of the whole.

This regimentation as to the total out-put in certain lines of industry has put a limit to the number of workers who may find profitable employment in those industries; and that has caused wholesale shifting of workers from old and accustomed lines of employment to others with which, in many cases, they have had but slight familiarity. A part of this regimentation has grown out of the war effort in which the government is at present engaged, and a part has been due to conditions resulting from the general economic disaster that overtook the country as a result of bad planning, or lack of adequate planning against the evils following in the wake of World War No. 1. The wholesale practically closing down of certain industries and the sharp limitation of the total out-put of others resulted in sweeping reductions in the number of persons employed in such industries, necessary to satisfy the needs of those who were able to buy and use products of such industries; and the consequent increase in the number of unemployed throughout the country.

The government magnanimously undertook the task of taking up the slack in industry by opening up various government projects and furnishing employment to thousands who would have otherwise entered the rolls of the unemployed. While struggling thus with the problem of unemployment and relieving the situation as best it could, the present war broke out among the nations of Europe, at which for more than a year our government was only a distant spectator.

Suddenly, on December 7, 1941, our flag was assailed and nearly 3000 of our soldiers and marines were killed at Pearl Harbor in the Philippines, and America was at once faced with the stark reality of war. Faced with this situation various types of new industries had to be opened up in order to meet the exigencies which the war forced upon us.

Meantime during the depression years preceding the outbreak of hostilities between our government and those of the Axis Powers, the struggle for bread had become so tense that as a minority group in this country the Negro was forced out of many lines of employment which had previously been held by him in monopoly, and the spread of industries in which he was permitted to find lucrative employment was becoming narrower and narrower.

And, while we are bound to admit that war is all that Sherman of Civil War fame said it was, it has had at least one redeeming feature; that is, it has opened up many opportunities for useful employment for the Negro which would otherwise have remained closed against him. By bringing on us a common calamity, it has broken down many of the walls of segregation in industry that have long existed; and leveled many walls of discrimination against him that had been built up through years, thus giving him increased opportunities to be gainfully employed in many of the old industries, besides making it necessary for the creation of many new industries, where as many qualified workers as can be found may be employed regardless of race or color. I confess my regret at not having exact data compiled from the record as to the precise number of new job opportunities open to the Negro as a result of increased changes growing out of the war industries; but I feel that a check on new employment opportunities opened up in our own state may give us a fair picture of what has happened throughout the nation. Mississippi being one of the states located in the deep south, and one which because of the Negro's predominance in numbers in the population, the white people seem to have felt that it was necessary to hold a tighter check rein on him than has been true in the rest of her sister states, lest he "'take the bits in his mouth" and run off with things. She has been the state in which opportunity is a bit more tardy in knocking at the Negro's door than in most of the other southern states, especially in those realms of opportunities for a livelihood which have heretofore been taken for granted to be white folks' jobs.

I think it safe, therefore, to assume that whatever opportunities for employment have come to Negroes in Mississippi as a result of war demands can be more in other states of the Union.

If, therefore, we can find out what new opportunities for employment in war industries have come to Negroes in Mississippi, if we multiply that number by the number of states we have, we will obtain a product in terms of employment opportunities which will represent at least the minimum of total opportunities for the nation as a whole.

So, beginning where it is commonly said that charity should begin, I made an effort to find out what additional lines of employment had opened up to Negroes in Mississippi as a result of war industries.

And, according to the best information available, already Mississippi has found it necessary to organize 47 courses for the training of men in war industries alone, employing 21 instructors to conduct the classes, and paying them extra for their services. These instructors have enrolled in their national defense courses a total of upwards of 2,000 students, who, upon the completion of their courses will be eligible for placement in defense industries, provided they show efficiency on the job when tested.

In the field of agricultural production farmers have engaged to step up agricultural production in certain crops where a shortage exists, and where such shortage affects detrimentally the efficiency of the nation's war effort. And teachers of vocational agriculture are employed to encourage the planting of these essential crops, to instruct farmers in methods of increased production, and in supervising the farmers' activities involved in such production and conservation. And these teachers are allowed extra pay out of the money appropriated by congress to finance the war effort. Thus in the field of agriculture the door of opportunity has been opened wider for absorbing more teachers at increased pay.

And not alone are those persons who have completed their courses in college and gone out as licensed teachers so engaged, but even many farmers who have proven ability to carry out the government's program by actually doing the job and doing it right have been approved to teach others the art and are paid for their services as teachers. Consequently in Mississippi we find that the service has absorbed every available teacher possible and at fair pay. And in the trade and industrial field the demand for trained personnel for the armed service is so insistent that many of the trainees who have been able to complete certain short courses have been immediately commissioned as teachers to go out and set up courses for the training of others in those special fields.

Thus, while we have not given any statistical data as to exact numbers of Negroes who have found employment in our war industries we have given a general outlook as to what is happening in our state as to increased opportunities for employment of Negroes in war industries. And by multiplying this by the number of states we have, we shall procure a bird's eye view of the conditions throughout the nation in that regard, because, as I afore said, Mississippi represents the minimum of opportunity.

It is also true that many courses in which at the beginning of the war no provision was made for the training of Negroes are now open to them in our own state and in many others.

In conclusion another field in which many Negroes are finding employment in phases of the war industries is that of the civil service. For all classes of work it is no longer necessary for an applicant to give his race or color or furnish a photograph of himself before being permitted to take a civil service examination; and in many lines of work many of the hard and stiff requirements heretofore exacted of would-be applicants are being modified and the standards lowered, and the matter of color is lost sight of.

So, all-in-all, while the war has its unpleasant side we may take some consolation from the fact that in the matter of increased opportunity for employment for the Negro, there is, after all, a silver lining to the otherwise dark cloud.

BREAD PRICE FIXED IN 1202

The price of bread was standardized for centuries under the assize of bread, a law passed in 1202 in England. Standardization was brought about by varying the size of the loaves with the changes in wheat prices.

In ancient Rome, bakers were called pistores, or pounders. They were given this name because of the way they pounded grain with a pestle in a mortar.

Eating Crow

An article in the Shreveport, Louisiana, Times of December 29, shows one reason why tens of millions of taxpayers are digging deeper into their purses today to find the money to pay Federal taxes.

Hundreds of millions of dollars have been poured into government-owned electric power plants to duplicate and compete with the private electric industry, although that industry has never failed to meet the requirements of this nation.

The heaviest industrial demands of war have had to be met by it without delay and at low rates. This in itself proves that the private power industry is capable of necessary expansion. The article in the Times is further proof.

Down near Hot Springs, Arkansas, ten power companies in several states pooled their power resources to supply a new government for construction work.

But the Rural Electrfication Administration insisted on building a line, with taxpayers' money, from the Pensacola dam on the Grand River in Oklahoma, to the government aluminum plant near Hot Springs, at a cost of some $40,000,000, to carry about one-third of the load—the excuse being that otherwise there would have been insufficient power for the plant, although existing companies had agreed to handle the whole load.

On December 25, the REA line broke down. The interconnected power from the private companies automatically took the up the additional load and prevented interruption in the aluminum company operations, which would have meant the loss of of more than a million pounds of aluminum, or material for 150 bombers.

This proved that existing companies were able to carry the load as they claimed, while serving other customers. It demonstrated that the superiority of interconnected systems which do not depend on a localized source of supply. It also illustrates how taxpayers' funds are being dissipated by unnecessary government spending which discourages and destroys taxpaying industries which have always been the strength of this nation in peace and war times.

Diluted Faith

This nation has always been unbeatable because the people have had faith in their form of government and in private enterprise. Their faith brought them freedom—spiritual, economic, and political. It also brought them unprecedented comfort and security. Any man or woman, regardless of race, color or creed, was free to come and go as he pleased, work for whom he pleased, and by thrift, bring security and well-being to himself and his family. He could go into business for himself and if he made good no one resented his success. Yesterday these things were so, without question.

We now hear predictions that we will have some measure of socialism after the war. We hear warnings that the people intend to have "total social security." If they cannot get it 100 per cent under the present system, the implication is they will demand it under some other system. Material comfort with many has clearly taken over things of the spirit, although lip service is still paid to American traditions. Federal bureaus and many public officials promote this counterfeit doctrine.

A good example of diluted faith in America was contained in a recent news report from Washington, which stated that in the near future an energy resources czar would be appointed to "control production and distribution of coal, oil, and electric power." The long-range purpose of this and similar official planning is to pave the way for ultimate taking over by government of all natural resources industries—socialization.

Natural resource industries are the foundation of free enterprise. They have served the nation well. They have contributed to stable employment and higher living standards. There is no sound reason for making basic changes in their ownership or their methods of operation. Proposals for their socialization mean that officials with "diluted faith" are trying to straddle a political fence. This is not the kind of "faith" that built this nation.

Hitler Couldn't Do Better

An incident is taking place in Puerto Rico which should be brought to the attention of every American citizen. As an island territory of the United States, it is being used as a guinea pig for social experiments at the hands of socialist politicians working under cover of emergency war powers granted by the people of this country to their government for the efficient prosecution of the war. It is an abuse of power that should make a fair-minded observer see red.

The war is being fought to preserve and re-establish the principles of representative government and individual rights. But the same officials who pay lip service to these war aims proceeded to ape Hitler in Puerto Rico. As the New York Times recently pointed out, at the instance of American government officials the Legislature of Puerto Rico in the last two sessions has: "(1) provided for government ownership of more than half the island's sugar lands: (2) turned all of the sugar mills into public utilities subject to regulations of the Public Service Commission; (3) authorized the government to purchase and operate all forms of communication; (4) provided for government ownership of all means of transportation; (5) created a government bank in which all insular revenues may be deposited; and (6) authorized the formation of a development company through which the government may engage in any form of private business."

The people of Puerto Rico have futilely opposed derstuction of private ownership. American courts have condemned it, pointing out that the emergency powers of government were never intended for such application. But the process continutes. Puerto Rico is fast becoming a socialized state under the jurisdiction of the United States. What irony!

Is this a preview of "the brave new world" we may expect to see in expanded form in this counrty and other countries which this nation is now helping to liberate?

Time To Help

The right of any business to advance by the initiative of its owner or management, operating on a competitive basis, has given this country a merchandising system that is now of incalculable value to consumers in money saved, and in the greater variety and better quality of products and merchandise offered.

Retail stores never before faced such problems as today. Securing goods for distribution requires expert knowledge, foresight and an understanding of laws and regulations heretofore unheard of in this nation.

There is one request that merchants now make of all consumers: Between now and the time full war rationing takes effect late in February, don't hoard. The merchants ask this because they are cooperating with government to the utmost to avoid disruption of consumer supplies. Merchandisers, no matter how efficient, cannot distribute products that don't exist. Lend-lease and military demands have made deep inroads on supplies of all kinds. It is up to the consumer to cooperate in dividing what is left.

The Suez Canal shortens the sea route from London to Bombay by 5,100 miles.

Another Nail

One of the most remarkable jobs ever done by the fire insurance industry was the recovery of 10,000 tons of the 18,000 tons of crude rubber which was given up for lost in the disastrous Fall River fire which destroyed the 30 buildings containing the rubber at the Firestone plant at Fall River, Massachusetts, October 12, 1941.

The recovery of this rubber illustrates an asset of the United Nations which cannot be put down in figures, namely, the ingenuity and ability of free enterprise to adapt itself quickly and successfully to meeting and mastering emergencies.

American business men, unaccustomed to accepting the word "impossible", would not concede that all the rubber was lost at Fall River. Despite the hopeless outlook, the Rubber Reserve Corporation, the Firestone Company and the fire insurance companies tackled the salvaging job.

The Underwriters Salvage Company, owned by fire insurance companies and operated in 36 states, went to work. "Strip" mining methods were used—steam shovels, a crane, trucks and heavy equipment for mining operations. What amounted to a steam laundry was built to clean hunks of "mined" rubber of dirt and muck, live steam at 200 pounds pressure.

Through winter, spring and summer 65 men working three shifts "laundered" the recovered rubber. It was shipped to the nation's leading rubber goods manufacturers. Today it is on the fighting fronts—10,000 tons that was given up for lost.

Once more, private enterprise drives a nail in the Axis coffin.

Fantastic!

The better brains of the country have been drawn into the war administration. Politics has to be forgotten when a burglar has a gun at your head.

Domestic problems have been largely sidetracked in the public mind, as they have seemed superficial compared with the war.

Beauracracy has run wild in Washington. The simplest acts in family life have been made complicated issues. One has to read the requirements for cutting up a beef in order to comply with price ceilings, to see how confused a local butcher must be. Running a grocery or merchandise store has become a problem so complicated that stores are going out of business by the thousands. Instead of receiving cooperation from government bureaus, everyone is threatened with a $10,000 fine or ten years in jail, or both, as the penalty for every failure to comply.

The people are heart and soul for winning the war on the battlefront. Boys from every family are there. We are proud of the results they are accomplishing. The people are also heart and soul for winning the production and distribution problems on the home front to back up our whole war effort. But they are beginning to open their eyes to waste and confusion and politics—as usual on the home front.

The situation has become fantastic and it is high time that thousands of bureaucrats who never raised a chicken, a hog, or a cow, and who never produced an article by manual labor, and who never maintained a payroll or sold a yard of goods, be replaced by men who know something of the actual problems of production and distribution.

Let brains come on the top in domestic affairs as they have in military affairs.

Germany has increased its use of cellulose for fodder to 500,000 tons per year so that an increase of 40 per cent is needed in woodpulp production to supply the paper and rayon industries.

A new device finds gasoline vapors; flashes a warning light when accumulation in airplanes become dangerous.

Dangerous Hoarding

Illegal hoarding of gasoline is a far cry from storing a few extra cans of food. W. E. Mallalieu, General Manager of the National Board of Fire Underwriters, observes that few people realize the potentially deadly hazard of gasoline. Gasoline vapors in a room can be just as explosive as they are in the cylinders of an automobile engine. One pint of gasoline fully vaporized will render 200 cubic feet of air flammable and explosive, and quite capable of wrecking walls that may confine it.

People who store gasoline in makeshift containers are practically inviting disaster. Such methods are particularly hazardous in basements. Containers are seldom tight. Gasoline vapor can readily be ignited from the furnace. The seriousness of this hazard can be recognized by the fact that shortage of gasoline without express permission is prohibited by many standard fire insurance policies. Even the so-called "safety can" is usually far from safe. Few of these containers are new and some of them may contain a small amount of water which will eventually produce a rust hole, thus permitting a slow leakage of the gasoline. This may not be noticed until a dangerous accumulation of vapor has resulted.

Perhaps the greatest danger to life is involved when the hoarder pours the gas into his car. It is practically impossible to avoid spilling a little and an invisible spark from static electricity is all that is needed to produce maiming or death.

Hoarding gasoline is a foolhardy policy. Sooner or later it will result in tragedy to the person who thus defies common-sense laws that are seeking to bring this country through the war without a breakdown in motor transportation.

Life Of America

There will be many changes as a result of the war. But change in itself is nothing to fear. Constructive change has made this country great. The fundamental theory of our government encourages constant change, which in turn has brought constant progress.

Every man is urged to exploit his talents to the benefit of society, for which grateful fellow men pay a fair reward. Our manufacturing and natural resource industries are built on this principle of service. Currently they are turning out the machines of war in mountainous quantity. But in normal times they are ever changing, ever seeking for things that will give the rest of us a fuller, more wholesome life. Not only does this hold true in the development of new products, but also in the field of human relations.

Men and women who work in industry, whether they wield shovels or pencils, work in an atmosphere of change, of progress. It is manifested in a thousand and one small ways, from better light and ventilation in the factory to new devices for settling differences between managements and workers.

Management changes too. Men who give their lives to building and operating industries are constantly being replaced. Their jobs are being carried on by other men who work just as hard.

"From shirt sleeves to shirt sleeves in three generations," is typical of the changing opportunities that sustain the American system of free enterprise. If we destroy individual incentive and its desire for change, the life of America will be destroyed.

What Are Wage Ceilings?

Newspaper dispatches of December 7 say that representatives of five operating railroad brotherhoods met in Chicago to formulate plans for further payroll boosts.

To the ordinary citizen or farmer who is trying to comply with war regulations and price and wage ceilings, this move for a further wage boost for some 350,000 of the highest paid workers in the world, is bewildering. It becomes more bewildering when at the same time price and economic stabilization officials ask for reductions in rail rates to combat inflation.

Four Fronts

Military victory must come on the fighting front. But back of the fighting front are three other fronts—manufacturing, farming and transportation. The fighting front cannot succeed without the efficient support of the other three. Robert S. Henry of the Association of American Railroads, in stressing the importance of the four fronts, has pointed out that on two of the fronts—farming and transportation—a constantly heavier load has been imposed while plant, equipment and manpower has either expanded very little or actually declined.

As far as the railroads are concerned, Mr. Henry said that: "To meet the rising demands in 1943 we shall have to continue . . . to improve our utilization of cars and engines, already at the highest point in our history; and we shall have to have more cars and engines. The number which we are asking the appropriate authorities to authorize is 80,000 freight cars and 900 locomotives, which is in no sense a 'trading' figure but is a minimum statement of our absolute needs.

"Just as on the farming front, so on the transportation front we are facing not only materials difficulties but also manpower problems. It may well be, in certain places at least, that the number of switch engine crews, train crews, or other railroad workers available rather than the number of cars and engines on hand, may determine how much a given railroad or a particular division on the road can handle.

"Manpower," just as materials, is a problem for those who must fix the policies for the over-all conduct of this most stupendous of all human enterprises—the war of the United Nations to restore and preserve the freedom of the earth. We who have limited parts in that enterprise can only do our best, trusting that those in a position to see the situation as a whole can carry the war forward on all four fronts. For men, the bravest and best in the world, cannot fight without tools and food; fighting tools cannot be manufactured without food; and none of it can be done without transportation."

A Hopeful Sign

The recent election contained evidence that the public is getting weary of destructive political attacks on industry. Particlarly was this true with respect to the electric industry. Voters turned thumbs down on practically every candidate who sponsored socialized electric power.

It is only logical that advocates of laws that would undermine American enterprise should go down to defeat. Voters who have enough faith in the institutions which support our economic and political liberties, to send the cream of our youth to all corners of the world to fight and die in protecting them against military aggression, certainly should not sanction their destruction by socialistic philosophers seeking public office at home.

The electric industry is an outstanding case wherein the intent of a minority group to change the form of government in this country has long been clearly defined. In the beginning, the abuse of a few electric companies furnished ammunition for an attempt to discredit the entire private electric industry in the eyes of the public. Next came such projects as TVA, ostensibly to further navigation, flood control, and kindred worthwhile objectives—and incidentally to furnish a "power yardstick" which was nothing more than a tax-subsidized club to drive the private companies out of business.

Finally, after great government hydroelectric plants dotted the rivers and valleys of the entire nation, came the admission from the socialists that their real intent all along was the total socialization of electric power. The admission undoubtedly did not come until they felt the plan was too far advanced to be stopped. It remains to be seen whether they miscalculated. The elections indicated that the people are awakening to the dangers of the alien doctrine of state socialism.

WOMAN'S PAGE

TIPS ON REDUCING MEAT USE, PREPARING FULL MEALS GIVEN

By Mary Jane Brooks

Don't look now, ladies, but that apparent conflict in the kitchen between Keep Fit Propaganda and Meat Rationing is no more than a friendly discussion. It seems you can be patriotic and satisfy that hungry family all at the same time—and for less money—if you mind these tips, hot from the broiler.

According to Miss Sarah Shull, whose "Health For Victory" lecture tomorrow before the nutrition group of the local "block organization" of the citizens service corps will concern "Stretching Your Meat Dollar," it's all a matter of initiative and carcasses.

What has happened already is this. Despite the fact the United States has a larger meat supply than ever before, our armed forces and Allies will tuck away about 6,500,000 pounds of it, leaving the rest of us 17,000,000 to 18,000,000 pounds and rationing.

But don't go away, because—to coin a new phrase—necessity is the mother of invention and it's no trick at all to be a Thomas A. Edison of the kitchen stove.

There are two important steps, Miss Shull says. The first, obviously, is to use less meat, substituting other pieces de resistance; and the second, to shop around for a variety of meat cuts. The latter, of course, doesn't necessarily allow you any more meat under rationing, but can knock a lot of dollars off your budget and ease the pressure on your butcher.

Substitutes Cited

Under substitutes, Miss Shull lists fish, poultry—not incluuded in the rationing program— and a variety of egg and cheese dishes. And don't forget spaghetti and macaroni.

For example:

TOMATO RAREBIT

2 tablespoons butter
2 tablespoons all-purpose enriched flour
3-4 cup milk or thin cream
3-4 cup strained tomatoes
2 cups grated cheese
2 eggs, slightly beaten
Salt
1-8 teaspoon mustard
Paprika

Melt butter in sauce pan, add flour, and mix thoroughly. Reduce heat. Pour in milk, and cook until thickened. Then add tomatoes slowly, next the cheese and mustard, and cook until cheese is dissolved. Add eggs and cook only a few minutes longer. Serve piping hot on toast. Serves six. (Care must be taken in adding tomatoes after the milk mixture is thickened or else the mixture will curdle—in which case, it will be necessary to add 1-8 teaspoon soda.)

Or perhaps:

SPAGHETTI CASSAROLE

2 cups cooked spaghetti
2 cups soft bread crumbs
2 cups milk
2 cups grated cheese
1-2 cup melted butter
1-2 teaspoon salt
Dash of red pepper.... ....
2 eggs, beaten
4 tablespoons pimento, chopped
1 can condensed tomato soup

Combine all ingredients except tomato soup. Place in a greased three-quart casserole. Bake for 45 minutes, then pour the soup over, and bake 15 minutes longer at 375 degrees. Makes six large servings.

MEAT CUTS

And now for the carcasses . . . You may not know it, but there are 37 separate and distinct cuts of beef, all from the same carcass, and all of them are almost identical in nutritive value. The great demand at the butcher shop, however, is for only eight of these cuts. The complete roll call includes rolled rump, rump roast, sirloin steak, pin bone sirloin steak, porterhouse steak, T-bone steak, club steak, standing rib roast, rolled rib roast, rib steak, blade steak, blade pot roast triangle pot roast, boneless chuck pot roast, shoulder fillet, English cut, arm pot roast, arm steak, rolled steak, boneless neck, round steak, top round, bottom round, heel of round, ground beef, hind shank, rolled flank, lank stew, lank steak, flank steak fillets, plate boiling beef rolled plate, short ribs, beef brisket, corned beef, knuckle soup bone, and cross cut fore shank.

Knowing carcasses is where the money-saving comes in. A 6-lb. standing rib roast at 40 cents a pound, for instance, comes to $2.40. A pot roast, on the other hand, costs 30 cents a pound, and three-and-a-half pounds will serve the same number as the six-pound rib roast, because you aren't buying fat and bone. Hence you pay $1.33 for pot roast or $1.07 less than for the rib roast and get just as much for your money.

Miss Shull will go into these and other meat matters at the Block Defense meeting tomorrow at 10:30 a. m., in the Watkins Institute Auditorium.

Pamphlets, complete with illustrative diagrams and recipes, will be distributed at the block defense meeting.

BAKED APPLE SAUCE

3 cups sliced apples
1-2 cup corn syrup
1-2 cup sugar
1-2 cup water
teaspoon cinnamon
1-4 cup cloves
1-8 teaspoon salt

Mix ingredients and pour into buttered baking dish. Cover and bake 30 minutes. Stir several times with fork. Uncover and bake 15 minutes.

BROWN FRICASSEE OF VEAL

1 1-2 lbs veal
1-2 cup cold water
2 tablespoons flour
1-2 teaspoon salt
1-4 teaspoon black pepper
1-2 cup chili sauce
1 small onion

Cut veal in small pieces, roll in flour and brown in hot fat, (drippings from salt pork); add enough water to cover and simmer slowly for 1-2 hour. Make a sauce by sauteing onion, flour, salt and pepper, add chili sauce and water. Pour over meat, stir until boiling and let simmer 30 minutes.

VEAL CREOLE

2 tablespoons butter
1 green pepper (chopped)
1-2 cupful catsup
1 cupful warm water
1 small onion (chopped)
Flour, salt and pepper

Melt butter, saute green pepper and onion; dip slices of veal in flour, sprinkle with salt and pepper, fry in the skillet. When brown pour over it the catsup mixed with water. Bake for 30 minutes in a moderate oven. Serve with boiled rice.

VEAL LOAF

2 pounds cooked veal
2 small onions
1 cupfull bread crumbs
2 tablespoons green pepper
1 egg
2 teaspoonfuls salt
2 tablespoonfuls Worchestershire-sauce
2 tablespoonfuls catsup

Chop meat, onion, bread crumbs, add eggs, Worchestershire sauce. catsup, green pepper and salt. Pack in a greased loaf pan and bake in a moderate oven for one hour.

TOPSY-TURVY MEAT SQUARE

Meat Filling:
1 cup ground meat (1-2 lb.)
1 tablespoon fat
1-2 teaspoon salt
1-4 teaspoon pepper
1 1-2 tablespoon chopped onions
3-4 cup condensed tomato soup or 1-2 cup canned tomatoes
1 1-4 cup cooked green beans, drained

Drop Biscuit Topping:
2 cups sifted enriched flour
2 1-2 teaspoons baking powder
1-2 teaspoon salt
1-4 cup shortening
1 cup milk (about)

Brown onion in fat, add meat, salt, and pepper. Cook 5 minutes. Add tomato soup and beans. Pour into greased 8x8x2 in. pan. To make Drop Biscuit Topping, sift flour, baking powder and salt together. Cut in shortening. Add milk and stir until flour is moistened. Spread over meat mixture in pan. Bake 25 minutes in a hot oven (450 degrees F.) Serve with tomato sauce. Yield: 6 servings.

TANGERINE CUSTARD

2 cups milk
2 eggs
1-2 teaspoon vanilla
1-4 cup sugar
Few grains salt
Tangerine sections

Beat eggs slightly; beat in sugar and salt. Pour scalded milk over egg and sugar mixture. Return the custard to top of double boiler; stir over hot water until mixture forms a coating on a metal spoon Pour immediately into a bowl; add vanilla. When cool. pour into serving dishes. Cover each portion with layer of tangerine sections. Top with whipped cream and serve. Makes 5 servings.

CORN MEAL REFRIGERATOR ROLLS

1-2 cup corn meal (uncooked)
1 1-2 teaspoons salt
2 cups boiling water
1-2 cake compressed or dry yeast (1-4 ounce)
1-4 cup lukewarm water
1-4 cup flour
1-2 cup diced potato
1 cup water
1-2 cup shortening, melted
1-4 cup sugar
6 1-2 cups general purpose flour (approximately)

Sift corn meal slowly into salted boiling water. Cook, stirring constantly until thick, then cook over boiling water 30 minutes.

Meanwhile, crumble yeast into lukewarm water, add the 1-4 cup of flour and stir until well blended. Cover sponge and allow it to stand until light and bubbly, about 1 hour.

WHITE FESTIVAL CAKE

1 cup shortening
2 cups sugar
3 cups sifted flour
1-2 teaspoon salt
3 teaspoons baking powder
1 cup milk
1 1-2 teaspoons flavoring
6 egg whites

Cream shortening. Add sugar gradually, creaming until very light and fluffy. Sift flour, salt and baking powder together. Add flour and milk alternately to creamed mixture. Add flavoring. Fold in stiffly beaten egg whites. Mix to smooth batter. Pour into greased paper-lined layer cake pans. Bake 35 minutes in moderate oven (350 degrees F.) Yield: 2 9-inch layers.

JIFFY FROSTING

1 cup sugar
1 egg white
2 tablespoons corn syrup
3 tablespoons water
1-8 teaspoon salt
1 teaspoon flavoring extract

Combine all ingredients except flavoring in top of double boiler. Cook over rapidly boiling water, beating constantly with rotary beater until mixture holds its shape. Remove from heat. Beat until cool. Add flavoring extract and spread on cake.

EGG NOG FILLING

4 egg yolks
1 1-4 cups sugar
1-2 cup butter
Grated rind of one lemon
3 tablespoons flour
1-4 cup chopped candied citron
1-2 cup raisins
1-4 cup liquor: rum, brandy, whiskey.

Beat egg yolks. Mix sugar and flour and combine with eggs and butter in top of double boiler. Cook over simmering water until the mixture is of the consistency of heavy cream (about 45 minutes). Remove from heat. Beat until cool. Add fruits, nuts and liquor. Stir until well mixed. Spread between layers.

SPAGHETTI LOAF

2 cups cooked spaghetti
2-3 cup bread crumbs
cup diced celery
1-4 cup chopped green pepper or pimientos
1 teaspoon salt
1-4 teaspoon paprika
2-3 cup grated or finely shaved cheese
2 eggs, beaten
1-2 cup hot milk
2-3 cup canned condensed tomato soup

Mix ingredients and pour into buttered, loaf pan. Bake 50 minutes in moderate oven. Let stand 5 minutes in hot place and unmold. Cover and surround with creamed peas or green beans.

HELPFUL HOUSEHOLD HINTS

MISS ALDEN GIVES ADVICE ON SHEETS

Martha Alden, sleep consultant of Pequot Mills, was guest speaker at the dinner of the Illinois Women Hotel Managers and Executive Housekeepers at the Midwest Hotel Show. She said, in substance:

"It is important that hotels offer restful sleep to their guest.

First, be sure that complaints of poor beds and sleeplessness are not your fault. If the bed is so tightly made that the guest is wrapped like a mummy, or so loosely made that the cover slip off, you are to blame. That part of providing restful sleep depends upon you.

There are five classes of sheets —low, medium and high thread count muslin, and utility and comb percale. Medium muslin is recommended for the average hotel. Low thread count is not practical; the heavy stands up longest and is ideal for government use. Percale is luxurious, rather expensive for general hotel use, but if laundry is done on a basis of weight the extra cost is saved in the laundry.

In buying sheets and pillow cases see that the yarns are even and of the same psoportion the entire length. Feel if the texture is strong or sleazy. Buy sheets with tape selvage and torn to size, preferably 108 inches. This allows five inches for shrinkage, five in. for hem and means a 98-inch sheet with six inches for tuckunder. Purchase pillow cases two inches wider than pillow circumference. A tight pillow case gets harder wear. Buy extra pillow cases. Scratchy lobby pins on one side of the bed and hair tonic on the other are hard on them. Buying is simplified since labels tell thread count and size. Have the sheets tabbed for size on linen room shelves. This saves time, does away with opening to see size.

In the ensuing bed making demonstration the accordion pleat to give foot room was a new idea to many present. (This pleat takes the place of the customary 'pinch-up,' which gives little leeway for the feet). The lower sheet is put on with corners mitered and tucked in the usual way. The accordion pleat is made by drawing down the upper sheet and blanket into a horizontal fold about five inches wide across the foot of the bed before tuck-in. In order not to have a bulge across the bed, simply turn the pleat under, and when the guest slips in bed the slack is taken up.

An increasing number of hotels use a third sheet as blanket protector. This reduces the blanket launderings.

Small triangle jags along the sides of your sheets may be caused by rough springs. If you are unable to file off the rough spots you may cover them with adhesive tape.

A method of prolonging life of sheets, if you use those with wide and narrow hems, is to have a standard rule that beds be made with one hem at the top for three months. then reverse for a like period of time. This distributes wear."

COFFEE CARE

Much coffee is now being sold in paper sacks so when it comes from the store change it into a glass jar with tightly fitting cover. It is advisable to put a pound into 2 pint jars instead of one large jar. One jar is sealed while the other is being used and this helps conserve the flavor.

ADD GRATED CHEESE

To save shortening for crust for apple or berry pie use an equal portion of grated yellow cheese with the fat called for. If a recipe calls for 2-3 cup shortening use a third cup each of shortening and cheese. White cream cheese can be used if desired.

USE COLORED MINTS

If you can still get pastel shaded after-dinner mints they can be used effectively for coloring cake frostings. Crush the candies until like powder, then thin with a little cream and use as frosting or add to other frostings to give the desired tint.

To remove all food parts from fat used for deep fat frying, strain the warm grease through a heavy muslin cloth into the container. Cover the fat when it has cooled and store in refrigerator. Food clinging to fat to be saved is likely to cause spoilage.

One should examine a garment thoroughly before mending it to see whether material can be taken from a seam, hem, or other inconspicuous place for a patch, or if thread can be raveled and used for darning.

WICKARD PLEADS FOR MORE CORN AND BARLEY ACREAGE

Washington, Jan. 8--(AP)--Sec-Wickard appealed to farmers tonight to increase 1943 corn and barley acreage to meet greatly expanded livestock feed requirements and thus bolster human food reserves.

Pointing out that acreage goals announced last month already are "out of date", he said there must be upward revision of feed production plans to meet constantly changing estimates of war needs.

The Bible, in whole or in part, has been translated into 1,051 languages.

Rationing Ordered For Canned, Dried, Frozen Food

33-Pound Average Per Person is Set

Washington.—(SNS)—In a radio broadcast to the nation Sunday night, Secretary of Agriculture Wickard explained his order to the Office of Price Administration to ration all canned, dried and frozen fruits and vegetables as soon as the ration machinery can be set up.

The announcement of the order to the OPA had come earlier Sunday Elmer Davis of the Office of War Information, and Secretary Wickard (speaking from the Department of Agriculture Building,) said the rationing point food plan was being put into effect in order to be sure that all Americans get enough to eat on the home and war fronts and so that our Allies may be fed.

Secretary Wickard said that the common sense thing to do is not to hoard canned and dried fruit and vegetables. He said one of the best ways to help the Axis is to hoard food.

Increased Military Needs

In his statement Sunday, Secretary Wickard said, "Increased requirements of canned fruits and dried fruits for military purposes make it essential that our stocks be conserved. While our total supplies of canned fruits and dried fruits are the largest in history, they are among the foods most urgently needed by the fighting men of this nation and other United Nations."

The rationing is expected to start around February 1.

The Office of War Information issued the following statement,

"Secretary of Agriculture Claude R. Wickard announces that he has directed the Office of Price Administration to ration all canned, dried and frozen fruits and vegetables as soon as the machinery for rationing can be set up.

"Increased requirements of canned fruits and dried fruits for military purposes make it essential that our stocks be conserved, Secretary Wickard said. 'While our total supplies of canned fruits and dried fruits are the largest in history, they are among the foods most urgently needed by the fighting men of this nation and other United Nations. This year nearly one-third of our production of canned and dried fruits and vegetables is being used by the armed forces: during the coming year nearly one-half of our production will be needed for military purposes.

33 Pounds Per Person

"'On the average, 33 pounds of canned, frozen or dried fruits and vegetables are expected to be available for each person in 1943 and compared with an average of about 64 pounds a year from 1937 to 1941.

"'With respect to the total food situation, I would like to stress the fact, that, despite the heavy need for food on the fighting fronts, our total output is so large that more than enough food remains to give civilians a well-balanced and healthful diet. To get this well-balanced and healthful diet to our people, our food must be fairly and equitably distributed. Rationing is a means to that end. It is a means of seeing that a small minority does not hoard or waste food at the expense of the rest of us. When that fact is realized, I know that rationing of the comparatively few foods that need to be distributed in this manner will have the whole-hearted acceptance and support of the American people.'"

Secretary Wickard explained Sunday night that the reason that announcement is made so far in advance of the actual start of rationing is to avoid confusion and to give time for thousands of dealers throughout the country to learn the details of the system. He issued a stern warning against hoarders and asked grocers not to sell exceptional amounts of products to be rationed.

Easttern News

Two million rabbits is the estimated production mark in the Ozarks.

MIRACLES COST MONEY

One of the first requisites of sound post-war planning is sound taxation Our Federal tax policy should be directed toward two objectives: First, paying for the war; Second, maintaining a financially strong industrial structure. Industry should be encouraged to build reserves to meet the inevitable and gigantic costs of reconversion to peacetime needs. Unless this is done, plans for the future both of government and industry, will be doomed to failure. Industry will be hampered in rebuilding a war-torn world. Government will be hampered in its efforts to encourage full employment, and collect needed tax revenues.

The depression consumed practically all of industry's cash reserves. Unwise tax laws and misguided social reforms have prevented the re-accumulation of reserves.

Industry has shown during the past year that it has the imagination and capacity to respond when our national existence is threatened. Never has the world seen our equal in military production—thanks to industry. And now with the problems of peace arising, it will again be up to industry to work a miracle. Millions of persons must be shifted from war jobs to peace jobs. Industry must supply the jobs. It must produce as never before, or this country will face state socialism, the very thing the war has fought to prevent.

When peace comes, industry must have cash reserves to remode factories, to fashion a better civilization. If taxes take all the profits, there will be no reserves.

The first problem of Congress in 1943 will be taxes. In the wise solution of that problem will lie the success or failure of plans for peace.

FREEDOM PACKS A PUNCH

Arms production records set by American manufacturers in the past year are: 49,000 planes, 32,000 tanks, 17,000 anti-aircraft guns, 8,000,000 tons of merchant ships. These figures are spectacular. They prove that initiative inspired by freedom packs a punch.

The performance of the industries that stand back of such production—namely the natural resource industries, should not be overlooked. Secretary of the Interior Ickes recently pointed out that: "For every ton of steel that goes into a tank or an airplane or a bomb or a bayonet, more than a ton of soft coal must be dug, transported, processed and consumed." The nation's mines produced more than 625,000,000 tons of coal in 1942, a new all-time record for the coal industry.

Coal is typical of other natural resource industries. Censorship regulations prohibit the release of figures relating to metal mine production. Suffice to say that informed observers do not fear serious shortages. The oil and electric industries have turned in equally amazing performances. Oil managements have tackled a synthetic rubber program designed to build in two years a whole new industry that would ordinarilly require a decade of construction work. The entire future of the war effort depends on the success of synthetic rubber. The oil industry is carrying forward its rubber program while at the same time producing billions of gallons of gas, fuel and lubricants for everything from motorcycles to ships and bombers. The power industry, in the face of constant punitive political attacks, has continued to keep ahead of all power requirements.

Here, in brief, are the accomplishments of industry operated by private citizens, after a brief twelve months of war. They are based on a century and a half of progress , progress that was possible solely because this has been a land where individual effort was encouraged.

A VITAL TRUTH

The War Labor Board has been doing a difficult and thankless job. It has been the recipient of much criticism, particularly with respect to the highly controversial union maintenance provision which has often been included in its decisions Wayne L. Morse, member of the board, has pointed out that this provision would not be desirable in peacetime. But war has forced its adoption as a compromise measure in settling disputes. In return for giving up many peacetime privileges including that of striking, union labor has received a degree of union security through government guarantee of maintenance of membership.

As Mr. Morse explains: "Finally, after much travail and care, the board adopted the so-called maintenance-of-membership formula, which in its most common form as applied by the board in the ordinary case provides briefly that anyone who is a member of the union fifteen days from the date of the directive order must continue his membership for the life of the contract (usually not more than a year), as must also anyone joining thereafter. All workers are free to withdraw from the union maintenance provision during the fifteen day period or refrain from joining without risk of losing their jobs. Both parties are ordered to refrain from any type of coercion. Obviously this formula restricts the individual worker's liberties to a certain extent, but only after he had voluntarily submitted to those restrictions."

The maintenance-of-membership clause has often been branded as synonymous with the un-American closed shop. I may be subject to other criticisms but it cannot fairly be called a guarantee of a closed shop. If a plant's workers are half union and half non-union, the maintenance-of-membership order would apply only to the union members. Many people have been confused on this point.

The War Labor Board has emphasized that labor and management alike are only human. The worker is no different than the employer. Both, on the average, are good American citizens. If this vital truth can be kept clearly in mind during these trying times, we will stand a good chance of coming through the present emergency with a strengthened, more tolerant society, a society without class distinction, a traditionally American society.

Oil Industry Cooperating

Many states are subject to fuel oil rationing this winter. Main reason for rationing is that disruption of normal transport methods by submarine sinkings of oil tankers has imposed an astronomical load on the land transport system.

One Midwestern oil company has released some information that gives a little idea of the lengths to which the oil industry has gone to alleviate the fuel problem of millions of civilians. This company, in compliance with directions from the Office of Defense Transportation, has discontinued rail oil shipments in areas within 100 miles of refineries, river, lake and pipeline terminals. Truck transport is used for short hauls from these points. The change necessitated an expenditure of half a million dollars by the company for the alteration of loading facilities at supply points and unloading equipment at local bulk plants. But as a result, 5,350 tank cars were released for long hauls to Eastern points, Likewise, more cars were released by pipeline construction and improvement. In addition, this company, in common with others, has switched its refineries to making far more distillate and heavy fuels and less gasoline, less asphalt, and no road oil.

Consumers can thank the resourcefulness of the oil industry and the railroads who are doing an unequaled hauling job for fair assurance that prudent users of fuel oil will get along reasonably well in the cold days to come.

CABARET ORDINANCE

W. E. Mallalieu, general manager of the National Board of Fire Underwriters, in discussing the Boston night club fire in which 500 persons died, said: "One of the basic facts about the Cocoanut Grove tragedy that has been overlooked, is that overcrowding, the rapid spread of the flames and inadequate exit facilities all contributed to the loss of life."

In other words, no single factor such as inflamable decorations should be blamed. No single factor in itself could produce such a tragedy. And in the future preventive measures must be broad enough to cover every conceivable hazard. A new model "cabaret ordinance" recently drafted by the National Board, is designed to do just that. It suggests regulations for the number and size of exits; forbids overcrowding; provides definite aisle space in night clubs, cabarets, dining rooms and other similar places; requires the flameproofing of decorations; requires for the electric lights, in all such places, and provides for licensing by the police department, with the fire department making frequent inspections for violations.

Prompt adoption and rigid enforcement of the "cabaret ordinance" will go far toward removing the danger of repetitions of Boston's horror of panic and death by fire. Prior to establishment of fire prevention laws, managers of enterprises that cater to cowds should take steps to safeguard patrons. Carelessness that results in death to hundreds of innocent people carries its own punishment. The man whose carelessness brings death to others, must inevitably carry a haunting picture of the victims to his own grave.

MORE RED TAPE

OPA and other government agencies have requested the Interstate Commerce Commission to rescind rate increases granted to the railroads less than a year ago. The railroads have asked the commission to deny the request. Some months will probably pass before the question is finally settled. In the meantime, railroad managements who are already working night and day to move astronomical quantities of men and material must crowd in the time to debate rates with public authorities. The whole affair has an unreal quality. The country has its back to the wall fighting for survival. Blood and treasure is being given without stint. No one knows how we will meet the problems yet confronting us. Our industry and our people have performed miracles during the past year. And not the least of those miracles has been the job done by the railroads. They have thrown all reserve equipment into the fight in an all-out effort to meet the challenge of war. Their aim, like that of the rest of us, is to win the war as quickly as possible. This year they must fight still harder.

The present rate controversy involves a sum that means nothing in the battle against inflation. It means nothing in the struggle to hold down the cost of living. But to the railroads it may mean the difference between success and failure in the days ahead.

If the rate increases in question had been in effect during the whole of 1942, they would have produced increased revenues for Class I roads of approximately $357,000,000. Wage increases alone during the same period have added $397,000,000 to railroad operating costs. Moreover, further cost increases, amounting to about $110,000,000 have accrued as a result of higher prices paid for fuel, materials and supplies. This is not all. Special voluntary rate reductions have been made in scores of items including ammunition, sugar, subber, and petroleum. And it shouldn't be forgotten that millions of troops have been moved by rail at reduced fares. These reductions probably more than offset the amount now proposed to be lopped off rail revenues by the OPA.

The transportation problem is far too critical to permit of business as usual" controversies over minor rate changes. Hampering the railroads might add months to the war.

BETTER PREPARED

At a time when farmers' cooperatives are being tested to the limit under the surge of war, it is a good plan for members to examine the stuff their organizations are made of, and how they were built in the beginning. Cooperatives that have been built soundly from the individual farmer up, and have been properly manned and managed, are better prepared to stand the stress of these turbulent times than the ordinary business concern. Members of such cooperatives are fortunate. Farmers had no such protection and hope in the other world war.—Dairymen's League News.

ARE WE ON OUR WAY?

After advocating full public ownership of land as well as control of the issue of credit, the Archbishop of Canterbury, according to a London cable in the New York Times, says: "If I view the situation rightly, the question of ownership is becoming steadily less important compared with that of direction and management."

When considering socialization of basic industries "for the common good," there is nothing more basic than farming. Federal socialization of the electric power industry in the United States is now well advanced and is being steadily pushed forward by a small, powerful group of public officials. Eleetric power, however, is but a minor issue compared to food. It is merely an entering wedge which is being driven into a private enterprise economy before the people are aware of the dangers incolved. It builds up to the Archbishop's suggestion.

We in America have felt that the individual ownership of land and business, resting in the hands of the people, developed responsibility and pride in accomplishment which was the strength of the nation. Children in school have been taught that private opportunity in America offered any man or woman with incentive and ambition a chance to rise from the poorest beginnings to the highest places in dustry or government. Saving was fostered; the acquisition of property was something to be proud of; the average man strove by hard work and sound management to accumulate some form of inheritance to leave to his family.

We have believed that the sole reason for the existence of government in a democracy was to protect the weak, to see that justice was based on equality and that the needy, the incompetent and the helpless were properly cared for. It has never been our idea that government should compete with its own people in business.

A new world turned toward socialization and the leveling of opportunity is reaching out to engulf us. Hatred for the thrifty is being promoted, and accumulated savings are for redistribution to others. These are hard, cold facts stripped of glamorous words.

The Archbishop of Canterbury proposes the only logical step that can follow socialization of basic industry. Conditions may be somewhat different in England, but the principle and the effect on the people remain the same. He can be thanked by the people of this country for warning them of things to come.

It is not pleasant for an American farm owner to contemplate becoming a tenant on a piece of publicly-owned land, with no opportunity to own it or leave it to his family.

Neither has it been pleasant for the owners of electric companies in the United States to contemplate being kicked off of properties which they (stockholders) have worked and saved to develop. But the socialization process knows no limit once it is established, for government then becomes the master, not the servant.

Railroads In Naval Victory

The prophets who a few years ago cried that the railroads were as out of date as the horse and buggy, are without honor at home or abroad. Our railroads probably saved this country from invasion.

For example, they moved soldiers and supplies to the critical danger points in a matter of hours following Pearl Harbor. Without firing a gun they became one of the greatest obstacles to the success of Hitler's submarine campaign on the Atlantic.

James F. Byrnes, Director of Economic Stabilization, is quoted in the newspapers of December 30, as saying: "The railroads have done a magnificent job. Before Pearl Harbor there were 5,000 barrels of oil delivered in Eastern Seaboard territory a week. Two weeks ago it was 761,000 barrels a day . . . We have to look for relief from the immediate situation to the railroads and railroad tank cars."

By their ability to do this unprecedented job of moving oil overland, the railroads snatched from the submarines one of their greatest prizes, thus winning what might be termed a major naval victory.

It would be impossible to estimate what the efficient functioning of our railroads means to this country in the fight against our enemies.

Chief Specialist Graham -W. Jackson, Negro band leader of Atlanta, Georgia, now attached to the Richmond, Virginia, Naval Recruiting Station, has been cited by the U. S. Treasury for meritorious service in selling over $300,000 in War Bonds. For fifteen years Jackson was instructor in music at the Booker T. Washington High School, Atlanta, Ga.

"DONKEY WORK" IN BRITAIN

E. R. Yarham, F. R. G. S.

Strange are the uses of adversity, and they are well illustrated by the news of the donkeys at Margate, resort of thousands of London's trippers in happier days. But now they dwell in a prohibited area and their occupation of carrying happy children and plump matrons for a ride on the sands is gone.

Yet they have not despaired. Indeed, these heroic animals of Margate put us to shame and stir us to action in our half-hearted attempts at salvage. Daily, all weathers, they go round the town bearing sacks into which the householders put their salvage. They stop at door after door with perfect placidity; indeed, the job is perfectly suited to their temperament.

This is not the only way in which donkey days have returned in wartime Britain. Sunday mornings now in a certain quiet village, a smart little turn-out drives up to the parish church, drawn by 'Billy" the donkey, perfectly groomed, who is taken out of well-fed and honoured retirement for a few hours every Sabbath now that the family car is perforce, laid up. He seems none the worse for it; indeed, he enjoys the jaunt, for every body makes of him.

Billy's turnout recalls how, in those far-off days when primitive cars were, by law, supposed to be preceded by a red flag, the daughter of a M. F. H. in Gloucestershire used to drive herself to the meet in a trap drawn in brown harness by a donkey clipped and high-fed. A very dashing little affair, the admiration of all.

Nothing escapes totalitarian war; it even sets the prices of donkeys soaring. This did not bring the poor beasts much happiness during the last War. They were shipped to the Continent in droves for work at the front. So in the Middle East today, donkeys are at a premium. There one sees the finest donkeys on earth—not the overworked beasts of the cities, but great beasts of the mountains, with no equals for surefootedness on treacherous paths.

One such was a hero of Gallipoli. In 1938 a statuette to him and his master was unveiled near the Shrine of Remembrance in Melbourne. Private Simpson, with the help of his tireless beast, carried hundreds of wounded men under heavy fire to the dressing station on the beach.

Another donkey is remembered in the British Army because for long he did a job faithfully without jibbing. He was 'Billy" too, the only donkey on the strength of the Army, and he died at Gibraltar early in 1942, after serving 16 years without leave. Billy was "rationed and accommodated" by the Royal Army Ordinance Corps and his daily fatigue was to draw the laundry cart down from the town up and down the steep hill that leads to the Army laundry at the south end of the Rock. He was born in Morocco and joined the British Army in 1925. He had been pensioned off only three months before he died of "natural causes" as the post-mortem revealed. Billy was 23.

Visitors to the New Forest, in Britain, catch delightful glimpses sometimes of the donkey foals, for it is renowned for its donkey population. In March, 1939. "Teddy," the celebrated 25-year-old veteran, passed on. During the last 12 years of his life Teddy had been "introduced" to the King and Queen when they were Duke and Duchess of York, to Queen Mary and the two princesses. When Princess Elizabeth and Princess Margaret accompanied their mother and father to the village of Bucklers Hard, Teddy was one of the first attractions, and they fed him with lumps of sugar.

It is good to know that the British Royal Family are friendly towards donkeys, which have been unduly despised in recent times. Jim Duckworth, 'Donkey King" of London, supplied Queen Elizabeth with a donkey, and he also sold animals to Lord Lonsdale and the Rothschild family. Film fame descended upon Duckworth when cameramen shot him during a scene in "David Copperfield." Donkeys and donkey boys were Miss Betsey Trotwood's bete noir, as Dickens delineated in immortal words. This was American produced, and it is a matter of interest that the first donkey to reach the United States is said to have been a gift to Washington from the King of Spain.

G. K. Chesterton chronicled the ass's supreme hour in memorable lines:

"Fools! For I also had my hour;
One far fierce hour and sweet:
There was a shout about my ears,
And palms before my feet.

50,000 FARM FAMILIES IN STATE RAISED 3-4 OF OWN FOOD IN 1942

Approximately 30,000 farm families in Tennessee raised three-fourths of their own food during 1942 under the State's home food supply program and will be awarded certificates of merit by the State Department of Agriculture, Commissioner C. C. Flanery disclosed today.

Begun as a peacetime measure in 1940, the program has become increasingly important as a result of wartime restrictions on transportation and demands on food supplies, the commissioner pointed out. During the past year, 201,500 farm families, or about 80 per cent of the State's farm population, were between 28,000 and 30,000 of these enrolled under the program and families succeeded in raising the required three-fourths of their home food supply.

In Middle Tennessee, the county in which the largest number of certificates are to be awarded is Lawrence, where some 800 farm families produced 75 per cent of their own food. Gibson County led the West Tennessee district with 1,316 successful participants, and Claiborne County led the East Tennessee section with 1,207 families eligible for certificates.

Rallies are expected to be held in the midstate counties between now and Tuesday, when the certificates will be awarded, Flanery said.

The number of families enrolled during the past year, as well as the number of certificates awarded, compare favorably with corresponding figures for the first and second years of the program.

In 1940, 61,000 farm families were enrolled with 9,025 receiving certificates.

In 1940, 61,000 farm families were enrolled with 9,025 receiving certificates. During 1941, 106,000 were enrolled and 14,418 were awarded certificates.

The program has subsequently been adopted on a nation-wide basis and has been labeled an undertaking of prime importance by Washington officials, the commissioner said. He pointed out that it was equally important to communities as it was to participating families since transportation restrictions and demands for food were becoming increasingly heavy.

Commissioner Flanery is scheduled to outline the home food supply program today at a meeting of the Nashville Garden Club at the home of Mrs. Jesse M. Overton, Wellington Arms Apartments.

DO YOUR PART

The individual citizen can help relieve the wartime medical problem. Here are suggestions: Choose your physician carefully and stick to him. Make appointments for visits as early as possible. Whenever advisable visit the physician's office instead of expecting him to call at your home. Write down all important facts you want to tell him. Tell him all symptoms which have any bearing on your physical welfare. Have confidence in him. Write down his orders and make sure you understand them. Public cooperation can go far toward eliminating the "doctor shortage."

Land Grant Colleges, their Presidents, and How They Can be Reached, With Associate Members

Schools For Children of Farmers In the Several States

Herein is presented for consideration of parents, the various colleges and schools headed by men of experience and training, that are and will continue to offer educational courses in state institutions where is taught not only the higher education, but economics, agriculture, horticulture, carpentry, brick-masonry, dairy, in fact, a whole list too numerous to mention. A letter from you addressed to the President of these Institutions will bring more information:

Alabama (Normal), A. and M. Institute; President J. F. Drake
Arkansas (Pine Bluff), State College
Delaware (Dover), State College; President R. S. Grossley
Florida (Tallahassee), A. and M. College; President J. R. E. Lee
Georgia (Savannah), State College
Kentucky (Frankfort), State College; R. B. Atwood
Louisiana (Baton Rouge), Southern University; President F. G. Clark
Maryland (Princess Anne), Princess Anne College; Dean R. S. Grisby, Acting President
Mississippi (Alcorn), A. and M. College; President W. H. Bell
Missouri (Jefferson City), Lincoln University; President S. D. Scruggs
North Carolina (Greensboro), A. & T. College; President F. D. Bluford
Oklahoma (Langston), Langston University; President G. L. Harrison
South Carolina (Orangeburg), State College; President M. F. Whittaker
Tennessee (Nashville), A. & I. State College; President W. J. Hale
Texas (Prairie View), State College; President W. R. Banks
Virginia (Petersburg), State College; President John M. Gandy
West Virginia (Institute), State College; President John W. Davis

ASSOCIATE MEMBERS

Alabama (Tuskegee), Tuskegee Institute; President F. D. Patterson
District of Columbia (Washington), Howard University; President M. W. Johnson
Georgia (Fort Valley), Normal & Industrial School; President Horace M. Bond
New Jersey (Bordentown), Manual Training School; President W. R. Valentine
Ohio (Wilberforce), Wilberforce University; President D. Ormonde Walker
Virginia (Hampton), Hampton Institute; President Malcolm S. MacLean

Negro Church Leadership

By Walter R. Chivers

Religion is the most powerful disciplinary agency in human society. In the western world it has harnessed its energy in the church. The church has divided itself into congregations housed in buildings in order to more effectively prosecute the work. Because people react differently to any inclusive philosophies, the church has broken up into denominations. The supporting theories of denominational disciplines have special appeal for castes and classes as well as the levels of intelligence within castes and classes.

A brief moment of reflection upon the social backgrounds of American Negroes should reveal some insight into why religion plays such an emphatic role in the lives of Negroes. It should also show why the most vital leadership of Negroes is vested in their preachers, especially those who serve the churches of the "common people." The reader, in addition, should find the foundation for the writer's conviction that the ministry is attractive to many Negroes with leadership ability becausc it serves as a substitute for other blocked avenues of public service.

The story begins with the introduction of the first transplanted resisting Africans into American slavery. The people summarized in their cntire beings untold generations of most complex culture patterns. Suddenly they were set down in the midst of a foreign way of life for which they had received no previous preparation for assimilating. Thus being victimized by culture conflicts which they could not solve satisfactorily, the subsequent history evolving from such a basis is one of frustration due to thwarted emotions and cultural isolation. Traditionally these forefathers of Americanized Negroes had found relief from the mystifying problems of life by taking refuge in the supernatural environment.

Naturally, then, these slave people turned to the supernatural as a protector against the aleatory elements—against the "black Magic" of the American whites.

". . . . For underlying the life of the American Negro is a deep religious bent that is but the manifestation here of the similar drive that, everywhere in Negro societies, makes the supernatural a major form of interest."

So the church as a refuge from the frustration of everyday life is a social heritage of American Negroes. This is evidenced by their anthropomorphic concept of God—a god of vengeance who punishes white people for their crimes of omission and commission against Negroes. It is further evidenced by their enthusiastic accepatnce of sermons on life after death where rest will be permanent, streets will be paved with gold, and the eternal diet will consist of milk and honey.

The most effective leadership in society arises out of conflicts and crises. Since so many of the problems of Negro societal life were, and still are for the matter, almost insolublc in their locale it was natural for Negro leadership ability to find its most effective outlet in the "area of refuge" furnished by the Negro church. A great Negro Sage has aply written, that,

". . . The Preacher is the most unique personality developed by the Negro on American soil. A leader, a politician, an orator,—all these he is, and even, too, the center of a group of men, now twenty, now a thousand in number. The combination of a certain adroitness with deep-seated earnestness, of tact with consummate ability gave him his preeminence, and helps him maintain it."

The partial isolation furnished by this "area of refuge" has reenforced the position of the Negro preacher by aiding him to build legends of divinity around himself. As a result he, too frequently, projects himself as an anthropomorphic god—a dispenser of white magic and a foe of black magic. He does this with such amazing success he probably knows the great mass of Negroes better than any other American.

The kind of success with these leaders have had to date is probably due to a great extent to the fact that they are not as a whole well educated. Neither is their clientele. They speak the language of their followers and appreciate their limiitations. The religious teachings of these preachers are of " . . . an ultra-devout and fundamentalist character, combining African and American superstitions with the most literal American orthodoxy."

Another Negro Surgeon Receives Recognition

Dr. U. G. Dailey, chief of the department of surgery, Provident Hospital, Chicago, was recently made a diplomate of the American Board of Surgery. Dr. Dailey is one of six Negro surgeons who have met the standards set by this body.

Born in Donaldsonville, Louisiana, in 1885, Dr. Dailey attended the public schools of Chicago and Fort Worth, taking his classical education at Straight College, New Orleans. In 1906, he graduated from Northwestern University Medical School. He spent one year, 1912, in study in Berlin and Paris, returning to Europe again in 1925-26 for further work in hospitals in England, Paris, Vienna and Rome.

The American Board of Surgery organized in 1937 was "created in accordance with the action of the Advisory Board of Medical specialties as approved by the Council on Medical Education of the A. M. A." Twelve specialty fields have been designated as suitable for such Boards. Fourteen Negro specialists have been certified by these Boards in four ficlds: surgery, six; obstetrics and gynecology, five; urology, one; radiology, two.

Over Million Negro Children Receive School Lunches

More than a million Negro children participated in the Community School Lunch Program last school year, according to figures made last March by the Agricultural Marketing Administration which were released this week by thc U. S. Department of Agriculture

Covering 15,661 schools attended by Negroes, the survey reveals that 1,140,784 or 19 per cent of the 6,200,00 children who received lunches under the program were colored. The total number of schools participating in the program was in excess of 93,000.

Negro Woman's Idea

"In 1935," the report says, "the School Lunch Program was launchcd. It has grown steadily. Last year lunches were served to five million white and a million colored youngsters. But the idea is not new. Mrs. Dora Johnson, a teacher in Jefferson County, Georgia, began serving lunches seventeen years ago.

"Of course then there were no surplus commodities, so Mrs. Johnson plantcd a school garden which supplied all of the vegetables for the meals she served to more than 100 undernourished children. Going about the program scientifically, Mrs. Johnson has kept accurate weight charts showing the children's development and record as of daily menus throughout the seventeen years."

According to figures issued by the Department of Agriculture, of the 1,140,784 Negro children participating in the School Lunch Program 1,012,598 were in twelve -Southern States.

In the Fiji Islands the men do most of the cooking.

THE NEGRO IN MEDICINE

(From Radio Address of Dr. Dailey—1942.)

Many have cxpressed the feeling that the Negro is not a productive factor in the profession of medicine, but merely a parasite. This belief is due, perhaps, more to lack of information than to prejudice. To correct this misconception, let us mention a few of a large list of Negro medical scientists and teachers:

Dr. Julian H. Lewis is a professor of pathology in the University of Chicago; devotes his entire time to research and teaching—has published eighty-odd scientific papers. A book from his pen on the Biology of the Negro, from the University of Chicago Press, is to appear.

Dr. S. C. Fuller, recently retired Professor of Psychiatry in Boston University, is a recognized authority on certain diseases of the nervous system.

Dr. Louis T. Wright of New York, besides numerous scientific reports, has written a chapter on "Head Injuries" in a standard textbook of surgery.

Dr. T. K. Lawless of Chicago, a teacher of dermatology in the Northwestern University Medical School, has been for five years engaged in research in the rarer skin diseases.

Dr. Laurie Lee Allen is senior physician to Muirdal Sanitarium, Milwaukee, Wisconsin, and is a national figure in the field of tuberculosis. He has a large consultaiton practice, like that of Doctor Lawless, almost exclusively among the white race.

The late Dr. A. M. Curtis, pupil of Dan Williams, was for twenty-five years professor and head of the Department of Surgery at Howard University. Doctor Curtis had the distinction of being the first Negro interne at Provident and the first Negro member of the attending staff of the Cook County Hospital.

Dr. W. A. Hinton of the Boston Dispensary has devised a test for syphilis which is employed in the United States Navy. It is used by many in preference to the Wassermann. He has written a textbook on syphilis.

Dr. Leonidas H. Berry, a young stomach specialist of Chicago, read a paper before a group of stomach specialists at the recent meeting of the American Medical Association in Cleveland.

Doctors Carl G. Roberts, R. C. Giles, W. W. Gibbs, R. Frank Jones, and W. S. Grant, among others, have recently become diplomates of the American Board of Surgery.

Dr. J. H. Hale, veteran Professory of Surgery at Meharry, is an inspiration to thousands.

Dr. Spencer C. Dickerson, pioneer eye specialist, was recently retired as a Brigadier-General, having served actively in the World War and afterwards commanded our all-Negro regiment, the 8th Illinois.

Dr. Charles R. Drew of Bellevue Hospital, New York, was recently appointed National Supervisor of Blood Transfusion matters in connection with medical defense. Dr. Drew assumes a professorship of surgery at Howard University this autumn.

Dr. George Shrophears, a young physician, member of the staff of Provident Hospital, is widely quoted as an authority on the treatment of one of the latter known diseases of the intestines.

The National Medical Association of Negro physicians publishes its own Journal, founded by the late Dr. C. V. Roman, philosopher-teacher-physician, and Dr. John A. Kenney, surgeon and indefatigable medical writer. The latter is its present editor-in-chief. Dr. Kenney is head of the Tuskegee Institute Hospital and was a personal physician to Booker T. Washington.

With the universities, the clinical institutions, the health departments in the past almost everywhere barred to him, especially in the South, the Negro doctor has, as it were, made "brick without straw." With larger opportunities, young Negroes in medical schools and hospitals throughout the country will be heard from increasingly in the annals of medicine.

ALLOCATION PLAN FOR BURLEY MART TO BAN RESALES

Washington, Jan. 8--(AP)--The Agriculture Department announced today that an allocation program to "alleviate chaotic conditions" will be put into effect in the burley tobacco auction markets when they reopen January 11.

Officials said the allocation system is necessary to assure cquitable distribution of the 1942 short chop among manufacturers and dealers. The markets were closed on December 22.

The order, details of which are to be announced later, will take into account maldistribution of that half of the crop which was sold prior to December 22, the department said.

The 1942 burley crop of 340,000,000 pounds was between 60,000,000 and 70,000,000 pounds short of requirements, the department estimated. The Office of Price Administration placed a ceiling on burley prices last fall.

In order to curb what is said was widespread speculative activity, the department said it would prohibit resale of burley purchased after January 11. The order also will prohibit sale of burley until it has been inspected and certified by the department.

As a protection to growers against collusive bidding, the department provided that any grower may reject an auction bid and offer his tobacco again later.

FARM LEADERS ASK INCREASES

Say Hunger Is Alternative To Higher Prices

Washington, Jan. 8--(AP)-- Leaders of four national farm organizations called on the new Congress today to raise farm product prices and increase the industrial work week to 54 hours, "eliminating any requirements for overtime payments."

The leaders said the nation faces acute food shortages and hunger unless action is taken to increase labor supplies and provide farmers with higher prices.

The leaders were Edward A. O'Neal, president of the American Farm Bureau Federation; Albert S. Goss, master of the National Grange; Charles C. Teague, President of the National Council of Farmer Cooperatives, and John Brandt, President of the National Cooperative Milk Producers Federation.

The statement insisted that the government's method of computing farm parity prices--the prices upon which price ccilings are based--be amended to include all farm labor costs. Government economists have estimated that such a revision would allow farm prices to advance at least 10 per cent.

In the house, meanwhile, representatives from farm states warned that Congress must act to protect dairy farmers, lest the nation face grave depletion of its dairy herds.

TIRELESS GARDNERS

H. Lewis Clark

Earthworms.---hold on there, don't get disgusted before you start reading about them. They are important; they are worth money, lots of it. Commonly known as fishworms, used as bait by fishermen.

It has been proved that earthworms are indispensable to the fertility of field and garden, and hence to life. Had there been more worms in our dust bowls there would have been less dust. Farmers of the future will know enough to pray for worms as in the past they have prayed for rain.

There is an earthworm farm near Los Angeles where they raise the worms in standard boxes by the ton, but that is not near enough, for there is a great demand for them. An acre of land in order to be productive should contain about two and a half million earthworms as farmhand tenants working day and night to turn subsoil into rich topsoil with an efficiency approached by no inanimate invention.

There are a thousand and one species of them, all tireless gardeners, engineers in a way, and there s no reason to suppose that any mechanical cultivator can even take their place. No machine is likely to devour soil and dead vegetation and transform it into fertilizer, meanwhile delicately stirring and airing the ground and increasing its power to receivc and conserve moisture.

The earthworm was the original soil chemist. The day is probably near when the florist will order from the National Wormeries worms for small sized flower pots, worms for the yard or lawn vases, worms to fertilize the flower beds and then the day will come when worms will be as definitely a part of successful farming as the commercial fertilizer which is sold so generally.

Earthworms arc found in nearly every country in the world. In some of the tropics they grow to the length of from three to six feet. In most countries in the temperate zone they grow to from six to ten inches.

They produce cocoons in which are deposited their eggs together with a certain amount of albumin which is absorbed as the eggs hatch.

Earthworms do not eat and destroy crops as do many of the ground infested varities. Most of them live on the soil which they devour as they burrow through it. Their energy is boundless but from the slightness and delicacy of their appearance it does not seem possible that they are so necessary and helpful in the grand scheme of nature.

HUGH MULZAC, FIRST NEGRO SKIPPER, BRINGS IN HIS SHIP SUCCESSFULLY

Captain Hugh Mulzac, first Negro skipper in the United States Merchant Marine Service, returned to an Eastern port last week bringing safely to port the 10,500 Liberty Ship, Booker T. Washington, which he commands, and his hand-picked crew which represents seventeen nations and territories of the United Nations.

An uneventful trip was chronicled by Mulzac, but the Captain said proudly that there had been no need for disciplinary action of any sort, that he had proven his capabilities as captain of a ship, and that this proved that "it can be done." The first voyage of the Booker T. Washington, successful as it was, is a convincing argument for breaking down the barriers of prejudice and discrimination, the sea chieftain said.

Twenty-five per cent of the Booker T. Washington's crew are Negroes. There are four deck officers, chief engineer, wireless operator and others.

Fifty-six year-old native of St. Vincent, Winward Islands, British West Indies, Mulzac has been a seaman since 1907. He lives with his wife and their five children at 536 Dean Street, Brooklyn. Mulzac attended Swansea Nautical School, South Wales, and was graduated from the United States Shipping Board School at Baltimore in 1918. He had held captain's papers since 1920, but had a master's berth on only one ship, a small British steamer plying the West Indes in 1922. Recently, due to a vigorous campaign, aided by the National Maritime Union and civic groups Mulzac won his long campaign to gain a captaincy and thus make the first break into prejudice against Negro officers on the high seas.

The child who has been allowed to climb and experience danger is much less likely to be foolhardy than the child who has had no such experience.

The average star explodes and becomes a nova once every 400,000,000 years from which it follows that either our sun has exploded in the past or that it will explode.

A. L. Holsey Has

(Continued from Page 1.)

tion and use of more and better food crops in farm homes.

4. During 1943, there will be shortages of farm labor, seed, fertilizer and implements. An important part of the Government's aid to farmers this year includes measures to relieve stress of these shortages which otherwise would hamper productive efforts.

5. Economists estimate that in 1943, there will be a civilian population income of $120,000,000,000 with only $60,000,000,000 worth of civilian goods available. The device of rationing, which is set up to meet this situation, places added responsibility on physicians, welfare workers, educators, club-women, nutritionists, and church, fraternal, business and other leaders, to plan such community, county and state programs of coordination as will help the masses of our people to adjust themselves to the necessary curtailment in supplies with least impairment to efficiency and health.

6. The AAA program can assist farming efforts in the following ways:

(a) Payments on special crop allotments, such as cotton, tobacco, and peanuts, providing cash for the purchase of materials necessary for the largest contribution to the Food for Freedom program.

(b) Payments for practices to conserve and improve the soil and thereby increase the production of vital war crops and food products.

(c) By providing such conservation materials as lime, super-phosphate, legume and other seeds without an immediate cash payment, thereby enabling needy people to increase production and make their contribution.

(d) By assuring a fair price for such crops or products as cotton, tobacco, wheat, rice, corn, peanuts, soybeans, poultry, eggs, dairy products, livestocks, vegetables and the like through price supporting loans or guarantees.

7. In addition to the assistance provided by AAA production credit may be secured through the Farm Credit and Farm Security Administrations.

8. City, town and suburban dwellers with sufficient sunny space and fertile ground, or who have access to community plots are urged by the Secretary of Agriculture to further assist the war effort by growing vegetables for family use. Every garden which takes care of family needs releases our already overtaxed transportation facilities for more pressing services and helps to relieve the strain on dwindling stocks in retail food stores.

9. In the effort to improve conditions in rural areas, our Government has provided competent and efficient Negro leaders, Extension Agents and representatives of the Farm Security Administration, Farm Credit Administration and Agricultural Adjustment Agency in cooperation with Vocational Teachers, Jeanes Supervisors and others are prepared and ready to assist farmers in working out details of the food production program, and to provide general information on the progress of the program to Negro leaders in urban centers.

Farmers Urged To Action

(Continued from Page 1.)

culture. They have achieved this record in spite of many handicaps and the country owes them a debt of gratitdue. Although they have produeed much this year, the nation will require even more of them during the year that is now before us. In full realization of the many difficulties affecting farm production during wartime, the people of this nation place reliance on the zeal, devotion, and unstinting efforts of farmers to do their part toward ultimate victory.

Food is no less a weapon than tanks, guns, and planes. As the power of our enemies decreases, the importance of the food resources of the United Nations increases. With this thought in mind, we must further mobilize our resources for the production of food.

First All-Negro Division

(Continued from Page 1.)

given half a day of schooling and half a day of military training.

Eager to Learn

"The men are eager to learn and anxious to become good soldiers," said General Miller.

"They take great pride in their uniform and get a big kick out of maneuvers, on which we are now concentrating."

Col. Edwin N. Hardy, post commandant, a soft-spoken Southerner who has spent his life in the army, declared the soldiers are "loyal and decent."

"The Negro has an inherent love of happiness and contentment," Colonel Hardy said. "To keep their morale high, the officers must maintain an air of confidence and well being. The attitude of an officer can pull the emotions of the men up or down."

Fine Equipment

The 93rd is equipped, housed, fed and clothed in exactly the same manner as every other American division, said General Miller.

The division was fortunate in having the veteran 25th infantry, a picked outfit of specially trained men long stationed at Fort Huachuca, as a nucleus. The 25th had been brought to a peak of efficiency by careful selection of volunters ever since the World War.

Many of these experiencel soldiers were made non-commissioned officers of the division and recommended for officers' candidate school.

Since the division was formed, more than 300 of the most promising soldiers were given officers' training.

Highest ranking Negro line officer is Maj. Charles J. Blackwood, a hero of World War No. 1 and an idol of his men.

The medical detachment has many Negro officers whom General Miller describes as "comparable with the finest medical talent to be found anywhere."

The first Negro WAAC's assigned to any post in the nation arrived recently and took over many jobs formerly held by soldiers who now are available for combat service.

Because Fort Huachuca is isolated from the Arizona and Mexican border towns, every effort is made to provide recreation at the post for the soldiers.

Wickard Praises Farmers

(Continued from Page 1)

ers, colored and white alike, began enlisting their farms in the 1943 Food-for-Freedom drive. Between now and January 30, it is expected that almost all of the farmers will sign up with the Agricultural Adjustment Agency committeemen who will be calling on them with the 1943 farm plan sheets.

While the farmers set an all time record in production last year, the 1943 goals call for even more of certain crops to meet the needs of our enlarged fighting force, our own civilian population, our allies and the half starved peoples whom we are liberating from Axis aggressors.

Among the products for which sharp increases are required are cattle and calves for slaughter, 30,400,000; hogs for slaughter, 100 million; 122 billion pounds of milk; nearly 60 billion eggs, and 3,712,000,000 pounds of peanuts.

Last year thousands of Negro farmers increased their poultry flock, enlarged their home gardens, and added a few pigs and a milk cow or two. There are indications that many more will either start a garden, and begin raising chickens and pigs for home use this year, or will enlarge their present live-at-home program.

While many Negro farmers have only sufficient facilities to grow food for home consumption, thousands are producing extra pigs, chickens, eggs and milk which find their way to the cities, to military cantonments and to our allies, Agricultural officials say, however, that the farmer who is only able to grow enough food for himself is also making a valuable contribution to the war effort. They point out that he saves the cost of assembling, processing, and transporting; he also saves jobbers' fees, wholesale and retail margins and at the same time assures his family an adequate diet. By growing his own food he is also easing the burden of our transportation facilities, and making more of the commercially grown foods available to our fighting men, and to the folks in the cities who can't grow their own food.

As for the farmers who do not have adequate facilities either for growing their own food, or for producing food for our armed forces, the Department has taken steps to provide credit for them. Through Farm Credit Administration, or Farm Security Administration farmers may obtain loans to buy seed, fertilizer, spray materials, fencing, livestock, poultry, machinery and other aids to increase prodnction.

Secretary Wickard has assured the farmers that the Department of Agriculture is throwing its full resources behind them to help get the job done. Among other things, steps have been taken to support prices for vital war crops, to meet labor needs, to solve transportation problems, to provide scientific information and supervision and to continue assistance for carrying out soil building practices for the high yields necessary to continue winning the war on the farm front.

Negro Mothers Active

(Continued from Page 1.)

cularly important to insure that they receive an adequate share of the protective foods. Programs, such as the school lunch, will receive appropriate recognition in connection with the Government's supervision of wartime food distribution."

The Federal Government assumed an important role in the school lunch picture when in 1939 free commodities were made available through the Department of Agriculture to local sponsored programs serving free lunches to needy children. These donations of commodities made it possible for almost any school to provide its children with better lunches than they had ever received. In the following three years the program expanded rapidly until by the school year 1941-42 a monthly average of 4,000,000 children were benefiting with over 6,000,000 participating at the peak of the school year in March, 1942.

The School Milk Program has had a very similar history, except that the real expansion of the program did not begin until the latter half of the last school year, during which time 500,000 to 700,000 children received half a pint of milk a day. During the present school year the milk program has been stepped up markedly, and data on programs already in operation indicate that well over 2,700,000 children are participating.

Changes in the Community School Lunch Program whereby sponsoring organizations will purchase food supplies from local merchants and farmers and be reimbursed by the Food Distribution Administration were announced last week by Secretary Wickard.

Previously, foods for the program have been purchased by the Agricultural Marketing Administration (now absorbed by the Food Distribution Administration) and distributed to state welfare agencies who in turn distributed them to school luneh sponsors.

Poultry And Egg Production Aided

Washington, Jan. 2—To stimulate poultry and egg production, the Office of Price Administration today removed priee eontrols from the sale of shell eggs purchased solely for hatching purposes.

"It has become evident," OPA said, "that eggs of the type and quality necessary for hatching purnoses cannot be obtained in sufficient quantities unless removed from all price curbs."

One Way "Yardstick"

In a speech made on December 8, United States Senator Jos. C. O'Mahoney of Wyoming, said: "An unrestrained bureaucracy subject to strong central leadership would be an easy avenue to state socialism of either Nazi or the Communist variety."

He then pointed out that the record shows that between January 7, 1941, and April 12, 1942, 500 executive orders were issued—"They were not written in the halls of Congress on the responsibility of men chosen by the public and known to the public, they were written in private by anonymous experts. They were not subject to public hearing, nor were they analyzed in public debate. They did not become known to the public until issued, and then they were effective . . . The doctrine of arbitrary state supremacy over the individual is held by both National Socialists and by Communists."

A hearing is now being held in Little Rock, Arkansas, by the Federal Power Commission, instituted on its own motion, to investigate the rates of a ten-company power pool.

This pool was voluntarily formed by ten power companies of the Southwest to pool power resources for the expressed purpose of furnishing power to a war industry, that is, a new aluminum plant of the Defense Plant Corporation located at Lake Catherine, Arkansas.

When the hearing started, the ten companies involved wished to compare their rates with the government-financed Ark.-La. Electric Cooperative, Inc., which furnishes about half as much power to the government aluminum plant as does the private power pool; also with the government-owned T. V. A. and Boonville rates. The Commission examiner ruled this was "irrelevant," on the ground that the hearing was to check private company rates only.

Apparently the wording of the hearing order was prepared very carefully so that all comparison of private rates with the tax-exempt government plants could be excluded.

This is an amazing situation when the original excuse for building government power plants was to furnish a "yardstick" for measuring the fairness of private electric rates. Now, when the private industry wants to use the yardstick as a basis of comparison, it is blocked on the grounds of "irrelevancy."

The implications involved in a hearing which, by technicalities, can prevent the public from getting the complete picture, are inconceivable.

The Arkansas case is a current illustration of the importance of Senator O'Mahoney's warning.

Typical

One of the underlying reasons for the failure of government to control the growing domestic problems is the fact that numerous government agencies are more interested in using the war emergency to bring about social changes than they are in stabilizing prices and wages and the preserving of basic individual liberties.

A recent example of this policy can be found in the request of the OPA to the Interstate Commerce Commission to rescind modest freight rate increases granted by the Commission to the railroads some months ago to partially offset wage increases. Apparently the request was made on the ground of stemming the inflationary trend. Like the salary limitation of $25,000 which came from the Office of Economic Stabilization, it is sheer politics—nothing more. It has nothing to do with inflation. To the consumer it would mean a possible reduction of the vast sum of two-thirds of a cent on the amount of wool in the ordinary suit of clothes, providing merchants could pass such an infinitesimal sum along to the purchaser.

Rate decreases would be in order providing the rails were making excessive profits. But they are not. They are earning less than 5 per cent on their capital investment, which is below the 5 1-3 per cent allowed by law, and which in actuality is not sufficient to build reserves to meet fully the rigors of reconstruction after the war. It is no secret that there will be need for tremendous outlays when that day comes, because every last ounce of equipment reserve is now thrown into the insatiable transportation demands of war. Thanks should be given that the railroads have been able to carry the load. By so doing they are going far toward insuring victory. Hitler may lose the war solely because he underestimated the importance of German railroads, allowing them to fall into disrepair.

Here is a clear cut case of playing politics with a public trust. It is not exceptional. It is merely typical of many similar instances that weaken the American war effort.

No Price Too Great

Banks must serve a double purpose hereafter. In addition to rendering financial service, they must render ration service. Ration coupons and stamps are rapidly becoming a supplementary form of money.

Money itself is worthless without a ration coupon. Merchants who accept coupons must present them in turn to proper authorities before they can restock the commodities represented by the coupons. Instead of letting millions of coupons pile up in stores and shops to be bundled up a sndent to wholesalers and suppliers by the bale along with orders for more goods, they can now be disposed of through the banks. In other words, the banks will handle the coupons much the same as they handle money checking accounts. And the merchant must keep a checkbook for ration "currency," just as he now keeps a checkbook for money.

The magnitude of the task of setting up a separate banking system for the new "money," in view of already existing labor shortages and other bank operating handicaps, will be formidable. But bankers, like farmers, workers and business men are just one more group anxious to expedite the winning of the war. No price is too great if it will help to guarantee the preservation of constructive government and individual liberty.

The Soul Of Medicine

It has become axiomatic for those who criticize medical men opposed to a fundamental change in the American medical system, to assume that the doctors have a particular ax to grind. As a matter of fact, the doctors have only one concern: the preservation of present high medical standards. As far as financial reward goes, the average doctor could make more money under practically any other system than the present one, which far too often pays him off in nothing more tangible than the satisfaction gained from a job well done; of seeing a sick person made healthy by his skill and experience.

The doctors who today are carrying forward the best traditions of centuries of medical progress simply do not feel bound to kneel before the fancies of social reformers whose only idea of progress is the steady growth of bureaucracy.

For example, they are opposed to compulsory health insurance which is merely a polite word for socialism. Experience in Europe shows that people "protected" by such insurance do not get the medical care now provided by the American system under which the most skilled specialists and surgeons are available to all, regardless of income or economic status.

The following comment of Doctor Edward H. Cary, Chairman of the National Physicians Committee, on compulsory insurance, expresses the viewpoint of the average doctor—a viewpoint typical of the American medical system in its approach to the whole health problem: "Compulsory insurance introduces the principle of differing qualities of medical care. It would make the doctors mercenary money grabbers and destroy their incentive to greatest efficiency. It would destroy the soul of medicine. It would undoubtedly lower the quality of medical care—and those who would suffer most would be not the doctors but the general public—those who are afflicted with disease."

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., MARCH 15, 1943 No. 2.

670,000 Negro Farmers In The South Can Probably Increase Food Output

FEB - 1 1943 OF AGRICULTURE

CLAUDE A. BARNETT'S PREDICTION ON PLAN

Special Assistant to Secretary of Agriculture Encouraged

Washington, D. C.—Claude A. Barnett, director of the Associated Negro Press and special assistant to the Secretary of Agriculture, declared in a statement on food production this week that the 670,000 Negro farmers in the South can probably increase their food output more than any other group in the agricultural industry.

Pointing out that food is taking its place in the war along side troops, planes, tanks and armament, Mr. Barnett said that Negro farmers could add a sizeable quantity of food to our stockpiles if they were further aided by the Government.

"Negro farmers," he said, "own more than 10 million acres of farm land and operate an acreage in excess of 30 million. The machinery on their own farms and on the farms they tenant and sharecrop is valued at well over $40,000,000. With these resources, Negro farmers have been producing nearly one-fourth of the Nation's cotton and a large part of it is tobacco, potatoes and peanuts, and yet, despite these production figures, Negro farm manpower is not being adequately used in the war effort.

"There are several things which these farmers need in order to convert to a full wartime footing," said Mr. Barnett. "First there is the need for seed, baby chicks, a brood sow, a heifer or a milk cow, and the need for shifting farm families from unproductive, submarginal land to soil yield will be commensurate with the effort put forth by the operator. Finally, additional supervision is also needed."

Going further Mr. Barnett said, "The present Extension Service staff of 573 Negro farm and home agents is doing an admirable job. However, there are thousands of Negro farmers who are not reached. Increasing the staff to 1,000 workers would be a step toward assuring maximum use of under-employed farm manpower. If such additions can be made to the staff, and if Negro farmers are given an integral part in the food production drive, the South will make a tremendous showing in growing food to meet our urgent wartime needs.

"Secretary Wickard has pointed

(Contnued on Page 4, Column 3.)

REASON FOR SFAX'S IMPORTANCE

The chief reason for Sfax's importance to Europe is its extensive exports of phosphates for fertilizer, in normal times reaching France, Italy, and England. Since 1899 the phosphates have been brought to the port by rail from the neighborhood of Gafsa, almost on the opposite side of the country. The port is on the railroad that follows Tunisia's coast from Tunis south to Gabes. It has an airfield and a seaplane basin. The European section of Sfax spreads along the waterfront in neat checkerboard squares on land reclaimed from the sea. On a hill behind it the ancient native city is still enclosed in its medieval wall. Besides shipping and fishing, Sfax's chief industries are pressing olive oil and making soap.

First Negro Farmer Pays Off F. S. A. Farm Loan

NEGRO FARM YOUTHS

Two Hundred Thousand Join 4-H Mobilization

Washington, D. C.—Negro farm youths, numbering nearly 200,000 are joining in 4-H Mobilization Week to help reach the 1943 Food-for-Freedom goals, according to an announcement made Monday by the U. S. Department of Agriculture. February 6-14, designated National 4-H Mobilization Week, follows "M-Day" for all farmers by less than a month.

Spurred on by a letter from President Roosevelt, the one and one-half million farm boys and girls, white and colored, in 4-H clubs will pledge themselves in their 4-H projects to produce more meat, milk, eggs, war crops, and do their jobs to help win the war. These youngsters, club by club, will make a determined drive to get a million new members by asking all farm boys and girls between the ages of 10 and 21 to join them in this effort.

One major objective of the week is to lay plans for 4-H clubs in an organized way to help meet local farm labor shortages, both by working themselves and by taking into their clubs and helping train city boys and girls who will work on farms this summer.

Four-H Club members last year in their club projects raised more

(Contnued on Page 4, Column 5.)

THEN PEACE WILL COME

Nellie A. Smith

The only living thing in sight
As I sit at my window here
Are the birds who come for their feeding—
Bluebirds, and starling, and sparrows dear.

On a nearby tree, with its branches bare,
Are gathered the birds by the dozens,
Only just waiting to snatch the food
Away from brothers or cousins.

In spite of ourselves, we smile at them,
As we watch each laughable antic.
And then we think with a heart-sick sigh
Of our brothers across the Atlantic.

How like to the birds are the nations there,
Watching each other with eager eyes—
Coveting others their possessions,
And fiercely fighting to win the prize.

And we who sit in our sheltered homes—
What are we doing to make war cease?
What are we doing to ease their burdens?
To bring these nations together in Peace?

Give us such Love for all mankind
That we may live—each for the other—
'Till hate may die—and love survive—
And we consider every man our brother—
Then Peace will come.

U. S. D. A. EXECUTIVE'S COMPLIMENT

Washington, D. C. Official Pays Tribute to Negro Farmer

Washington, D. C.—"Both Negro farmers and Negro industrial workers are making an important contribution to the war," said I. W. Duggan of the U. S. Department of Agriculture at the National Freedom Day celebration held in Philadelphia, Monday.

Discussing the Negro farmer's contribution to the war, Mr. Duggan, director of the Southern Division of the Agricultural Adjustment Agency, pointed out that six million Negro Americans earn their living growing, harvesting, processing, and handling agricultural commodities.

Going further, the director said, "While the records kept by the Department of Agriculture in connection with the National Farm Program make no distinction between Negroes and whites, I know from observation and from my experience in the administration of the AAA program for a good many years, that Negro farmers are making their full contribution in this important job of farm production.

"The loyalty and patriotism of your farmers have never been doubted. And today, more than ever before, they are upholding the traditions of your race."

Director Duggan also pointed out that although American farmers had set new agricultural production records for three consecutive years they still have a bigger job to do this year. Citing the needs, he said that the goals call for 122 billion pounds of milk, 14 billion pounds of pork, 11 billion pounds of beef, nearly four billion pounds of peanuts, and 57 billion eggs, or enough to make the earth a 10-foot belt to girdle itself at the equator.

In discussing rationing, the director said that rationing is the only fair way to divide the available food supply. "Although some foods will be scarce, the low income groups will get more than they have been accustomed to getting," Mr. Duggan said.

Comparing the cost of living now

(Contnued on Page 4, Column 1.)

HARD TO UNDERSTAND

Recent anti-trust proceedings against several chain store systems have been mystifying. It has been generaly understood that the anti-trust statutes were to prevent the suppression of competition, the creation of a "monopoly" and the subjection of the helpless consumer to high prices. When the Department of Justice moves to apply the statutes to an industry obviously highly competitive at all points, and with many and individually powerful competitors, and which depends for its success on maintaining low prices, the ordinary citizen is completely confused.

While the OPA fights inflation by trying to curb rising prices, another agency of government attacks an industry which by efficient methods of operation, has done more to stabilize and hold down prices than any other single influence.

ELBERT STALLWORTH PASSES

Sumter County Agent Began Work in 1917

By W. A. Hagins

Industrial College, Ga.—Elbert Stallworth, county agent for Sumter County, is dead. He was a pioneer in Negro Extension work in Georgia, having entered the work in 1917. He did an affective piece of work and won the respect and praise of farmers, educators and business men throughout the county. His contribution to the development of educational facilities for Negroes in Sumter County and Americus will be lasting.

Stallworth entered the work during the first world war and in response to the needs created by it, was able to do a magnificent piece of work in food production. He was attempting this same type of basic work during the present war when death came.

He was deeply concerned about farmers feeding themselves from their land and immediately tackled this task during his early years. One of his first jobs was to get 500 acres of wheat planted as well as other essentials of the live-at-home program. Was met with difficulty though as farmers followed the one-cropping system (cotton) then. He never fought back but did his work so well that it was highly endorsed.

Boll weevils soon began to strike cotton fields and resulted in scores of farmers going North to seek livelihood. Here he immediately took to the task of combatting them, which resulted in many farmers sticking to the soil for a living. So impressive was his work in this project that people throughout the country often referred to him as the "boll weevil man." This enabled him to win the faith and respect of scores of farmers throughout the Sumter County area and set a record of having the largest number of farmers attend meetings of any other work in the state, until his death.

Agent Stallworth was a public spirited citizen and was in every civic movement in Americus, having played an important part in the building of schools for Negro children throughout that area. The Americus Times Recorder, County Commissioners. County Board of Education and many leading citizens wholeheartedly endorsed his work and always supported him.

(Continued on page 5, Col. 5)

INSULTING THE VOTER

Initiative No. 12 before the Washington State Legislature would permit the forming of super-super public utility district commissions without a vote of local communities affected, to take over private power companies, also without a vote of the people. This move of the Washington state socialists is in line with attempts to give Federal power agencies authority to condemn local power companies, without a vote of local citizens.

These endeavors to ignore or destroy local self rule are amazing in their cleverness and brazenness and should be rebuked as they deserve.

RODDIE PRIDGETT CLEARS OBLIGATION HE MADE

Owner of 120 Acres in Rankin County, Mississippi Happy

Washington, D. C., Feb. 3, 1943. —Completing payment for his farm, under the Bankhead-Jones Farm Tenant Act, 36 years ahead of schedule, Roddie Pridgett, Negro farmer of Rankin County, Miss., was honored by special ceremonies held at Jackson college, Jackson, Miss., Feb

J. L. Reddix, president of Jackson college, has announced that Judge J. Morgan Stevens, prominent Jackson attorney, will be the principal speaker, and T. B. Fatherree, assistant regional director of Farm Security Administration, delivered the cancelled notes to Mr. Pridgett. The ceremony was the highlight of the annual farmers' conference sponsored by the college.

First Negro farmer to complete payment for his farm under the program, Mr. Pridgett is 41 and the father of nine children. Five years ago when he and Mrs. Pridgett obtained the loan of $1,495 to buy a 120 acre farm through the U. S. Department of Agriculture's FSA they were sharecroppers just barely getting by.

Says H. A. Patrick, well-known white Rankin County farmer, who recommended Mr. Pridgett for the loan, "Rod would never have owned a farm today if it hadn't been for the FSA farm ownership program."

Paying for their farm in a little over four years hasn't been an easy task for Mr. and Mrs. Pridgett and their nine children. Of course they had 40 years to pay back the loan at three percent interest, but they wanted to get it

(Continued on Page 4 Col 3)

COORDINATING FOOD RESOURCES

"Food will win the war and write the peace," says Claude R. Wickard.

Food must not only be raised and prepared for the consumer, but it must be distributed so he can get it. At the opening of 1942, there were 603,000 food stores in the United States. At the end of the year there were 570,000.

In order to meet the countless problems stores face today, the National Association of Food Chains has created a "Food Industry War Committee" to deal with the acute food situation, and cooperate with the food administrator in solving distribution problems.

Without concerted action by the stores, such as they are giving, no food rationing program could ever be successfully carried on. Our whole industrial and military success depends upon the raising and distribution of food.

The nation is fortunate in having coordinated leadership in the retail food distribution field that can gear its plans to those of the food administrator so as to render the maximum service to the housewife, war industries and armed forces.

WOMAN'S PAGE

WAYS OF EXTENDING MEAT EXPLAINED BY FOOD EXPERT

By Mary Lyles Wilson

As we begin his year let's dedicate our thoughts and efforts to the health of Amcrica. Remember our suecess, our happiness, our all, depend on health. Health is our nation's backbone and depends upon the food we eat.

It is our patriotic duty, to plan and serve meals to build and protect health.

Although the government through the National Nutrition program is helping homemakers to choose food wisely, and planning of menus and the preparing of food is still the homemaker's responsibility.

Share the Meat!

The government has asked every individual to share the meat supply. Meat production is the greatest in history but at the same time this country is faced with the responsibility of feeding more people. Meat is an important food in the diet of the men in the armed forces and our Allies.

Every homemaker through cooperation can do much to make the share-the-meat program a success. (1) Plan meals to use only the family share of restricted meats; (2) be wise about the selection, care and preparation of meat to extend meat and meat flavor, and (3) include "variety" meat dishes in the menu.

Beef Steak Supreme: The Ingredients

To extend meat: Buy flank steak (which has been scored) or round steak (cut 3-4-inch thick) Combine 1 teaspoon cinnamon, 1 teaspoon allspice, 1 teaspoon celery salt, 1 teaspoon salt, 1-4 teaspoon pepper, 1-2 cup bread crumbs and enough water to moisten. Spread stuffing on steak, roll, and tie securely.

Brown on all sides in 2 tablespoons fat. Add 3-4 cup water, cover and simmer about 1 hour.

Add peeled onions, scraped carrots and 1 cup water and continue cooking an hour. Serve the cooked vegetables around the steak.

It is important for each homemaker to become familiar with the different cuts and kinds of meat available. Knowledge of the less demanded or economy cuts of meat will simplify the purchasing problem.

Many Ways of Stretching

Meat is so full of flavor that it can be extended in many dishes. Here are a few helpful suggestions:

(1) Serve stews with vegetables, noodles, dumplings, etc.;

(2) Make meat loaves and patties by mixing meat with oatmeal and other cereals, mashed potatoes, bread or cracker crumbs. Make croquettes by combining left-over meat with these same foods;

(3) Use bread, cereal or vegetable stuffings in hearts, lamb or veal breasts and shoulders;

(4) Cook frankfurters, sausage, salt pork or bacon with baked beans;

(5) Serve meat or meat balls with spaghetti or macaroni:

(6) Use left-overs for meat pies made with vegetables and topped with mashed potato or biscuit crust, and for casserole dishes made with vegetables, noodles or spaghetti;

(7) Prepare dishes such as Swiss steak and hash using gravies to extend the flavor;

(8) Combine left-over meat with mixed vegetables for salad.

Mrs. Joe Dunn of Collinwood. Tenn., writes for Hot Punch. She wants to serve for refreshment for her club meeting—Maybe you would like to have it, too.

Hot Punch for 25:

1 quart strong tea
2 cups sugar or honey or 3 cups syrup
1 teaspoon whole cloves
2 sticks cinnamon
Juice of 1 dozen oranges
Juice of 8 lemons
Gingerale—1 quart

To prepare tea—Put on to heat 5 cups water. When a rolling over boil has been reached pour over 2 tablespoons tea. Let stand 5 minutes.

Strain and add sugar or substitute. Combine fruit juices, tea and spices and cook slowly about ten minutes, add gingerale. This may be served piping hot or iced.

What About Wild Rice?

From a friend in Nashville, Mrs. P. D. L., comes a request how to cook wild rice. With the season open for duck shooting many will be the times that wild rice will be served or should be with ducks.

Roast duck, steamed wild rice, baked sweet potatoes, creole beans, hot corn sticks and coffee. Doesn't that sound good?

Wild Rice (1)

Wash thoroughly— combine 1 cup wild rice with 4 cups water and boil 25-30 minutes. Do not stir. Drain and steam until light and fluffy.

Wild Rice (2)

Soak 1 cup washed rice in cold water to cover one hour—drain and cook, covered, in double boiler with 3 or 4 tablespoons water at least 35-45 minutes. Serve with a sauce made of half butter and oil, salt and pepper to taste.

Creole Beans

1 can green beans (whole)
1 medium size onion minced
1 teaspoon salt
1 teaspoon sugar
1-4 cup chili sauce
1-4 cup salad oil

Mix all ingredients together and simmer thirty minutes before serving.

This request came from Miss Jennie Sparkman of Nashville. She tasted them at a dinner where we served creole beans with roast duck and wild rice. She says they are the very best she ever tasted.

Winner Announced

The Rev. Walter Ehrdardt, 810 North Church Street, Murfreesboro, Tenn., in this week's award winner for the best—receipe for a meat substitute dish.

His receipe for LIMA BEAN DISH follows:

1-2 pound lima beans
1 chopped onion
2 tablespoons chopped raw carrots
1 stalk celery
1 clove
1 teaspoon sugar
1 teaspoon salt
2 cups strained tomatoes
1 tablespoon shortening
2 tablespoons flour

Cook the beans in salt water until tender. Put onions, carrots celery, clove, sugar, salt and tomatoes in a pan and let simmer 20 minutes. Strain if desired (but I prefer not to strain). Melt shortening, add flour and blend to a smooth paste. Add tomato mixture and cook until thick. Pour over beans and bake for about 10 minutes in hot oven (400 degrees Fahrenheit). Serves 5 to 6 adults

---

WESTERN BAKED BEANS

3 cups pinto beans
1 clove mixed garlic
1 teaspoon salt
2 small onions
1-2 cup brown sugar (molasses may be substituted)
1 teaspoon chilo powder
1 10 1-2 ounce can condensed tomato soup
3 or 4 slices bacon

Wash beans, cover with water (two inches); soak over night drain. Add garlic and salt, cover with hot water and simmer 1 hour Drain, reserve liquor. Place beans Sprinkle with sugar and chilo powder. Cover with soup and liquor. Arrange bacon slices on top. Cover, bake in slow oven, 300 degrees, five hours. If necessary, add more bean liquor. Serves 8 to 10.

URGES LESS USE OF CANNED GOODS AND MORE COOKING OF FRESH VEGETABLES, DRY BEANS

By Mary Lyles Wilson

Secretary of Agriculture Claude Wickard tells us many foods are to be rationed. It is gratifying to know that American homemakers will make any adjustment necessary to help boys in the service or speed up victory. Homemakers are fighting this war, too, so once again you have a chance to play a vital part in the fight for conservation at home to insure adequate food for the men who are giving their lives in the battle for a free world.

Canned food will be rationed as was sugar and coffee. This is the way of making sure there will be enough canned food for everybody.

What Limited Purchase Does

It is suggested by the War Production Board that we cut our usual purchase at least one can each week. Let me tell you what I read recently: figures that amazed me. If every housewife in the country will voluntarily limit her purchases in this way nearly 190,000 tons of steel, over 26,000 tons of tin and 77 tons of rubber will be made available for tanks, planes, guns and other equipment.

The tin shortage is acute as the free world's largest source of supply has been cut off since early in 1942. I mention these facts that we may realize it is neeessary for us to be careful now.

May I suggest a few specific things we, as homemakers, can do:

1. Buy no more canned goods than you absolutely need between now and the start of rationing.

2. If possible cut your usual canned goods purchase by one can a week.

3. Buy fresh fruits and vegetable when they are in season.

4. Do your own home canning of available winter fruits and vegetables if you have the proper facilities and storage space.

5. Plan a victory garden this spring. but be sure you have proper instructions for the planting and cultivation of a garden.

We all know fresh fruits and vegetables are good for us; in fact, they are absolutely necessary to make youngsters grow and keep them, as well as grownups, fit.

Plan to use fresh fruits instead of canned ones. It has been too easy to open a can. More times than we realize we can use fresh fruit. A few days ago I planned a pear cheese salad. I used the delicious fresh pears that are available now and they were not any more expensive. Yes, you can peel them ahead of time.

Peal, rub with lemon—cover and place in refrigerator until ready to use. They will remain crisp and white. The salad was completed by stuffing seasoned cottage cheese in the cavity of pear, surrounding it with slices of calavo and placing it in crisp lettuce.

Ingredients: 6 sweet potatoes, 2 tablespoons butter, 1 teaspoon salt, cream, 3 medium size apples, 1-2 cup sugar, 1-2 cup water, 1-2 package red cinnamon candies (optional). Marshmallows.

Method: Scrub sweet potatoes Cook in salted water until tender. Drain. Peel. Place potatoes in large bowl. Add butter and salt. Beat until fluffy adding enough cream to moisten. Place in a casserole. Meanwhile, core apples Slice cross-wise about 3-8-inch thick. Boil sugar, water and cinnamon candies about 5 minutes Add apple slices. Cover. Cook over low heat until tender. Place apple rings in a border around edge of casserole, placing a marshmallow in center of each. Bake in a moderate oven of 350 degrees F., for about 15 minutes or until marshmallows are brown. Serves 6.

How to Use Dry Beans

The victory food special for January 18 is dry beans. Many delicious and healthful dishes, hot and cold, may be prepared with beans. Dried beans include red, kidney lima. yellow eye, blackeyed, soy, pea or navy.

For simple goodness prepare any one of these in this way:

Wash and soak in cold water overnight. Drain and cover with boiling water. Cook with a small piece of salt pork, bacon or ham bone until tender. Drain and season with salt and pepper and a little butter.

A real victory dish full of real goodness, too, is red beans and pork liver. You know liver is a non-restricted meat.

Slice 1-2 pound pork liver in 1-2-inch slices. Cut in one inch pieces. Season and dredge with flour. Brown liver with one sliced onion in two tablespoons fat, add 2 cups cooked tomatoes. Cover and cook slowly 25-30 minutes. Serve over 2 cups hot cooked red beans.

Have you ever served baked bean soup? If not try this receipe, a nice way to use left-over baked beans.

Baked Bean Soup

2 cups cold baked beans
1 cup tomatoes
4 cups water
Seasoning, salt, pepper, mustard

Simmer beans in water until soft, add tomatoes.

Rub soup through strainer. Add boiling water if too thick. Add seasoning. Heat again and serve with toasted crackers or cubes of bread toasted or fried.

One of the best salads I ever tasted was served by a friend of mine on a picnic once. It will taste just as good by the fire on Sunday night for supper.

Red Bean Salad

2 cups red kidney beans (cooked)
2 cups chopped apples
1-2 cup chopped celery
1 onion minced—seasoning
Mayonaise

Mix ingredients, season with salt, dash pepper and moisten with mayonaise. Line bowl with lettuce, pile salad in center. Serve with thick sliced ham, hard rolls, sweet pickles, beverage and filled cup cakes.

Boston Baked Beans

2 cups white beans
2 tablespoons molasses
1-4 lb. salt pork
1 teaspoon salt

Soak beans overnight or at least several hours; drain and cover with cold water; boil about ten minutes; drain; place in baking dish; add pork, molasses, and salt; cover with liquor from beans; bake in slow oven for 3 hours. Remove cover and brown before serving. Serves 4 to 5.

Mrs. Martin Hulon from Cleece's Bend has requested suggestions for canning fresh meat. She tells me she has been so successful with our direction, having put up hundreds of cans of vegetables and fruits. We are pleased to give recipe for canning meats. Perhaps many of you have some extra spareribs or backbones you would like to safely save for meals later on.

Spareribs

Cut in lengths that will pack into jars. Roll tightly, tie with string, brown in hot fat heating thoroughly. Pack into clean jars to within one inch of top. Add one teaspoon salt to each quart jar. Add 3 or 4 tablespoons pan gravy. Put on top. Process 180 minutes in hot water. bath or 60 minutes—15 lb. pressure in cooker.

YOU MAY NOT LIKE "IT" BUT "RATIONING" IS HERE; BETTER TRY TO UNDERSTAND

You may not like it and you may not want it, but since it is here to stay for the duration, you might as well try to understand it! "It" is none other than rationing on a larger scale than anybody dreamed of two yearss ago. First it was just rubber and oil and sugar, but now nobody can escape it, because the new food rationing plan will reach into every home in the land.

If you must blame somebody when you can't get what you want, then do remember Shicklegruber (alias A. Hitler)! Gnash your teeth in his direction because he's the lad that started the whole business and not your long suffering ration board.

Agriculture Secretary Claude Wickard has directed the OPA to start rationing about 200 canned, frozen and dried vegetables and fruits as soon as the machinery can be set up. So while the machinery is being put into shape, you and your family had better go into a huddle so that when the time comes to go into action, you'll know just what to do.

Mr. Wickard says that nobody in this country has to worry about existing on a sub-standard diet. Although U. S. civilians will eat nearly one-third less of these foods in 1943 than they have been accustomed to eating, their diets can still be well balanced and healthful.

Point System Looms

Rationing will begin early in February under the point system." Under this system, the housewife (or whoever buys the groceries) will use special stamps to buy rationed foods, from her grocer. The storekeeper will use the stamps to buy from his supplier, and the supplier, in turn, uses the stamps to buy from his canner or from another supplier. The OPA assures us that there will be complete freedom of choice all along the line.

The point values of each stamp will be the same in every store throughout the nation, so that your grocer's business in these rationed foods will be limited only by the point value of the stamps he takes in from you and his other regular customers.

Goods Will Be Frozen

Remember this, too and avoid getting panicky when the program starts. Supplies of goods to be rationed will temporarily and briefly be frozen or held on retailers' shelves and in wholesale warehouses. Before you can get a ration book, you, as the consumer, must declare whatever canned gods you have on hand so that these goods can be deducted from your allowance. (Happily. home canned goods are exempt.)

Heavy penalties will be imposed for giving false information. With this bit of information under your hat, you ought to be able to help yourself and your rationing board, and earn a crown of glory, besides!

BASE FOR HANNIBAL'S STRUGGLES

Sousse was a base for the Carthaginian leader Hannibal in his struggle against ancient Rome. Julius Caesar launched one of his African campaigns by landing there. The city's importance in the early days of Christianity is shown by its miles of Christian catacombs still well preserved. Then known as Hadrumetum. Sousse owes its modern name to a "susa," a moth-like insect that figures in fables of the city's Arab era.

5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

U. S. D. A. EXECUTIVE'S

(Continued from Page 1)

with that during World War I, he revealed that food claims the smallest share of the industrial worker's income on record. The figures are 58 percent in 1917, and only 28 percent in 1942.

Coming back to the role which Negro Americans are playing in the war effort, he said, "Both Negro farmers and Negro industrial workers are making an important contribution to the war. As Booker T. Washington once said: 'Work diligently to establish yourself in the land, and its good will come to you.' Certainly, Negro farmers are working diligently and I am sure they are reaping the benefits about which Booker T. Washington spoke."

Closing, Director Duggan said, "In time of peace, you have made a lasting contribution to the welfare of the entire nation. Now in war-time, members of your race are serving on all the battle fronts and laboring in industrial plants to produce munitions, and your farmers, along with all other farmers, are serving on the food production front. Your contribution looms even larger than ever. You have much of which to be proud."

"PRIORITY"

We have a new word in our dictionary, a word that is on everyone's lips, that comes into every conversation, that hangs over every purchase, that is taking an unprecedented part in our daily lives. It is the word "priority."

Just what does priority mean? The answer is very simple. Priority is simply putting first things first.

As a nation and as individuals, we have one job today—the job of winning this war. This must come before anything else, because, if we don't win it, there won't be anything else. And defeat would be unthinkable to any of us.

The quicker we win the war, the sooner can we return to the way of life we want to live, to the full enjoyment of the advantages and happiness of the democratic way of life. The quicker we win it, the sooner can our factories revert to the production of those things which make life easier and more enjoyable. The quicker we win it, the sooner will our boys come home, our families live again as families should, in peace and prosperity, free from fear, free to plan again for the future.

Here is where priority comes in. Priority means that we must put the war effort first. We must ask ourselves before we buy anything, whether or not it is essential. We must use our money for war bonds, not for luxuries. War bonds have priority on all spare cash—and spare cash means all that is not needed for bare living expenses. We must remember that non-essentials not only take money, but they take manpower to make and transport; they take space needed for war materials; they use up steel and rubber and gas to move them from place to place. Luxuries do not have priority. They are "out"—for the duration.

Priority means that we must work hard at those things which are essential. In industry, if we have the strength. In civilian defense, and other volunteer war tasks, if we cannot give all our time. We must remember that there is priority on our ability to work, and because of that priority we must keep fit and ready to do our share.

Priority means that we have no time to indulge in hatred, prejudice or discrimination, or in resentment for real or fancied wrongs. All of our energies, mental as well as physical, must be devoted to the one end of winning the war quickly. There is no priority on personal dislike and morale-sapping grudges—and above all, passing on subversive rumors. There is no priority on careless talk.

Let's not cavil at the discomforts of priorities. Let's use the word for what it is—a help in winning this war speedily. We CAN win it if we bend every effort to the task—and if we put first things first.

—Service Magazine.

ELECT SENATORS FOR SIX YEARS

U. S. Senators are elected by popular vote in each state for a term of six years in accordance with the Constitution, as amended, Senator Joseph F. Guffey was re-elected to the U. S. senate in November, 1940, and began his second term on January 3, 1941, so that he will serve until 1947.

The first U. S. senate was the only one in which some of the senators served for four years. When it convened on May 14, 1789, the senators were divided by lot into three classes: the first class to serve for two years, the second for four years, and the third for six years. The lots were so arranged that no two senators from a state fell into the same class and the reason for this allotment was to elect only one-third of the senate at any time and to maintain thus a majority of experienced lawmakers in the legislative branch of the government. The successors of these first senators were elected for terms of six years.

CLAUDE A. BARNETT'S

(Continued from Page 1.)

out that the American Army is the best fed army in the world. We must keep it so. But it is not our soldiers alone for whom we must provide food. We must also provide food for the countries of Europe whom Germany has raided and stripped in order to feed her own armies and people. These are some of the reasons we Americans must forego some of the foods we have always enjoyed in abundance.

"The need for increasing food production is obvious. And steps already taken by Extension Service, Farm Security Administration, the Agricultural Conservation and Adjustment Administration, and other agricultural agencies have laid the ground-work for increased food output. The farmers, colored and white, have caught the spirit. Many are now raising chickens, pigs, and cows. The number of Victory Gardens grown by Negro farmers last year was amazing.

"Of course not much of the food produced on 11 farms reached the market, or our soldiers, but it performed a great service in providing far better nourishment for the families on these farms that they had heretofore received. The home gardens, pigs, and chicken also kept farmers from buying in town, thus leaving that food for the city folks and for shipment to our armed forces."

Mr. Barnett also pointed out that he and Dr. F. D. Patterson, president of Tuskegee and also special assistant to the Secretary of Agriculture, had traveled over a large part of the farming area of the South studying the conditions at close range. He indicated that no all-out effort has been made to utilize the resources of Negro farmers."

Said he, "In addition to increasing the supervisory staff, a corps of specialists is needed to work with farmers and farm youths in pushing poultry, hog, and dairy production. Located in the South where the growing season is long, Negro farmers, if given adequate leadership, can develop a food production program which will play an important part in providing the nourishment so vitally necessary to winning the war."

RODDIE PRIDGETT

(Continued from Page 1)

over with. And when excessive rains threatened to ruin their crop in 1940 and '41 they had to work mighty hard.

Mrs. Pridgett sold milk and eggs. Last year her average egg sales were 20 dozen a week. Farmer Pridgett and his boys cleared a part of their woodland and sold $600 worth of timber.

While paying for their farm the Pridgetts have been producing Food-for-Freedom, too. Mrs. Pridgett canned 600 quarts of fruit, vegetables and meat with her new pressure cooker last year. They stored away 250 gallons of cane syrup, a large quantity of potatoes, and killed seven hogs. This year they plan to increase their production of food, and they are putting some extra acreas in soybeans and peanuts to help overcome the vegetable oil shortage caused by Japanese aggression in the Far East.

The Pridgetts have nine head of dairy stock, 150 chickens on the yard, two teams of workstock, a wagon and other farm equipment. They are out of debt, have money in the bank to operate on this year, and once in a while Mr. and Mrs. Pridgett like to go into the bureau drawer, get out their bonds their share in America, and look at them.

FOR PRAIRIE FARMS

School children of Dauphin, Manitoba, collected 3,000 pounds of maple seed and sent it to a forest nursery station in Saskatchewan to be used in establishing trees on prairie farms.

The Pacific Ocean is more than four times as large as North and South America together.

FIRST M

Five years ago Roddie Pridgett, 41 was a sharecropper who wa just "getting by." Today he owns his 120-acre farm in Rankin Co., near Pelahatchie, Miss.. having paid off his Farm Ownership Loan 36 years ahead of schedule. The father of nine children, Pridgett is the first Negro farmer in the United States to pay off his loan under the Bankhead-Jones Farm Tenant Act which is administered by the Farm Security Administration of the Department of Agriculture. He was honored at special ceremonies held February 12 at Jackson College, Jackson, Missouri, of which Dr. j. L. Reddix is president. The ceremonies highlighted the annual farmers' conference sponsored by the college.

Upper left photo shows Mr. Pridgett with two mule colts he has raised. He has two teams of workstock, a wagon, plows and other farm equipment. Not only does he

BUTTER, CANNED CITRUS JUICES CURTAILED

Washington, Jan. 6 --(AP)--America's armed forces and her Allies are going to get 30 per cent of the nation's monthly production of creamery butter and virtually all of the canned citrus juices.

The new government order, effective February 1, is expected to set aside about 510,000,000 pounds of butter this year for war requirements, leaving about 1,190,000,000 pounds for civilians.

Secretary of Agriculture Wickard said last night that the curtailment will permit civilians about 13 pounds of butter each in 1943 as compared with an estimated per capita consumption of 16 pounds last year.

In reserving production of all citrus juices, except unconcentrated grapefruit juices, for war needs, Wickard declared his order will not materially affect civilian supplies. Large quantities of fresh citrus juices, he explained, are available to civilians as the orange and lemon crops are large and the grapefruit and tangerine crops, now being harvested, are expected to be of record size.

The War Production Board last November 30 directed half of the then available cold storage butter stocks in 35 cities frozen for government needs. The directive earmarked about 18,000,000 pounds, or two weeks' supply, for war needs.

Under the new order, about two-thirds of the government's share will go to American military forces and almost all the rest to Russia. Meantime, dairy officials declared that the possibility of rationing butter is being studied. Part of the civilian supply, they added, also may be reserved for distribution late in the year when butter production declines.

The butter order applies only to manufacturers making more than 12,000 pounds in any month since January, 1942, but officials said that more than half of the output of canned grapefruit juice will be available to civilians although Kikard forbade canners from selling unconcentrated grapefruit juices during February and March and the remainder of January so that the supplies may be reserved for civilians later in the season when the amounts of fresh citrus fruits are low. Wholesalers and retailers however, may continue to sell their available stocks.

The entire production of orange lemon and combination juices, both concentrated and unconcentrated, will serve war requirements, but virtually all of the concentrated juices already are going to the Government, Wickard said.

The order, prohibiting packing of citrus juices, except grapefruit, for commercial sale in any type of container suitable for storage or shipment, does not prevent preparation and sale of these juices by hotels, restaurants and similar distributors or by concerns that customarily supply such institutions and consumers.

President Roosevelt, meanwhile, will inaugurate the 1943 food production campaign in a broadcast January 12, a date he recently proclaimed as farm mobilization day. The program, the Agriculture Department said, will emphasize the importance of food as a weapon of war and reliance of the United Nations on American farmers for food.

NEGRO FARM YOUTHS

(Continued from Page 1)

than six million chickens, one-fourth million hogs, owned close to 100,000 head of dairy cattle. They raised more than two million bushels of vegetables in 4-H Victory Gardens; canned over 12 million jars of fruits, vegetables and meats. They bought over six million dollars worth of War Bonds, and collected thousands of tons of scrap.

In addition to increasing these activities, 4-H Club members will lay plans to enlarge their activities in fire prevention, nutritious meal planning, first-aid and home nursing, farm machinery, care and other wartime activities.

NEGRO FARMER PAYS OFF FSA. LOAN

have money in the bank to finance his 1943 operations but he has paid off all his debts. He will cooperate with the FSA Food-for-Freedom program by increasing his peanut and soybean acreage, poultry and eggs, hogs nd dairy products. The Pridgetts sold an average of 20 dozen eggs a week last year.

Upper center photo is a view of the Pridgett home, a remodeled farm house on the place they bought with an FSA loan of $1,495. Cost of remodeling was $166.82. The farmer and his boys did all the work. (The house is in good repair, is neat and clean in appearance.)

Photo at extreme right shows Mrs. Lucile Pridgett with the pressure cooker she used to can more than 600 quarts of food last year. Before the Pridgetts became Farm Security borrowers she never canned more than 50 jars of food a year.

Lower left photo shows the family who are proud of their achievement. Besides Mr. and Mrs. Pridgett are four sons, Enos J., 15; Robert Lee and Earl Lee, 14-year-old twins; Jack, 7 and four girls whose ages are 13, 11, 6 and 3. Besides their healthy and well-clothed children the Pridgetts have much to show for their hard work. All of the children are still at home except the oldest daughter who is married.

In addition to the canned goods, part of which is shown in the lower center photo, the family has killed seven hogs. They also have 250 gallons of cane syrup, quantities of potatoes and peanuts, nine head of dairy stock, plenty of corn, hay and other feedstuffs. Excessive rains which threatened to ruin their crops in 1940 and '41 only caused the Pridgetts to work all the harder. Net result: they paid out their FSA loan 36 years ahead of schedule.—FFSA Photos.

NEW VARIETIES OF AMERICAN SEED RECOMMENDED FOR GARDNERS RAISING THEIR FOOD SUPPLY

All America Selections Include Cucumbers, Tomatoes, Pole Beans

By Dr. Floyd Bralliar

"Food will win the war and write the peace." That was no idle expression by the Secretary of Agriculture, Claude Wickard. America is pledging to feed 10 million British this year, and no one knows how many others will need to be fed. Even with an armistice or capitulation by Germany, rehabilitation is slow and sealanes would be wide open for America to help feed the world. Greece, Norway and many other countries must be fed just as soon as a way can be found to do so.

Without some seeds usually obtained from Europe and Japan, and with some shortages of American grown seeds, we are more than ever concerned over superior varieties for better production. For this reason, we are all interested in the new varieties, recommended for 1943.

The "Food for Freedom" program for America is to plant and to make planting count. Home vegetable gardens are needed wherever they may be reasonably and economically grown. We are asked to get our own hands in the soil; to plant flowers, roses, shrubs; to keep our homes attractively planted. Where space is available, we are expected to plant vegetables, at least to feed our own families and to preserve, market locally, or dry our surpluses. Let us feed ourselves if possible, relieving market gardners, shippers, canners, warehouses and transportation, for supplying those Americans who cannot garden and those starvation-rationed humans abroad who are ravaged with war. In fact, it now looks as though canned vegetables may be entirely off the market for civilians.

Registers New Seeds

The responsibility of All America Selections is to register all new varieties of seeds. Samples of proposed new varieties, before offered for distribution, are planted in trial grounds in the different climatic sections of the United States and southern Canada. From scorings and reports of the judges in charge of these comparative trial grounds, the really different and superior new varieties are determined. The winners are recommended to the seed industry and to the gardeners of North America, where these most worthy new varieties may be depended upon to produce better vegetables and flowers than other similar kinds.

The All-America Vegetable Selections for 1943 introduction are not in large quantity supply this very first year they are offered. But all gardeners have an opportunity to get some seeds of them, through their own favorite seedsmen. The following are the varieties selected for 1943 because they were found superior to others of their kinds or for their recommended purposes.

There are four bronze medal winners this year, and one honorable mention. They are described in order of their ranking, or points voted them by the All-America judges.

Cucumber Marketer is the Blue Ribbon introduction. It has been selected as an ideal slicing cucumber for home gardens, early market and shipping. It is very smooth with exceptionally uniform dark green color down to the blossom end, and very prolific on a vigorous vine. Being a so-called white spine variety, it does not turn yellow on aging. The fruits are crisp, firm and tender and a few hills of these will be an asset to any garden or for any salad bowl.

Pole Snap Bean Potomac practically tied with the cucumber for first place. Every gardener is familiar with Kentucky Wonder, the old standby for a pole bean. While it has a grand flavor, it does have strings and a rather crooked shape. But, it is heavy bearing on a most vigorous vine. The new Potomac has the same heavy vine growth and trials showed more pods than Kentucky Wonder. It is absolutely stringless at all stages of growth. The rather small purplish-black seeds go a long way in planting, and because of their dark color help keep the pods green and fresh in appearance on the market.

Tomato Jubilee answers a long-felt want. It is smooth and globe-shaped, for economical slicing. The deep tangerine-orange flesh shows through the yellow skin. It ripens and colors uniformly and is quite free from cracks. This should be the leading yellow tomato for home and market right from the start. The nutritionists' call for yellow vegetables, with their extra vitamins answered by this real and deep yellow tomato, for slicing, juicing and canning.

Pepper Early Pimento introduces the famous sweet pimento for home gardens even in the north. Earlier to set and mature fruits, this newcomer makes a little shorter, though more prolific plant. For salads, with cheese, eating straight or stuffed and baked, this is a welcome new pepper.

Bush Lima Bean Cangreen provides a green-seeded lima or butterbean, which appears fresh and green-shelled even when it is saved for use as a dry shelled bean. Retaining its fresh green color after being cooked and canned, is a decided advantage for canners. Similarly for quick-freezers and for marketing, this fresh appearance is a big marketing help.

Cangreen has shown itself in the trials to be a very prolific green-seeded strain of the reaviest bearing. Henderson Bush Lima, variety. It has the same thrifty, vigorous, bushy growth and high production of pods of the smaller sized beans. Home or variety, both fresh from the garden and drying for winter use. It is also more dependable in setting pods from first blossoms, particularly in some sections, than the larger seeded varieties.

Look for All-America varieties in the seed catalogs and in the stores. And try these newest winners, being offered to you for the first time in 1943.

MEDICAL LEADERSHIP IN THE AMERICAS

"In its development throughout the world, medicine has passed through innumerable transitions from country to country, from subject to subject, from leader to leader," says Morris Fishbein, M. D., editor of the journal of the American Medical Association. "The reasons for such continuous transition have been perhaps largely economic but no doubt also spiritual.

"Cradled in Greece, the youth of medicine was no doubt spent in Rome, its adolescence in the Oriental nations, perhaps the first few years of its maturity in Germany and Austria. Today its finest offspring seem to be coming from America."

Dr. Fishbein then points out that the decline in medical progress in Europe and even in England, puts the major burden of future medical progress squarely up to the American nations. He traces the medical advancement that is taking place throughout the Americas in countless privately-endowed institutions and hospitals in cooperation with various public health agencies. The facts he presents are an inspiring story of the unselfish devotion of the medical fraternity to the prevention and cure of disease.

Today more than ever before, the aim is to create good health by the elimination of the causes of disease. With the world aflame and infectious disease closely allied with wars, constant vigilance must be maintained to protect human health and life. We in this country can be thankful that American medicine has earned a place of leadership by its accomplishments in safeguarding health and curing disease.

ELBERT STALLWORTH

(Continued from Page 1.)

Elbert Stallworth was born and reared on a farm in Southern Alabama and finished Tuskegee Institute. A pupil of the late Booker T. Washington; he received his inspiration—learning to dignify and glorify labor and put brains and skill into the everyday common occupations of life. He was a versatile man of great vision and a conscientious worker whose good deeds will live.

KOINONIA FARM FINALLY LOCATED IN GEORGIA

DRS. JORDAN AND ENGLAND HAPPY OVER PROSPECTS

A Surplus Of Fresh Meat And Dairy Products Help Supply Neighbors

Several months ago it was announced in the American Baptist that the Rev. Clarence Jordan with the assistance of the Rev. Martin England and friends would purchase a farm in Alabama State to be operated cooperatively. News has been received from Dr. Jordan that the farm has finally been located, not in Alabama, but in southwest Georgia. The farm is a 400 acre tract about nine miles southwest of Americus and about 100 acres is now in cultivation.

Dr. Jordan writes an interesting letter on the progress they have made since arriving around the middle of November. Knee-deep in Bermuda grass with a seedling p[illegible] can to greet us we entered upon this plot to start our much planned and prayed for project. With no team nor plow we borrowed enough to break the land later, however, when we laid off the rows in our garden it was necessary to hitch each other to the plow, thus two mule preachers are witnessing little green shoots of vegetables where once there was a thick mat of grass says Dr. Jordan Fruit trees, berry vines, grapes and nut trees have been set out with an outlook for a promising future

Plenty of milk and butter is being supplied by two milch cows and fresh meat is gracing the table of landlord and neighbor, this was made possible because of the death sentence passed on a nice brood sow which became unruly and chased brothers Jordan, England and neighbors over field and fence.

Dr. Jordan further states that the community has not quite figured out two preachers trying to farm and seem rather amused at their attemps, they are willing to confess their ignorance and ask their instruction and advice. In return, we may in time share with them our convictions about the brotherhood of all men, about the way of love as an alternative to hatred and violence, about man being more valuable than mammon, about Christian commual living, and the many things which loom so large in the teachings of Jesus. Drs. Jordan and England appreciate the blessings received through their friends both far and near, and sincerely pray that in some small measure they may be a blessing to them. Kentucky friends of these good men can appreciate their endeavors because of the fine Christian fellowship which was theirs to enjoy and believe this is a labor of love and joy to hasten the establishment of peace on earth and Christ-like living with all mankind. Our prayers are that these God-fearing men will be able to interest all races in their sacrificial efforts and live to see the fruits of their noble endeavors.

--American Baptist

FROZEN MICROBES REVIVED

A Russian scientist claims to have brought to life microbes and other specimens of small marine life after they had been frozen for thousands of years.

BAD SPELLING

Higher education for counterfeiters seems to be the next necessary step. Some counterfeit bills in Syracuse, N. Y., were quickly retired from circulation because a word was mispelled.

DR. ROSCO BROWN SAYS FOOD IS A MUST

Washington, D. C.—Dr. Roscoe C. Brown, Health Education Specialist of the U. S. Public Health Service says "Food is a Must for Victory' in a letter to Albon L. Holsey, Agricultural Adjustment Agency field officer. His statement follows:

"There is a law of supply and demand which controls commerce but there is no way of making the undernourished body understand the logic of this law or its method of operation. This is man's device and his responsibility.

"People may do without most non-essential things of life and some which are considered essential for general purposes of living, but man cannot live long or well without sufficient bread, the staff of life, and the companion foods which make the balanced diet and build bone and sinew, clear minds and high morale.

"Hence, there must be more production of food if there are more uses for it, more people to consume it. And the problem is not one which will wait on man's time or convenience. Should the "no more" distress signal be sounded, it would then be too late to plant, to grow, to harvest, to process and to market food. The time is now and the need is urgent.

"Wherever there is land, small or large, within your reach and control; whatever knowledge and skill, little or much, you have, you may add to the nation's breadbasket. Think it over, talk it over with your farm and home demonstration agents, plan it with family and neighbors—and grow more food on home lots, in gardens and field. This too, is patriotic service for VICTORY.

BARNETT'S ARTICLE

In an article appearing in the January edition of Extension Service Review, a U. S. Department of Agriculture publication Claude A. Barnett, Director of the Associated Negro Press and Special Assistant to Secretary Wickard, points out how Extension Service is contributing to better living.

Among other things, Mr. Barnett says, "There were at the last census, 672,214 Negro farm operators in the South, something less than a fourth of the farms operated in that section. They form a large percentage of the entire Negro population of the United States and, together with the white small farmers, tenants, and sharecroppers in the South, represent the lowest income families in the entire country.

"Here is a great mass of people caught in the toils of a one-crop system, with appalling illiteracy poor schools, few health provision, and little purchasing power. As a result, they are of little service to themselves and in many instances a burden on their section. That they can be made an asset to the South, that they can measure up to the fullest stature of American citizenship if given fair help and opportunity is beyond question.

"There are many governmental agencies, and particularly agricultural agencies, which are pointed in the right direction to help in these problems if only their programs were large enough or could be driven deep enough to reach these folk who are at the very bottom of our Nation's economic life. As far as Negro farm families are concerned, Extension predominantly, points the way, by virtue of the educational character of its services and the far more extensive use of Negro personnel than in any of the other groups."

AGRICULTURAL DEFERMENTS

Deferment requirements for farm workers have been liberalized. This is expected to keep many additional workers on the farm. Among other things, tobacco and short staple cotton have been added to the list of essenial crops, and the 16 war unit standard has been relaxed somewhat. In some cases a farm worker who only produces eight war units of essential crops may be deferred. A war unit is a measure of production of essential farm products. For example, a milk cow is equivalent to one war unit; or 20 pigs or one acre of carrots is equivalent to one war unit. The farmer who cares for 16 cows or who cultivates 16 acres of carrots or produces 16 units of any essential war crops is eligible for deferment.

In no case is an agricultural worker frozen on any given farm He may move from one farm to another and remain in his deferred classification so long as he continues to be necessary to, and regularly engaged in an agricultural occupation, or endeavor essential to the war effort. However absentee farm owners do not qualify for deferment under this program.

HERE'S HOW YOU CAN SAVE YOUR SHOES

Washington, D. C.—With shoes now being rationed, you are probably interested in ways to make those you have last. But before we get into that let's take a look at the Nation's wartime leather needs. About a year ago the War Production Board ordered 80 percent of A-grade leather soles set aside for the manufacture and repair of footwear for our armed forces.

Our fighting men must have good shoes. Each soldier gets three pairs of shoes when inducted, and two pairs more during his first year in service. The number of men in our army is a military secret, but let's take an army of five million men, that means 25 million pairs of shoes a year. Why, that's enough shoes to fill a three-tier household shoe bag 1500 miles wide, or comparable to the distance from Boston to Miami.

Of course, shoe rationing is designed to save leather. And shoes aren't the only leather items in a soldier's wardrobe. There are belts, straps, gloves, scabbards for guns and bayonets, and in the cavalry there are saddles and bridles and other leather paraphernalia. Besides the Army, there's the Navy, and we must not forget the WAAC's, the WAVE's and the SPAR's.

Now that you see where the leather is going, here ahe some tips, compiled by Department of Agriculture chemists, on how to care for your shoes and make them last. (1) Keep your shoes soft and pliant, and strong by greasing and polishing them often. For dress shoes, use a little castor oil; and be sure to grease the soles as well as the uppers. (2) Never let mud dry on your shoes; always wipe it off as soon as possible. (3) When your shoes get wet never dry them near a hot fire, a stove, or a radiator; grease them carefully, working the grease inthoroughly where the sole is fastened to the upper then let them dry in a warm, dry place. Do not put them on again until they are thoroughly dried.

Use plenty of grease on your heavy shoes, especially when you use them for farming or gardening. You may use several different oils —neat's foot oil, castor oil, cod oil, tallow, wool grease, or a mixture of these. Have the oil slightly warm, and apply it with a soft cloth. Then rub it in thoroughly with the palm of the hand This will protect your shoes against mud, water, drying, heat dirt, and perspiration.

Here's another important suggestion: have your shoes repaired promptly when they need it. This not only assures longer wear, but it also makes for proper support of the body, and often prevents foot ailments.

LABOR PLEDGES

The Department of Agriculture has announced that a labor recruitment program will be started immediately in all major counties producing perishable fruits and vegetables for canning to help assure farmers at planting time that workers will be available at harvesting and processing time.

Extension Service agents in cooperation with the U. S. Employment Service, the Office of Civilian Defense, and local operators of canning plants will immediately launch a campaign to canvass the available labor in canning plant areas. Churches, civic clubs, business and school groups, and farm workers who have some spare time are called on to pledge themselves to help in the crops and get them processed.

State Extension directors are discussing the recruitment and placement of non-farm youth for summer work.

EGG PRICE SUPPORT

The Department has announced minimum support prices which will be paid producers for eggs bought by the Food Distribution Administration under the 10-case Southern Egg Marketing Program in 12 Southern states. The prices effective now at buying stations in the 12 states range from 33 to 35 cents per dozen for Grade A, large eggs, in 10-case lots.

They Serve The Neediest Of Their People

Jeanes' teachers are Negro women working in Negro rural schools as itinerant assistants to County Superintendents. They are paid in part from state and county school funds and in part from a fund established in the will of Anna Jeanes, a Quaker of Philadelphia. The first and most famous Jeanes teacher was Virginia Randolph of Virginia who in the rural school work established the pattern for the Jeanes rural programs.

Four years ago Jeanes teachers set out to raise $25,000 to establish the Virginia Randolph fund for tuition at Hampton for young Negro women. This year, the first award of $500 was made. The work of the Jeanes teachers covers the whole field of Negro family and community life. These hundreds of Negro women carry ou programs and where a need arises not covered by the program they with imagination and initiative, devise their own ways of filling the need. Health nurses have been employed through the efforts of Jeanes teachers; money has been raised for incidental school purposes; mothers' clubs have been organized; hot school lunches have been inaugurated. Get the children in school, keep them there, and reach out for the parents and educate them might well describe the basic program of a Jeanes teacher.

"Another innovation," so reports say, "is the employment of a minister known as the 'Jeanes rural school counselor.' His duties are with the churches and pastors. demonstrating to them the value of church budgets, decorating the church and inspiring the congregation to higher ideals in health and education."

Mrs. Jane Williams of Dallas, Texas, the only Negro woman among 600 contestants, won first prize of $500 at the onnual World Designer's convention in New York in November. She invested $300 of the prize money in War Bonds.

'CAREFUL JOHN'

According to a decision handed down by the Kansas Supreme court, it is the duty of passengers of an automobile to warn the driver of approaching danger, and when nearing a railroad crossing where the view is obstructed, they should get out and reconnoitre on foot.

Serious Undertaking

As the new year opens, statisticians, experts and housewives agree on one fact. The cost of living is rising ominously. Cries for inflation controls grow louder. The "easy" way of paying for war by painless borrowing is beginning to hurt. The best possible inflation control is taxation. This control has not been applied effectively.

An additional inflation control is direct sale of war bonds to the people. The banks should receive much of the credit for successfully putting tens of billions of dollars worth of these bonds into the hands of the public. Their efforts have helped immeasurably to stem the trend toward forced savings and resultant restrictions which the Treasury has been reluctant to impose. The Treasury hopes to raise the present figure of 23 million workers now investing an average of 8% of their pay in savings bonds to a figure of at least 30 million workers setting aside an average of at least 10% of their earnings every pay day. This means, in the words of a spokesman for the National City Bank of New York, that "The banker of virtue of his position in the community, has a special responsibility for taking off his coat and getting down to work to make the financing a success."

However, no voluntary war bond program can possibly be a success unless the American people evidence a willingness to turn from a scramble for disappearing luxuries and put their money into a serious undertaking. That undertaking is winning the war, and at the same time saving the economic system by which we all live.

WAY TO WIN

Government expenditures have become so fabulous that an inclination has grown on the part of many people to avoid the subject on the ground that the war comes first. Ostrich like, they ignore a couple of important facts: Before battles can be won, the machines to win them must be built. That takes money. Secondly, the all-important matter of how the money is raised to build these machines may finally determine who wins the peace.

During the coming year the government will have to borrow upward of 60 billions of dollars, over and above the amount it collects in taxes. It must borrow the bulk of the money directly from the people in one manner or another. Treasury experts know and the local banker knows that the banks cannot absorb too much public debt without undermining the institution of private banking which is the foundation of the economic system, as well as bringing about disastrous inflation. Borrowing directly from the people is the hard, sure way of winning the war—and the peace. And that is the way we must do it.

NO LONGER THE VILLIAN

Lelia Munsell

Earlier bird writers almost always listed the blue jay as the blackest villian of Birland, despite his beauty. All sorts of faults were checked up against him. Fuller study of the bird has hhown him to be both interesting and intelligent.

We praise the squirrel for his foresightedness in storing food for the winter. Why not the blue jay? He is one of the very few birds who do this. Some birds will hide a few seeds in crevices in tree barks, but most of them are thoroughly improvident, trusting blindly to Mother Nature.

The blue jay, however, is like the squirrel. Independent enough to look out for himself, and industrious enough to store food while it is plentiful. He, too, will hide seeds and grain in tree bark, but he does not himself eat all he thus stores. Smaller and less foresighted birds, such as nuthatches, chickadees and and titmice, profit from this. True, the blue jay may not have had any benevolent purpose in mind, but give him the credit of doing a good deed, anyhow

GREAT SCIENTIFIC ADVANCES AFTER WAR FORESEEN

Boston, Jan. 8--(AP)--A post-war world in which chemical discoveries will make the present era resemble "horse and buggy" age was predicted today by Theodore G. Joslin, ublic relations director of the E. I. du Pont de Nemours & Company.

"We will have glass that is unreakable and glass that will float, wood that won't burn, and laminations of plastics and wood that will compete with structural metals," he told the Wartime New England Sales Management Conference, in prepared address.

"Hosiery derived from air, water and coal, a wonder of prewar days, is but the forerunner of many innovations from the same sources, ranging from shoes that contain no leather and window screens that contain no wire, to machinery bearings that contain no metal.

As for homes:

"Lighting will be automatic, governed by electric "eyes" sensitive to outside variations in the daylight____The inner walls will be adjustible, so that several combinations of rooms can be arranged.

One-half the fuel will heat it. Plastic surfaces will be good for a lifetime of wear. The electric bill will be smaller. To mention just one detail pointing the way: Electric lamps that lasted 1,500 hours in 1939 now last 2,500 hours, give 12 per cent more light and cost from 12 to 17 per cent less."

Automobiles?

"Automobiles in the years immediately following the war may be quite similar to those of today because of the immediate demand for motors, but we can see notable changes coming in due course.

"Sealed cooling systems, proved on large scale by avaition, may end in the post-war car the nuisance of adding water to radiators. Weights may be half what they are, saving from 1,500 to 2,000 pounds of useless load. The power output per cubic inch of piston displacement may double, treble or even quadruple. Fuels may yield 50 miles to the gallon."

A WORLD RECORD

Where does sense end and nonsense begin? One might well ask that question about the rules and regulations that apply to buying and selling by American merchants.

How can the average storekeeper find time to read and digest the rules and regulations that apply to ten-thousand-and-one items that his shelves and counters contain?

The marvel is that they have been able to adjust themselves and at the same time furnish the customers uninterrupted service.

No branch of business or industry has cooperated more closely with the government in its anti-inflation plans than have the local merchants, but the service they render the people is largely taken for granted, like air and water.

When industries building, battleships and planes and cannon are in the spotlight and getting the flags and citations, for doing war work, it is only fair to speak a word in be half of the local merchants who render an indispensable service to every war worker who takes it for granted the store will have what he wants when he wants it.

The headaches beyond the counters of the local merchants are many today, and they get no medals for doing the most remarkable merchandizing job at the lowest turnover profit the world has ever seen.

BLUE GRASS IN TEXAS

If West Texas suddenly blossoms forth with Kentucky Blue Grass, the Chamber of Commerce can thank Pvt. William T. Edger of Camp Barkley, Texas. Longing for the familiar surroundings of his old Kentucky home, Pvt. Edger, former Versailles, Ky., banker, ordered a bushel of blue-grass seed from a dealer friend. The seed has been sprinkled about the company area, and Pvt. Edger is dreaming of a blue-grass Christmas.

Negro Women Serve Their Country In The Army

Negro women are in Army now. Some are on detached service in Washington and England; some are serving in the central training stations at Fort Des Moines and Daytona Beach; some are out in the field acting as recruiting officers to build up the auxiliary forces. Two companies have been ordered to Fort Huachuca, the home of the 93rd Division, to take over the non-combatant work now performed by soldiers.

* * *

When Fort Des Moines opened on July 21, forty Negro women were admitted. Thirty-seven of these received commissions.

* * *

In November 29 WAACS were graduated from the motor transport specialist division at Fort Des Moines. After finishing their basic training on August 29, they enrolled for eight weeks intensive training in this field.

* * *

On October 26th the President signed an amendment to the law creating the WAACS which placed women in the Army on the same pay basis as soldiers and raised the top rank to that equivalent to Colonel in the Army. The pay of an auxiliary thus was raised to $50.00 a month with maintenance, complete uniform and medical care provided. Top non-commissioned officers receive $138.00 a month. with same maintenance allowance as the auxiliary forces.

* * *

One hundred and forty Negro registered nurses have been commissioned officers.

* * *

AND IN INDUSTRY

Negro women are now being employed in the Willow Run plant of the Ford Motor Company. Starting the last of September, the Ford Company took on 27 women who upon completion of their training will act as instructors for additional Negro women for war work in Ford plants. In order to assist in recruiting new workers, the Ford Company has assigned a Negro woman to its personnel department.

Up to September 15, of an approximate number of 3,000 women employed by the Willow Run plant, not one was a Negro.

* * *

"A large number of Negro women are taking the regular training courses of the Westinghouse Manufacturing Company in preparation for regular jobs on a full time basis," according to the Negro press. "No explanation was given for the change in policy, but it was the opinion of well-informed leaders that a shortage of manpower has played an important part in the decision to hire Negro women."

* * *

Negro women are either employed or are in training as welders, machinists, mechanics, aircraft welders, and laborers in war industries.

* * *

AND IN SOCIAL SERVICE

The Red Cross has sent Negro women to England to assist in directing the social and recreational clubs established for Negro soldiers.

* * *

Negro women have passed civil service examinations and qualified as "learner mechanics" in aviation.

TUNIS' MOHAMMEDANS

Approximately 93,000 of Tunis' 219-000 inhabitants are Mohammedans. Almost 50,000 French, about an equal number of Italians, and approximately half as many Jews are concentrated in this port city. Tunis, centuries old and many times battle-scarred, came into French hands in 1881 when Tunisia became a French protectorate.

HAVE WE NOT ALL ONE FATHER HATH NOT ONE GOD CREATED US

If the Church is to make any substantial contribution to the social problem of relieving the present racial tensions, she must give herself to the task of doing away with that primary dogma which makes for racial tension, viz., the concept of white-race supremacy which is back of the whole brood of dissocial actions and attitudes manifested by the dominant race in the United States toward the Negro and, in all other countries, toward colored races of their respective population groups. Increasingly acute racial tension around the globe is but the logical and moral result of the effort of certain white peoples to force the world's colored population to accept and believe that colored men are not men. This 'deification of the white race, a relatively modern social tenet, is the major source of world confusion and conflict.

Its countersocial force is the determination, now more resolute, of colored people everywhere to repudiate and withstand this deification dogma. Since no social force or factor, from this time in, will be able to deflect them from this purpose and action, the challenge which this ominous situation brings to the Christian Church is imperative.

In the social process, an idea is made vocal in the institutions which the ruling element of the population sets up. Thus, practically every institution of our country is set to foster this idea of the "master race," from which concept the Negro is excluded. Religious sanctions for such a social process are sought because these are among the strongest controls and vehicles which society can invoke in perpetuating its culture and social machinery. Hence, the American Church has been reduced to the level of paying hostage to the white-race-supremacy obsession. Supplementing this "orthodox" procedure, force and fear have been invoked as auxiliary weapons in the hands of those whose political badge of humiliation and despair.

The tragic fact of our American life is the equivocal attitude of the Christian Church toward this resurgent pagan social and religious ethic. Thus, the Christian Church lends moral cooperation and sanction to this current process. As a religious social institution, the American Church has suffered her activities and her structual form to crystallize into perfect consonance with the idea of a fellowship divided upon the basis of color and race. Even if this were not so obvious a fact in American Church history, the eloquent testimony of acquiescence in the process is borne out by the silence of the American Church on so momentons an issue. Does anyone know where the American Church or the American white clergy, as a class, stands on the issue of race? Only since the exaggerated emphasis on the "master-race" ideology has brought the race issue to an acute focus in world-thinking have we begun to think in critical vein concerning it. And then, only because a super-pagan man blatantly boasting has made the shoe "pinch the other foot," If white-race superiority over the American Negro is proper and right, why is not German-race superiority over the non-German races right? "Have we not all one Father; hath not one God created us."

Unless the concept of the Father-God and of the equal and infinite worth of all personality now becomes the conviction of the Church, and is translated into the practical relationships, programs and policies of the Church, and becomes the active underlying principle of all social grouping and behavior, the next twenty-five years will see the traditional Church of America moribund and her missionary message and enterprise a mockery around the world.

From Gen. MacArthur's Order of the Day Following the Victory at New Guinea

To God Almighty I give thanks for that guidance which has brought us to this success in our great crusade. His is the honor, the power and the glory forever. Amen.

FORT LAMY AIR BASE

A short distance south of African Lake Chad on the important southern feeder river, the Chari (Shari), is the administrative center of the colony, Fort Lamy. It is an important air base and hub for caravan routes and automobile roads. The war important, all-weather, heavy traffic road, linking French Equatorial Africa with the shipping center of Khartoum on the Nile, stems eastward from Fort Lamy. This key road, following closely the route traveled by early caravans, skirts the desert, passes through Abeshr, and on through the province of Kordofan.

Land Grant Colleges, their Presidents, and How They Can be Reached, With Associate Members

Schools For Children of Farmers In the Several States

Herein is presented for consideration of parents, the various colleges and schools headed by men of experience and training, that are and will continue to offer educational courses in state institutions where is taught not only the higher education, but economics, agriculture, horticulture, carpentry, brick-masonry, dairy, in fact, a whole list too numerous to mention. A letter from you addressed to the President of these Institutions will bring more information:

Alabama (Normal), A. and M. Institute; President J. F. Drake
Arkansas (Pine Bluff), State College
Delaware (Dover), State College; President R. S. Grossley
Florida (Tallahassee), A. and M. College; President J. R. E. Lee
Georgia (Savannah), State College
Kentucky (Frankfort), State College; R. B. Atwood
Louisiana (Baton Rouge), Southern University; President F. G. Clark
Maryland (Princess Anne), Princess Anne College; Dean R. S. Grisby, Acting President
Mississippi (Alcorn), A. and M. College; President W. H. Bell
Missouri (Jefferson City), Lincoln University; President S. D. Scruggs
North Carolina (Greensboro), A. & T. College; President F. D. Bluford
Oklahoma (Langston), Langston University; President G. L. Harrison
South Carolina (Orangeburg), State College; President M. F. Whittaker
Tennessee (Nashville), A. & I. State College; President W. J. Hale
Texas (Prairie View), State College; President W. R. Banks
Virginia (Petersburg), State College; President John M. Gandy
West Virginia (Institute), State College; President John W. Davis

ASSOCIATE MEMBERS

Alabama (Tuskegee), Tuskegee Institute; President F. D. Patterson

Ohio (Wilberforce), Wilberforce University; President D. Ormonde Walker
Virginia (Hampton), Hampton Institute; President Malcolm S. MacLean

Negro College Women Establish Rural Health Program

By Jessie Parkhurst Guzman

Eight years ago Negro college women established a health clinic for rural Negroes of Holmes County, Mississippi. This "Mississippi Health Project" as it is called grew out of a statement made by a Mississippi Negro school principal in which he maligned college-bred Negroes for doing nothing for the masses of their race. Among his hearers was a Negro woman, Miss Ida L. Jackson, a native of Vicksburg, Mississippi, graduate of the University of California, and teacher in a Junior high school of Oakland. Miss Jackson, realizing that the charge was in part true, decided to do something about it.

She thought that a summer school for Negroes would work out well, and she wanted it set up in her own State of Mississippi. Realizing that if it were to succeed she would have the backing of a strong organization, she turned to her sorority, the Alpha Kappa Alpha, a national body of some 3,000 Negro college women. With the wholehearted support of these women throughout the country, she began to put her plan to work.

First, a summer school for rural teachers in Holmes County was set up with a faculty of six volunteer teachers, all of whom gave their summer vacations to the work. Miss Jackson served as Dean. The others were Miss Marion Carter, of St. Louis, who taught mathematics; Miss Literia May and Miss Marie Thomas, of Cincinnati, who taught physical education and recreation; Benny Cooper of the Saints Industrial and Literary School, of Lexington, Mississippi, who taught agriculture.

They Find Rural Negroes Need Health Instruction.

It was not long before these teachers, keen observers, soon realized that a more important approach to the problems of rural Negroes was necessary if a real service was to be rendered. All about them were evidences of poor health—venereal diseases, malnutrition, blindness, malaria, diphtheria, and many other maladies. A health program must be started.

Again Alpha Kappa Alphas were called in. They were told that the teachers wanted to teach about health—how to maintain it, how to reduce the ravages of disease, and personal hygiene; that they wanted to show farm folk how to prepare balanced and palatable meals out of the foods that were accessible. This was no light responsibility which the Sorority was asked to assume—the financing and administering of a volunteer health program for rural Mississippi Negroes—but these college-bred Negro women had set their hand to the plow and they would not look back. The Health Clinic was born.

A Health Center was first planned but this did not work out. The distances were too great for travel and, too, plantation owners, suspicious of this group of physicians, nurses, dentists, dietitians, school teachers and public health specialists whose motives they did not understand, did not want their farm hands to attend. A travelling clinic was then proposed. Thereupon, the planters understanding what was intended agreed to permit the clinic to be brought to the people on the plantations.

Negro Women Give Up Their Vacations

Since 1935 Bolivar County has been the center of activities, with Mound Bayou, a small Negro town, as headquarters. Each morning at 7 o'clock a aravan of from 12 to 14 workers, who have given up their vacations to perform this service, driving their own cars loaded with supplies, go to a community from 5 to 45 miles away. Sometimes the setting for the clinic is an old dilapidated church of schoolhouse. Ofttimes it is a grove of shady trees. Soon doors are removed from farm house, church or school and placed across the backs of benches. In this way tables are made. They are often covered with a padding of newspaper and topped with crisp fresh linen. On thsee service tables sterilizers heated by alcohol stoves, instruments, biological and medical supplies are placed. Benches provides accommodations for taking case histories. Nearby brightly covered posters carrying a pictorial message of health are hung from dozens of clothes lines. Then hands and arms are scrubbed in basins and tin tubs and a change into a fresh white uniform is made in the "privacy" of a cotton field.

The services rendered by the clinic consist of health talks and demonstrations; general medical examinaions; dental examinations and prophylaxis with a new toothbrush and powder for every child; immunization against diphtheria and smallpox; malaria therapy; blood testing of expectant mothers and anti-syphilitic treatment in indicated cases. The clinic also gives Wassermann blood tests. Recently a Nutrition Clinic and a personal Hygiene and Baby Care Clinic have been added.

They Teach by Doing

The demonstration method is effectively used both in the Personal Hygiene and Baby Care Clinic and in the Nutrition Clinic. To show the way to care for a small child, one is selected as a model. After a bath in a tin tub, deodorant and talcum powder are applied, the teeth cleaned, the hair combed and brushed and the child dressed in new garments.

The dietitian demonstrates over a charcoal stove or pail the kinds of dishes that can be prepared from a pound of oatmeal and a box of raisins, or the nutritious drinks that can be made from dried or evaporated milk. Each mother is given a supply of cod liver oil, powdered spinach, calcium and dried milk for the small children of the family.

To more than 15,000 people the Sorority has brought not only health but new hope, encouragement and vision. The dream of one woman has materialized and the opportunity has been given thousands of others to make a worthwhile contribution.

(Space does not permit the naming of all of the persons who have worked with the project, but this account would be incomplete without mentioning the invaluable service rendered by Dr. Dorothy Boulding Ferebee, a practicing physician of Washington, D. C., who has directed the affairs of the project since its origin, and of Dr. Mary C. Wright, a dentist of Cambridge, Massachusetts, who year after year has come down from that city to supervise the dental program. Miss Jackson has worked with the group in some capacity each year.

(Mrs. Guzman, a native of Savannah, Georgia, is Dean of Women and Professor of Sociology at Tuskegee Institute where she has been a member of the faculty since 1923. She received her early education in Georgia, later taking her B. A. at Howard and M. A. at Columbia. She is a member of Alpha Kappa Alpha.—Editor's Note.)

RED DEER OF SCOTLAND

Jasper B. Sinclair

It was the red deer of Scotland that Sir Walter Scott had in mind when he wrote "The stag at eve had drunk his fill" as the opening line of the poem, "The Lady of the Lake."

The red deer is not peculiarly Scottish, of course, though it is perhaps the most common of the large wild animals in the land of the heather. Red deer roam the forests and hills in many parts of northern Europe and Asia.

Frequent mention is made of the red deer, however, in Scottish song and literature, as well as in the legends and traditions that date back to the early days of the Gael.

Even Holyrood Palace, the home of Scottish kings and queens in Edinburgh for hundreds of years, owes its founding to the red deer—if we are to believe an old legend that will not be denied by the passing years.

According to tradition, the life of King David I was somehow saved by a red deer in the forest that once covered the present site of the palace. In gratitude, David in the year 1128 founded the Abbey of Holyrood. The roofless ruin of the chapel adjoins the present Holyrood Palace.

A red deer was once the mascot of one of the Scottish Highland regiments--the 42nd Black Watch. "Donald," as the men called it, was for several years the regimental century. He was retired to a private estate when the Black Watch left Britain for active service.

It is a matter of historical record that Donald took his enforced separation from the regiment very much to heart. He became morose and virtually unmanageable, refusing to permit anyone to come near him.

In the Scottish preserves and deer forests you may see, if you are fortunate enough, as many as ten or twenty or even fifty of the red deer feeding in a group, or drinking the cool waters of some mountain pool.

The art of camouflage in nature is just as old as nature itself. The red deer provide further proof of that truism. In the late summer and autumn months, the deer blend perfectly against hillsides carpeted with the blooming heather. At any ordinary distance they are safe from discernment in the reddish-purple back-drop of heather.

The teaching of humaneness, kindness to every living creature, when made a part of the regular training of all children of school age, furnishes a foundation for justice, fairness, and pity for all life, both human and animal.

FLAT PENCIL

For the reader addicted to making margin notes, there's a new flat pencil which also serves as a book mark.

550-MILE PIPELINE

A 550-mile, 24-inch pipeline will be built from Longview, Texas, to Salem, Ill., to help relieve the Eastern oil shortage.

The Modern Farmer

OFFICIAL ORGAN of

Nashville Federation of Colored Farmers

Obeys The Law

We feel that every reader of this publication is anxious to do likewise. The Postal Laws and Regulations provide that all subscriptions should be collected for the year.

If they are not paid, then under the law this paper, the Modern Farmer, must discontinue sending it to any person who is not a paid subscriber.

Since the Modern Farmer is obeying the law, may we insist upon you, Dear Reader, not to be guilty of disobeying the law yourself? We feel that it is the duty of every American citizen to live above the law, so before your subscription expires, and we have already sent you a notice by mail, forward to us a post office money order for $1.00.

If you are not near the post office, send the cash by registered mail or send us your bank check.

FARMERS GROWING MANY THINGS

Ships, Shells, Tanks and Planes Are Some of Implements Now Being Produced

"Negro farmers are growing ships and shells, tanks, guns and planes," National Food Production Director M. Clifford Townsend declared at the Food-for-Freedom Day observance held here in Washington, Sunday at Mt. Carmel Baptist Church.

The observance in the capital, highlighted with speeches by national and international figures, was a part of a nation-wide drive to mobilize colored farmers for increased production of vital war crops. Some 40,000 colored churches throughout America held similar services in keeping with a resolution adopted by the executive committee of the Fraternal Council of Negro Churches in America, proclaiming Sunday,

MISS CARRA D. OWENS APPOINTED

First Woman of Race Appointed As Technician In Dept. of Agriculture

Washington, D. C.,—Among the women technicians who have been appointed in the U. S. Department of Agriculture is Miss Carra Dell Owens of Houston, Texas, the first Negro women to receive such an assignment..

Miss Owens has been assigned to the Pathological Division of the Bureau of Animal Industry and is preparing culture media for bacteriological purposes. These media are used largely in identifying various infectious diseases of livestock, including tuberculosis.

Coming to the Department from Burrell Memorial hospital at Roanoke, Va., where she served as medical laboratory technician for four years, Miss Owen

SOIL CONSERVATION STRESSED

Aids Wartime Food Drive in the United States As Well as in Haiti

Washington, D. C.—Both America and Haiti know the importance of soil conservation in their wartime campaigns for increased food production, and both have taken steps to insure the protection of the soil from erosion and from depletion of its fertility.

American farmers, colored and white, through the work of Soil Conservation Service, and through conservation payments made by the Agricultural Adjustment Agency, are learning the need for conserving the land resources. They are also discovering that conservation practices increase the yield and keep the soil fit by holding topsoil and water on the land, preventing washing and leaching of fertilizers, reducing

LOANS AVAILABLE TO FARMERS

Sharecroppers Can Get Loans to Help Increase Their Food Production and Crops

Washington, D. C., March 1, '43—The Department of Agriculture doesn't plan to let the matter of credit stand between the farmers and their all-out production of war-needed crops. Steps have been taken to provide loans to farmers, sharecroppers and tenants as well as owners, who can put the funds to work in increasing their output of vital foods and fibers.

The two major Agriculture agencies concerned with making credit available to farmers for wartime production are Farm Credit Administration and Farm Security Administration. Both have launched a war program to help assure the maximum production of food crops.

Hard pressed small farmers, sharecroppers and tenants, who need some assistance to produce Food-for-Freedom, can go to their county Farm Security Administration office and talk their problems over with members of the staff. Those who are eligible may file applications then and there. A few days later FSA supervisors will visit their farms to determine what type of assistance they need in order to adequately grow Food-for-Freedom.

One applicant may need a a pair of mules or a brood sow. Another may need seed and fertilizer to enlarge his garden; and still another may need a cow and some baby chicks. Maybe their wives haven't been preserving enough of the right kind of food for home use. Whatever the problems the FSA supervisors will consider them carefully with each of the families and help them get started on the right road for bigger food production.

The size of the loan which the supervisor will recommend will depend on the family's ability to increase its production of vital war crops. The loan carries a five percent interest and is to be paid in five years. FSA loans are also made to tenants and croppers, as well as day laborers, for the purpose of buying farms of their own. Since 1937 FSA has made more than 60,000 loans totaling more than $50,000,000 to Negro farmers. Last year FSA borrowers were responsible for more than one-third of the Nation's increase in milk production.

—FCA LOANS—

The war program of Farm Credit Administration is divided into three main fields of activity: (1) financing food and fiber production, (2) financing process-

FARMERS RAISING JIMSON WEED

There Is a Buried Treasure in Your Barnlot, Says Mary Jane Brooks

By Mary Jane Brooks

Down in the barnlot, there's buried treasure. No rusty old sea chests involved. Nothing to do with heirloom silver in an ante bellum garden. As a matter of fact, it isn't so very buried. It grows, and (don't think we're kidding) it goes by the name of Jimson weed.

According to the Tennessee Planner, just issued by the State Planning Commission, the United States has imported an everage of $322,000 worth of Jimson or stramonium during past years. Used in the making of belladonna, this plant has heretofore been brought to this country from Europe, now shut off from American importers.

Well over a hundred other plants, valued at $130,000,000 and many of which grow in Tennessee, have imported from markets which are closed today because of war conditions. The Planner wants to know why Tennessee farmers should not become a new source for these plants.

Herb collectors, of course, are not foreign to the State. Ginseng, "shony" haw, and others are gathered annually in the mountain regions and, it is believed, herb-collecting could be developed into an industry supporting thousands of persons.

The growing of such plants on a commercial scale, however, appears to be even a better bet.

Jimson, for instance, can be cultivated to produce over 1,000 pounds of dry leaf and between 750 and 1,000 pounds of seed per acre. The wild plant now sells for 15 cents a pound, and the cultivated would probably sell for more.

Perilla, imported, from Manchuria for making printers' ink, paints and varnishes has also been found in Tennessee. Two

FARMERS CAN GET LOANS TO GROW FOOD

The U. S. Department of Agriculture is making credit available to farmers, sharecroppers and tenants, as well as owners, who can use a loan to increase their production of vital war crops. At top, Cornelius King, right, assistant to the Governor of Farm Credit Administration, explains to Thomas N. Roberts, special assistant to the SDA Personnel Director, how farmers can obtain loans through FCA. Below, Extension Farm Agent T. D. Williamson of Caswell County, N. C., advises farmers how they may consult their County Farm Security Administration office about a Food-for-Freedom loan.

ALABAMA FARMERS PROVE CO-RACIAL CO-OP CAN WORK

(By The Associated Negro Press)

Union Springs, Ala., Jan. 27—"Buying things we need together has helped us a lot this past year," said Cliff M. Thornton, secretary-treasurer of the Bullock County Purchasing and Marketing Association, at a recent meeting of the board of directors.

The meeting was called for the purpose of deciding how much of the savings on pooled garden seed purchases could be returned to the members.

It was only a matter of routine business for the board, but seven years ago nothing like this had ever been heard of or thought of in Bullock County, for here was a board of directors of a corporation composed of three whites and two colored farmers in the deep South discussing problems of mutual interest.

Dressed in their overalls, these five men sat around a big table, in the office of the Farm Security Administration of the U. S. Department of Agriculture and conducted their business as orderly and efficiently as any other board.

A check on the business of the association for the year just closed revealed that this group had bought wheat, hagari, rice and garden seed and a substantial saving had been made on each of these items.

APRIL MORNING

May Sowles Metzler

Soft spring was singing in the air,
All nature waked from sleep:
I thought I heard repeated sounds
Of a chicken's plaintive peep.
It was a most elusive cry,
Which seemed first far, then near,
And mingled with short turns and trills,
Almost deceived my ear.

Just then I heard a louder cheep,
Which made me look up higher,
And there I saw a mocking bird
Perched upon a wire.
The saucy fellow winked at me
In manner calmly cool,
And bobbed his head as though to say:
"I caught you—April Fool."

WOMAN'S PAGE

HOME DECORATORS FACE SHORTAGE IN PAINTS AND ENAMELS

The paint, enamel, or varnish that the housewife used to whisk over tables and chairs in the morning and that dried before her bridge club arrived in the afternoon are out for the duration as far as she is concerned. All the quick-drying protective coatings now produced are for planes, tanks, guns, cartridge cases, and other military items.

Various oils, such as tung oil, pressed from the Chinese tunk nut, and synthetic resins, the ingredients which give protective coatings their quick-drying quality are available only for war purposes.

Conservation of oils may make the wartime exterior oil paints for civilians less glossy. However, the exterior paints may have a new advantage—they should stay clean longer.

The dry powder type water paints are now being produced without restriction. The water they call for is about as non-critical a material as a householder could hope to find. Coloring matter for these paints—and for oil paints, too is available.

Metillis Paints Limited

For metallic paints the picture is different. The housewife who wants to brighten a dull-looking radiator with aluminum or bronze paint may be able to find it in stores—or she may not.

Aluminum pigment, because of its light weight, ability to withstand high temperature, resistance to corrosion, and ability to prevent formation of bacteria, is a vital war material. Little can be spared for civilian use.

Bronze pigments are also needed in war production. Only bronze powder ground before March 31, 1942, may be used for paints for civilians.

So urgently needed, too, are steel and tin that none can be used for cans to hold paint, varnish, or other protective coatings. Glass jars, in certain standard sizes, are being used instead.

For the duration, favorite old paint brushes will need all the coddling the home decorator can give them. A good technique is to clean brushes thoroughly with turpentine or a standard brush cleaner immediately after using them and then to suspend them in a par containing a mixture of equal amounts of linseed oil and turpentine. The oil keeps the bristles soft, suspending the brushes prevents bending.

The reason for all these precautions is that the best brushes have always been made of chinese hog bristles. And civilians won't see any new hog bristle brushes until the war is over.

Housewives' planning to have floors sanded or waxed should encounter little or no difficulty, even though production and sale of new floor sanding and finishing machines will be prohibited after March 15 of this year. Repairs and replacements can still be made after that date, so professional decorators and hardware dealers who rent such machines will be able to keep them in good running order.

Waxes for floors should be available in sufficient quantity this spring, too.

Shellac supply is growing short. Substantial amounts of lac are still coming into the country from India, but every bit of it is needed for direct war work.

Stars and stripes of silver or gold will still gleam in wallpaper sample books this spring. Later on, after existing supplies have been exhausted, they won't. Wallpaper with metallic print designes can no longer be made.

Also, new papers of any kind won't be produced in such abundance as formerly. While the war lasts, patriotic homemakers will not have walls repapered just because the color of the old paper isn't in tune with their present mood.

SAVE DRIPPINGS FOR FRYING AND BAKING

The old-fashioned cook knew the value of drippings saved rom baked meats, or fats taken from uncooked fowl and meat and rendered. She knew that the lightest kind of biscuits could be made with chicken fat, and pastry, too.

Now the Bureau of Home Economics U. S. Department of Agriculture is warning housewives to save all fats which can often be used in place of butter of which there is definitely a shortage in many parts of the country, because fat is a necessary part of the diet.

"It is a wartime duty," says the Bureau, "for every cook to see that no fat goes to waste. Fat used in cooking may be saved and used again, unless it has scorched or is too strong in flavor." Here are their practical tips for saving and using this food weapon:

1. Keep fats from scorching and smoking. Once a fat reaches the smoking point, it gets rancid more quickly and makes food cooked in it harder to digest.

2. Save all fat drippings. Use "as is" flavoring for vegetables and in other cooking.

3. Or use drippings as fat. Heat them, strain them, mix several kinds together if you like. Use in pastry, hot breads, some cakes and cookings, or to cook meats that haven't enough fat of their own.

4. Save excess poultry fat, fat trimmed from raw meat when more than necessary for its cooking. Render raw fat; then use as you would new fat.

5. If there's a Jack Spratt in your family, save the plate waste Render it and keep it for salvage.

6. Store saved fats as carefully as you do new fats. Store in clean containers, with tight fitting covers. Put in a cool, dark place. Use as soon as you can.

VEAL LOAF

2 pounds chopped veal
1-4 pound chopped pork
1 tablespoon cooking fat
1 cup bread crumbs
1 teaspoon salt
1-8 teaspoon pepper
4 tablespoons milk
1 chopped onion
2 tablespoons chopped pepper
1 teaspoon, thyme
1-2 teaspoon celery seeds

Veal front shank is suggested

Place veal and pork in bowl, stir in crumbs, and season, press in square pans and bake in a moderate oven. Serve with vegetable sauce.

INDIVIDUAL MEAT ROLLS

1 cup thick gravy (leftover)
2 tablespoons meat drippings
1 tablespoon minced onion
4 tablespoons flour
1 cup liquid (milk, water, tomato juice or vegetable liquid)
2 cups finely chopped cooked meat (ham, beef, veal, chicken, lamb, liver, or 1 cup each cooked vegetables)
Salt and pepper to taste
3 tablespoons melting meat drippings.

If you haven't the leftover thick gravy, make some as follows: Melt meat drippings; add onion and cook together for 1 minute; blend in flour; add liquor and cook, stirring constantly, until sauce thickens.

Add meat mixture to gravy or sauce.

Cut loaf of bread in half, horizontally. Set aside top half of loaf for use later. Remove crust from bottom of the loaf and slice lengthwise into 6 thin slices. Remove remaining crusts. Spread each lengthwise slice thinly with meat mixtures and roll up like a jelly roll. Brush tops with melted meat drippings. Bake in moderately hot oven (375) degrees F.), until golden and crisp—about 20 minutes. Make 6 servings. Serve with hot bread.

Hot Bread

Use the top half of the loaf. Slice down, half way to bottom, at 1-inch intervals. Spread top and sides with melted butter. Place in oven, along with the Meat Roll and allow it to toast. Serve hot.

For any creamed mixtures we make our own bread cups or baskets. Often friends ask where they can be bought, Simple to make, good to eat, and a fancy touch to any meat, toast cups are always welcome.

Cut bread 1 1-2 inch thick, Cup round with large cutter or clip into round shape with scissors, hollow out center. Brush lightly with salad oil and toast very slowly 45-60 minutes using 250—275 degrees oven. They should be a delicate brown.

HONEY BUTTER ROLL-UPS

2 cups sifted enriched flour
3 teaspoons baking powder
1 teaspoon salt
4 tablespoons shortening
2-3 to 3-4 cups milk
1 tablespoon melted butter
2 tablespoons honey
1-2 teaspoon cinnamon

Sift flour, baking powder and salt. Cut or rub in shortening. Add milk and stir to form a soft dough. Turn out on lightly floured board and knead 1-2 minute. Divide dough into 2 equal portions. Roll each portion out into circular shape about 1-4 inch thick. Brush with melted butter and honey. Sprinkle with cinnamon. Cut into pie-shaped pieces. Roll up, beginning at the wide end. Bake in hot oven (450 degrees F.) 10 to 12 minutes.

Yield: 16 roll-ups.

HONEY BUTTER ROLL-UPS

Serve Honey Butter Roll-Ups for dessert if your family wants a furlough from fancy food. They will vote this honey-butter bread a distinguished biscuit innovation.

Like other biscuits, Honey Butter Roll-Ups are best when brought from the oven to the table and eaten while still hot. So good are they that, if necessary they can be enjoyed without butter or margarine. Pass a tray of cottage cheese and spicy apple sauce as accompaniments. They will not only add a delicious flavor note, but will furnish much good nutrition. Up-and-coming home makers will make their Roll-Ups from enriched flour, because this flour provides the most economical and most delightful way of adding B-vitamins and iron to the family's diet.

If you are the kind of person who is constantly entertaining unexpected guests, make up a big jar of biscuit mix and keep it in your refrigerator, or on the shelf. Then when friends drop in on a cold day, step into the kitchen and make a batch of Honey Butter Roll-Ups. While the Roll-Ups bake prepare a hot beverage. In twenty minutes or so you are ready to serve a dainty lunch.

HAVE A SLICE OF PEAS AND POTATOES!

A vegetable dinner in a new form, peas and potatoes are a delectable pair in an egg-topped loaf you can make at your leisure with this easy recipe:

Pea and Potato Loaf

2 tablespoons vitaminized margarine
1-2 cup dry bread crumbs
1 cup fresh or canned peas mashed
1 cup cooked potatoes, mashed
1-4 teaspoon salt
1-8 teaspoon pepper
1-8 teaspoon nutmeg
1-2 cup thick white sauce
2 hard-cooked eggs, sliced
Broiled bacon, (if desired)

Brown crumbs in vitaminized margarine and sprinkle 1-2 of them into a well greased loaf pan (8 1-2 x4 1-2 x2 3-4 inch) to form a a lining Mix together peas, potatoes, remaining crumbs and seasonings. Add white sauce (2 tablespoons vitaminized margarine, 2 tablespoons flour and 1-2 cup milk), and mix well. Alternate layers of peas and potato mixture and sliced eggs until all is used. Bake in a moderate oven (350 degrees F.) 25 minutes, or until set. Serve with Tomato Sauce made by the addition of 2 tablespoons of vitaminized margarine and a bay leaf to a can of undiluted tomato soup and cooked together several minutes Garnish with eggs or broiled bacon, if desired. Yield: 6 servings.

DRIED BEANS, PEAS FOR PLANTING RELEASED FROM RATION RULES

Seed Dealers, Gardeners, Farmers Relieved After Earlier Order Threatened Gardens

By Louise Davis

Nashville farmers, gardeners and seed dealers last night breathed easier following an announcement by the Office of Price Administration that they will not be required to obtain rationing certificates before they can purchase dried beans or peas for planting.

The OPA issued the order Saturday, but yesterday, beset by protests from farmers and gardeners all over the nation, lifted the restriction.

Resentment Widespread

The announcement came in the midst of widespread local resentment and confusion on the part of farmers, gardeners, seed dealers and ration boards.

The earlier order had required growers to apply to their ration boards for certificates giving them the necessary ration points for purchasing the seed they needed for planting beans, peas and lentils.

Nashville seed dealers had predicted in interviews with The Tennessean that the Saturday order would ruin the whole victory garden program and would bring about a decided shortage in beans and peas during the coming year because they said neither the gardener nor the farmer, had time to go to the extra trouble of obtaining seeds

"I wanted to buy ten cents worth of bean seeds for my back-yard garden" one man said before the earlier ruling was withdrawn. "But I am not going through all of that red tape to get a handful of seeds, I just won't have a garden."

The lifting of the restriction will enable him and all of his fellowgardeners to go on with their plans, all cheerfully agreed yesterday.

"All was confusion," one seed dealer complained. "Farmers could not take time or gas to make the extra trip to town to get the certificate. They just decided not to plant any beans or peas. If the order had not been changed, there would have been a serious shortage in these foods."

One seed store in Memphis closed yesterday, a local dealer said, until the owner could find out the true state of affairs.

Dealers here spent several hours trying to learn what to do, and they reported their customers completely discouraged in their planting plans. Agricultural authorities had expressed the plan could not be anything but a hindrance to farmers and gardeners.

The Office of War Information said the ruling was retracted to help the farmer at this busy planting time and to relieve the ration boards."

Local agriculturists said that lima beans, blackeyed peas and crowder peas comprise the largest acreage in this classification in Davidson County. If the former order had stood, the loss of these products would have created a serious shortage in local supplies they agreed.

"This new order is a 'life-saver' for gardeners, farmers and the public in general," concluded one dealer in expressing his appreciation of yesterday's regulation.

Meanwhile, the OPA relaxed food rationing regulations for babies, sick, blind or cripple persons and announced extended time limits on ration stamps held by individuals not able to make frequent shopping trips for purchases.

Service men on furloughs over seven days, the OPA said, will get special ration books and exceptions were made covering church suppers and similar events.

HOME CANNED GOODS WILL HELP GREATLY FIVE CANS OF FOOD ALLOWED EACH PERSON

The system of point rationing at first will seem difficult. But take heart. Remember it is new for everyone and don't be afraid to ask questions. There is no escaping this point rationing, for you must have food. Read carefully everything that appears in this and other newspapers concerning the method of "point rationing," and how it works. Prepare to spend more time shopping for foods It will take time until you become familiar with the system. Below are some questions and answers that are applicable to any family.

1. Q. My family consists of my husband, our two children, and myself. What is my family's allowance of canned foods when rationing begins?

A. 20 cans; five to per person, excluding those contain less than 8 ounces.

2. Q. If I have more cans than that, will the extra cans have to be turned in when rationing begins?

A. No, but one blue eight-point stamp will be taken out of Ration Book Two for each can beyond the allowable five.

3. Q. Do I have to count all the can canned foods in my home.

A. Count all the cans, bottles and jars that contain eight ounces or more. Home-canned foods are not included and there are certain other exceptions.

4. Q. Exactly which foods are to be reported?

A. Include all the following: commercially canned (tin or glass) fruits (including spiced fruits), and vegetables, canned fruit and vegetable juice, all canned soups, chili sauce and catsup.

5 Q. Will stamps be deducted from canned foods which are part of an "emergency shelf" to be used only in case of an air-raid or other disaster?

A. Yes All cans of food to be rationed and weighing eight ounces or more must be included in the count.

6. Q. How and when will these extra cans be reported?

A. They will be reported to local rationing registrars when War Ration Book Two is distributed, on a form called the "Consumer Declaration."

7. Q. Where will I get the form on which to report my extra stock of canned foods?

A. Watch for it to appear in your newspaper sometime after February 15. Clip it out and fill in the facts on February 21. Registration for War Ration Book Two begins on February 22 and you will save time by bringing a complete form with you.

8. Q. Will each member of the family fill out one of these forms?

A. No. Only one form will be used for the entire family. The form has a space for writing in the names of all members of the family unit.

9. Q. Do I include my housekeeper in this list of names? She lives with us and eats all her meals in our home?

A. No, List only the members of the family.. Your housekeeper must fill out a separate declaration form.

FOOD FOR FREEDOM DAY IN NATION'S CAPITAL

Important national figures highlighted Food-for-Freedom Day in Washington, D. C., Sunday, February 14, which was observed nationwide as part of a drive to mobilize Negro farmers for increased production of vital war crops. Top, left to right, are M. Clifford Townsend, director, food production administration; Dr. W. H. Jarnagin, pastor of Mt. Carmel Baptist Church where the program was held, and also chairman of the Executive Board of the Fraternal Council of Negro Churches in America which proclaimed the observance; and Roy F. Hendrickson, director, food dirtribution administration. Bottom, left to right, Lt. Col. Frank M. Snowden of the Quartermasters Replacement Training Center, Camp Lee, Va.; Captain Ronald Bannerman, assistant labor attache of the British embassy, and Dr. Robert M. Williams, president of the Interdenominational Ministers' Alliance of Washington. Some 40,000 colored churches throughout the country were called on to observe Food-for-Freedom Day by the Fraternal Council.

WHAT UNCLE SAM HAS TO SAY ABOUT FISH

The Office of War Information in discussing the high protein foods recommended to supplement the meat allowable under the rationing plan, has this to say about fish:

"Of the total yield of the fisheries for 1942, about two billion pounds will be available as food, according to the Interior Department's Fish and Wildlife Service. This amount is equal to the five-year average for 1935-39. There will be perhaps 10 to 15 per cent less of this protein food available for civilian use . . . especially certain species commonly canned . . . because of the increased military uses and exports to the United Nations.

"This deficiency will be largely compensated for next year, however, when meal planners should look for unfamiliar species which will be marketed fresh, frozen, and canned. These lesser-known species will probably include such fresh-water fish as carp, burgot, smelt, buffalo fish and sheepshead; and such marine species as king, whiting, skates, mussels, silver herring, alewives, monkfish, sea herring and mullet.

"In summary, fishery products have passed the tests which show that they are indeed foods having a high nutritive value. The flesh of fish and shellfish contains appreciable amounts of several vitamins. Marine products are rich in iodine and many seafoods contain appreciable amounts of calcium, phosphorous, iron, and copper. Finally, the protein of fish and shellfish is very digestible and has a high food value.

"With upwards of 200 species of edible fish and shellfish produced by our fishermen, each with a distinctive character and flavor of its own, the restaurateur should be able to satisfy the most exacting taste. While we have discussed the food values of oysters and other fishery products, in the final analysis, it is the fine flavor and sea tang that have made oysters so popular for over 2,000 years. Do your part by so handling and preparing them as not to injure these qualities."

WORTH WATCHING

The Federal Power Commission, on its own initiative, has been carrying on an exhaustive hearing as to rates charged a government aluminum plant in Arkansas by private electric companies located in Arkansas and surrounding states.

A bombshell was exploded at the hearing when the Arkansas Department of Public Utilities entered into the case and charged it was "an unconstitutional invasion" of state boundaries and an encroachment on the functions of a state regulatory body for a Federal bureau to attempt to regulate intrastate rates, as it had no authority in that field.

"Regulatory bodies of the states and nation should not under any pretext or guise whatever, attempt . . . to extend their powers beyond the well-defined statutory and constitutional limitations," asserted P. A. Lasley, attorney for the Commission, in making the charge.

Mr. Lasley said that the Arkansas Department of Public Utilities will ask the cooperation of all state regulatory bodies to prevent Federal bureaucratic invasion of states' rights: "Any attempt on the part of any agency to exercise power over state matters not clearly provided by statute and permitted by the constitution, must be actively resisted by the states; otherwise, local jurisdiction will swiftly become impotent and Federal encroachment the rule, not the exception."

As a matter of fact, the Federal Power Commission might as well attack the State Public Service Commission of Arkansas, as to attack the rates of the Arkansas companies, for the simple reason that the Arkansas utility rates are all passed on by the Arkansas Department of Public Utilities.

If the people needed an object lesson to open their eyes to the growing danger to states' rights, as well as individual rights, from entrenched, centralized bureaucratic power, they have it in examples such as this in Arkansas and in every section where Federal power plants have sought to displace local companies. The minute a Federal plant goes in, local authority as to rate regulation, taxation, etc., goes out.

This is not a case of private versus public ownership of the power industry. It is a case of local versus Federal control over local affairs. The Arkansas Department of Public Utilities is rendering a public service in bringing this issue to public attention.

ENCOURAGE THE TAXPAYERS

Stripped of all political camouflage, Congress faces two inescapable duties in formulating future tax policies.

First, a tax law must be perfected which will provide a practical method for millions of individuals who never paid taxes before, to pay taxes on income as earned.

Second, the tax structure must not destroy productive enterprise and profit, thereby eliminating tax income for the government at its source.

This will not be so difficult to do if politics can be eliminated from the formula.

ONE MORE DEMONSTRATION

Probably no industry ever faced such a world-wide job as has oil during the past year. Overnight, oil producers were called upon not only to keep the domestic needs of the greatest oil and gasoline consuming nation in the world supplied, but in addition, they found themselves called upon to provide undreamed-of amounts of fuel and lubricants for our armed forces and those of our Allies on the seven seas and every part of the globe.

Delivery of oil, due to submarine sinkings of tankers, has been a problem beyond the control of the oil producers. Seventy-two oil executives drawn from companies in every part of the nation, have cooperated with the government's petroleum administrator to assure an unfailing supply of indispensable petroleum products to our armed forces. Our domestic needs, although hampered by tanker shortages, have been met in the most vital cases, even though rationing had to be applied to personal use of oil products.

Already tires made from synthetic rubber, which the oil industry is also relied upon to produce, are being advertised as going to the armed forces and essential users. It is safe to say that the ingenuity of the oil industry in cooperation with the government, will solve this country's oil and rubber problems.

Thus is another great industry, motivated by American enterprise and ingenuity, demonstrating that it can meet all obstacles when and where they arise.

The wood of the best ebony is black only in the very center, the outer portions are practically white.

TIME FOR CORRECTION

During April and May, 1942, hearings were held before Subcommittee No. 3 of the Committee of the Judiciary, House of Representatives, Seventy-seventh Congress, Second Session, on H. R. 5218, H. R. 6752, H. R. 6872, and H. R. 7067. The intent of these several bills was to bring labor unions under the regulation of anti-trust statutes, and within the provisions of the anti-racketeering law of 1934. The bills were bitterly fought by the labor unions on the ground that they would handcuff labor in bargaining with employers.

Anyone who reads the testimony or looks at the pictures included in the record, would be horrified by the waste and destruction that was caused by strikes and boycotts involving farm products in 1941. Trainloads of citrus fruits in Southern California are shown dumped into canyons or on the ground because of packing house strikes and secondary boycotts. Farmers who worked a year to raise, irrigate, cultivate, harvest and ship the crops, then worked days to dump them because of secondary boycotts.

The Hobbs Bill, one of the measures which organized labor attorneys violently objected to, does not even mention the word labor; it does make guilty of a felony anyone who in connection with any act affecting commerce "obtains or attempts to obtain, by the use of or attempt to use or threat to use force, violence or coercion, money or other valuable consideration;" or who "commits or threatens physical violence to any person or property" in furtherance of such plan. Could a bill seeking protection of the public in this manner, be truthfully called a threat to "peaceful" labor activities?

Since those hearings early in 1942, our nation has seen inexcusable work stoppages in all manner of industries—either by order of labor leaders or by so-called wildcat strikes. The public has suffered and our armed forces have suffered, and the perpetrators of such outrages have gone unpunished, and have even gained in their power to call strikes, slow up production, or create work stoppages as they see fit.

Congressman Hobbs of Alabama, on January 6, 1943, introducer H. R. 653, which seeks to remedy conditions shown in the hearings held in 1942. Correction of such vcies is na attack on organized labor. No group in this nation should be permitted to cause such depredations and loss to the public as shown in the 1942 hearing without just punishment such as would be meted out to any willful lawbreaker or promoter of anti-social acts.

ODIOUS COMPARISON

In castigating strikes over the nation, Wayne L. Morse of the War Labor Board, expressed public opinion when he said that service men who are "fighting and dying that labor in America may remain free," will not accept alibis for wartime work stoppages.

"No combinations of words, no rationalized alibis, no pleas of provocation and extenuating circumstances can be, will be, or should be accepted by our fighting forces as justifying work stoppages resulting from disputes between employers and employes or between factions within their ranks."

It should also be said that the people are becoming nauseated with publicity seeking to impress on the public that workers in war industries are occupying "battle stations." By the wildest stretch of imagination there is no comparison between a workman living at home, enjoying family life, and drawing the highest pay on record, and a member of our armed forces who really occupies a "battle station" where bullets fly and men are killed. It is an insult to the boys at the front to even compare home jobs with soldiers' work.

No soldier or sailor at a "battle station" ever strikes.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

'OLD FUSS AND FEATHERS'

The American general, Winfield Scott known as "Fuss and Feathers" because of his precise manners and dress, was born near Petersburg, Va., June 13, 1876. After attending the College of William and Mary for a brief period in 1805 he left and studied law in the office of David Robinson in Petersburg. In 1808 he was made a captain in the United States Army and for his participation in the battles at Queenstown, Chippewa and Lundy's Lane, in the War of 1812, was advanced to major general. After succeeding to the command of the army in 1841, Scott completed several difficult assignments, his greatest achievement being the Mexican expedition in which he captured Vera Cruz, defeated Santa Anna at Cerro Gordo, took Jalapa and Puebla and on September 14, 1847, captured the Mexican capital, where the peace treaty was signed in February, 1848. The Whigs nominated him for the presidency in 1852, but he was defeated overwhelmingly by Franklin Pierce. In 1852 also the brevet rank of lieutenant general was created for him. In 1861 he retired from the army and he died five years later at West Point.

THE CHURCH MUST LEAD OR CEASE TO PRAY—"OUR FATHER"

R. L. Russell

The Christian Church has faced many tragic and important hours. It faces one now. I would not say that it faces its most momentous hour at this time, but these are certainly great days; days that call for courage, high living, and tremendous decisions. Will the church cast its lot on the right side, or vacillate and lose its rightful place among the sons of men as the greatest light given among all the other institutions among us?

Personally, I believe that there are leaders in the modern church sufficiently Christian to dominate the thinking and procedures of the church so that she will maintain a Christian attitude towards all races of men regardless of color, class or clan. There is no other way for the church to be the Church. Certainly it could in no other way be Christian.

It is up to the Church to blaze a new trail in human brotherhood, or cease to pray the Lord's Prayer, or believe in the New Testament. To pit race against race, create race hatred and talk a world neighborhood with God about the inferior or superior race is as unchristian as the devil. The Church has on its shoulders the responsibility of building a world brotherhood in as Father of all and Jesus as brother of all.

KEEP STILL

By Ruth Taylor

There is one war job that every one of us—man, woman or child—can do. It isn't exciting, it doesn't cost time or money—but it is just as essential and just as vital to the men in our armed forces as deeds of daring or great feasts.

We can keep still.

I know—I know—we've been warned on the radio between jive and symphony day after day, night after night. Wherever we go there are posters warning of the dire results of talking. But still people rattle on. And ships go down and men die because someone said as much.

I've listened to conversations on buses and trains. There are the women who talk to each other of their husbands and sons—and where they are; there are the men who talk of what their plant is doing, or of whom of importance they just saw—and where there are even the children boasting about their big brothers. Not one of them would willingly say or do anything to hurt those they love and who are fighting for their life and liberty—and yet daily the lives of our men are endangered by carelessness.

Let's make a bargain with ourselves. Let's put a seal upon our lips and vow that we will hold back on anything that might give aid to the enemy. The best way to do this is, by not trying to know or guess too much, by not taking our soldier's letter, for instance, and trying to figure out where he is from the little things he says; by not trying to be the first with information. Let the newspapers break the news first—they know what is safe.

There is another kind of keeping still we can do, too. We can refrain from passing on rumors which will stir up hard feeling. We can refrain from disparaging remarks about any group. We can refrain from destructive criticism. The enemy is trying to divide us from within and he works with the subtlety of the serpent. Be not guileless! Let all disunity propaganda stop with you!

This is our war—civilians as much as soldiers. Let's keep the the home front so secure that the enemy is locked out, and our men can go out to fight, knowing that that those at home will do nothing to let the enemy attack them from the rear.

Let's all keep still—until the guns are stilled.

OFFICE OF WAR INFORMATION DEPARTMENT OF AGRICULTURE

Washington, D. C.,—Farm families who have enlisted in the huge 943 food production program will be awarded a Certificate of Farm War Service in recognition of their war work, the Department of Agriculture anouneed today.

The 11x14 inch certificates, signed by Secretary of Agriculture Claude R. Wickard will be presented by County USDA War Boards as soon as possible after the completion of the 1943 farm mobilization drive. This drive, aimed at getting each farmer to produce his share of the 1943 food production goals, began January 12 and is to be completed this month.

"This certificate" said Secretary Wickard, "is a simple word of appreciation and encouragement to the fighting units of the food front—the nation's farm families. On the long, hard work of these families, in their ingenuity in overcoming every handicap imposed by total war will depend to a considerable measure the outcome of his war.

"Our farm operations, and their families had begun to convert their production to crops which would aid the forces fighting the Axis even before Pearl Harbor. For three years in a row now they have broken all production records with emphasis, on the war needed crops and meats.

"This year food production goal of many commodities have been set still higher. Even with the shortage of labor, machinery and transportation, if weather is generously favorable, our farm families will reach their new goals and break production records once more."

The 1943 farm plan which each farm operator is now filling out will be the basis for making the awards. A copy of the certificate is attached.

DR. PATTERSON SAYS NEGRO FARMER CAN DOUBLE OUTPUT IF FULLY AIDED

Dr. F. D. Patterson, president of Tuskegee Institute and special assistant to the Secretary of Agriculture, pointed out in a statement this week that Negro farmers could almost double their present food production if adequately financed and supervised.

Said Dr. Patterson, "I believe the 680,000 Negro farmers of America are doing all that they possibly can under the circumstances which they now live and work to meet the food needs of our nation. If. however, they can get more adequate supervision through additional farm and home demonstration agents, and through other supervisory services, plus the necessary financial aid on a low interest basis, I am sure that they could almost double their present production.

"These two items: financial aid and supervision must go hand in hand in my opinion if the most is to be made of either of them."

Dr. Patterson also indicated that colored farmers should try to take full advantage of the leading facilities made possible through the Department of Agriculture. These include Farm Credit Administration, Regional Agricultural Credit Corporation, and Farm Security Administration. FSA loans are made available to farmers who cannot qualify for credit from other sources.

He also emphasized the fact that FSA loans are being made to small farmers who with such financing can become qualified as "essential farm producers" under the war-unit rating by adding to their lovestock, or poultry, or by increasing their production of war-needed crops.

Pointing out that Extension Service has made a significant step in getting information to farmers through the organization of "neighborhood leaders," Dr. Patterson urged, however, that Extension increase its staff of farm and home agents to meet the supervisory needs.

HORSES AND RAILROADS

As current rail rate hearings before the Interstate Commerce Commission unfold, the case against the rate reductions demanded by OPA becomes steadily stronger.

The railroads, in the course of their testimony, are making friends. The public is learning something of the job they have been doing in behalf of winning the war. It is also learning how incredibly little it costs to ship by rail.

A rate reduction at this time, without regard to previous railroad earnings or future prospects, might prove disastrously costly to the nation.

Ralph Budd, President of the Chicago, Burlington and Quincy Railroad, in testifying before the ICC, warned that: "Unlike many other industries, the railroads have adapted their plant to emergency war needs without government grants. They must continue to be able to provide itmprovements and facilities needed temporarily in war transportation now. And when it is all over, they must be able to provide the replacements and improvements then demanded, if they are to do their part in the continuance of a sound national economy . . . They should be able to take advantage of new technological developments and to proivde employment for returning soldiers and released war workers. The problem of financing such a program of modernization should be considered now. Replacements ought to be financed from earnings of the plant now being worn out."

The best horse in the world cannot pull his capacity load unless his owner can provide adequate equipment and retain enough from the horse's earnings to keep sufficient fat on his bones to preserve his strength.

HORSE LAUGH OUT OF ORDER

Euphonius titles for tax measures will not make it any easier for the taxpayer to pay the tax bills he owes. The only permanent relief he can ever expect will come from the elimination of political waste in government and from drastic pruning of the bureaucratic fungus that threatens to smother earnings and savings.

In the meantime, the taxpayer can be helped by a new tax bill that will allow the easiest possible installment tax payments for current income for current taxes. Treasury officials should not give the horse laugh to ideas to aid the taxpayer. The bureaucrats don't pay the taxes. They should hump themselves to keep the taxpayer alive.

WAGES UP—PRICES DOWN—HOW?

The Metropolitan Cooperative Milk Producers' Bargaining Agency lays blame for "shortages and increased rationing" to "the price repression policy of the Federal government and the wage increase policy of the same government."

The Agency adopted resolutions setting forth facts of the nation's food problem, and ordered copies sent to representatives at Washington. "For two years leaders of diary co-operatives . . . have pointed out that when farmers are forced to slaughter good dairy animals for lack of adequate price returns, it requires three to four years to make replacements.

"Not only are hired hands leaving the farm, but many farmers are selling livestock and equipment because they cannot carry on under present compensation for their effort.

"Almost every strike is settled by a wage increase." The farmers pay all increases, and cost of farm labor should be computed in the national price index, says the Agency.

In conclusion it said: "Authorities in Washington should abandon payment of subsidies in lieu of price increases when the buying power of the American people is at its all-time high and when the problem before the Treasury is how to absorb an excess purchasing power of 15 billion dollars."

OUR NEIGHBORS' HEALTH

Few people realize how medical progress, such as has been made in the United States during the past generation, is being extended to the other American countries. Not only in commerce, but in health must North and South America be closely allied.

The publications of the Pan-American Union and the Pan-American Sanitary Bureau indicate that certain problems of the South American nations, which may be as much scientific as economic, demand the aid of hteir North American neighbors for ultimate solution.

Good health is fundamental to human progress. The downfall of many a nation may be definitely related to malaria, plague, cholera or smallpox. Fortunately, the United States has been able to stamp out most of the great plagues which beset the rest of the world. Through philanthropic and other agencies it is giving its help wherever possible to aid other nations in meeting these hazards.

If we can help bring to other countries some of the blessings that have fallen to this nation as the result of a tireless, independent, self sacrificing medical profession, we will be greatly benefiting ourselves. To illustrate, plague that is prevalent in Java, India and China, has been detected among rodents in the far west of the United States. It was carried here years ago on ships from the Far East. The mosquito that carries yellow fever has been found in airplanes flying into the United States from other countries.

A progressive and watchful medical profession, and the constant interchange of information from the health officials of all the Americas, is necessary for the salvation of all the American people.

"BILL" A THOROUGHBRED

Conrad O. Peterson

My father has always loved horses. In his younger days he owned many of them.

"Bill,' was one of these. Bill not only was fast and high-spirited; he was intelligent also. Although not born of blue blood, he was in every way a thoroughbred.

Father, at that time was a country mail carrier with a nineteen mile mail route. Horses were used to haul the mail wagon. One horse each day. Bill one day, Prince his partner, the next.

Father still talks of the time when Bill saved his life. The many people who saw Bill act in a real emergency, heaped praise upon the horse.

The mail wagon used was a closed affair, painted white, and something on the order of a milk delivery wagon. With the doors closed it was difficult to see with the exception of straight ahead. This was not unusual as it was before the day of the speeding auto.

At the end of the day's drive, and after leaving the Post Office, a four-track crossing had to be crossed.

On this particular afternoon a freight train was on the first track, leaving just an opening for the crossing. Seeing that the train was stationary, father and Bill started across.

Bill found himself on the second track with a lone engine racing toward him. With a rapid drumming of hoofs he tried to back off the track. Seeing that he could not do so in time, Bill raised on his hind feet just as the engine whizzed past, missing the hoofs by inches.

White-faced, my father got out and hurried to Bill's side. Bill was entirely unharmed. And father? Well, he tried not to think of what would have happened had Bill tried to dash ahead out of danger.

Had Bill done so, both father and his horse would have been killed. Many people waiting for a train on a nearby depot saw the near-tragedy and all voiced their opinion that Bill's feat was something rarely seen.

Yes! Bill was every inch a thoroughbred.

VICTORY TAX HITS ALL ALIKE, BUT IT ALLOWS POSTWAR CREDIT

Five Per Cent on All Over $625 Earned During Year Will Be Diverted by Employes

By Tremain F. Robinson

Washington, Dec. 6.—The Victory tax, now provided for the first time in the federal code, is something new as far as the federal government is concerned, although actually it is a form of the arbitrary gross income tax tried out on occasion by various sattes. In at least some of the places where it was tried, the plan was not very satisfactory and was dropped. At any rate, the federal government has it now and we must pay it.

It will hit us hard in the pocketbook nerve, but the outlook is not all bad—along about March 15, 1944, when you start wondering how you will ever pay your regular income tax a fair-sized jackpot will turn up to help out. More of that later.

For most people the Victory tax will mean approximately a 5 per cent cut in income plus some bookkeeping a year from next March, when it is time to draw up a new income tax return. Every body earning more than $624 a year must pay it, either directly to the government or by a withholding arrangement with their employers. In community property states, husband and wife may each take half of the exemption, but it makes no difference in the total Victory tax they pay together.

Employers to Deduct Tax

It works this way: Beginning with January 1, employers must deduct 5 per cent of the salary, wage, commission, etc., paid to each individual employe in excess of $624 a year, or $12 a week. There are certain exceptions, which will be noted. That 5 per cent is the tax and employers must turn it over to the government, instructions and forms for which will be issued to them. Receipts for this tax collection must be made out by employers and given to the employes who are to save them and add them up at the end of the year—or else pay the tax again.

Here is an example. A workman in a factory earns $62 a week. He gets the automatic exemption of $12 a week, leaving what is called the "Victory tax net income" of $50 a week. He must pay the 5 per cent tax on that $50. That is $2.50 a week or $130 a year. In this case and nearly all others, his employer must deduct that $2.50 a week and turn it over to the government for him. The employer gives him a receipt for every deduction. Starting January 1, the deduction is made every week all year. When the employe makes out his income tax on March 15, 1944, he adds up all the deductions made and puts it on his income tax return. If he has had any additional income or if for some sufficient to total 5 per cent of all his income in excess of $624 he must pay the difference at the time of paying the income tax in 1944. If too much has been deducted he can subtract the excess from what he will owe on his regular income tax.

Withholding Exceptions

This is the Victory tax in the withholding form. Remembering that nobody who gets more than $624 escapes the 5 per cent assessment, following are the exceptions to the withholding provisions of the law:

Men in the armed services, farm labor, domestic labor, casual labor, employes of a non-resident alien individual, partnership or corporation, employes of a foreign government. Also, persons who work for fees—such as doctors, lawyers, certain public officials, etc.—where it is impractical to withhold the tax at the source of payment, are exempt from the withholding.

Persons in this category are not exempt from paying the tax. Only difference is they must do it when they pay their income tax in 1944. Reason for this is that it is impractical and in many instances impossible to use the withholding system in these cases. Furthermore, the law is designed so as to take no tax from buck privates in the army, except for such income as they have outside their army pay.

In other words, you do not have to withhold the 5 per cent Victory tax from what you pay your maid, even though the pay should exceed $12 a week (it does sometimes), nor do you have to cut 5 per cent from what you pay the man to rake up the leaves, or men hired to work on the farm.

Can Avoid Confusion

There is considerable confusion over the Victory tax; but by remembering one point this confusion can be cleared up: When you make out your income tax return for next March 15, forget about the Victory tax. It does not belong in that return. Through the withholding requirement you will be paying it all year, but ignore it in this next return. It does belong in the return in the following year, the one for March 15, 1944.

Now for the jackpot mentioned previously, which will turn up at the end of next year to help out in 1944. In the law it is known as "Post War Credit or Refund of Victory Tax." Actually the terms will mean little because most of us will use it as soon as possible.

Every year, out of the total Victory tax each individual pays, the Treasury will set aside a certain percentage which will be credited to him or repaid to him after the war. However, the individual may use that sooner if he wishes, and probably will.

In the case of a single person, the annual credit set aside for each person is 25 per cent of the Victory tax he pays, or $500, whichever is less. In the case of the head of the family, it will be 40 per cent of the Victory tax he pays, or $1,000, whichever is less. Also, in the case of the latter, a credit will be allowed for each dependent of 2 per cent or $100, whichever is less. Thus the maximum credit a single person could have in a year is $500 and the head of a family $1,000 plus $100 for each child or other dependent.

Example Cited

Example: A married man with two children earning $5,624 a year would pay the 5 per cent Victory tax on $5,000. It would amount to $250 tax in the year. Thus his credit would be 40 per cent of that, $100, as head of the family plus 2 per cent for each child, or $10 for the two of them, which makes a total of $110.

If he wishes, he may let that ride every year until the end of the war, when it will be applied to any federal income taxes he might owe at that time and the treasury will repay him the balance.

However, if this chap is like most of us, he is going to take advantage of that as soon as possible under terms of the tax law.

As a credit, the law allows the following three things: The amount paid on life insurance premiums for policies in effect Sept. 1 this year; payments on old debts contracted prior to the same date, and purchase of war bonds in the taxable year (starting next January 1.)

A taxpayer may add up the money he spends on any or all of these three things and deduct them on the tax payable in 1944 up to the extent of his own postwar credits. That sounds complicated and it is, rather. Here is how it works.

Exemptions Allowed

Take the same example of the married man with a postwar credit of $110 on the Victory tax he pays in 1943. He paid his in the form of the withholding tax. Using even figures for convenience, say he pays $100 on life insurance policies, another $100 in reducing old debts and $100 for War Bonds and Stamps. That all must be done in the taxable year, 1943 in this case. For tax reducing purposes, that spending is allowable only to the extent of the credit, or $110.

He cannot very well deduct that from the money he has already paid, so when he makes out his income tax return for March 15, 1944, he may simply substract that $110 from the income tax he owes and pay the difference to the government.

The principle is the same for the individuals who do not come under the withholding provisions. In that 1944 return, they must figure the 5 per cent Victory tax, and if they wish to take advantage of this at that time, hey will deduct it from that, add the regular and surtax and pay whatever it totals.

As mentioned heretofore, there are certain deductions which can be taken from the Victory tax net income in figuring how much of that income is subject to the tax, but to most individuals none of them will apply. The law sets the arbitrary deduction of $624 for everybody and that is all most of us get.

Alimony or separation payments, made on a periodic basic, by a divorced or separated husband to his former wife may be deducted by the husband, but the former wife has to pay the tax on it. Aside from this, the other deductions include only expenses, taxes, losses and soon incurred in carrying on business, and some in connection with estates and trusts.

The Victory tax was designed to touch all of us possible and it does. For the average individual, the only relief is the $624 exemption and the postwar credit. As a Treasury spokesman said, "You can't wiggle out of it."

"HORSE AND BUGGY DAYS"

John Colville

"Horse and Buggy Days"—During the last few decades, we have grown accustomed to hearing this expression as applying to something remote and almost forgotten. The day when the horse-drawn vehicle was a common sight seemed to have suddenly vanished. The motor driven conveyance had crowded it out of the picture. Some old timers still stoutly maintained that "a horse is the best for a short haul" but their voices were drowned out by the honks of a million horns.

Of course the saddle horse remained—but the use of horses for teaming, delivery work—and even farming seemed to be practically over.

Horses are coming back unquestionably. Drastic tire and gas rationing has become an accepted fact—with the end not in sight. Who comes to the rescue? The horse!

A big city newspaper has gotten out its fleet of old delivery wagons. Drawn by sleek, well cared for horses, they seem to be doing as thorough and prompt a job as any motor truck ever did. Horses are being used by many other business concerns in recent months. The horses for sale columns in the want ads testify to that.

One thing that horse lovers can be thankful for, is the fact, owing to years of hard work on the part of Humane Societies, drivers and others, as a whole, will treat these faithful working creatures better.

It took organization to educate the public to humane thinking—and to enact laws that compel a just consideration of the rights of all dependent creatures.

Cases of ill-treatment of animals are still occasionally noted in the daily papers, but the punishment meted out by the courts—on compaint of an authorized agent of the Prevention of Cruelty to Animals Society, guarantees protection for our equine friends.

The schools, too, through the use of humane literature have been steadily developing this idea of fair play to animals.

We can easily and happily believe that the horse of today will never suffer from the cruelty and wilful neglect that some horses underwent in the past.

Yes, the "horse and buggy days" have come again, it seems—and

Some morning when I take my walk,
I stop with great surprise—
What is this memory of the past
That greets my puzzled eyes—
"Oh, it can't be—Why, yes it is"
I hear myself believe—
"A row of wooden hitching posts
Around the court house square!"

AGED MILWAUKEE NEGRO MODELS AT ART SCHOOL

A thin, grave old Negro gentleman, carefully holding a clarinet, is sitting very still and erect in front of one of the rooms on the third floor. A conservative brown suit, horn-rimmed glasses, and small mustache add a note of distinction to his appearance. After sitting in this position for 15minutes, he slowly and with difficulty stands up, for he is stooped. Taking the come which is lying beside him, he hobbles from the room.

After five minutes of rest he is again before the group of students, carefully assuming another pose. He presents a dejected picture as he stands leaning heavily on his cane. His whole body is bent over wearily, and only his grizzled old gray head is lifted slightly to the people before him.

tto Lester George, for this is the gentleman's name, was born in Middletown, Ohio, in 1881. Mr. George is a model for the art students at the college, Layton Art school, Milwaukee Downer college, as well as several private studios.

But Mr. George hasn't always been a model, nor has he been a southern preacher or school teacher, as his appearance suggests. He came to Milwaukee only four years ago to live with his son and at that time began modeling. He had been a watchmaker and licensed boiler operator in Indianapolis up to that time. Mr. George enjoys posng with clarinet because he is an accomplished musician and has played the clarinet and cello in several bands in Indianapolis.

He began his present career at the suggestion of a friend who was engaged in this work. "'He is a good model because he is a typical example of the Negro people," one art student said. "He has an interesting head structure and nose, very prominent cheek bones, and good coloring." It is Mr. George who is the subject of almost every gouche that comes from the Art division.

FORESTALL TRAGEDY

Requirement which would provide a uniform standard of safety against fire in places of public assembly, are contained in a suggested model "cabaret ordinance," announced by W. E. Mallalieu, General Manager of the National Board of Fire Underwriters. Engineers of the National Board have been working on this suggested ordinance since the Cocoanut Grove tragedy in Boston. They have conferred with other engineers and fire prevention experts, with business officers and representatives of hotels, restaurants and night clubs, so that the ordinance might include all of the practical safeguards of life.

Such an ordinance, if adopted in every community, will save many lives in the future. It describes a "place of assembly' as a room seating 100 or more persons, for religious, recreational, educational, political, social, amusement, food or drink purposes.

All decorative materials in such rooms would have to be rendered flameproof and tested each six months if necessary. Chairs and tables would have to be arranged for unobstructed access to aisles Width of aisles, number and types of doors, etc., are specified according to size of room. Exits must be clearly marked. Places of assembly would not be permitted above the second floor in any frame building, and fire resistive stairways would be required.

The value of any safety ordinance of this nature would depend to a great extent upon the diligence of the fire department, or city council seeking to guard the lives of citizens in assembly places should write the National Board of Fire Underwriters, 85 John Street, New York, for a copy of the suggested ordinance. With unusual crowds gathering in amusement places and eating places today in many congested areas, no time should be lost by public authorities in seeking to prevent any more Cocoanut Grove tragedies.

THE APPLE HAS ROMANTIC HISTORY

There is no fruit or vegetable with a more romantic history than that of the apple, and no item in the diet more versatile and delicious. Apples are thought to have originated in Southwestern Asia, from there migrating to Europe. The Romans carried them into Great Britain, and within a few years after the Pilgrims landed in New England, the first apple trees in America were growing. The old adage, "'An apple a day keeps the doctor away" is probably an outgrowth of many of the beliefs held in ancient times as to the efficacy of the apple as a health agent. The Turks believed them to be the true fountain of youth. Another custom was to eat an apple on Easter morning to be assured of good health for the remaining year.

Apples contain the important vitamins and minerals. Of course the percentage is high if apples are used raw, complete with skin. They are highly approved for both children and adults because of the easily digested fruit sugar which seems to satisfy a craving for sweets. The cellulose and pectin are laxative, and stewed apple sauce is usually recommended for a baby's first fruit.

To prove the versatility of the apple, suffice it to say that they may be used for any meal, between any meal, and at bedtime. For breakfast, there are fried apples as main dish, or apple sauce as the morning fruit. If your apple sauce seems flat during the winter months it is only that some of the flavor of the apples has been lost in storage. A bit of spice or lemon juice will restore the sparkle in a moment's time. As for fried apples, don't think they're impossible without bacon as you probably don't have any bacon. Fry the sliced apples as usual in drippings and then dream about a safe and sane world where there'll be two strips of bacon in every frying pan and a good cup of unrationed coffee for everybody in the whole wide world.

From the apple at breakfast we move on to the apple for lunch which goes "as is" into the lunch box of the defense worker or school child. Then for the stay at home, what could be nicer than some version of an apple salad for lunch? One of the most famous is Waldorf salad composed of equal parts of nut meats, diced celery and cubed apple. Then there are cubed apples tossed with shredded cabbage. A pretty combination of red and white, and just the thing for that raw food your family is hupposed to be getting once daily.

In this day of sugar rationing I would not dare to dwell upon the virtues of apple pie. There is no doubt that apple pie is America's favorite dessert, but there are other less expensive desserts. The baked apple will take less sugar and no butter to speak of. An apple that cracks during baking may not look as pretty, but it will have a better flavor and texture than those which remain whole. Good varieties for baking, to name a few, are Jonathan, Northern Spy, Baldwin and Rome Beauty. Apple snow is a mixture of cooled apple, sugar to taste, and beaten egg whites. Serve very cold with a custard sauce.

Then what about a piece of excellent cheese like Blou or Camembert with slices of unpeeled crisp apples? There is a pleasing contrast of texture and flavor and such a simple easy way to solve the dessert problem. Apples are cheap and plentiful, so use them generously They were meant for something besides gifts for teachers, though an apple for the teacher might not be amiss if you would woo her favor.

The Australian bombardier beetle sends out a little cloud of acrid vapor that temporarily disables its enemies.

The best coat linings are made of slippery fabric, so the coat will go on and off easily.

Alcorn Agricultural And Mechanical College

ALCORN - - MISSISSIPPI

Service to Youth, the Farm and Home Since 1871

COURSES OFFERED LEADING TO THE BACHELOR'S DEGREE in the Following Divisions

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges.

NATIONAL DEFENSE COURSES

WELDING
BLACKSMITHING
MARINE PIPEFITTING
AUTO MECHANICS
TRUCK AND TRACTOR SERVICE
APPLIED ELECTRICITY

WM. H. BELL, President

Alcorn A. & M. College

Alcorn, Mississippi

PRESIDENT Wm. H. BELL, Alcorn A & M College, Alcorn, Mississippi. Secretary, Mississippi Cooperative Church Council, announces the fifth Annual Interdenominational Institute for Town and Rural Pastors to be held at Alcorn A & M College in cooperation with the Home Missions Council of North America during the week of May 3-8. Bishop S. L. Greene of the A. M. E. Church is President of the Council.

Appropriately dressed in the colors of their country these young ladies are seen relaxing after class hours. Each of them is a major in the Division of Home Economics and is wearing a dress made as a class project

MARMON HALL
College dormitory for freshman young women

This is indicative of the fact that life can be made comfortable and enjoyable without riches. The furniture including the bed in this room was made from scrap lumber, boxes and orange crates by the young women in home management. The chair and bed covers were made from scraps of cloth.

LOANS AVAILABLE TO FARMERS

(Continued from Page 1)

ing and marketing of farm products and (3) the anti-inflation program.

The maximum production of food and fiber by America's 6,000,000 farmers, including 680,000 Negro farmers, is the main objcctive of FCA's war program, which is making its contribution to the Food-for-Freedom drive through the varius FCA lending units.

These units include production credit associations. the Regional Agricultural Credit Corporation, the emergency crop and feed loan office and national farm loan associations.

The services of producton credit associations are available to all farmers, white and colored, to finance costs of farm production including the purchase of livestock, feed, equipment and supplies, the employment of labor and the repair of machinery and buildings. Payments are adjusted to suit the needs of the borrower.

Nearly half of the 530 production credit associations are in the 16 Southern states where more then 95 percent of all Negro farmers live. Applications for loans may be submitted directly through the central association office or through one of its field units.

A new source of credit at the county level for the production of essential war food and fibers has been made available through Regional Agricultural Credit, Corporation which is under the supervision of FCA. RACO loans, which are approved by USDA County War Boards, will be limited in amount only to that needed to do the farmer's production job. Loans are for one farm season not to exceed one year, but renewals may be granted. Interest rate is five percent and collateral for the loan will be a lien on the commodity crops, livestock or other items, being financed.

--Emergency crop and feed loans are available to all farmers, tenants and croppers as well as owners. The total of all loans to any calendar year cannot exceed $400. These loans cannot be made for the purchase of livstock or equipment. Application forms may be obtained at the office of the county war board.

Farmers wishing to obtain long-term loans for various improvement purposes may obtain such credit through national farm loan associations. Negroes hold membership in several of these associations and in some cases have associations of their own. FCA cooperatives are helping in the war program, too, by assisting in the marketing of farm products, the purchase of farm supplies and in providing capital for cooperative plants. In the South loans are made to farmers' cooperative associations through the banks for cooperatives at Baltimore, Md., Columbia, S. C.; Louisville, Ky.; New Orleans, La.; St. Louis, Mo.; Wichita, Kans., and Houston, Tex.

The Federal Land Banks, which are under the supervision of FCA, are assisting in the war effort by helping to prevent inflation. They are urging farmers' to make proper use of their surplus funds to pay off debts, and buy War Stamps and Bonds.

FARMER BEGRUDGED FINE

Cows in Brooklyn. N. Y.! Yes, believe it or not. a Brooklyn suburban dairy farmer, whose frisky cows had endangered traffic, by wandering along Linden Boulevard, was recently called into court.

There he paid his begrudged fine of five dollars, and faithfully promised it would not happen again. He thought he lived in the country.

And it would seem that the farmer might be partly right. For, the last Federal census indicates that **Brooklyn is three times more rural** now than it was ten years ago. In 1930 the borough had eleven farms. In 1940 it had thirty-nine, and valued at almost a million dollars!

FARMERS RAISING JIMSON WEED

(Continued from Page 1.)

million dollars' worth is brought in annually, and Tennessee farms might produce as high as 1,000 to 1,500 pounds per acre.

Annual rape-seed importations come to $1,2000,000 and could, likewise, be replaced by Tennessee crops. Other include Coriander and angelica plant.

"Perhaps," the Planner suggests, "it will take the war to force us into new crops and industries, just as it took the last war to force the American dye industry into existence in 1918 when German products were no longer available.

SOIL CONSERVATION STRESSED

(Continued from Page 1)

crop losses, rebuilding soil, keeping the range productive, and saving power and time.

American farmers are finding out, too, that all crops depend on soil and water. Safeguarding these resources means that crops will have every natural advantage Topsoil and water held on the fields will grow more crops than silt and floodwater in the creek. Thousands of farmers are boosting their yield by terracing, plowing contour furrows on slopes, by rotation of crops and by planting cover crops because all of these help prevent erosion and protect the soil. A colored farmer said to a Department official in the field last week, "I feed and care for my land just as I do for my hogs."

Americans are learning the importance of soil conservation through education and demonstration. But in Haiti, with only 10,700 square miles for her 3,000,000 population, the problem has been approached in another way. In 1937 Haiti passed a law regulating the planting of crops according to the slope of the land, controlling the handling of forest programs, and regulating the breeding and handling of livestock.

"I find you guilty of planting your crop within less than 160 feet of a creek, and I sentence you to 10 days in jail." This is an ordinary procedure in Haitian courts. If her people are to eat, Haiti knows the land must be conserved.

There is a number of well educated and trained agriculturists in Haiti who are exercising capable leadership. They realize the danger if destruction of the country's natural resources is allowed to continue. Because the situation is so grave, they feel that there is no time to wait for the slow process of education. Regulatory control has been established the gradual educative processes are to follow.

Haiti's regulatory program not only outlines the law which farmers are to follow, but it also provides for the employment of officers to enforce it. Wearing a uniform and a distinctive badge, Haiti's farm office, or agricultural police agent, patrols a well defined area in the rural regions.

Here are some of the laws the agricultural policeman enforces: (1) seeing to it that no farmer, withont a special written permit, injures, cuts, prunes, or burns any trees on land where the slope is 45 percent or more around the source of rivers closer than 325 feet, and within 160 feet of the borders of rivers and creeks. The regulations apply equally to renters and owners.

Offenders are taken before the judge immediately, and a hearing must be held on that day or the next.. The penalty provides for a fine, or imprisonment for one to 30 days. Farmers who repeat the offense are given both fine and imprisonment sentences The law also provides for a fine for agricultural policemen who are negligent in carrying out their duties. All policemen must be 25 years of age or over. be, able to read and write, and enjoy full citizenship rights.

With shipping what it is now, now, Haiti must conserve her soil resources to provide adequate food for her people. With a huge army to feed, with our war workers and our allies to supply, the American farmer, too, must practice sound soil conservation measures to insure increased production to meet these increasing demands.

FARMERS GROWING MANY THINGS

(Continued from Page 1)

February, 14, Food-for-Freedom Day.

In addition to Food Production Director Townsend, other speakers on the program in the nation's capital included Roy F. Hendrickson, food distribution director of thhe U. S. Department of Agriculture; Captain Renald Bannerman, assistant labor attache of the British embassy; Lt. Col. Frank M. Snowden of the Quartermasters Replacement Training Center, Camp Lee, Va.; Dr. Robert M. Williams, president of the Washington Interdenominational Ministers' Alliance; Dr. W. H. Jernagin, pastor of Mt. Carmel, and also chairman of the executive board of the Fraternal Council; Martin G. Bailey, Maryland farm agent; and two Maryland farmers, David T. Brooks, and Lewis J. Parker.

Direceor Townsend praised the colored farmers for the splendid part they are playing in America's wartime food production campaign. He pointed out that in the South colored farmers make up a fourth of the farmers, and more than half of the farm laborers.

"Last year colored farmers grew a goodly portion of our cotton and peanut crops. Since cotton and peanut oil, too, go into the making of ammunition, and implements of war, we can say that our farmers are growing ships and shells, guns ,tanks and planes," the Director declared.

Continuing, he said, "It would be a wonderful thing both for themselves and for the country if colored farmers produced more milk, eggs, and vegetables..Too long have millions of Negroes in the United States been undernourished. Yours is a magnificent powerful race. The list of your athletic champions is truly amazing considering that Negroes constitute less than 10 percent of the total population. You have men of great mental as well as phyical stature."

Discussing the food needs of our fighting men, Director Townsend said. "The other day an Army officer said to me. 'Two disasters can befall an American soldier on the battlefield. One is an empty gun, the other is an empty mess plate. You can't fight very long on an empty stomach. The Army looks to the farmers to keep food piled high on the mess plates. No one but the farmer can fill those plates, "the officer concluded."

Throughout tthe year the Fraternal Council will conduct various programs in an effort to help encourage increased food production.

A MARK TO SHOOT AT

The coal industry of our country came through 1942 with one of its best production records—560 million tons, 13 million tons under the record high in 1926.

Last year's production was achieved in the face of a severe manpower shortage, unprecedented demands for coal, difficulties in obtaining repair parts, and other obstacles.

For 1943, the industry will strive for a record of 600 million tons. Longer work weeks in the mines are inevitable. An increased production must be secured with fewer men. The enjoyment of social gains and soft living will now have to wait until this war is over. The men on the front must not be held up on supplies which coal produces; their efforts are not confined to a 6-hour day, a 10-hour day, or a 20-hour day. They work until the job in hand is done. Workers permitted to remain safely at home should be more than willing to match their record, as a small return to the men who are fighting and dying at the front.

MISS CARRA D. OWENS

brings to her new position a wide background in bacteriololgy with special emphasis on serology. She received her bacteriological training at Houston College and at the University of Michigan where she studied under the noted Dr. Rube L. Kahn.

INDIVIDUALISM— SYMBOL OF VICTORY

By an ironic twist of circumstances, modern war proves beyond argument that individual initiative is the key to victory and progress.

Captain Eddie Rickenbacker says: "Once you put a boy in a foxhole, he is on his own. Once you drop a parachute trooper behind the enemy's lines, he is on his own. The youth in the cockpit of a fighter, in a tank, on a commando raid, is always on his own. The 'rugged individualist,' as a political symbol, may have few friends, but God help us if we can't recreate him on the battlefield and the factory floor." The nation that does not have rugged individualism on its side will lose the war.

This stark truth must come as a shock to the political sharpshooters who have been busy right here in our own country kicking the props from under a system that was founded on the supremacy of the individual. Captain Rickenbacker is a product of that system. He fought as a soldier, willing to give his life that the system might live. He helped to pioncer the automobile and aviation industries. He has time and again taken chances, as a soldier and as a businessman, because he could envisage a bright future, not just for himself, but for his family and all the other families of America.

The future he has pictured through the years has not taken its lustre merely from the prospect of comfort and security. Eddie Rickenbacker is a typical rugged individualist. For him there is no future unless his right to take risks, to think up new ideas, to do things on his own hook and reap a fair reward, is safeguarded and encouraged.

The United States was built by men like Rickenbacker. They came across the plains in ox-drawn wagons, fought Indians, dug in the earth for gold, developed farms. They discovered, invented and produced their way to the highest standard of living in the world. At the present moment, they are the men and women who own, operate and work the coal and metal mines, oil wells, power plants, railroads and factories that are turning out the weapons for other "rugged individualists" on the battlefront, who will win this war.

Above all else, this war is being fought to keep the future bright for the descendants of these millions who believe in themselves as individuals. Those who think and act otherwise are running contrary to the character and tradition of this country.

FAIR REQUEST

It is estimated that coal requirements of the nation during 1043 will total well over 600,000,000 tons. To achieve such production will be a "sizable job."

We don't hear a great deal about coal other than as something to burn in the furnace to keep up warm. But that is only one of many uses. It yields gas for cooking, chemicals for explosives, tars for a thousand uses. Its products are essential ingredients in antiknock motor fuel, synthetic rubber, dry-cleannig compounds and paint removers. All of these uses are in addition to supplying heat and power for war industries, railroads and homes.

Coal is an essential war industry, yet it faces the maintenance and manpower handicaps of less important enterprises. The mines must be permitted to do three things that they have requested, if the 1943 production goals are reached: Retain essential skilled labor, replace essential supplies and machinery, and recover enough of their capital investment to expand production of old mines or, where necessary, open new workings.

These are not unreasonable requests. They are not based upon any attempt to profit from the war. They are prompted by a sincere effort to help win the war as soon as possible.

LESSONS BEING LEARNED

History shows that military defeat is usually preceded by a collapse on the home front. Such collapse inevitably follows a breakdown in the supply of civilian necessities.

Nothing is more essential to the successful conclusion of a war than an efficient distribution system to meet civilian needs. This country has such a system. Hundreds of thousands of retail merchants scattered throughout every county in the United States, are working day and night to have food, clothes, and all commodities, always available for the civilian population. Through their various trade organizations, they are cooperating with government in all phases of the price stabilization and rationing problems. They are spending millions of advertising dollars explaining to consumers the need for regulatory measures and how to comply with them. Where gaps in the rules exist, the merchants often ask voluntary cooperation of customers to prevent hardship. Who has not seen the makeshift placards requesting consumers to limit their purchases of certain items? Government rulings cannot possibly cover every emergency, any more than they can materially soften the grim realities for the merchant.

Consumers seldom see evidence of these realities. They don't stop to think that back of the cheerful exterior of the modern store are sleepless nights for managements that must cope with nightmares of complicated rules, restrictions, price squeezes, labor shortages, staggering taxes and other problems without precedent.

It is doubtful if the public, or most merchants, fully realized the vital character of service which the distribution industry was destined to render in a total war economy. But they are finding out now. And when the war is over, it would be surprising indeed if the old political issue of chain versus independent stores was resurrected. It has at last been proved more powerfully than words can express that both are needed by consumers.

PREVENT THAT FIRE

Fire insurance is ordinarily thought of as protection against financial loss or property destroyed by fire. But under the stress of war, the fire insurance industry is putting increasing emphasis on fire prevention. Its research facilities are furnishing an invaluable service, to that end.

Fire prevention experts are cooperating with vital war industries in reducing conflagration hazards. Countless lives and immeasurable productive capacity have been saved by their efforts. They continuously seek to impress upon managements and employes that fire is a powerful ally of the enemy; that normally replaceable property is today irreplaceable due to national shortages. A munitions factory, shipyard or other war plan destroyed by fire is a permanent impairment of the war effort.

A large measure of responsibility for the success of fire prevention rests with the local community. Civic leaders must insist that fire ordinances be modernized and enforced. Particularly is this true in communities that have overnight become industrial centers of war production. Here again the experience and knowledge of the fire insurance industry in the field of fire prevention, play an important part. Fire prevention experts know how an effective fire ordinance should be drawn. They know what safety standards are of first importance, and they can help to eliminate unnecessary restrictions that may actually hamper industrial operation.

Not a day's delay should be excused in taking steps to prevent fire in our war plants.

Two Hundred Fifty Thousand Negro Farmers To Grow Peanuts

COLORED AND WHITE ALIKE IN EFFORT

Home Front Among Farmers to Help Win The War

Washington, D. C.—Thousands of farmers, colored and white alike, are expected to grow peanuts this year to help replace oils formerly imported from areas that are now in war zones of the Far East, U. S. Department of Agriculture officials reported this week.

Designated as one of our front line war crops, peanuts are playing a vital role in the war effort not only as food and feed, but also in supplying oils for certain domestic uses so that more of other fats and oils can be released for military purposes.

This year's goals calling for 5,500,000 acres of peanuts, nearly a million and a half more than last year. will be met largely by Southern farmers who are scheduled to produce more than 95 percent of the total production. Georgia, Texas and Alabama will lead production with 1,450,000 to 1,300,000 and 850,-

(Continued on Page 8, Column 1.)

ANOTHER ROAD TO STARS

Camp Phillips, Kans., April 8—A soldier's drawers became a general's stars, in one quick promotion.

The story was told after the departure of Lieut. Gen. Ben Lear, commander of the Second Army who visited this air base near Salina on short notice.

There wasn't a three-star general's flag within 100 miles. Two spotless stars hastily were cut from the underwear and affixed to a one-star flag.

Kansas' state motto is "ad astra per aspera"—through difficulties to the stars.

NEW MILK ECONOMY PROGRAM

Washington, D. C.—Negroes living in the larger cities accustomed to buying milk in pint sizes have not been seriously affected by Secretary Wickard's Food Order 11 on Milk Economy. Although they have been buying milk from the corner grocery store and from dairies in the smaller sizes, scientific methods for handling milk insisted upon by most municipalities make it safe to buy a quart of milk every two days instead of the daily pint. Then again, most city apartments have modern refrigeration.

Elimination of the retailing of milk in container sizes smaller than a quart for consumption off the premises was made necessary by the need for economizing on material, fuel, rubber and man-power.

At first, the order is expected to work a bit of hardship on the consumer, but by following instructions, the simple rules will work themselves out easily.

While parts of the order apply to stores and home delivery, milk will still be available in pints and half

(Continued on Page 8, Column 2.)

THE RIGHT APPROACH

Price Administrator Prentiss M. Brown deserves the wholehearted cooperation of all citizens. He speaks a language which our people understand and appreciate, instead of the "$10,000 fine and 10 years in jail' 'lingo.

When enlarging the rationing program, Mr. Brown said: "The necessities of war have once again compelled the government to ask the American people to bear the burden of another rationing program. I should like to ask the forbearance of the public . . . while the trade is adjusting itself to new demand and supply conditions."

That's the American way. Freedom-loving Americans should cooperate 100 per cent.

POULTRY FOR WAR

R. A. Mundy, right, head of the poultry division at Tuskegee Institute, shows Albon L. Holsey, Agricultural Adjustment Agency field officer, four champion layers developed at Tuskegee through a system of selecting and breeding. These layers represent the first 300-egg-a year hens developed by Negro poultry specialists. The three Barred Plymouth Rocks, (left to right) daughters of the bird Mr. Mundy is holding, laid 323, 276 and 256 eggs respectively last year; the mother produced 185 eggs her first year. The national average for all hens in 1942 was 139 eggs. This year Negro farmers are being asked to increase the production of their layers. The egg golds for 1943 call for nearly five billion dozens.

STRETCH YOUR RATION COUPONS

Washington, D. C.—Your Victory Garden will not only help win the war, but it will also help stretch your ration coupons, and assure you and your family more of the vegetables you like in rounding out a diet of nutritious foods, U. S. Department of Agriculture officials pointed out this week.

Of course you need a suitable, sunny piece of fertile ground about 50 by 50 feet or larger. Farm can easily provide themselves with such a plot, but some city and suburban residents may find it somewhat difficult. If you live in a town or city, take a look at your back yard, or at a nearby vacant lot, or join in with your neighbors and form a community, or allotment garden.

Secretary of Agriculture Claude R. Wickard is asking every farmer, and every town, city and suburban dweller who can find plots of sufficient size and fertility to grow a large part of his vegetables for home use. Schools in towns and rural areas are also encouraged to grow Victory Gardens to help provide vegetables for school lunches.

Our farmers have a big job to do in producing enough for our fighting men, our workers in war industries, and our allies. By growing a Victory Garden you can help in this important job. Your vegetables will help build the stockpile of food for the war, and by eating the vegetables right out of your garden you are saving vital metals used in canning, making more of the canned food available to our soldiers and to folks in the cities who just can't grow gardens.

Your Victory Garden also eases the burden on our transportation system. By cutting down on the amount of food you buy from the store, you are helping to reduce the amount that must be shipped to your community. Thereby you are helping to keep guns, tanks, planes and ammunition rolling to our men and the fighting front.

Gardening this year is a serious business. Seed, fertilizer, insecticides and tools cannot be wasted. Persons who begin Victory Gardens should plan to care for them throughout the season so as to get maximum yield. That which is not eaten should be canned, dried, brined or stored away. Those who live in warm climates should plan to grow year-round gardens. Of course gardening isn't all work. It offers an excellent avenue for outdoor activity

(Continued on Page 8, Column 3.)

FOR THIRTY PIECES OF SILVER

A letter from members of the 750th Tank Battalion, Company A, at Fort Knox, Kentucky, to workers who recently struck in a war industry, said in part:

"We feel deeply hurt to think you would let the boys overseas down. Just what do you think would happen to this country if the boys overseas would sit down, and quit fighting, because they just make $50 a month? We need more fighting equipment. What do you Americans want? More money now and slavery later, or less money and freedom? Just think how some of your sons and brothers over there would feel if they knew you were selling them out, and that's what you are doing when you stop production."

There is a bible story of a sell-out for 30 pieces of silver. Read it.

VICTORY GARDENS AND WAR CROPS

Washington, D. C.—One way that the Department of Agriculture is meeting the farm manpower shortage, officials point out, is by helping to improve the health of farmers, white and colored alike.

The Department has approached the problem of rural health in several ways, but none has been more effective than through the drive for Victory Gardens and war crops Both the gardens and the crops which include milk cows, pigs and chickens have given increased impetus to the live-at-home program.

Negro Extension agents in several Southern states report that since the Food-for-Freedom program got underway, thousands of Negro farm families have enlarged their gardens, and many have started gardens for the first time. Others have either started poultry flocks or enlarged their flocks, added a few pigs, and obtained a milk cow. Growing food at home has meant better diets and better health, the agents point out.

A survey was made in Texas two years ago after Selective Service had revealed that nearly half of the selectees rejected were suffering with ailments traceable directly or indirectly to malnutrition. The survey showed that of the 201 Negro families studied, 40 had no garden, and 28 reported that they had no milk fruit, or green vegetables in their menus on the day interviewed.

Such dietry deficiencies were taking their toll from Texas farm manpower. State Extension got busy. Conferences were held, demonstrations conducted, and radio programs launched in an effort to get families to grow gardens, raise chickens and

(Continued on Page 8, Column 3.)

THE WAY TO PREVENT FIRE

Many of the safety requirements of the modern fire ordinance applicable to places of public assembly, which was drawn up by the National Board of Fire Underwriters subsequent to the Boston night club fire tragedy, could be carried out easily and promptly. Many fire deaths occur in such places because proprietors are unaware of the deadly danger of hazards created by temporary decorations, overcrowding, thoughtless changes in seating arrangements, inadequately marked exits and other dangers contingent upon confusion and crowds. The ordinance represents a scientific approach to these problems. It is written in language that the layman can understand. Many fires could be prevented by giving a copy of it to every person whose business involves large gatherings of people.

For example, it states that: "The aggregate clear width of doorways serving as required exits shall be not less than at the rate of 22 inches for every 100 persons to be accommodated. No exit doorway shall have a clear width of less than 34 inches, corresponding to a nominal 36-inch door, except that exiting exit doorways have a clear width of at least 24 inches may be accepted." Much more information is given on the subject of exits, including type of doors, marking and lighting, and stairways.

Combustible decorations receive detailed attention. They are the starting point of many fires and under the ordinance, "shall be rendered flameproof."

Those responsible for lives in places of public assembly should urge adoption and enforcement of a modern fire ordinance of this nature.

MITCHELL GETS HIGH APPOINTMENT

Washington, D. C.—Secretary of Agriculture Claude R. Wickard announced this week the appointment of John W. Mitchell, Negro state agent for Extension Service in North Carolina, as Federal Extension field agent succeeding the late John B. Pierce.

In his new position, Mr. Mitchell will have the responsibility of advising with State Extension directors, and Negro county agents in the upper Southern states. He will have his headquarters at Hampton, Va., and is to take up his duties on April 1.

Rounding out 26 years in Agricultural Extension of North Carolina, during 14 of which he was district and state agent, Mr. Mitchell has set a unique record. Under his supervision, Negro extension work in North Carolina has developed and enlarged until it now leads all other states in the upper Southern in number of Negro Extension agents. Since he was appointed district agent in 1929, the number of Negro county agents has doubled. There are now 35 serving in the state. Mr. Mitchell is also the only Negro agent of his state to have received all three of these medals: bronze medal for conducting the largest farm house whitewash campaign, silver medal for getting his farmers to plant the largest acreage in summer legumes, and gold medal for best all-round Negro agent.

Mr. Mitchell did his under-graduate work at A. & T. college of Greensboro, N. C., and received an A. M., degree from Central university, Indianapolis, Ind. Prior to entering Extension Service in 1917, he was a teacher for eight years in the public schools of North Carolina and assistant principal of Fayetteville State Normal.

M. L. Wilson, director of Extension, points out that Mr. Mitchell's record in North Carolina thoroughly qualifies him for his new position. In succeeding Mr. Pierce, Mr. Mitchell becomes the third Negro to serve as Federal Extension agent. T. M. Campbell, now serving in the lower Southern states, and the late John B. Pierce inaugurated the service in 1906. Mr. Mitchell's territory will include Maryland, Delaware, West Virginia, Virginia, North and South Carolina, Tennessee, Kentucky and Arkansas.

THE WISDOM OF CHILDREN

This Second World War is giving millions of Americans a new slant on facts of life on which 99 per cent of the people are ignorant. Most of us eat by instinct with no knowledge of food values. Our natural appetites and the variety of foods we have had, give us a balanced diet in the majority of cases, without thought on our part.

But with food shortage, rationing and less food in prospect, what we eat becomes a scientific issue and governmental and private agencies are making available facts about food. Candy, which most persons considered a luxury for children and young ladies, has been found to be an indispensable part of the rations of our armed forces. It is included in the field ration, jungle ration, mountain ration, bail-out ration and numerous other rations for soldiers and sailors operating under exhausting conditions.

This form of food contains a vast array of nutriments which contribute to an adequate diet, such as milk, citrus fruits, other fruits, cereals, nuts, eggs, butter and minerals.

WOMAN'S PAGE

POULTRY, EGGS, HOME-MADE BREADS, LEAP TO NEW HEIGHTS OF POPULARITY NOWADAYS

By Mary Lyles Wilson

There are many clever ways to "meet meat rationing," First cook what meat you do buy more carefully than ever. Serve it attractively, make the most of second and third servings.

Remember as long as there are good wholesome unrationed foods to bolster point products meal time cannot be very painful.

What is better than baked stuffed fish, or filet of snapper fried a golden brown, served straight from the skillet with perfectly fried potatoes, crisp vegetable salad and from the bread basket—muffins, yes, corn meal muffins, so good that they require very little butter.

Fortunate are we that poultry is still unrationed. However suggestions for stretching each purchase is timely so that reserve supplies are not depleted before new crops of poultry are produced.

Many people who enjoyed chicken once a week are now eating it two and three times a week. As poultry appears in daily meals more frequent, the successful meal depends upon a variety of ways to serve it.

Poultry is unique in what it can offer. Its rich flavor makes its regular inclusion particularly useful in meal-extender needs, as in soups, and in chicken combination dishes with fruit, cereals, bread milk, all dairy products and vegetables.

The very make-up of poultry—its light and dark meat, meaty and less-meaty parts, giblets, and the variations in flavor and shape of these parts—makes for excellent stretching possibilities for meat variety.

Yum-Yum!

We all know that baked chicken, dressing gravy, golden brown fried chicken, fork tender broiled chicken—cold cuts of chicken, chicken hash on toast points or in ring of steaming hot grits are favorites in the South.

But lets learn just as we are doing with meat—that all parts must be used and too that in doing this many delicious dishes result. Make a feature of these dishes instead of pointing out the fact that they are leftovers or the like.

Make the call "soups on" so attractive that all will want to hear it often.

Here's a recipe for soup from left over chicken:

Chicken Soup

Bones and skin from cooked chicken or fowl; water; leftover gravy or pan drippings; 1 t. salt; 1 medium carrot; 2 celery stalks or 1c. celery leaves; salt and pepper; 1 c. cooked rice; 1 c. cooked vegetables, 1 small onion.

Crack bones if it can be done easily. Add enough water to come about 2 inches over top, gravy, salt, carrot, onion and celery. Bring to boiling point. Remove any foam Cover tightly and simmer about 2 1-2 hours. Strain. To stock, add rice and vegetables. Season well to taste. Simmer, cover, 5 minutes to blend flavors.

Variations: 1 cup top milk, cream or undiluted evaporated milk may be added after straining stock. Barley, noodles, macaroni, or Hungarian Egg Drops may be used.

For something special worthy of company try:

Chicken Chowder (cooked meat and Stock)

1 cup diced chicken, 2 oz. salt pork finely chopped or 4 tbs. chicken fat, 3 tbs. chopped onion, 2 1-2 cups diced potatoes, 1 cup diced celery, 1 can kernel corn, 1 can evaporated milk, 1-4 t. ginger, 1 t. salt, 1-4 t. pepper, 2 tbs. chopped parsley, 2 c. chicken stock.

Cook salt pork in saucepan over low heat until lightly browned. Add chicken and onion and cook until onion is soft, but not browned. Add potatoes, celery, and chicken stock. Simmer until vegetables are tender. Add corn, milk, and seasonings. Heat thoroughly, stirring occasionally. Season to taste. Yield: Six generous servings.

Baked Eggs

One tablespoon melted butter, 2 cups corn flakes, 6 eggs 1-2 teaspoon salt, dash of pepper.

Pour butter over corn flakes. Form nest of corn flakes in each section of greased muffin pans.

Break eggs carefully, slipping one into each nest. Sprinkle with salt and pepper. Bake in slow oven (325 degrees) F. 20. minutes, or until eggs are firm.

All the good common sense we can muster can be used effectively these food rationed days. We may even resort to being tricky about meal planning.

Feature other points of the meal rather than the meat course. Draw attention to tempting salads, delicious breads, unusual desserts (Yes, it can be done on very little sugar, good ones too!)

Bread Can Be Surprising

Make a game of serving a different kind of bread at least once each day. The family will begin to wonder what today's surprise is. With attention centered on the bread, the simplicity of the rest of the meal will be less noticed. But have the bread good, as good and nutritious as possible.

One of the most efficient ways to spread the milk, shortening, and egg supply over the family's needs is to combine these ingredients judiciously with enriched flour to make delicious breads.

Just as a starter, try molasses gingerbread with cabbage and apple salad; crisp peanut muffins with a fresh vegetable plate; English tea cake with fruit and coffee for breakfast or lunch: toasted hard rolls with creamed eggs; rolls-in-loaf with vegetable stew; waffles with asparagus; hot biscuits with new peas. So the list goes—an idea from the bread box or mixing bowl for every day in the week to help observe the rule of good eating and good nutrition.

For the days you do not have meat, fish, or fowl—egg dishes really satisfy in a healthful way.

New eggs on the menu several times a week are good management this season of the year. And a new way to serve them is always welcome. Creamed eggs in an asparagus muffin ring have a scintillating touch of spring about them. The yellow and white of quartered hard-cooked eggs folded into a smooth white sauce and piled high in the center of a delicately brown muffin ring flecked with gay green pieces of asparagus bring the season's bright colors to the table.

Asparagus Muffin Ring With Creamed Eggs

2 cups sifted enriched flour; 3 teaspoons baking powder; 1-2 teaspoon salt; 1 egg; 1 cup milk; 2 tablespoon melted shortening; 1 cup cooked asparagus, cut in small pieces.

Sift together flour, baking powder, and salt. Beat egg and add milk, melted shortening, and asparagus. Add to dry ingredients, stirring only until flour is moistened. Turn into well-greased 8-inch ring mold or 8x8x2" pan and bake in hot over (425 F) 30 minutes. Serve with creamed eggs. 8 servings.

Creamed Eggs

4 tablespoons butter or chicken fat or drippings; 3 tablespoons enriched flour; 1 teaspoon salt; 1-4 teaspoon pepper; 2 cups milk; 8 hard cooked eggs.

Melt fat and add flour, salt, pepper, stirring constantly. Add milk gradually, stirring until mixture thickens. Cook 2 minutes longer, stirring occasionally.

This recipe may be cut in half or service of four. Eggs for breakfast, lunch or dinner makes healthful delicious dishes — helpful to homemakers in every way.

Second War Loan Bonds will keep the planes up and the prices down.

HELPFUL HOUSEHOLD HINTS

Clean Your Stove

Clean the burners on top of a gas stove with a fine wire brush frequently dipped in water with soap powder added. Then dip the brush in clear warm water. Clean the burners at least an hour before turning on the gas.

When the burners are turned on after a cleaning make sure that all the holes are free of soap bubbles. If some holes are still plugged up, insert a small wire. An untwisted hair pin will often work.

Avoid Mildew

Never put damp laundry into the laundry hamper if you would avoid damage by mildew — which is difficult to remove if it does not actually destroy the garment. Dry damp clothes completely before storing if it is not convenient to launder them immediately.

Rainy Day Dress

Rainy days, and most people wear a raincoat. Rainy California days, and Dorothy Lamour steps out in her "rain dress." It is made of a water proofed pilot blue twill and looks for all the world like a smart shirtmaker frock. The only trimmings on the dress are four large pockets with flaps ornamented with red buttons and a red flanned lining. By donning her crimson rubber boots and a pilot blue twill hat, Dorothy is suitably and becomingly dressed for the worst kind of weather.

Carpets on Stairs

Since stair carpets usually get the heaviest wear, they should be good quality, with a thick firm pile. Use a good padding under the carpet, see that it is laid carefully, especially over the edge of each stair. Buy enough so that the carpet may be sifted occasionally to distribute wear and thus lengthen its life. Extra footage can be turned under at either the top or bottom of the stairs.

Save Wax Paper

Washington, D. C.— (Special)—Housewives are urged to conserve all their wax paper against the time when this handy commodity may be very scarce. Wax, says WPB, is hard to obtain, and has many important war uses.

Rip Up Sweaters

Don't throw away old sweaters. If they are not too worn make them up into new garments—scarfs, gloves, new sweaters for the small members of the family. Before ripping apart, wash sweater in a mild soap and warm water, and you will find it more pleasant and easier to work with.

To Store Rubber

If you can't help folding or creasing rubber articles before putting them away, sprinkle a little cornstarch or talcum powder between the folds to prevent sticking together.

VICTORY GARDENS— VICTORY PANTRIES

By Mrs. M. M. Hubert

Club women throughout the State of Mississippi have found a way to beat the high cost of living, and at the same time create beauty, conserve food, and get recreation through their Victory Gardens of 1942.

For several years, clubs have been growing gardens on a small scale, but they were not referred to as Victory Gardens. In connection with the civic work of the clubs, emphasis has been put on beautification of the premises, which began with flowers, potplants, window boxes and yards and finally grew into vegetable and flower gardens. Prizes were awarded to those persons who excelled, according to the decisions of qualified judges who spent much time scoring these back, front and side yard plots. The main points from which they were judged were condition, variety and plot arrangement.

The premises, intended primarily for flowers brought a new and rather interesting problem: too much money and labor were involved in creating a garden to leave the plot to grow up in weeds after the close of the spring and early summer judging contests. On the other hand, the prize winning flower and vegetable gardens had attracted much attention and the owner had to find some definite method of keeping up appearances on a reasonably large space for a longer period. Hence lawns were edged with flowers, which supplanted the over-all flower garden, and in turn, vegetables have supplanted some of the flowers. Now, it is no uncommon sight to see plenty of vegetables growing in the flower garden.

From the health standpoint, vacant lots have furnished lots of fresh vegetables, instead of mosquitoes.

Mention was made of gardens being scored on 'variety' as a main point in judging. Among the number grown were many that could be saved by canning, drying and freezing. The club members often boast of growing from 4 to 10 varieties of vegetables in her garden, the number varying according to the size of her plot.

These were peace time pastimes by club women, largely in urban centers. In rural sections club women grow gardens as a part of the family farming schedule and canning is always an accepted part of the summer program. They are usually the leaders in the communities and often direct the activities of groups of women. Their slogan has been and is: "Eat all you can, and can what you can't."

The year 1942 brought the necessity for growing gardens for food and feed, therefore, reports across the year show that Victory Gardens have developed into Victory Pantries. A cross section of the clubs reporting show us that Victory Gardens have been grown by Garden Clubs, Social Clubs, Literary Clubs, Church and School Organizations and Home Demonstration Clubs. Some of the centers where these activities have been more or less centralized have been in Canton, Alcorn, Greenwood, Laurel, Jackson, Lexington, Piney Woods, Prentiss, Natchez, Vicksburg, Yazoo City, Columbia, Columbus, Aberdeen, D'Lo, Pinola, Philadelphia, and other places.

During the past summer, Columbia club women, with the assistance of their home demonstration agent, who lives in the town, conserved every vegetable grown in their various gardens. Among these were peas, beans, cabbage, okra, corn, tomatoes, soup stock, beets, chow chow, and fruits, both orchard and wild. They also learned how to dry and package for safety both fruits and vegetables. They reported the number of jars ranging from 40 to 200 quarts in the town and the rural women have a much higher average because of having more vegetables and fruits. They are fortunate in that they work in groups and learn to use both tin and glass containers. The pressure cooker, the improvised canner and the cook stove are used extensively.

In one town, the gardens of various members were planted at different times with different vegetables and all of the friends in the immediate vicinity shared the same gardens for table use when vegetables were most plentiful and many canned from each other's gardens. Housewives and Home Economics teachers rubbed shoulders, exchanged recipes and vied with each other in the quantity, quality and appearance of fruits and vegetables shown on their pantry shelves.

Perhaps Jackson has produced most in the conserving program. Some years ago the women in one community organized a neighborhood club and under the supervision of the Hinds County home agent spent three days canning in the State Agent's Demonstration kitchen and learned to use the pressure cooker for canning and for preparing meals. Following these meetings the pressure cooker was taken to a home in the community and fruits and vegetables canned without the presence of the home agent. Each person brought the amount she could gather from her garden; all assisted in the work and everyone carried home at least a jar of food. Food was taken to cook and dinners were served all present. Beginning with fruit juice everything served except the meat and bread, was a part of the day's canning. This year, Jackson Club women report pantries filled with fruits, jellies, pickles and conserves. The highest number reported is in the home of a young home maker, with three in family who canned 400 pints of fruits and vegetables for winter use. Many have colored pears for salads, whole tomatoes, etc., thus permitting them to entertain as well as feed their families from their pantries.

Fortunate indeed is the wife of a farm agent who canned successfully more than 200 quarts of fruit and vegetables, twelve quarts of meat, and has enough fresh vegetables in the dehydrating plant to enable her to serve fresh vegetables weekly throughout the winter months. These were grown in her garden during the past spring and summer. Because of our promise, her name is not being called, but she is a leading club woman, church worker and civic leader in her community. Her flowers deserve as much praise as her vegetable garden.

This is a cross section of the work of seventy-five clubs throughout the state, both rural and urban. We do not have an exact account of the number of gardens grown and the amount of food conserved, but we can safely estimate that at least 700 club women of Mississippi have conserved more than 10,000 quarts of food from their front, back and side yards, thus changing their Victory Gardens into Victory Pantries.— SERVICE MAGAZINE.

IT MUST NOT HAPPEN HERE

Tragic stories of death from starvation and exposure in Europe are so commonplace that their horror has lost significance to many of us. But it should never be forgotten that lack of production is not the sole factor in the plight of Europe's millions. Europe has no organized distribution system. What few necessities exist are transported at the convenience of military authorities. Points and final distribution to consumers are places rife with disease and dirt. What a contrast to the distribution system of this country!

Retail distribution in America is scientically organized. Its principles are comparable to those of mass production. The core of modern retail distribution is the chain stores and voluntary groups of independent merchants, both of whom are heavily counted up on by the government to help maintain a stable and adequate supply of necessities, within equal reach of every civilian. It is a formidable task.

Fair and adequate distribution can be accomplished. The record of retail merchants gives strong reasurrance of that. However, they will need the utmost cooperation from the government and from the public. The government must do all in its power to simplify rationing and price regulations, just as it must recognize the essentiality of merchandising. The public can cooperate by being tolerant toward inexperienced employes and by avoiding the temptation to hoard non-rationed commodities.

The tragedy in Europe should spur us on to help our producers and distributors in every possible manner. We want no recurrence of that tragedy, in this country.

NEWTON COUNTY FARMERS DEVELOPING NEW WAR-TIME FARMING PROGRAM

By W. A. Hagins

Covington, Ga., March 15—Negro farm folks around Newton county advance farther towards developing sound county war-time farming program, said the Georgia Agricultural Extension Service today. Several soil management demonstrations have begun in land-use planning and systems of crop rotation worked out While submarginal land is being set to trees and kudzu, sufficient acreage will be devoted to pasture crops for livestock units.

More than a thousand baby chicks were recently placed in brooders by adult farmers and club boys. Also greater efforts are being put forth to increase the size of family laying flocks. Quite a few litters of pigs have been farrowed on demonstration farms this month with an average of eight pigs to the litter. These are to be sold to neighbors to increase the meat supply. It is pointed out that more pigs will be favored in the near future and that several club boys have beef animals which they are feeding out for the fat stock show.

In corn production, bushels of yellow seed corn have been distributed among farmers and club boys to conduct feeding demonstrations with corn. Leaders have been selected to carry demonstrations with serica. Austrian winter peas and soil building crops are growing off fine and farmers are making improvements to their pastures.

While six club boys planted three acres of Irish potatoes in the interest of the food for fighters program, adults planted potatoes for truck crops, home and market demands. Many gardens have been sufficiently enlarged to produce adequate supplies of vegetables; still English peas, cabbages, onions and mustards are being planted. Club members are enthusiastic over victory gardens.

Four-H clubbers continue their interest in the conservation of natural resources too. Recently they prunned the fourteen acre demonstration forestry plot of slash pincs and black locusts, out on the old Eatonton highway.

The neighborhood leaders and Extension agents conducted 40 neighborhood meetings and splendid progress is made in reaching farm families and enrolling them into supervised groups for instruction and guidance, the Negro county agents points out.

HERE'S HOW TO PLANT YOUR VICTORY GARDEN

You are probably getting ready now to start your Victory Garden. Well, here are some tips from the U. S. Department of Agriculture on how to go about it. Of course you have selected a site of open, sunny ground with sufficient fertility to grow a garden, not an ash pile, or a bed of cinders.

Now that that's settled, we are ready to get out the old spade and limber up. If you live on a farm you'll use a plow. But whether you use a spade or a plow, that point is to pulverize the soil thoroughly before planting. That should be done as soon as the ground is dry enough to work. On thin soil be sure not to turn up much of the sub-soil. Don't dig clay soil when it is wet.

If well-rotted leafmold, horse or cow manure, or other organic matter is obtainable work it into the soil while you are spading or plowing. Use about a bushel to every 25 square feet. Unless you know that commercial fertilizer is not necessary, you should apply Victory Garden Fertilizer in bands about three or four inches wide, and about two inches from the line along which the seed are to be sown, or the plants set. Victory Garden Fertilizer, containing three percent nitrogen, eight percent phosphoric acid, and seven percent potash, has been authorized by the Department of Agriculture and the War Production Board.

In getting ready to plant, the rows should be straight and run the long way of the garden plot for convenience in working. Try to get seed or plants of disease-resistant varieties. Because of the great need for garden seed this year, buy only as many as you are going to use and be careful not to sow them too thickly.

Bean and pea seeds should be spaced as the plants are to stand; never thin these plants. Small seeds such as carrots, collards, spinach and onions should be sown three or four times as thickly as the plants are to stand since many of these seed fail to produce good seedlings. In heavy soils seed should be covered less deeply, than in light sandy soils. Tall plants should be placed on the north or west side of the garden so that they will not shade the low plants.

Now, what should you grow? As to specific vegetables, consult your experienced neighbor, your county Extension agent or the State Extension Service at your state agricultural college. They will tell you which vegetables do best in your local climate. But in general, plant eight or ten different vegetables. Let them be green leafy vegetables, yellow vegetables, tomatoes, root vegetables and others which may be eaten fresh over a long season and which may be stored without much processing. Planting dates range from March to June. For detailed information on planting dates, ask a neighbor who has grown a garden before or the county agent.

Don't forget to plant flowers. They help make things look beautiful, and they are important to national morale.

Inexperienced gardeners are reminded that elaborate and expensive tools are not necessary for the cultivation of a small garden plot. A spade or spading fork, a hoe, a steel rake, twine and two wooden stakes are sufficient for the task.

A VALUABLE DOG

A young lad was standing in a corner with his dog. He had posted a sign which read, "Dog for Sale, $200." One morning a man going to work, noticed the boy and his dog and his sign, and he stopped and said "Young man, I see you have a dog for sale." "Yes, sir, I sure have." "I see you're asking $200 for him." "That's right," the lad replied. "You would take less, wouldn't you?" "No, not one penny less." The man went on, chuckling to himself. A few days later he passed the same corner and saw the same boy, but the dog and sign were gone. The man said, "Well, did you sell your dog?" "Sure did," he replied. "Did you get your price for him?" "Sure did." How did you find anyone who would give you $200 cash for your dog" "I didn't." "I traded him for two $100 cats."

BUILDING FOR TOMORROW

Vital foods are not only sent to Ethiopia and other members of the United Nations to keep them in fighting trim, but wholesome school lunches and milk are served to millions of American youngsters to help them grow strong bodies to carry on the way of life we are fighting to preserve. These lunches also ease the burden on busy mothers who now have war jobs. This young lady is one of more than a half million colored school children who receive delicious lunches every day. The food is provided by the Food Distribution Administration of the U. S. Department of Agriculture.

YOU HELP THE ENEMY WHEN YOU NEGLECT YOUR VICTORY GARDEN

Your Victory Garden is doomed to failure, and all the fresh vegetables you might grow to insure increased supplies for our fighting men, and to add to your own ration of canned goods is only wishful thinking if you neglect to care for it, the U. S. Department of Agriculture warns this week.

Neglecting your Victory Garden also means a waste of the seed you plant or plants you set out, and a waste of tools, valuable fertilizer, and man hours which the nation needs so badly. Caring for your garden is a simple, easy task which offers relaxation and recreation, but it must be performed regularly, and with some degree of skill.

In watering your garden, don't sprinkle a few buckets-full or turn on the hose for a couple of minutes every day. In so doing you are only watering the shallow-growing weeds while the deeper roots of your vegetables go thirsty. Your garden should be thoroughly and deeply soaked as by a fairly heavy rain, and watered again only when the soil shows signs of becoming dry.

Here are five suggestions which inexperienced gardeners may keep in mind as a guide in caring for their Victory Garden: (1) We keep weeds under control by shallow but thorough cultivation or hoeing. Vegetable crops should not be cultivated deeply because of danger to the roots that grow near the surface. Weeds that take root again readily after hoeing or pulling, should be carried out of the garden. (2) Keep insects and plant diseases under control. (3) Cultivate your garden as soon as the soil is dry enough after each rain and as often in addition as is necessary to keep weeds down. (4) Care should be taken to avoid trampling and packing the soil so far as practicable. (5) Mulching between the rows with straw, dry lawn clippings, leaves, or similar material will help conserve moisture and keep down weeds. (6) Don't sprinkle or irrigate your garden too often. If water is to be supplied, the garden should be thoroughly and deeply soaked as by a fairly heavy rain and watered again only when the soil shows signs of becoming dry.

For additional information on caring for your garden consult an experienced neighbor, your County Extension Agent, the State Extension Service at the state agricultural college.

The best coat linings are made of slippery fabric, so the coat will go on and off easily.

CORRESPONDENT FOR ANP SEES JAP'S AIR RAID

Colored Newsman Tells Of Attack on New Guinea on Morning of April 12

SOMEWHERE IN NEW GUINEA, April 29—(Censored)—(ANP) **(Associated Negro Press Foreign Correspondent)**

By "SCOOP" JONES

—It was the morning of April 12 I first spotted Tojo's formation corrugated tin roofing bomb shelter, I commanded a ringside seat for one of the Japs' biggest daylight air raids.

Peeping from beneath a fortified of mixed fighters and bombers flying from the west. They looked like a flock of wild geese flying to a new season. The raiders grew from little birds to a more distinguishing size as they drew nearer. Then the formation parted into groups heading in different directions, bombers escorted by Zeroes.

The Zeroes turned on a floor show . . . began to dive, zig zag and flip. For whose benefit the performance was, no one yet knows. The zig-zagging and the flipping didn't last long. Our anti-aircraft turned loose. I ducked out of the picture for fear of being hit from falling shrapnel from anti-aircraft fire. The mixed din of anti-aircraft fire and exploding bombs from the planes could be heard. Anxiety and inquisitiveness was too great. With my tin helmet securely on my head I peeped again just in time to see a streak of white smoke (from a distance) going downward from the sky as though a plane had been shot down. Anti-aircraft fire was not so great now as I emerged from the shelter. Looking upwards it seemed like planes were everywhere. From whence they had come, I yet don't know, but our fighter planes were in the sky. The circus flying Zeroes now had a problem.

The most impressive sight I witnessed from the aerial dogfights that ensued was when one of our Lightnings diving from the clouds into the fray. Down it came right through what seemed like a flock of Zeroes. Ignoring them, it kept on its downward slant towards the Japs' five bomber formation that the Zeroes were hovering over and apparently escorting. In the midst of the bomber formation the Lightning went turning on the heat. The battle disappeared into the clouds. What was the outcome of this fracas I don't know. The results were included in the tally of victories that was later issued. Whoever the pilot was he could stand a few medals.

It wasn't long before the air drama was all over. Later at press headquarters it was learned (at the time of this writing), although the count wasn't final, that something like 13 bombers and 10 fighters were definitely destroyed, and 10 bombers and one fighter were probably destroyed. It was believed that the attack was made by better than 100 planes.

The morale of the soldiers is the thing that seemed uncanny, almost incredulous. Looking at them while the sky battle was in its last phase of dogfighting. I noticed no sign of fear on those faces. To the contrary, they were laughing and enjoying the show as though it was another Hollywood action-filled cinema.

Another chapter of a small phase of the war has been closed. The Japs lost more in planes than the small damage they did here. The attack here was more or less a morale booster. Soldiers learned that the Japs, even in such large force, were no match for the guns and planes of superior nations. The battle and results were indeed impressive.

Bill Robinson Prepares Suit Against Critics

HOLLYWOOD, April 15—(ANP)—Upon the return of his attorney, the noted Jerry Geisler last week, Bill Robinson, internationally famous "king of dancers," declared that he was ready to sue over a story that appeared in several publications a week ago. The story was to the effect that his all-colored starring vehicle, Fox's "Stormy Weather," would be remade to exclude him from a romantic role opposite Lena Horne.

Highly indignant over the article, and which the studio also hurried to contradict to the Associated Negro Press, Bill had declared that he would enter suit for damages up to $100,000 as soon as Geisler, who was out of town, returned. Incidentally this attotrney is the man who forced Hollywood Legion stadium to break its 18 year color bar, and who more recently had successfully defended movie star Errol Flynn against trumped-up rape charges.

It is not known definitely which publication Robinson plans to sue first, but the story made its initial appearance in New York's P. M. Coast readers did not see it until it appeared on the front page of the Pittsburgh Courier March 27. However it also appeared in the New York Amsterdam News and the New York People's Voice. To date it has been seemingly impossible to trace down the actual author of the fallacy, but the majority of the newsfolk here declare that it was written in New York as have been several other recent false stories.

THE PRICE OF FREEDOM

Everybody wants freedom. "Freedom" is a popular word. But, as Eric Johnson recently pointed out in an article in Reader's Digest entitled "Your Stake in Capitalism," you cannot have freedom unless you also have "capitalism." Capitalism is as unpopular as freedom is popular—and therein lies the danger to freedom.

It has long been good political strategy to talk about freedom and damn capital in the same breath. Under such inconsistent reasoning our lawmakers have enacted much social legislation designed to enhance the freedom of the individual by establishing wage and hour standards and other economic safeguards, while at the same time passing laws which destroy capital and threaten the very freedom they profess to uphold.

Capital is accumulated savings which, put to productive use by private citizens, supplies jobs and opportunities,. When private citizens are prevented from accumulating capital and using it to create jobs, private jobs in free enterprise gradually cease to exist.

As Mr. Johnson observes: ". . . A great many people — in polling booths and in legislative bodies—have thought that you can tax business just as much as you like and still have 'free enterprises' and the 'American way of life.' You cannot. Just suppose that you taxed all new savings and all new profits and all new capital out of private hands into the public treasury. What would you have left to be the creator of new jobs, Only the government. Only the totalitarian state . . . We stand at a solemn parting of the ways. Our business leaders and our labor leaders want freedom . . . But what is the price of freedom? I say it is the capital with which to operate capitalism. The word is capitalism."

Freedom will be lost unless we recognize the truth of Mr. Johnson's words.

Only 200 fires set by lightning occurred during the 1942 fire season in California national forests, compared with 600 in the average year.

"What do they mean by the City's pulse'?"

"Oh, I suppose it has something to do with the policemen's beats."

OPA MAKES AVAILABLE EXTRA CANNING SUGAR

Deal With Cuba Permits Lessening of Restrictions.

Washington, April 8—OPA decided today to make sugar available to home canners again this year without ration coupon penalties after arranging for an extra 200,000 tons of sugar to be imported from Cuba.

The sugar deal involving extra shipments was concluded this morning, and a few hours later top OPA officials held a special conference and authorized the home canning sugar.

Previously, OPA had considered requiring persons who asked for extra canning sugar to surrender eight to 12 points of their canned goods ration points for every extra pound of sugar.

Because of the canning and other needs, however, there was no indication that the extra Cuban sugar would affect the ordinary consumer's sugar rations, which is at the rate of about one-half pound per person per week.

One of the other possible places where OPA may allot the extra Cuban sugar is to restaurants, hotels and other public eating places that make their own pastries.

THE POWER OF LITTLE THINGS

A time of war is always a time of strain. This is inevitable. The hard work we all must do, the sacrifices all must make, the crowded conditions of work and travel, the anxious hours of wondering about our loved ones in the service—all these things keep our nerves on end. If we are not careful, they make us unhappy inside and most unpleasant outside.

The trying, straining nature of these days is responsible for a great deal of the "Tension" about which we hear so much just now. I am certain it is responsible for many of the unfortunate incidents that happen in our communities from time to time. It isn't that conditions around us have suddenly gone bad. It is rather that our tempers are sour, and we lose the ability to handle even simple situations wisely.

I believe we will find a key to much of the trouble of the times if we make up our minds to pay careful attention to certain little things. The first of these is common courtesy. On busses, or trains, at work or at home, if we will be careful always to have a kind word; to return a good natured answer even to an unkind remark; to do the little deeds that will promote the comfort of others, even to the slight discomfort of ourselves—just simple little acts of courtesy such as these will do more to smooth out ruffled feelings and ease the tired nerves of people around us than anything else we can do.

Secondly, if we will refrain from doing certain little things, such as making unkind remarks aloud, or using insulting nick-names in the hearing of those they hurt; refrain from pushing in crowds, or from becoming impatient quickly; or from taking out our bad feelings on somebody else—if we will refrain from doing little unkind things such as these, we will do much toward promoting and maintaining better relationships all along the line.

Thirdly, if we will try to see life through the other person's eyes, that is try to see his wants and his needs and thus to understand his hopes and ambitions, many of our prejudices would disappear. We would not be so quickly to hate or condemn. A great deal of the wild, loose talk that flies so thick just now would quietly die away. After all most people want the same things we want—work, shelter, enough for a little pleasure and progress, a chance to enjoy the common advantages of the American way of life. These are the desires of most human beings. In our true moments, we would not deny these to anyone. It is only when we are blinded by prejudice or made thoughtless by bad temper that we try to block others from getting the common things we ourselves want and need. It is imperative in a confused and hurried time like this that we take time to know our real selves, and refrain from doing any thoughtless thing that would hurt or block a brother and cause needless frictions. It is only through such control of our actions that we can ever hope to develop that unity of purpose and feeling which is essential to our winning the war.

There is much that our leading agencies can do to help us promote better feelings. Employers can call employees together and talk frankly about the need for courtesy and understanding. Employers can also exercise fairness in their employment policies, distributing positions for the benefit of the largest number, refusing to have part in selfishly exclusive schemes.

Ministers can stress the need for kindness in a time when unkindness may cause so much social harm. Teachers can talk to the young about proper behavior in public places. Parents can talk to children about respect for the rights and feelings of others in the community.

Tensions and troubles are always caused by little things. They can also be relieved or cured by little things. Now in the midst of war and strain, if we can find the way to be kind and considerate, we will have gone a long way toward preparing the ground for wholesome progressive life in American communities in the days when peace shall come.—SERVICE.

SUPPORT POTATO PRICES

The Department has announced support prices of U. S. No. 1 grade sweet potatoes produced in 1943 at $1.15 to $1.45 per bushel to encourage farmers to meet the production goal of a million acres, or 32 per cent over the 1942 goal. Prices will be supported through purchase by the Food Distribution Administration at $1.15 per bushel during the harvesting season from August through November; $1.30 per bushel in December and January; and $1.45 per bushel during February, March and April.

These prices apply to U. S. No. 1 grade packed in bushel crates, baskets, or hampers. Sack potatoes are at 10 cents discount, and U. S. No. 2 containing 75 per cent or better U. S. No. 1 will be supported at 15 cents less per bushel than U. S. No. 1 grade.

PERMANENT PEACE IS POSSIBLE

Future world peace depends to a large extent upon the United States—providing we do three things: First, keep our faith with the American capitalistic system by allowing individuals and business to survive with sufficient earnings to maintain private jobs in free enterprise; Second, actively participate in world affairs; Third, lead the way in broadening the flow of international trade.

The first is essential to peace because the alternative to free enterprise is state socialism, and state socialism leads to war. The dictators have proved that. The second is essential because our cooperation is necessary to enforce a just peace. The third is essential because nations tied together by trade are less inclined to fight.

Every effort must be made to awaken people to the fact that our leadership is sorely needed in the creation of a lasting peace and a new era of trade, just as every effort must be made to awaken the people to the fact that all of us have a common interest in the maintenance of the free enterprise system.

In pleading for such leadership, Clark H. Minor, chairman of the National Foreign Trade Council, says: "When we look over the economic record of the past and see the ravages caused by war . . . we must be convinced that the establishment of permanent peace would be so beneficial to every inhabitant of the world that there is hardly any immediate sacrifice which we could be called upon to make which would not be repaid a thousand-fold."

He further declared: "That we and every country may enjoy the fruits of the particular aptitudes of other nations, of their particular natural resources, requires that no barriers shall be placed in the way of our access to such fruits. This means intelligent and courageous action with respect to tariffs, exchange regulations and all the unnecessary impediments which now restrict the flow of goods . . . Our country has the least to fear from being a leader toward freer world trade. With our total foreign business representing such a small percentage of our total trade, and with our resources of such great richness, we are surely the best situated to take the lead in a program benefiting not only ourselves directly, but all other civilized nations." As a step toward international leadership, the council has urged the renewal of the Reciprocal Trade Agreement Act. This act has opened the door to commerce and enduring peace. The door should not now be closed.

Peace, trade and free enterprise are dependent upon each other, and the freedom of mankind depends upon the maintenance of all three.

Hugh Gibson, former American ambassador to Belgium and Brazil, has joined the firm of Doubleday Doran as an editor.

DR. PATTERSON URGES NEGRO FARMERS TO STEP UP WARTIME POULTRY PRODUCTION

Washington, D. C.—With the Southern states being requested to produce nearly 300 million chickens and more than a billion dozen eggs as their share of the 1943 chicken and egg goals, colored farmers who make up a fourth of the farm operators in that area must also step up their production of poultry this year in order to contribute their full part to the nation's wartime food drive, Dr. F. D. Patterson, president of Tuskegee and special assistant to the Secretary of Agriculture, said this week.

Pointing out that Tuskegee's poultry department, in making a special study of improving layers, had already produced several 300-egg a year hens through a system of selecting and breeding, Dr. Patterson urged Negro farmers to make plans now to increase their flocks of laying and eating chickens.

It is expected that many colored farmers, as well as residents of villages and suburbs of cities will either start a flock this year, or will enlarge the flocks they already have. With meat rationed, it is pointed out that poultry is becoming increasingly important as a source of meat. And, of course, since the very beginning of the war eggs have been vitally important as one of our principal protein foods. Last year the Food Distribution Administration of the U. S. Department of Agriculture purchased more than 600 million dozen eggs for lend-lease shipment and for our fighting men abroad. This year the quota is even higher.

The importance of poultry is also shown in the increased production required this year which is 10 per cent higher for eggs, and 11 per cent higher for chicken. The Southern states alone are asked to produce 1,132,051,000 chickens, and 284,274,000 dozen eggs. Unless the 350,000 Southern farmers who were not even raising a single chicken in 1939 get into the fight, the job of meeting the goals is going to be increasingly difficult.

One of the handicaps to egg production in the South has been the lack of marketing facilities. However, Food Distribution Administration has taken steps to remove this barrier by establishing egg market warehouses in 12 Southern states. One day each week these warehouses are open to buy eggs in 10 case lots at support prices now ranging from 30 to 35 cents a dozen.

The important thing, however, is not so much the direct sale of eggs and chickens, but rather the assurance of more adequate diet of nutritious food for farm families so that they can grow stronger and healthier. And by raising chickens at home to eat, they will buy less red meat and thereby leave more of it for our fighting men and our war workers.

Farmers, as well as villagers and suburban residents who are starting flocks this year for the first time will be interested in knowing how to go about it. Well, the first thing to do is consult an experienced neighbor, see your county agent, or write the State Extension Service at your state agricultural college for information.

Department officials warn that those who buy baby chicks and then let them die for lack of proper care are sabotaging the war effort. Baby chicks are delicate and need much attention for the first few days. They must be properly housed so as to be protected from inclement weather and from rats and other animals that prey on fowls. They must also be properly fed and watered.

A city backyard flock, or a farm flock may be started by purchasing day-old chicks from a hatchery, or the flock may be started with three or four-week old chicks, or even with ready-to-lay pullets. Those who want flocks both for eggs and eating should try a general purpose breed. These breeds include Plymouth Rocks, Rhode Island Reds, New Hampshires and Wyandottes. Those interested especially in layers should get Leghorns.

Care is the watchword for poultry raisers: housing, feeding, watering, looking after layers, seeing that the nests are clean, controlling lice and other parasites, and keeping the flock healthy. If you have a garden, or if your neighbors have gardens, then be sure that your chickens are well fenced in. It may not be too difficult to obtain salvage fencing material.

HIGHLIGHTS OF AGREEMENT FOR AGRICULTURAL EMPLOYMENT OF BAHAMAN WORKERS IN THE UNITED STATES

Washington, D. C.—Both the Negroes from the Bahamas and our country's own farm labor force are protected by the agreement under which the islanders will be brought into the United States to help relieve the farm labor shortage in Florida and adjoining states.

Under the agreement between the Government of the Bahama Islands and the U. S. Department of Agriculture which was signed last week, as many as 5,000 Bahama workers, over 18 years old, may be brought here to help push our wartime food production. Provisions of the agreement assure minimum standards of working conditions, and the same protection accorded other groups by the President's Executive Order No. 8802 barring discrimination against workers in war jobs.

Other provisions of the agreement are: (1) that Bahamans will not be employed to displace other workers, or to reduce previously established wage rates; (2) that the island workers will be paid the prevailing wage in the area for the kind of labor performed with a minimum of 30 cents an hour, or the piece rate equivalent; only part of their wages will be paid them directly, however, the remainder will go to their families and into a savings fund; and (3) that the islanders will be housed in camps maintained by the Department of Agriculture, or in other government approved quarters.

The agreement also assures employment for three fourths of the work contract period. A daily subsistence of $3 will be provided by the Department, for each day they are unemployed during the 75 percent period for which employment is guaranteed. The Department will also provide subsistence to the workers in case of unemployment during the remaining 2' percent period on the same basis as it is made available to other agricultural workers in the migratory labor camps.

As a precautionary health measure, the Bahamans will be required to pass a physical examination supervised by U. S. health authorities; they will also have the same legal protection afforded other agricultural workers as to occupational diseases and accidents.

THEY MUST EAT

Former president Herbert Hoover, oustanding leaders in agriculture and milk production, and the governors of many states have been pointing out the dangers involved in undermining our farm output by policies which treat agriculture as a non-essential industry, in comparison with so-called war industries.

It is self-evident that any policy which cripples food production, will wreck the whole war program Men and women have to eat every day before they can produce or fight. We can't keep our promises to our Allies to furnish them food, and at the same time feed this nation, unless the farmer has the manpower and the equipment to raise the crops.

A lost crop season or a lost milk cow involves a time element for replacement, of from one to three years. It is well that these facts are now being impressed on those responsbile for future farm policies.

World's smallest independent state, Vatican City, is about the size of an 18-hole golf course.

A. M. E.'S PUSH FOOD DRIVE

The Bishops' Council of the African Methodist Episcopal Church which met in Nashville, Tenn., has informed the Department of Agriculture that it heartily endorses the Food-for-Freedom program and plans to mobilize its 8,000 ministers fully behind it.

Several weeks ago the Fraternal Council of Negro Churches in America, headed by Bishop James A. Bray, took similar action and initiated Food-for-Freedom Sunday on February 14. The council represents 40,000 churches, 11 denominations and more than 6,000,000 communicants.

Department officials point out that the churches can play an important part in the wartime food production program by encouraging farmers to grow more of the things the Government needs to win the war.

Many ministers are telling their parishioners about nutrition and how they can assure a proper diet for their families by growing more of the foodstuff on their farms. They are stressing Victory Gardens, chickens, pigs, and milk cows. They know that a people must be strong to fight either on the spiritual front or on the physical battle front where American boys are meeting the enemy.

FORM LABOR ADMINISTRATION

Taking further steps to meet the farm labor situation, Secretary Wickard formed an Agricultural Labor Administration last week headed by Wayne H. Darrow, associate director of the PSDA Office of Information. The new administration will take over the farm labor work previously carried on by the Agricultural Labor Branch of the Food Production Administration and will also integrate farm labor work done by other Department agencies, including that of Food Distribution Administration, the Farm Security Administration, and the Extension Service.

SCHOOL CHILDREN CAN HELP

Secretary Wickard has sent telegrams to all state governors proposing the release of young people, white and colored alike, from schools in small towns and rural areas to help with the planting of essential crops this spring in areas where labor is scarce. The Secretary's action is based on the urgent need to make available immediately all possible aid in spring planting.

The Secretary's telegram reads: "Nation's food and fiber requirements make it imperative we have maximum planting of essential crops this year. Department of Agriculture exerting all possible effort to assure farmers sufficient work force to make 1943 production even greater than last year's record output.

"Supplementary to your state efforts to meet farm labor shortage, and within limitations your state laws and policies, I respectfully urge you to investigate need for services of young people, especially in small towns and rural areas, in helping to get crops planted, and to issue proclamation or take other appropriate action to have school authorities release farm students 14 years and older from schools in areas where farmers must have extra help for spring planting."

SEE BIG FARM JOB FOR NEIGHBORHOOD LEADERS

T. M. Campbell, regional Extension Service field agent, and John W. Mitchell, Negro state agent for North Carolina were in Washington last week attending a meeting called by Director of Extension M. L. Wilson to lay plans for making full use of farm neighborhood leaders in the wartime agricultural program. Neighborhood leaders and state and county Extension workers from 38 states attended the conference. With farm educational meetings curtailed because of tire and gasoline shortages, as well as the fact that many farmers are now short-handed, neighborhood leaders have a big job to do in getting wartime agriculture information to the farmers in their community. There are 650,000 such leaders, of which 50,000 are Negroes. Each leader gets information to about 10 families.

RICE, BUT NOT FOR THE JAPS

..Frank Bunn, Farm Security Administration borrower of Marion County, Miss., got the idea four years ago that he could grow rice as a supplementary cash crop. The fact that it had never been done in his area didn't bother him. He decided to try it out as an experiment any way.

Well, the experimental crop worked out all right and Farmer Bunn made money. In 1941 he harvested more than a ton off of two acres and cleared $90, besides having plenty of rice at home for his family. Farmer Bunn found a ready market for his rice at the county seat where he supplied the merchants.

BOYS AND GIRLS HELP

Negro farm boys and girls are helping to win the war, too. Here's what 635 did in Florence County, S. C., last year: (1) they enlarged their home gardens by 95 acres, (2) fattened 167 pigs for home use, (3) raised 5,436 broilers, (4) fattened 14 beef calves for canning and marketing, (5) grew 3,000 bushels of corn and canned 9,000 quarts of meat and vegetables.

When you multiply the achievement of 635 youths in one county of South Carolina by the thousands of Negro youths in other counties of the nation you begin to get some idea of the magnitude of the contribution they are making to the war effort.

PLANTED YOUR V GARDEN YET?

If you live in the South, you've perhaps already planted part of your Victory Garden, and if you live in the central part of the country it's planting time now.

First vegetables to be planted include spinach, radishes, onions, cabbages, turnips and lettuce, also peas and potatoes if your garden is large enough to accommodate them. Within two or three weeks it'll be time to plant beets, carrots, and swiss chard. By making several small plantings of lettuce and radishes about a week apart, all of your crop will not mature at the same time. This means that you can eat lettuce and radishes fresh over a longer period.

For a family of four with a 30 by 50 yard, plant a row each of spinach, beets, onions, carrots, cabbage, turnips and a half row of lettuce and swiss chard.

4-H "SERVICE UNITS"

Negro 4-H clubbers are enrolling in a contest to produce for sale as many "Service Units" of beef, pork, eggs, poultry and other foods as possible. A "Service Unit" in beef for instance, is the amount which is required to feed a member of the armed forces for one year. In pork that amounts to 1,262 pounds and in chicken 769 pounds. In North Carolina the 4-H Club boy who takes the best showing will receive a $100 War Bond as will the 4-H Club girl who leads her sex in "Service Unit" production.

A BACKYARD FLOCK

Although it is said that chickens and gardening don't mix, it can be achieved. And since both meat and canned vegetables are rationed, your Victory Garden and your backyard flock will go a long way toward assuring our family a balanced diet of the foods they like best.

BAHAMIANS MAY HELP

Three Department officials are conferring with representatives of the Bahama Islands in Nassau this week in an effort to find out what arrangements can be made for bringing Bahamians here to help with the harvesting of vital war crops in Florida and other areas. The Bahamas, governed by The Duke of Windsor, are largely populated by colored people.

NEGRO STUDENTS HEAR AAA OFFICIALS

Advanced students in agriculture and home economics at A. & M. College, Normal, Ala., recently heard a series of lectures on the South's economic problem and the program of the Agricultural Adjustment Agency presented by E. A. Miller, assistant to the director of the Southern Division of the AAA, and Albon L. Holsey, AAA field officer.

"The Condition of the South Prior to 1932" and "The South's Economic Resources" were the subjects discussed by Mr. Holsey. The AAA officials were invited to give these lectures at A. & M. by the president, Dr. J. F. Drake.

TEN PER CENT MORE COTTON

In order to insure an adequate wartime supply of vegetable oil and protein feeds, Secretary of Agriculture Claude R. Wickard has announced that farmers will be permitted to exceed their 1943 cotton acreage allotment by 10 per cent. However, cotton marketing quotas will be retained. The Secretary pointed out that an acre of cotton (based on the five-year average in the U. S.) will yield, in addition to lint, 205 pounds of cotton seed meal and 10 pounds of oil.

Southern farmers are also being urged to plant their full peanut soybean and other crop goals and to increase their production of feed grains.

TO WIPE OUT BLACK MARKET

Secretary Wickard has launched a meat program designed to do three things: prevent black market operations, obtain adequate meat supplise for war needs, and secure the necessary control over the supply of meat so that it can be fairly distributed when rationing goes into effect March 29.

Under the new program all livestock slaughterers, who sell meat, including farmers and local butchers, must obtain a permit and stamp their permit number at least one on every wholesale cut. Farmers, local butchers, and packers in small towns are to obtain permits from their County USDA War Boards. However, farmers who kill animals for home use need no permit.

Also under the program, all livestock dealers must have a dealer's permit to buy and sell livestock. They must also keep a complete record of their transactions. Farmers are not required to obtain dealer permits; they simply keep records of livestock purchases and sales. All slaughterers operating under federal inspection must set aside a designated percentage of their production for war uses.

FARM AWARDS

Farm families, white and colored alike, who enlist in the 1943 food production program will be awarded a certificate of farm war service in recognition of their work. The 11-inch by 14-inch certificate signed by Secretary Wickard will be presented by USDA War Boards as soon as the Farm Mobilization Drive is completed this month.

DR. CARVER ON DISPLAY PANEL

Among three new exhibit panels recently completed by the Department of Agriculture is one of Dr. George Washington Carver, showing the Negro's contribution to peanut production for war. A portrait of Dr. Carver working in his laboratory towers over pictures of Negro Americans seeding, harvesting and processing peanuts. The two other panels in the group show the part Negro farmers are playing in producing food and cotton for the war effort.

The panels are each 30 by 40 inches and make excellent exhibit material. Already they have been on display in a New York History Week exhibit. Groups planning exhibits may borrow these panels from the Department of Agriculture by writing the USDA Office of Information, Washington, D. C.

INSURE AGAINST BOLL WEEVILS

At present prices, cotton and cottonseed are too valuable for growers to risk losing. The Federal Crop Insurance Coporation of the Department of Agriculture is protecting growers, sharecroppers and tenants as well as owners from losses caused by boll weevils, drouths, floods and other unavoidable hazards, providing they sign applications for crop insurance at their county Agricultural Adjustment Agency office before planting, and of course before the closing date in the county. Closing dates vary from March 1 to April 15.

No cash payment is necessary. Each grower signs a premium note that bears no interest charge, and falls due about cotton-picking time. Premiums are based on the average crop loss on the applicant's farm. No profit or cost of administrating the insurance program is added to the premium rate. The crop may be insured for 50 per cent or 75 per cent of the average yield.

Farmers insuring their crops every year, without suffering heavy losses, will in time pile up a premium reserve or backlog on which to draw in paying future premiums.

This may reduce the grower's premium rate as much as 50 per cent. Tenants and croppers, who often move from farm to farm, do not lose their premium reserve. It goes with them. A tenant or sharecropper may insure his interest in a cotton crop whether the landlord does or not.

Thousands of cotton crops were damaged or destroyed last year by boll weevils, storms, floods and other hazards. About 500 million dollars worth of cotton is destroyed by these causes every year. However, the farmer who insures his crop has little to worry about, because he collects cash indemnities. This year farmers in more than 1,000 counties are signing up for insurance.

FOOD FOR PUERTO RICO

A program to encourage production and support prices of food crops in Puerto Rico was announced jointly Thursday by Secretary of Interior Ickes, Secretary Wickard, and Governor Tugwell of Puerto Rico. Shortage of shipping facilities makes it important that the Puerto Ricans grow more of their own food on the island.

AID FOR FARM TIMBER OWNERS

The Department has announced that 22 states have entered into cooperative arrangements with Forest Service for development of a forest products marketing service for farmers. The new service will include assistance for farm woodland owners in finding proper markets, preparing agreements for sale of forest products, and obtaining full value for the products. Among the 22 states are Georgia, Alabama, North Carolina, Tennessee, Kentucky, Louisiana, and Mississippi. It is expected that 38 states will finally participate in the program.

HERE'S WHY THE AXIS CAN'T WIN

When six Farm Security Administration farm ownership borrowers of Gaston County, N. C., and their wives held a group meeting recently to discuss plans for bigger war food production in 1943, it was discovered they were making a major contribution to the war effort on on both the food front and military front.

The six families have a total of 32 children. Of this number, five sons and two daughters are in the military forces. One of the girls is a member of the WAACS and the other an Army nurse. Two of the boys are in North Africa, one in Alaska, one in Australia and one in the Army Air Forces.

Family members remaining in Gastonio made plans for increases of poultry flocks, dairy and hog production, soil building, permanent legumes, annual winter legumes, orchards, truck crops and canning. In addition they intend to improve their home grounds.

In spite of a failure in cotton last year, they are 15 to 20 per cent ahead of schedule in loan payments. Each family received the Department's FSA certificates of merit for meeting their 1942 food production goals and all agreed that FSA's Farm Ownership program was the best thing that had ever come their way.

The six family heads are: Mr. and Mrs. John W. Bradford, Mr. and Mrs. Clarence L. Duncan, Mr. and Mrs. Tom Jackson, Mr. and Mrs. Matthew Williams, Mr. and Mrs. S. M. McCoy, and Mr. and Mrs. Joe McDowell.

GROWING WAR FOODS

Reports received this week by the Department from its representatives in the field indicate that many Negro farmers are not going to be worried about rationing, because they are getting set to grow a record food crop. From Alabama comes the report that scores of Negro farmers, faced with a manpower shortage, are switching over to livestock which requires much less work than the row crops they have been growing. Plans are already underway for the development of adequate feed crops and pastureland for the increased livestock production.

Negro Extension agents in Texas are urging livestock production by conducting a series of meat curing and storage demonstrations. Plans are also being carried out in these and other Southern states for the increased production of fruits and vegetables.

BRIEFS

The Bureau of Agricultural Economics reports that the number of persons working on farms March 1 this year was at the lowest March level in 19 years. There were 8,730,000 persons working on farms the first of March this year as compared with 8,369,000 on the first of February of this year, and 8,738,000 the first of March 1942.

Farmers are already making plans to assure an adequate supply of Thanksgiving turkeys. It is estimated that they will produce about 37 million. If this goal is reached it will be the largest turkey crop ever produced in this country.

The nutrition division of the Office of Defense Health and Welfare Services has been transferred to the Department of Agriculture.

Interesting News Items From Alcorn A.-M. College, Alcorn, Mississippi

DOINGS IN THE GARDEN

By C. A. Elliott, Horticulture Dept.

Due to the severe and sudden changes in the weather the Victory Gardens have been unable to do very much. It is pertinent, however, that we begin and go straight through.

I should like to warn you of a serious mistake we often make and that is the one of preparing and seeding the same day. This does not give the bed a chance to become firm. The more firm and compact the seed-bed, the better the germination. It is necessary that the seeds have a sufficient amount of moisture, but not too much, as the seeds will rot. It is also advisable to treat the seeds before planting them. Among the recommended types of seed treatments are: The hot water method, the use of corrosive sublimate, the use of red copper oxide, zinc oxide and semesan. There are, however, many others that will give good results. It is advisable that before purchasing any material for treatin the seed that you speak to your county agent on the matter.

When the seeds have germinated and the small seedlings are trying to maintain thmselves in the soil, we must not over look the fact that weeds and insects are very injurious. It is necessary to cultivate the soil in order to keep down these weeds. In doing this it has been found that it is more economical to kill the weeds when they are very small, as it saves both time and energy. The insects may be the deciding factor between success or failure. I recently overheard a conversation between two farmers and a seed merchant. They were talking of their problems with the potato beetle:

FIRST FARMER: Those ole potato bugs ate nearly all of my potato crop last year.

SECOND FARMER: Why, they ate all of my potato crop and sat in the trees waiting to see if I'd plant any more.

THE MERCHANT: W e l l, they've already been over to my office looking through my books to see who has ordered potato seed for this year.

As humorous as this may seem, it is a fact that insects have an initial start because as soon as they emerge in spring they are ready to being eating; and when the small plants peep from the ground they are over powered by these non-essential animals.

These animals may be controlled by the use of arsenic of lead or Paris Green. These substances will kill all of the foliage eating insects, and they are also injurious to man, but if precaution is taken to wash the crops before using them there will be no reason for becoming alarmed over their use. Rotenone and derris root dust are also good for controlling foliage eating insects. These substances are no tinjurious to man, but they are expensive and are not easily obtained. Triogen and gulf insect spray are commercially prepared insecticides and are recommended for spraying for insects. Your county agent should be able to advise you further as to the control of these pests. It should be remembered that unless we kill these pests they may kill us, as their food is our food.

LAST CALL FOR VEGETABLES FOR THE GARDEN!!

If you haven't made planting of onions, potatoes, English p eas, leaf lettuce, or parsley, you had better make them in a few days as it will soon be too hot. Remember, however, that it is always better late than never.

FIRST CALL VEGETABLES:

It is always good to take a chance on vegetables and have both prize for harvesting the first in your community and the pleasure of being able to save your ration points.

Corn, snap beans, tomatoes, okra, squash, lima beans, and eggplants may be planted in the field the last week of March and very good results obtained. Several loads of hay may be put around the garden to be used over these crops if a cold snap is expected. Old tin crops that will permit doing so on cold days and at night. By these methods crops may be harvested from three to four weeks earlier than under ordinary conditions.

SUMMARY OF THE AVAILABILITY OF VOCATIONAL EDUCATION IN AGRICULTURE FOR NEGROES IN MISSISSIPPI AGRICULTURAL SCHOOLS

By A. D. Fobbs, Asstistant Teacher-Trainer

1. There was a total of three departments of Vocational Agriculture established for Negroes in Mississippi during the first year oi the program of vocational education in Agriculture, 1917-19. These departments were located in three counties.

2. For the first few years the increase in the number of departments for Negroes was very slow, except during 1920-21. The increase in the number of departments established during that period was 300 per cent over that of the previous year. The number of counties in which departments were established in 1920-21 increased 233 per cent over that of the previous year. Thereafter the increase in both the number of departments established and the number of counties in which departments were established grew steadily though not rapidly, except foi slight decreases in 1930-31 and in 1931-32.

3. In 1941-42 there were 118 departments of vocational agriculture for Negroes located in 51 counties. Thirty-one counties had no departments of vocational agriculture.

4. In 1918 no county had more than one department of agriculture. From 1930 to 1942 a considerable number of counties maintained consistently two or more departments for Negroes, most outstanding of which counties were Sunflower, Coaroma, Jones, Leflore, Leake, Marion, Claiborne, Holmes, Amite, Jefferson Davis, Walthall and Scott Respectively.

5. The largest number of agricultural departments maintained for Negroes by any s ingle county was eleven. These were maintained by Sunflower County and have existed constantly from 1937-38 to 1941-42.

6. Only two counties, Covington and Lee, have maintained departments for Negroes throughout the twenty-five year period, 1917-18 to 1941-42.

7. From 1917-18 to 1921-22 only all-day students were enrolled in Negro departments of vocational agriculture. Evening classes were started in 1922-23; part-time classes in 1926-27; day-unit classes in 1927-28; and continuation classes in 1938-39.

8. The total enrollment of students in vocational agricultural classes was small and remained almost constant from 1917-18 to 1919-20. From 1920-21 to 1940-41 there was a steady increase in the total enrollment of all types of students in agricultural classes except during 1940-41. The greatest advancement in enrollment was made in evening classes; all-day classes were second in rate of growth; day-unit and continuation classes combined, third; and part-time enrollment fourth. In 1940-41 there were enrolled in all-day classes 2,723 students; in Day-unit and continuation classes combined, 669 students; in part-time classes 320 students. This enrollment totaled 9,380 students for the year.

9. A very low percentage of the Negro farm population was reached by instruction in vocational agriculture in either 1930 or 1940. In only eight counties in the state in 1930 did instruction reach one percent or more of the Negro farm population. In only six counties in the state in 1940 did instruction reach as many as six per cent or more of the Negro farm population. The range in the percentages of Negro farm population reached by instruction in vocational agriculture for 1930 was from 0.11 per cent in Washington county to 3.2 per cent in Lamar County; for 1940, the range was from 0.16 per cent in Clay County to 10.57 per cent in Green County.

10. Most of the departments of Vocational Agriculture for Negroes are located in the Northwest Delta Section and in the South Central part of the state.

11. There is a fairly even distribution of the departments of agriculture in Jasper, Leake, Sunflower, and Coahoma counties.

12. Fifty-three departments were located in the open country, and 46 were located in towns, most of which are small country towns with populations of less than 2,000.

13. The average size of school districts for schools having departments of vocational agriculture in 1941-42 was 39.22 square miles. The range in size of school district from four to 200 square miles. A total area of 3,882 square miles was served by 99 agricultural departments.

14. School communities in which vocational agriculture departments were located in 1941-42 had an average of 145.6 farm families, 51-.24 farm boys between the ages of 14 and 21 inclusive enrolled in school, and an average of 49.97 farm boys between the ages of 14 and 26 inclusive out-of-school.

15. Eighty-six of 99 teachers of vocational agriculture devoted their entire teaching time to vocational agriculture classes. Seventy-five per cent of the teachers taught five or more agricultural classes; 85.8 per cent taught three or more types of agricultural classes in 1941-42.

NON-AGRICULTURAL SCHOOLS

16. The 98 schools which reported having no vocational agricultural departments were located as follows: Twenty-five in towns; seventy-three in the open country; thirty-six in 18 counties which had no established departments; twenty-eight in 12 counties which had only one department each; and thirty-four in 15 counties which had two or more departments each.

17. The total area (school districts) served by 89 of the 98 schools was 1,465.5 square miles, or an average per school of 16.47 square miles.

19. The average number of adult farm families per community was 67.8; of farm boys between the ages of 14 and 21 inclusive enrolled in school, 29.5; of farm boys between the ages of 14 and 26 inclusive out-of-school, 29.9. The number of farm families ranged from zero to 330; the number of farm boys in school between the ages of 14 and 21 inclusive ranged from zero to 150; and that of out-of-school farm boys, whose ages were 14 to 26 inclusive, ranged from zero to 240.

20. Eighty-six schools which had no departments of agriculture in 1941-42 were an average of 17.6 miles away from schools having departments of agriculture. The range was from two to 85 miles.

21. Five of the 31 counties which had no established departments of agriculture in 1941-42 had less than 100 Negro farm operators each. These counties were George, Harrison, Hancock, Jackson and Stone. Itawamda, Lamar and Tishomingo each had fewer than 150 Negro farm operators in 1940. The Negro population of 23 of the 31 counties ranged from 229 for Perry County to more than 4,000 each for Yazoo, Tunica, Tallahatchie, and DeSota.

22. Fifteen schools which returned questionnaires indicated that rooms either available or could be provided for teaching vocational agriculture.

23. If data submitted by 94 communities in which there were no agricultural departments are used as a basis, it is estimated that 149 teachers of agriculture would be needed to serve these communities.

24. If the number of Negro farm operators is to be maintained at its present level of 159,540, it will require 7,877 new farmers annually to replace those passing out of the productive work period. To train these new farmers and serve the adult farmers, the state will need an additional 1,994 teachers of agriculture.

(This is a summary of the study made by the Department of Agricultural Education at Alcorn College during 1942. The summary is given here without comment. Extracts and comments on the study will follow in subsequent issues.

HOME PORK PRODUCTION GEARED TO MEET THE NEEDS OF A NATION AT WAR

By Alan T. Busby, Department of Animal Husbandry

THE FARROWING PEN: A Discussion worth dollars and cents to the producer of Home or market pork.

Because of the number of inquiries in regard to the statement contained in the last paragraph of the article "Home Pork Production Geared to the Needs of a Nation At War" which appeared in the December-January issue of this publication, the author has decided to discuss somewhat at length the subject of the "Farrowing Pen." In this article he will attempt to answer the following questions:

1. What is a Farrowing Pen?
2. Why is a Farrowing Pen Needed?
3. How is a Farrowing Pen Built?
4. How much Does It Cost To Build a Farrowing Pen?

In Answering Question No. 1.—The author refers you to Page Two in the above menioned issue of he "Agricultural News," on which h e outlines the six major pre-requisites of a Farrowing Pen. Such a structure will provide the greatest amount of safety for the sow and her litter during the period covering from seven to ten days before farrowing until the litter is at least three weeks old. Such a structure provides the sow with a dry, clean, draft-free home during a very trying period. The very presence of such a structure in one's hog lot, or adjacent thereto will generally stimulate the will on the part of the owner to pay more frequent visits to his sow than if she has been forced to make her own bed at some distance from the lot. In the actual construction of the pen, or house, the care taken in planning and placing the pig fenders, or guard rails will return worthwhile dividends in saved pigs.

The Answer To Question No. 2 is almost self-evident. The first few hours in the life of the newly farrowed hogs are of tremendous import, and in fact will generally determine whether the pigs are to survive or not. As has been previously stated the pigs that go into the pork barrel are the pigs that are raised, and not necessarily the pigs that are just farrowed. If one is to assure one's self of a fair chance to bring his pig crop safely through to the harvesting time he should give careful attention and consideration to this matter of properly constructed farrowing pens for his brood sows.

Included in the Things We Must Consider in Finding An Answer to Question No. 3 are the following: First, what type of pen is best suited to one's needs and to one's purse. In answering this, the author makes this suggestion, that the former item be the basis for consideration rather than the latter. A cheaply built structure is more than likely to prove a most expensive one. The colony type house has many advantages over the individual type, for the large producer. It presents some worthwhile labor saving features, and it can be built of more permanent materials, thus making its actual cost less. For the average farmer the portable type pen is perhaps more adequate, or at least more feasible, and for this reason we shall consider it in some detail. Common practice has made the so-called "A" shaped house quite familiar wherever farrowing pens are used. It is simple in construction, and makes a very practical house. It does have one or two disadvantages which the author feels are not shared by its closely related "full monitor" type house, and as the construction costs of the latter do not run any higher than of the former. We shall include plans and specifications for each with this article.

It is not the desire of the author to intimate nor imply that just "anybody" can build a satisfactory farrowing pen, but most any farmer with a minimum of manual skill with a hammer and a saw, and a real desire to do a good job, coupled with some knowledge of following directions, as written or drawn, can undertake this job and carry it to a successful culmination. The dimensions used are those which have been found best suited by actual test. The material may be varied according to local situations. Such substitutions as have been found practical and possessed of some degree of advantage under certain conditions have been noted.

The answer to Question No. 4 must be determined by local conditions but the author does furnish a complete bill of materials for each plan.

Materials needed to construct a Farrowing House:

Dimensions—6 feet wide—8 feet long—7 feet high.

Used For	Dimensions	"A" Type No.	"A" Type Pieces B. Ft.	Monitor Type No.	Monitor Type Pieces B. Ft
FRAME					
FLOOR—					
SILLS	2x6-8 Ft,	2	16	2	16
	2x4-8 Ft.	2	11	2	11
JOISTS	2x4-6 Ft.	5	20	5	20
SIDES (2)	2x4-8 Ft.	10	52		
	2x4-4 Ft.			10	27
	2x6-8 Ft.			2	16
ENDS (2)	2x4-6 Ft.	4	16	4	16
	2x4-2 Ft.	1	2	2	2
	2x4-4 Ft.			2	6
RIDGE	2x4-8 Ft.	1	6	1	6
ROOF	2x4-8 Ft.			2	11
	2x4-3 Ft.				
COVERING				10	20
FLOOR	1x12-(Rough)		50		50
SIDES (2)	shiplap or drop Siding		120		60
ENDS (2)	shiplap or drop siding		50		50
ROOF	shiplap or drop siding				50

(*) THIS INCLUDES ENOUGH MATERIAL FOR DOORS AND SHUTTERS.

HARDWARE:	Hinges (6 in. strap)	8	2
	Hinge Hasp	1	1
	Nails—20D	5 LBS	5 LBS
	12D	5 LBS	5 LBS
	10D	3 LBS	3 LBS

It will be noticed that the cost of the two houses is just about the same. The Monitor type allows for better ventilation and less opportunity for sow to climb out and leave her litter. Be sure to make the fenders, or guard rails of 2x8 material, and nail them in substantially before nailing on covering boards.

VICTORY GARDENS MUST LICK INSECTS AND PLANT DISEASES

If Victory Gardeners want to help our fighting men lick the Axis they must take measures to lick the insects and plant diseases that stand mobilized and ready to attack their gardens, the U. S. Department of Agriculture cautioned this week.

Although insects and plant diseases are serious enemies which gardeners face, certain control measures have been developed which reduce the hazard, and make it possible to grow vegetable gardens with comparatively little loss from attack by these foes.

There are several ways of protecting gardens against diseases: (1) crop rotation, (2) soil treatment, (3) the use of disease-free seed and plants, (4) use of disease-resistant varieties of seed and plants, (5) seed treatment, and (6) spraying and dusting with fungicides. Garden experts have found the planting of disease-resistant varieties to be the most effective control measure.

In buying plants, make sure that the roots are clean, thickly branched and free from knots or swellings. This is a wise precaution against plant diseases.

In combating insects, Victory Gardeners have two general classes to deal with: those that bite off pieces of the plant with their chewing mouth-parts, and those that pierce through the surface of the plant tissue with their needle-like tubular beaks and take in nourishment by sucking the sap below. The first group which includes cutworms, caterpillars, beetles, and grasshoppers can be effectively dealt with by spraying or dusting poison on the plants. But the sucking insects, plant lice, thrips, leafhoppers, and aphids, that do not bite the surface but rather pierce down into the plant tissue, must be controlled in another way. Contact insecticides, or those which kill by touching the insects, prove effective.

Rotenone, or pyrethrum is highly recommended for most vegetables with edible portions exposed to the insecticide. These control both biting and sucking insects.

Probably the three most important insects in home gardens are cutworms, cabbage worms, and Mexican bean beetles. Poison bait such as wheat bran poisoned by Paris green is the most effective control for cutworms, while cabbage worms and bean beetles can best be controlled with pyrethrum or rotenone. Local gardening experts, state college of agriculture, or the U. S. Department of Agriculture will be able to supply additional information on insect control.

Gardeners are warned that wherever poisons are used to combat insects, great care should be taken to see that they are stored in a safe place where there will be no chance of persons or animals being poisoned. It is suggested that poisonous materials be applied as sparingly as is consistent with control of the insects. Such garden products as tomatoes, snap beans, okra, eggplant should not be prayed or dusted with poison after the edible parts have formed. Early applications often make it unnecessary to apply control measures late in the development of the plant.

In some communities, several gardeners may buy a sprayer or duster together. The small 3 gallon capacity compressed-air type of sprayer or duster of 2 to 3 pound capacity is adequate for small garden plots. It is made with a strap that fastens over the shoulder so that it is easy to carry.

MICHIGAN CAMPAIGNS AGAINST NOISE

Noise abatement campaigns are under way in 19 Michigan cities engaged in war production, with the goal of promoting rest for war workers and increasing productive efficiency, the Council of State Governments reports. The pr ograms are sponsored by the Michigan Council of Defense labor advisory committee. Campaign plans include appeals to school children, distribution of "quiet" signs for use by daytime sleepers, proclamations, highways signs at approaches - - -- movie shorts, and police co-operation.

HOGS, CHICKENS AND COWS HAVE GONE TO WAR

By W. A. Hagins

Industrial College, Ga., Mar 22—Every hog, chicken and cow that farmers produce this year will help our fighting forces and people on the home front get their share of meat, eggs and milk. With unprecedented interest, Georgia Negro farmers are making progress in that direction.

In Brooks county, five lamp brooders were recently built and 1500 baby chicks have been ordered for delivery this month. Five old breeders and brooder houses have been re-conditioned and chicks will be placed in them soon.

More and more, farmers in Hancock county are turning to livestock as a supplementary cash crop and a main factor in the live-at-home program. Seven farmers recently sold 23 shoats which brought them $315.25 and 19 farm families are feeding out beef animals for home consumption.

As a whole, flocks of chatham county farmers are producing and the brooding of baby chicks is well underway. One farmer reports that 97 out of 100 chicks have reached broiler stage and 700 are being brooded in one unit.

Farmers in Peach and Houston counties are carrying out the program of swine production 100 per cent. On each farm visited, it is pointed out that there can be seen an increase in the number of sows and hogs.

In Meriwether county, several farmers have beef calves set aside for home and market consumption. Recently 364 pounds of home grown pork were put in sugar cured mixtures for the family meat supply. Also special crops of millet, oats, corn, velvet beans and sweet potatoes are being planted for hog feed.

Farm families in the Zion Hill community of Dodge county have just finished a campaign of canning and curing meats. Fifteen hogs were canned and the hams and shoulders and sides cured. "We've done a heap of canning before, but I can tell the difference in flavor and the correct methods used in getting proper results is all right with me," one farmer said. As the results of this campaign 1395 quarts of backbones, spare ribs and other so called waste parts of the hogs were canned.

While farmers in Baldwin and Newton counties are building up their pastures to proper livestock unit carrying capacity, farm families in Grady county are building lamp brooders for brooding chickens, and a three year swine sanitation program has been worked out in the Dougherty county area.

THE LION'S SHARE

The investor of $100 and $500 in the stocks or bonds of an industry in our country, has a tremendous interest in the nation's tax policies, both national and local.

The Southern California Edison Company is typical of electric properties owned by thousands of small stockholders. Vice-President Mullendore of the company said that with war absorbing more than half of the currently produced wealth of the country, enormous tax bills can be expected.

To show how the government depends on the earnings of private enterprise, Mr. Mullendore said: "Whereas last year our common stockholders received only $1.50 a share as dividends, taxes equaled about $5.25 a share." He then pointed out that by comparison with publicly owned electric utilities, which are financed with public credit, and which are wholly or partially tax exempt, private electric companies bear an unfair tax burden.

Also, he stressed the unfairness of applying the so-called "excess profits" tax to the earnings of a regulated utility, for, under public regulation, utilities are not permitted to earn more than the rental value of capital—true "excess profits" are prohibited.

If government wishes to continue to collect the lion's share of the earnings of industry, it should correct inequalities in tax laws which can destroy private enterprise.

SHOES FOR THE IRON HORSE

Most of us at one time or another have seen powerful dray horses pulling a heavily loaded freight wagon. Vivid is the memory of steel-shod hooves striking sparks on hard pavements, as the straining bodies clawed for footing. Such horses have become a rarity. Their counterpart today is the "Iron Horse," the railroads.

The Peoria, Illinois, Star, in commenting on the recent move to reduce railroad freight rates, observes that reducing rates would amount to removing the shoes from the iron horse. Anyone who has seen flesh and blood horses at work knows what would happen to them if, at a time when they were struggling under an unprecedented load, they were suddenly to have their shoes removed. They might be able to complete the job at hand because good horses are trained to never quit. But they probably would suffer injury that would impair their usefulness for a long time to come. And so it is with the railroads.

As the Peoria Star points out: "Anyone with half an eye can see the clogged and troubled condition of railroads panting under a staggering burden. The railroads are doing a job which history will record as 'magnificent.' Freight tonnage jumped 33 per cent in '42 over '41, and passenger travel 80 per cent, with 2,000,000 troops being moved a month."

The railroads are earning money as a result of this large traffic volume. But again they are like faithful work horses. When they work hard they need more food and other additional care which costs more money. Rate reductions under present conditions would not only remove the shoes from the iron horse but would also mix sawdust with his grain.

EMPTY WORDS MEAN EMPTY CUPBOARDS

The food industry has warned government executives that thousands will go hungry in this country this year unless the government moves promptly to solve the pressing manpower and distribution problems of the food industry. Lack of manpower, beginning on the farm and ending behind the counters of retail merchants, is assuming grave proportions.

The position of retail distributors is critical at the moment. Officials have steadily failed to include the merchant in the war program as a war worker. They have so far failed to recognize the essential part he plays in putting necessities into the hands of consumers. They fail to recognize that without his expert cooperation, price and rationing controls would be domoralized; that competent merchandisers are vital to efficient distribution.

Collapse of efficient distribution would mean that food grown and processed could not reach the consumer. Waste and decay of precious food would assume tragic proportions to hungry people. It would promote inflation, and inevitable curtailment of war production.

The food industry has asked officials to make clear that food production, processing, and distribution ranks with armaments in importance. Pirating and drafting of essential employes must cease if we are to eat. They also have asked for the proper allocation of food supplies to maintain civilian health and morale, and the simplification of rationing procedure. They have asked for these things repeatedly. Beyond vague generalities no action has been taken.

Disaster will come if this policy continues. Either the appointed officials, or Congress must act.

COMMON SENSE

"If increased milk production is required, flexible price ceilings should be established at points sufficiently high to assure some measure of increase," says Chas. W. Holman, secretary of the National Cooperative Milk Producers' Federation. "Between the minimum and maximum prices, there should be allowed free play of economic forces. Such a plan would be effective in controlling runaway prices and helpful in producing milk and its products in our present need.

"Such a plan is anti-inflationary, whereas the present effort to freeze dairy prices at relatively low levels and make up for it by giving farmers some form of subsidy, which later must be paid out of tax monies, contains the essence of inflation."

STATE OF MANY FLAGS

Five flags (Indian, Confederate, Spanish, Mexican and United States) have flown over the old Palace of the Governors in Santa Fe, N. M.

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

COLORED AND WHITE ALIKE IN EFFORT

(Continued from Page 1)

000 acres respectively.

In the face of the manpower shortage, peanut production offers an advantage in that it requires fewer man-hours per acre than some other crops. And yet the price compares favorably with that of cotton. The average price will be $129 or more per ton. At this price the 5,500,000 acres should bring almost 250 million dollars.

Last year about 80,000 Negro farmers planted peanuts. It is estimated that a quarter million will grow them this year. Inexperienced growers should consult neighbors who have been growing peanuts, see their county agent, or write the State Extension Service at the state agricultural college for information.

Peanuts may be grown satisfactorily in most of the Southern states where the soil is well drained. They do best, however on light sandy loam, or soil that is loose so that the pegs on which the peanut develop can easily go into the ground. Peanuts should not be planted on the same land oftener than once in three or four years, and in each case should be followed by a cover crop.

The late Dr. George Washington Carver began encouraging the production of peanuts in the South more than 40 years ago to supplement the income from cotton. He conducted numerous experiments not only in peanut growing, but also in new uses for peanut. These experiments led to the discovery of more than 300 useful peanut products. Department officials point out that the present wartime peanut production drive may lead to the establishment of an important new cash crop for Southern farmers.

Dr. Carver also discovered that peanuts may be used as a substitute for meat in cooking some vegetables including collards, turnips, spinach, corn, string beans, navy beans, and blackeyed peas, Austin Curtis, his successor as director of agricultural research at Tuskegee reports. With meat rationed, this discovery is a boon to both rural and urban housewives.

PROOF OF THE PUDDING

After Pearl Harbor a plan had to be worked out for war risk insurance. Here was a chance to put government into the insurance business on a grand scale. To the credit of those in charge, and to the lasting benefit of the country, this was not done.

Congress provided that the Reconstruction Finance Corporation could invest up to a Billion Dollars in the capital stock of the War Damage Corporation then created. Instead of building a gigantic new bureau to handle these war risks, the voluminous details of insuring the property of the American people is handled by directors of the Reconstruction Finance Corporation through 546 insurance companies acting as fiduciary agents. These companies had in existence more than 150,000 insurance agents, reporting to more than 1,400 policy issuing officers. Arrangements were made to pay small commissions and re-imburse insurance companies for actual out-of-pocket expense in connection with war damage business. The RFC accounting department takes care of the figures and the Federal Reserve banks receive the funds. Thus was an indispensable service provided without great cost to the taxpayers.

This is the way government and industry should cooperate in a free country where the government exists for the people rather than the people existing for the government.

This emergency job was carried out with the use of machinery created by private enterprise, thus proving the flexibility of our American system. We don't need to junk our American way of doing things, as some have suggested, to fight the dictators.

Dried eggs for our soldiers and Allies save three-fourths of the space required for fresh eggs.

CONFERENCE WITH GA. POWER COMPANY OFFICIALS

In an attempt to ease interracial tension and prevent friction on Atlanta's street cars and buses, a sub-committee of the Georgia Interracial Commission met Thursday, November 12, with officials of the Georgia Power Company.

The Committee meeting with the transportation company officials included Dr. Rufus E. Clement, president of Atlanta University; Dr. David Marx, Rabbi, The Temple; Dr. Lester Rumble, pastor of St. Mark's Methodist Church, who acted as chairman; C. A. Scott, general manager, Atlanta Daily World; Mrs. M. E. Tilly, secretary, Christian Social Relations, Southeastern Jurisdiction, Methodist Church, and Miss Josephine Wilkis, director of the Citizens' Fact Finding Committee.

Representing the Georgia Power Company were W. E. Mitchell, vice-president and general manager;; W. R. Polard, transportation manager; and others. The meeting was held in the Electric Building.

Mr. Mitchell said that President Preston S. Arkwright of the Georgia Power Co., had spoken to drivers and other employes of the company, urging that every courtesy be accorded all riders and that tolerance be shown in every situation.

The Committee presented to the Power Company three proposals for aiding the transportation situation. These proposals included the matter of enlarging the number of inspectors on vehicles, of publication of a booklet for use in conducting an educational campaign on the etiquette of race relations, and of placing notices in the regular places for signs on cars and buses calling attention to the fact that this is war, that the transportaion facilities are being taxed to the utmost, calling for obedience of the bus driver and for the respect of other passengers in their effort to get where they are going, and asking the public to please take it in good spirit since a little crowding may be unavoidable.

Mr. Mitchell said that the Power Company already had under consideration, increasing the number of its inspectors. The material for the proposed public educational campaign was discussed fully and the Power Company agreed to cooperate in the preparation and distribution of the suggested booklet. Both Mr. Mitchell and Mr. Pollard stated that, while the Company had already made some use of car signs along the line of those proposed, they felt that renewed use of such cards was timely and that the Company would undertake a series covering the points suggested.

Mr. Mitchell said that he had observed transportation facilities in other southern cities and he was satisfied that Atlanta's policy of not placing awkard signs of segregation reminders on street cars and buses is the most satisfactory.

The Committee was assured by Mr. Mitchell and the other officials that the Power Company would redouble its efforts of cooperation in preventing friction. It was stated that any practical program for improvement was welcomed by the Power Company.

NEW MILK ECONOMY PROGRAM

(Continued from Page 1)

pints at soda fountains, hotels, lunch rooms, cafeterias and milk bars. But it must be consumed on the premises and not taken away. It is not permissible to take the small sizes to office buildings or to places of work, but the consumer may have any of the small sizes in such places authorized for the resale of milk as named above. Ordinary stores do not fall in this class, but it is possible that delicatessen stores selling sandwiches and the like may be permitted to sell milk in small sizes for consumption on the premises.

VICTORY GARDENS AND WAR CROPS

(Continued from Page 1.)

pigs, and obtain a milk cow. Last year a survey was made of the same families. It showed that nearly all of them were growing gardens, raising chickens and pigs and several had obtained milk cows. Checking the store rooms at these farm homes revealed cured meats, and canned fruits and vegetables. Similar surveys have been conducted in Mississippi, Arkansas, Georgia and other states with similar results. And likewise, programs have already been put into effect to correct them.

This, perhaps more than anything else, is improving the health of Negro farmers. However, the Department of Agriculture doesn't stop here. Several other health programs are carried on year after year.

While the live-at-home campaign is reducing malnutrition in rural areas, the effort is being further aided by the school lunch program of the Department's Food Distribution Administration. Through it thousands of youngsters, both rural and urban, receive nourishing school lunches and milk. Last year more than a million Negro children received school lunches at the peak of participation. This number represented 19 percent of all youths receiving the lunches.

With thousands of mothers now working in vital war industries, the school lunch program has taken on added significance. Lunches served youngsters at schools and child-day-care center receive working mothers of the task and also help to step up their efficiency on the job.

Other health programs of the Department include safe well demonstrations, and demonstrations in screening, and in building sanitary privies. Extension Service conducts many such demonstrations in addition to encouraging health recreation. Farm Security Administration, in aiding low-income families, goes a step further. It often lends farmers money to screen their homes, build sanitary privies, and put down safe wells. FSA has also aided farmers in the organization of a medical care plan. More than 10,000 Negro farm families are participating in this program. Through it farmers pool their money and set up a fund to take care of medical expenses throughout the year. Increasingly Negro physicians are participating in the medical care program.

Officials point out that the Department will continue to emphasize health as a means of upping man-hours on the farm for increased food production.

STRETCH YOUR RATION COUPONS

(Continued from Page 1)

and recreation.

Your Victory Garden will supply you with important vitamins and minerals. Vegetables contain Vitamin A. C. some B-1 and G. also calcium and iron. However, proper cooking is necessary to get the full food value out of your garden vegetables. The common way of cooking vegetables is boiling; the correct way of boiling is to drop the vegetables in a small amount of rapidly boiling, slightly salted water and boil until tender. The cooking water should be served on vegetables.

The ABC's of Victory Gardening are (1) have an adequate plot of sufficient fertility, (2) care for your garden throughout the season, and grow year-round garden, if possible; (3) eat your vegetables right out of the garden and save on canned goods; can, dry, brine, or store away surplus vegetables for scarce seasons, (4) cook your vegetables the correct way so that you get all of the minerals and vitamins, (5) school and community gardens can play an important role in helping to meet the nation's food needs, and (6) by growing a Victory Garden you, like industry and agriculture, are converting your unused resources into a weapon for America.

Unsung Workers

Recent news reels contained a propaganda picture of one of the government's great socialized power plants. An uninformed person gaining the impression from the explanatory remarks, would be justified in assuming that government power projects were principally responsible for furnishing power to war industries.

Such is not the case. Without the private electric industry, which furnishes upwards of 90 per cent of the power for American industries, the great majority of our war industries would come to a standstill overnight.

The private electric industry has no official spokesman. Its hundreds of operating companies furnishing power for the nation are like the millions of small farmers who furnish the bulk of the food for the nation, unheard of and unsung.

Every time a government-owned power plant turns juice into a war industry, the news is flashed from Washington all over the country. But nothing is said about the fact that when America's power demands pyramided overnight, American privately-owned power companies performed a miracle of interconnecting their various systems, which had long been planned for just such an emergency. This was done in the day's work, without a dime's cost to the taxpayer—instead millions were returned to the Federal Treasury in war taxes.

The socialized Federal power plants have tax exemptions which are inexcusable when every industry and every individual should be sharing the war tax load.

The private electric industry is doing things the American way—paying its way, paying its taxes, and meeting an emergency with initiative and ingenuity.

PIGEON PARATROOPERS

Sigmund Sameth

Remember "Cher Ami," homing pigeon hero of the last war? Military authorities aren't releasing any information yet, but pigeons are performing acts of valor under fire in this war, too. So important does Uncle Sam regard pigeons that an entire Signal Corps camp does nothing but breed and train these feathered bullets for our armed forces.

Recently pigeons have even become paratroopers—"they "hit the silk" (as the act of parachute jumping is termed in Army parlance) with the nonchalance of seasoned veterans. But why should it be necessary for a pigeon to have a 'chute?

The answer lies in the intense cold, the rarified air, and the terrific speed with which military planes fly in the upper levels of the atmosphere. With radio "blacked out" to avoid giving away the position to the enemy, homing pigeons are often the only way in which a squadron commander can get word back to his base while in the air. The message goes into a capsule which is attached to the pigeon's **leg—and out of the plane he goes at an altitude of 25,000 feet above sea level!**

Pigeons rarely fly 1,000 feet high when left to their own devices. Thrown out of a plane moving at 400 miles per hour from a near-stratosphere height twenty-five times higher than their normal range, pigeons would have most of their feathers ripped off in the blast of air from the propeller. On the day down they'd freeze to death. Temperatures up at 25,000 feet sometimes get as cold as **seventy degrees** below the freezing point!

To remedy this, the Signal Corps has developed a special pigeon crate dropped from high altitudes. When the crate has finally plummeted ten thousand feet straight down or more, a mechanism whips out a parachute and checks its flight. At the same time a spring makes the side of the crate fly open releasing the pigeon who then performs his message carrying duty.

They deliver the goods, these feathered paratroopers!

NO CHOICE

When the specter of food shortage looms over the family dinner table, the immediate conclusion is now drawn that something is wrong at the production end of the food industry, for the reason that the problems of the farmer have at last reached the headlines for all to sec.

However, the problems of processors and distributors of food are equally critical.

Retail food distribution is in danger of collapse. Retailers have reported that employe turnover has reached 500 per cent a year. Loss of manpower is acute and is largely attributable to the "work or fight" order of the government, the "raiding" of key employes by the United States Employment Service, and to the draft. Because food distribution has been declared essential, many men have felt morally bound to look for jobs in "essential" industry. The resultant impact on the operating efficiency of organized retail distribution, has been staggering.

It would be tragic indeed if food, once produced, failed to reach tables or consumers. Yet, that is exactly what will happen if the distribution industry is crippled. Approximately 85 per cent of the total volume of food distribution is handled by the organized food distribution system calling for highly trained personnel. This system is composed of proprietary chains, supermarkets, retailer-owned wholesale cooperatives, retailers affiliated with voluntary groups, and large individual retailers. It is the backbone of retail distribution. Without its support, price and rationing regulations and inflationary controls would become virtually unenforceable. Without its continued efficient operation, millions of people would go hungry even if every farm in the country produced to capacity.

There is no choice. The food industry, from farm to merchant, must be freed of red tape and given the necessary skilled manpower to get food into American homes—or American homes will go without food.

THRIFTY, EFFICIENCY, WORK

Railroad rate reductions are being considered by the interstate Commerce Commission. The reductions were demanded by the OPA, as an anti-inflationary measure. Of all the conceivable arguments for lower rates, this would appear to be least grounded in fact, for one very obvious reason. If the rest of the war program had been operating on the same basis as the railroads, there would be no inflation!

The railroads have done what many of us merely talk about. They have made, and are still making, an all-out effort to do the job which war has imposed upon them, efficiently and at minimum cost. In spite of rising wages, prices and unprecedented taxation, they are receiving less per unit of service today than at any time in more than two decades. It costs the shipper under one cent to move a ton of freight one mile. That is what the railroads charge for carrying the that is literally pounding tracks and biggest war load in history; a load equipment to pieces. In 1942 they delivered the greatest volume of freight in history. They did it by driving rolling stock at punishing speeds, and by efficient management.

The railroads are justified in opposing rate reductions. They must soon spend vast sums for maintenance and replacement of war-battered equipment. Moreover, operating costs are rising steadily. It is not reasonable to expect the railroads to buck the inflationary trend single-handed, when all over the country the cry is for money, ever more money. It is not reasonable to penalize them for setting an example which the whole country could well follow. Rather than adding to the problem of inflation, the railroads have demonstrated the way to cure it—thrift, efficiency and hard work.

Madagascar produces the finest variety of flaky graphite, used in war industries.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., JUNE 15, 1943 No. 5.

Little Farmers Dig In For Victory And Freedoms

SOUTHERN FRONTIER GIVES BIG STORY

Plowshares and garden tools are singing a hymn of victory in an all-Negro community on the northern rim of Randolph County, Ga., where tenant farmers have buckled to the job of raising Food for Freedom.

In the late '20s and early '30s, this group raised liittle but "cain." Up in Benevolence, a part of the community, after one of their all day "meetings" there would often be a few casualtiies for the doctor to look after and some for the undertaker. But all of that has been changed since the Farm Security Administration stepped in with help to some 125 families in the community.

This place was originally farmed by big white landowners but the economic upheaval caused the falling prices, boll weevils, the depression and other manifestations of rural atrophy, forced the big planters to desert the farm for good, leaving the tenants and sharecroppers high and dry.

The FSA went into the area in 1937 and 1938 with its credit-plus-education way of building up the resources and abilities of farm families.

Land in this section of the State was extremely poor so subsistence farming was stressed. The number of hogs, cows and chickens was increased several times over

(Continued on Page 8, Column 1.)

WOMEN'S LAND ARMY

A Women's Land Army of 60,000 will be recruited and placed as part of the 3,500,000 workers to be enrolled in the U. S. Crop Corps to help meet the farm labor shortage, the War Food Administration announced last week. Dressed in especially designed uniforms the Land Army will make up part of the 360,000 women who will be enrolled for farm work. About 10,000 members of the Land Army are expected to enroll for year-round work, the remaining 50,000 for seasonal work of one month or more. The year-round workers will receive from 3 to 6 weeks' training in one of the agricultural short-courses offered by the state agricultural colleges, similar institutions, or equivalent training on the farm. Women of the Land Army may also work in farm homes, relieving skilled farm women for work in the fields.

The other 300,000 women workers who will be recruited along with transported farm workers, businessmen, and high school youth of the Victory Farm Volunteers, will be placed for short-time emergency jobs on farms. Women who can spare week-ends, a few days, or a few weeks will enroll in this service to help with the job of producing and harvesting vital war crops.

Recruiting will be done in rural areas by County Extension agents, and in cities by the U. S. Employment Service with the aid of County Councils of Civilian Defense. Supervision of the Women's Land will be under Cooperative Extension Service of the Department of Agriculture enrollees in the Land Army must have reached their eighteenth birthday, and must furnish a doctor's certificate as to their physical fitness to do farm work.

Always underneath and round about us are God's everlasting arms.

463,491 FAMILY-SIZED FARMS

Negro F. S. A. Borrowers Aim at New Record

Washington, D. C.—The Farm Security Administration announced last week that its borrowers, white and colored alike, plan to surpass their 1943 production of war-essential crops.

The 463,941 family-sized farmers, including 62,969 Negro farmers, who have received loans from FSA believe they can produce enough additional milk to meet the requirements of more than 3,000,000 fighting men for a year. Of course only a small part of their production is reaching the front. The remainder is consumed right on the farm to keep the family in working trim so that it can make a full contribution to the war effort. Last year FSA borrowers produced 989,990,000 gallons of milk, this year they plan to increase their production to 1,183,850,000 gallons.

They also expect to boost their pork production to 1,178,000,000 pounds, their chicken output to 224,350,000 pounds and their peanut crop to 374,000,000 pounds. This will help a lot toward assuring full mess plates for our soldiers and full lunch buckets for our war workers.

HOPE SPRINGS ETERNAL

George H. Sweetnam

There'll be blossoms just the same
In the spring.
There'll be songbirds from the south
With our winter birds to sing,
There'll be music from the frogs,—
Harps so sweet of green and gold,—
Harbingers from yonder bogs,
Just the same as days of old.

There'll be peace when God ordains
Some fair spring,
When the world will know His Truth—
All His praise and glory sing.
There'll be fixed in every heart
Filial love for all mankind,
Each to play his chosen part;—
Wars and bloodshed left behind.

DON'T LET SICKNESS, ACCIDENTS ROB YOUR FLOCK

Are you raising a back-yard poultry flock this year to supplement your meat supply? Well, here are some tips from the Department on how to keep your flock healthy: (1) buy only vigorous chicks from a reputable hatchery, (2) keep your brooder sufficiently warm, (3) provide a home-make drinking fountain to prevent-drowning. To make a fountain, punch two small holes in side of an empty tin can about an eighth of an inch from the opened end, fill the can with water and invert it into a saucer. (4) Give your chicks the right kind of feed. Vitamins A and D. protein, carbohydrates end minerals are essential to good growth and production. (5) Keep your poultry house clean and dry, (6) let your chicks have plenty of sunshine, (7) remove sick birds from the flock, (8) handle your chicks carefully so they are not injured, and (9) avoid crowding, provide spacious, well-ventilated quarters for your flock.

NEGRO TEACHERS ACTIVE

Pass Resolutions at 49th Annual Session

WASHINGTON, D. C.— The Arkansas Negro State Teachers Association, in its 49th annual session, wired War Food Administrator Chester Davis last week informing him that the body is in full support of the drive for increased food production. The telegram pointed out that the association would do all it could to help farmers, colored and white alike, in obtaining adequate farm labor.

TO BE VALUED MORE THAN RUBIES

Her electric iron is one of Mrs. Housekeeper's most valued servants. Knowing that new irons and repair parts will be scarce, she takes good care of it. She keeps the sole of the iron clean; wipes it off with a damp cloth, soapsuds or mild scouring powder, if necessary, when the iron is cool. She never irons over buttons, or other sharp articles that may scratch its mooth surface She never, never drops the iron or put it away before it is perfectly cold.

BARNETT'S ADVICE TO YOUTHS

Grow Victory Gardens And Help Win the War

Washington, D. C.—"There are thousands of colored boys and girls in the cities and towns who could perform a useful service for their country and for their families by growing a garden this spring and summer and at the same time find it a fascinating adventure." Claude A. Barnett, special assistant to the Secretary of Agriculture, declared last week in a statement on Victory Gardens.

"Vacant lots," he continued, "are available almost anywhere with the exception of a few of the larger cities. Youngsters should look into the possibilities of their backyards or that of their neighbors. They can club together and work in partnerships. Not many efforts pay bigger dividends. A few seeds, some fertile soil and plenty of attention will give a really rich reward.

"Those beginning a garden will need to learn how, of course. There will be someone in the family or neighborhood who knows the ropes and the man at the store where the

MODEL LAND ARMY UNIFORMS

In perfect step. Miss Wenefrett Phillips, left, USDA junior professional librarian, and Miss Betty Jean Arnett of the USDA secretariai staff model uniforms which have been approved for the Womens' Land Army. These smart outfits are washable, colorfast, and preshrunk. The 60,000 women who will be enrolled in the Land Army, on the basis of local need, will wear uniforms like these.

—Extension Service Photo by Ackerman.

FOOD PRODUCTION IS CHIEF

Praises for Negro Farmers Are Given

Washington, D. C.—The big contribution that Negro farmers are making in the war was described in an address delivered Thursday by Mr. Clifford Townsend, Food Production Director of the U. S. Department of Agriculture, before the annual convention of the Fraternal Council of Negro Churches in America. The meeting was held in Memphis, Tenn., April 28-30.

Director Townsend declared that food is just as important in this war as guns, planes, or tanks. Said he, "Our fighting men are looking to the farmers to keep their mess plates full, and the hungry peoples whom we liberate from the Axis are also looking to the farmer for food. Negro farmers are doing their part in the production of that food.

"If Negro farmers meet their goals this year," the director said, "they will produce enough eggs to serve 11 million soldiers, sailors, and flyers an egg for breakfast every morning from now until next September. They will produce enough milk to meet the milk requirements of 11 million fighters for the next six months, and enough cotton to satisfy the needs of 18 million soldiers . . . I want you to

(Continued on Page 8, Column 1.)

CRYSTAL BIRD FAUSET INTERVIEWS HEAD OF WOMEN'S LAND ARMY

In a newsreel interview last week Miss Florence Hall, head of the Women's Land Army, explained to Mrs. Crystal Bird Fauset, special assistant to the director of the Office of Civilian Defense, how the Land Army is to operate. Among other things, Miss Hall pointed out that enrollment is not being undertaken on a national scale. WLA will only be organized in such communities where the farmer demand for help requires it.

In answer to Mrs. Fauset's question as to safeguarding the health and welfare of the women who enlist, Miss Hall assured her that certain standards of health and safety will be established. The Land Army chief also pointed out that the enrollees, colored and white alike, will receive from 3-6 weeks special training in agricultural schools and colleges.

All women interested in joining the Land Army are urged to be ready to answer the local call for farm workers when and if it comes in their community. Such requests for workers will be made by the county agricultural agent, the U. S. Employment Service or from some local cooperating group.

Land Army enrollees will wear smart, dark blue denim uniforms, consisting of overalls, shirt, jacket, cap and wrap-around shirt which can be worn alternately with the overalls. The entire uniform is washable, colorfast and pre-shrunk. Last week white and colored Department office workers modeled three sample WLA uniforms in the patio of the Administration building here in Washington.

All good comes from God.

It is not what we have on the outside, but what we are on the inside.

WOMAN'S PAGE

KNOW ARITHMETIC? IT TAKES SOME FIGURING TO BUY 'TEA FOR TWO' UNDER RATIONING!

By Mary Lyles Wilson

Many are the advantages of a large family. This is certainly true with point rationing.

Real arithmetic is necessary for two. The homemaker for a family of two, be she newlywed or experienced cook, has to do a lot of shifting around to balance those 32 points a week for meats, fats, oils, and cheese.

It is a good idea first to get the fat supply well in hand. A pound of butter is sufficient for two by careful planning and half pound of shortening is ample. In order to have salad oil, build up a reserve in fats by saving drippings from bacon and other meats and also chicken fat.

A half pound of bacon will yield about a half cup of fat. This is light in color and mild in flavor which permits its use in seasoning of vegetables also browning vegetables, meats, fish and fowls.

To get chicken fat, after chicken is removed, cool stock, chill, skim off the fat from top and store in refrigerator. This is good for seasoning, browning foods for making pastry covering for chicken not pie for biscuits served with chicken hash. Use this fat for any creamed dish, hash or the like. The flavor is unusually good. All of this affords you the opportunity for a jar of french dressing. Serve boiled or salad dressing on slaw or fruit salad so that you may have delicious home made mayonnaise when needed.

I am stressing dressings because salads are necessary to health and spring time is salad time. A change of dressing gives the variation enjoyed in salads.

Buying Meats for Two

The better buys in meats for two include these selections: A half pound of chuck beef makes a good dinner for two, is excellent in flavor and low in points (only 4.) Top round of beef also takes only 4 points for a half pound, is all meat and delicious in flavor.

Veal steak or cutlets are meat delicacies that take only 4 points for serving of two Three points for 1-4 pound of dried beef will provide a good change and an economical dish when combined with vegetable or eggs. Three points will also get 1-2 pound of beef liver, which is rich in iron for springtime blood building.

Cheese combined with eggs, macaroni, spaghetti, rice or bread or made into souffle will serve as a meat alternate. For the remaining meals the family of two or more will enjoy chicken, duck, fish or eggs for the protein requirements.

When company comes it is best to depend on chicken. Even then pennies as well as points are important An entree tasty and satisfying is the chicken-vegetable entree A grand treat for supper, it's really a mtal in one dish.

Chicken and Vegetable Entree

3-4 quick-cooking split peas
2 chicken bouillion cubes
1 small bay leaf
2 cups water or chicken stock
2-3 cup finely diced carrots
1 1-2 cups coarsely chopped cooked chicken
1 cup thinly sliced celery
3 tablespoons minced onion
1-3 cup quick-cooking tapioca
1 teaspoon salt
Dash of pepper
1-2 cup milk
4 strips bacon

Combine peas, bouillon cubes, bay leaf, and water in small saucepan. Cover and simmer 30 minutes, stirring occasionally. Add carrots, cover and continue cooking about 15 minutes, or until pears are tender, stirring frequently. Remove bay leaf. Measure 2 cups. If necessary, add milk to equal that amount.

Combine with remaining ingredients, except bacon, mixing thoroughly. Spread in greased pan. Place strips of bacon across top. Bake in hot oven (450) 35 minutes, or until browned. If necessary, place under broiler to brown. Cut in squares and serve hot. Serves 6.

To complete the supper menu, serve hot corn bread squares, a fresh salad of tomato, lettuce with bacon dripping dressing, beverage and apple pie for dessert.

Stuffed meat loaf is a glorified edition of an old standby and only requires 8 pints for serving of 4 with enough left for lunch next day, for family of two. This dish has an added feature of extending protein which is supplied by egg and enriched bread crumbs.

Stuffed Meat Loaf

One pound ground beef, 3 tablespoons finely chopped green pepper, 4 tablespoons finely chopped onion, one-half tablespoon salt, one-half tablespoon Worcestershire sauce, one-quarter teaspoon sage, if desired; one-half cup soft bread crumbs, one-quarter cup water, tomato juice, or soup stock, 1 egg (stuffing).

Combine all ingredients Mix well. Make a laytr of one-half the meat mixture in a loaf pan. Cover with stuffing, press remaining meat mixture over the stuffing. Bake in moderate oven (350 degrees F.) for 1 hour.

Stuffing

Two tablespoons butter or meat drippings, 1 cup soft bread crumbs one-half cup water or soup stock, 2 tablespoons chopped onion, 2 tablespoons chopped celery, salt and pepper. Melt fat. Combine all ingredients. Mix well.

With this serve baked potatoes, Harvard beets, hot biscuits, romaine or lettuce salad, strawberry shortcake and beverage.

An Old-Fashioned Dessert

Mrs. Homer L. Brinkley of Tullahoma wants me to send her a recipe for old-fashioned grated sweet potato pudding. Here is one selected from an old-time cook book.

2 cups peeled and grated sweet potatoes
1 cup sugar
1 tablespoon flour
1-2 cup melted butter
2 cups sweetmilk
2 beaten eggs
1-2 teaspoon calt
1 teaspoon each of cinnamon and nutmeg.

Combine materials in order given and place in buttered baking dish and bake slowly for two hours Serve warm or cold. Cold boiled mashed potatoes may be used instead of grated potatoes. Serves 5 or 6 (Molasses may substitute for sugar.)

Charlotte Russe

6 egg yolks
1 cup sugar
1 envelope plain gelatin
1 pint sweet milk
1 pint cream, whipped

Soak gelatin in one-fourth cup cold milk, beat yolks very light, add sugar and beat well Put milk in double boiler, and when hot add sugar and yolks gradually, cook until thick, stirring all the time, add gelatin

Remove from heat, strain, cool, fold in whipped cream, add two tablespoons vanilla. Line mold with lady fingers or macaroons and pour in mixture. Pack in salt and ice or place in freezing compartment of refrigerator. Honey may be used in place of sugar in either recipe.

PAINTING RADIATORS

Radiator metallic paints are scarce, but white and light-tinted finishes actually transmit more heat than do bronze and aluminum, even when the light paint is applied over the metallic one. Using white, maroon gloss or terra cotta enamel, you can have a warmer and brighter-looking room.

NEWS ODDS AND ENDS

Clean and pack your heating stove and stove pipe elbows carefully this summer as the pipe especially, will be obtainable only in limited quantities from now on... All dehydrated Irish and sweet potatoes, cabbages, carrots, beets, onions and rutabagas are reserved for army and navy use from now on--Only forge-finished axes, hatchets, adzes, broad axes and light hammers will be manufactured, and handle styles will also be limited to three types ..Replacing that cod liver oil you used to take is pilchard oil, 13 million gallons of it for vitamin-conscious America.

THE YOUNG HOMEMAKERS OF AMERICA

Department of Teacher-Training, Division of Home Economics

Among the many activities and responsibilities carried on in the vocational home economics program in the schools for Negroes in Mississippi are home economics clubs. In the 76 vocational home economics departments in the state there are 76 home economics clubs organized. The name of the organization is the Mississippi Young Homemakers of America.

The purposes of the organization are:

1. To encourage cooperation, interest, and self expression in group organization.
2. To encourage leadership ability.
3. To further develop the girls' interest in better homemaking.
4. To encourage correct use of parliamentary usage.
5. To strengthen and develop abilities and interest by exercising talents to the best advantages through programs and other activities.

The home economics clubs have been organized into a state organization for two years. There have been two annual state meetings held at Alcon A. & M. College. May 1941 and May 1942. During these meetings the girls have conducted and rendered programs, participated in various homemaking and oratorical contests, and held annual election of officers.

The state N. F. A. organization held its annual meetings at the same time and place. This gave the girls an excellent opportunity for developing wholesome boy-girl relationships through assembles, entertainments, etc.

The Young Homemakers Association is under the auspices of the State Vocational Office just as the vocational home economics department are. Each local chapter is sponsored by the home economics teacher as local advisor and the Teacher Trainer of Home Economics as the state advisor.

Reports from local clubs concerning activities, other than class work, carried on this year shows:

1. Homemaking demonstrations.
2. Chapel programs.
3. Plays.
4. Mother and Daughter Banquets.
5. Improving home economics departments.
6. Entertainments.
7. Homemaking projects as:
   (a) Canning,
   (b) Gardens
   (c) Dairy and poultry.
8. Special contributions to war efforts as:
   (a) Scrap iron drives.
   (b) Red Cross drives.
   (c) Buying War Stamps and Bonds.

These clubs offer an excellent opportunity to awaken more feeling of responsibility towards:

1. One's self.
2. Home and family living.
3. Group living.
4. War effort

Through such group organizations the youth of today will become more desirable citizens in helping to shape the world of peace tomorrow.

STRANGE BIRDS THAT DO NOT FLY

Juliette Laine

CENTURIES ago, wingless birds were qnite common, but today they are a rarity. The "kiwi," still found in New Zealand, is the best known of these.

The kiwi is an odd-looking creature for it has a round body covered with brown feathers so soft and delicate in textnre that they feel more like fur than plumage. It has sturdy little legs, very thick, and three finger-like toes. Its bill is long and flexible, and with it, it sucks up its food from shallow streams.

Altongh the kiwi cannot fly it can run very fast ,and when danger seems near it runs to the nearest swamp or river bank and tries to hide by sticking its head into the soft mud.

Another flightless bird commonly found in New Zealand is the weka, and many of the natives claim that both it and the kiwi are descended from the now extinct dodo. The latter seems to have actually existed, despite considerable opinion to the contrary As late as 1626 an English adventurer, Sir Thomas Herbert, saw a dodo bird on the island of Mauritius, in the Indian Ocean. He described it as, round, fat, and some of them weighing fully 50 pounds. "They are of melancholy visage" wrote Sir Thomas, "'and their wings were unable to hoist them from the ground. They were able to run at great sneed however."

"The Church Serving Men Under Arms"

PAPER WRITTEN BY MRS. NATALIE GREEN OF WHEATLAND, PA.

December 8, 1941 found this American Nation abandoning all ideas of peace time tranquilities. War was declared on the Axis Nations guilty of the atrocities of the day before. Since that time we have devoted ourselves to the all out effort of winning the war. Almost every organized group has made itself heard in its efforts to help win this conflict. Labor and industry, clubs, civic organizations —all have been serving in their way to furnish health, morale and munitions to the men in the service.

At first the church was bewildered by the sadness of it all and found itself retiring to an obscure corner from the fierceness on the home front. But as demands required more and more men and women, and evil consequences resulted, she realized that she had a service to render, both at home and on the battlefield and came forth fighting to save both. It was then that she began to do what any Christian ought to at such times.

Letter Writing Committees were formed and the soldier in far away camp began to receive letters from home expressing the Christian's Attitude. And was supplied religious thoughts in a war torn world The letters were also letters of Courage and Faith and admonishing the man with the gun to believe in God. Hence the church has served in building morale. A soldier with faith in God can execute a given order better, even amid bursting bombs and singing bullets when he knows all is well with his soul—It has been said more than once, "Atheists are not found in fox Holes' Through faith in God the soldier becomes fearless.

Too—the church did not begin to serve the men under arms at the outbreak of hostilities. In the quietness of pre-war Sunday School rooms men and women were taught to put their trust in God and praise him for every blessing. A

(Continued on Page 2 Col. 4)

WOMEN IN INDUSTRY

1943 is destined to mark new eras in many fields. The complete emancipation of women will be in the front rank of these changes. Earlies predictions were that at least 1,8000,000 white women and 200,000 Negro women who had never worked in paid services in their lives would be in factories within the next two years. According to the present rate at which women are taking the places of men in industry, by the end of the year, one out of every six physically fit women between the ages of 18 and 45 will be engaged in war jobs.

These women are entering industry on the same pay basis as men. The War Labor Board has ruled that "wage rates for women shall be set in accordance with the principle of equal pay for comparable quantity and quality of work on comparable operations." This ruling was big news for the more than 15,000,000 women who are at present carrying on in the industrial life of America.

Women's entrance into industry has been no smoother than the average innovation. Changes always bring about oppostion. The urgent need of manpower caused by the war has, of course, reduced these obstacles to a minimum, but many labor organizations had to be educated up to the value of women as union members. The fight of the women welders on the West Coast to take their rightful places in the International Boilermakers and Welders Union, AFL; the stand that had to be taken by the Ford local union's women's auxiliary to win for Negro women their rightful place, and many other instances testify to the obstacles that had to be overcome.

Time, in all probability will bring women a wider place in industrial circles and in the national forum. These new workers, it is predicted, have come into the nation's work life to stay. In the wake of such arrangements will follow problems of child care, juvenile delinquency and social problems of varying and various types. Whether the contribution which women can make tn our industrial life during peace times will compensate for the handling of these problems is a matter with which post-war planning will have to concern itself.

It is not believed nor desired that women will ever lose their femininity. There is a definite need in this tough old world for beauty and daintiness; for law and order, for home life and babies, and all the things that lie close to a woman's heart. That these things will be preserved—no matter how hard women will have to work, nor how many things will have to be given up—is evidenced even today in the midst of the ugliness and harshness of war.

Behind the wheels of a big truck we note a woman driver wearing carefully pressed slacks and a fresh blouse or gay colored overalls. Beneath the ugly helmet which is necessary for safe and efficient production, is prettily curled hair tied with a cheerful ribbon bow. In the home these factory workers are out of bed in time to get their young offsprings curled and cleaned for the nursery school. Dainty gingerbread goes into the lunch box instead of the angel food cake which rationing no longer makes possible

Our women will meet the test of industry's demand but will always strive to be appealing and beautiful. They will somehow find time and ways to carry on the work of beauty and Humanity that lies within a woman's world.

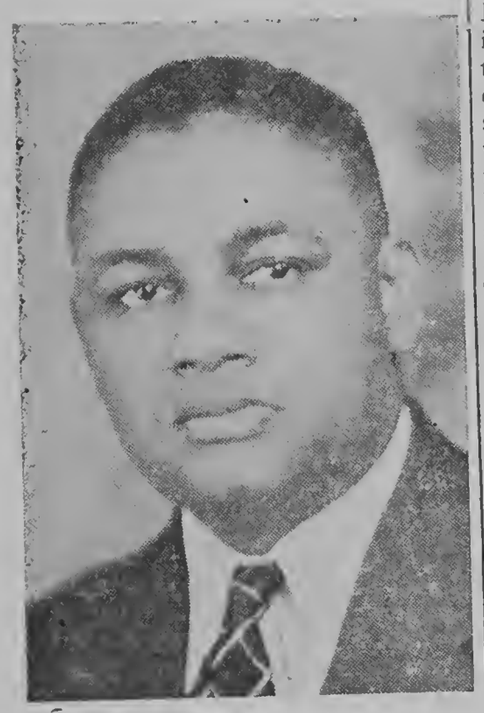
Mr. Neidspondiavanci: What initial please?

"GOD, THE NEGRO AND AMERICA"

Rev. John W. Williams Spoke on Wings Over Jordan

Corpus Christi, Texas, (Special) —Every radio among the thousands of members of the race of this city was turned in on Sunday morning, June 6th to hear the Rev. John W. Williams, who is pastoring the leading Baptist church of this city, who is the moderator of an association and who is the vice president of the American Baptist Convention of Texas, because he was the speaker and served on the program of the "Wings Over Jordan," perhaps one of the best known radio programs appearing over the Columbia Broad-

Radio Speaker



REV. JOHN W. WILLIAMS, vice president of the American Baptist Convention, Corpus Christi, Texas, who was a recent radio speaker on "Wings Over Jordan" program.

casting Station each Sunday throughout America.

Rev. Mr. Williams' subject was "God, the Negro and America." In the address he said:

"I stand here today, in the city of Dallas, the Metropolis of North Texas, to speak to you on this subject, "God, the Negro and America." When we think of God, we think of a self-existing Being, the Guider, and Director of the universe. Jean Paul said, "without God there is for man neither purpose nor goal, nor hope, only a wavering future, an eternal dread of every darkness." Yes, God is the center of the universe, without Him the world and all that is in it would sink into the abyss of nothingness. God is the infinite and Perfect Spirit in whom all things have their source, support, and end. God is the God of all men, and the Father of every true believer in Him. In a world torn with strife and confusion, in a world saturated in the oils of hate and injustice, men need to know God as their personal Saviour.

The Negro

Who is he? Where did he come from? And where is he now? In answer to these questions I say, "The Negro is an intelligent, peace loving human being." A question was asked a few days ago by one of our present day writers, Does the Negro have a soul? Yes, the Negro has a soul, a God given soul, a worship loving soul.

Where did he come from? God made him when he formed the first man, Adam, out of the dust of the earth and breathed the breath of life into his nostrils and he became a living soul. For God hath made of one blood all nations of men. We are often referred to as a "Child Race," but remember the touch of a child's hand released the imprisoned forces that destroyed Hell Gate. The initial pressure of an ounce sent forth a spark which hurled from its bed the commerce-impeding rock in New York Harbor. Remember the day begins as a first ray; and the gianthood of human strength commences as a flash of thought which holds one man and bye and bye enchains the race in Solemn fealty. Truth has its inceptions; the simple learning of a little child may overcome a kingdom which violence has failed to master. There have been times when just one has chased thousands. Power is measured by principles, and our so called "Child Race," if we represent truth, will see our hope full-born in success.

And where is the Negro now? He is in the Orient, in England, in North Africa, in training camps. He is in every branch of the Army; he is in the Air Corps, infantry, artillery, armed forces, engineers, cavalry, and quartermaster corps. Fliers are being made at the basic and advanced flying school at Tuskegee, Ala. Our Negro fighters have made records in this present war that have equalled and surpassed many made in World War I. Where is the Negro now? He is in America, the land of the free and the home of the brave, the country of Benjamin Franklin's toast, who spoke of it as: "The Young Joshua who commands the sun and the moon to stand still and they obey him." Yes, he is in America, the land of golden opportunities; yes, the Negro is in America on his knees, begging, pleading for an opportunity to display his loyalty, to bring to light the latent power that he possesses. Yes, he is asking that he might be allowed to touch the lever of his mind and release powers more powerful than any beast; he is asking that he might be allowed to press the button of his intellect and direct energies that are swifter than the fligh of any bird. After he finds a cause, he is asking to be allowed to trail it until he reaches its effect, and after he discovers an effect, he wants to be allowed to follow its tracings back to the cause. He dreams and wants to be allowed to demonstrate his vision. His qualities have been shown in men like Booker T. Washington; in geniuses like the late Dr. R. H. Boyd; in business, in the trained and natural ability of Dr. Henry Allen Boyd; in the leadership of men, in the polished brain of Dr. G. L. Prince, president of the National Baptist Convention of America; in the military genius of General Benjamin O. Davis; and in the scientific mind of the late Dr. George W. Carver. Yes we have Negroes who are gifted with moral and mental grace to see clearly and to pursue consistently the path of duty, of preservation of prosperity, and of dignity, always keeping in mind that one great truth: "That life is more than meat and the body than raiment." God, the Negro and America will be a great team when justice and righteousness reign.

THE CHURCH SERVING

(Continued from Page 2)

soldier's blessings are many. The wife left at home as well as her soldier husband were taught the value of a life well lived and the joys of a faithful man and wife.

The church is extending its youth programs and thus taking the place of father in children's lives in many instances.

In conclusion, the church serves the soldier as a memory of home; not to make himself homesick, but to live with his fellow soldiers as he did with the brothers of his particular place of worship.

Neither has the church remained wholly at the home front. Leaders from every denomination have gone to the battle front to reassure those under arms that God can be served and praised even while shells are bursting all around.

Yes, the church too is serving men under arms.

"I Have a Brother in The Army; Let's Make It a Million Dollars"

Washington, D. C.—At a meeting held in Conference Room E of the 135th Street Branch of the Y. M. C. A. of New York in the early part of February, where plans were being discussed and formulated to launch a War Bond Campaign under the sponsorship of the various women's organizations of Greater New York, the patriotic enthusiasm of those in attendance was galvanized by the challenge of a member of the A. W. V. S. who arose, and getting the attention of the chair, said: "Ladies and gentlemen—I have a brother in the army. Why limit our thinking to a $100,000 campaign; let's make it a million."

In addition to official representation, practically every type of organization with which colored women are identified, there were present two members of the National Organizations Divisions of the War Savings Staff—Jesse O. Thomas and Mrs. Nell Hunter. The services of Mrs. Hunter, who devotes her major efforts towards increasing the participation of individual women and women's organizations in the War Bond program, had been requested by Mr. Robert P. Braddicks, Deputy Administrator of New York City.

Appearing before an average of three different organizations per day, during the time Mrs. Hunter spent in New York, she met with and spoke to more than 200 different women's organizations and outlined programs through which both as organized groups and as individual members, sustained buying of War Bonds and Stamps might become the individual and group objective. This groundwork developed some community organization culture among the women, and they have become more War-Bond-conscious as a result of the spade work done by Mrs. Hunter.

While the million dollar goal set at this meeting seemed at the time to many in attendance impossible of achievement, all "Doubting Thomases" were confounded when the tabulation at the end of the drive (March 15 to May 15) showed that there had actually been "put on the barrel head" $1,050,516.05. This seems to be the largest amount of money raised by Negro women in any city of the Nation. This, of course, is at it should be, for there are more Negro women in New York City than in any other city of the Nation or the world.

The chairman of the Women's Committee and of this campaign organizations was Miss Wilhelmina Adams, who has been identified with various church, political and civic organizations in New York for a good many years.

REPLACES STEEL WOOL

Steel wool for scouring alumninum cooking utensils is getting scarcer but there is a new special preparation to replace it. It comes in a 12-ounce glass shaker jar with a colorful plastic top. Is economical, too, for when original contents are used up, you can purchase a two-pound refill.

MR. W. ANTHONY GAINES TELLS OF FLORIDA NORMAL

St. Augustine, Fla., June 12, 1943 —(Spl.)—It was announced here today by president Wm. H. Gray, Jr., that the government had selected Florida Normal as the site for the establishment of a school of commercial education in the state. The courses are free, and the school is being opened as a result of increasing demands for stenographers, file clerks and typists by the government. The courses are accelerated and streamlined so that they may be completed in six or nine months.

Graves Heads Staff

The staff which has been selected listed Mr. Freddie G. Graves as head, supported at the present by Mrs. Clyde Bradford Francis and Miss Bernice A. Kennedy. Mr. Graves who has been in charge of Commercial Education in the college is well prepared to take on these new duties, having specialized in Business Administration at the University of Michigan where he was awarded the Master of Science degree. Mrs. Bradford who has had governmental experience since finishing Florida A. & M. college will be a member of the staff which is being assembled along with Miss Bernice A. Kennedy who recently resigned from

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

BRIEFS

"Thomas Jefferson was the father of scientific agriculture in the United States . . . . If he lived today, Jefferson would probably be the country's most enthusiastic Victory Gardner," declared Secretary of Agriculture Claude R. Wickard on the Farm and Home Hour April 9 in commemoration of the 200th anniversary of Jefferson's birth.

* *

In canning products from your Victory Garden the Department recommends the use of a pressure cooker for the canning of non-acid foods such as beans, peas, corn, spinach, other greens, and asparagus. (And while we are on the subject, meats, too.) Acid fodos such as fruits, tomatoes, rhubarb, and pickled beets may be canned safely by the boiling water-bath method.

* *

Fewer people are now living on farms. According to the Bureau of Agricultural Economics, 27,821,000 persons were living on farms in the United States on January 1. This is the smallest number of farm residents in the entire 33-year period for which estimates of farm population are available.

DISTRIBUTION PAYMENT ON PEANUTS

Farmers who produced "excess" or oil peanuts last year and delivered them to designated grower agencies under the 1942 peanut program, will receive a distribution payment of $10 a ton for those extra peanuts, less outstanding indebtedness of the Government for 1942. An additional distribution payment is expected to be available upon completion of the 1942 Marketing Program.

Payments to farmers will be made with the approval of Commodity Credit Corporation by peanut grower cooperative associations designated as agencies of the Secretary of Agriculture for purchase and sale of peanuts. These agencies are Georgia-Florida- Alabama Peanut Association, Camilla, Ga.; the Southwestern Peanut Growers Association, Gorman, Texas, and the Growers Peanut Cooperative, Inc., Franklin, Va.

The Department has also announced that there will be no marketing cards and no "quote" or "excess" peanuts this year. Support prices to farmers will average not less than $140 per ton for Spanish type peanuts, $140 per ton for Virginia types, and $130 per ton for Runer type.

Steps have been taken by the Department to make peanuts available to farmers needing additional supplies for seeding the 1943 crop. The designated agencies are selling peanuts for seeding at cash prices rangs from $125 to $155 per ton.

THE FOOD SITUATION

According to the Department's Bureau of Agriculture Economics, food production this year will be 30 percent over the yearly average for 1935-39 and 3 percent above 1942. These figures are based on the March Intention to Plant Reports. There are indications also that a 4 percent acreage increase over 1942 is expected for the major spring crops this year.

The biggest problem which farmers face assuming favorable weather, is the scarcity of labor and machinery. It is estimated that a million actual or potential workers, including those who have entered the armed forces, will have migrated from the farm between July 1942 and July 1943. Thus a substantial number of women, children and older men may be necessary to replace them.

Steps which have already been taken to relieve the farm labor shortage include importation of workers from Mexico, Bahama Islands and Jamaica, deferment of farm workers, movement of farm families from less productive areas to more productive lands, and the recruitment and replacement of urban labor for farm jobs.

While there was more machinery on farms at the beginning of 1943 than ever before, the average age of the machines was greater. The available supply of new machines this year will be only about 40 percent of that purchased in 1940. Of course, more parts may be had—67 per cent more than three yearse ago.

Despite the machinery and labor problem, and the fact that from 20 to 25 percent of our total production must go for military and lend-lease uses, civilians will have, on the whole, as much as the average for the 1935-39 period. However, with more people now able to buy foods which were formerly beyond their means, the demand will be much greater than the supply. On the other hand, families whose annual income falls below the $500 mark will be able to buy only a little more than half of their rationed allotment of meat and $1,000-a-year families will have a few meat coupons left over, but from there on up families won't have enough coupons to buy all the meat they would like to have.

As for chicken, which is not rationed, the demand is expected to be around 26 pounds (dressed weight) per capita, while the supply is estimated at 28 pounds. However, the shortage of other meats will probably run the chicken demand up beyond the 28 pound per capita record supply.

TWO-LEGGED STOOL

Public statements have been issued by the War Manpower Commission and the Department of Agriculture appealing to employes in various phases of production and processing of food to remain on the job. They were informed that they were contributing as much, if not more to the war effort than they would be working at other war activities.

No one questions the essentiality of food production and processing. But what of the food after it has been processed? It is utterly inconsistent, as well as useless, to encourage food production and processing, and then ignore distribution. Thousands of retail merchants are going out of business. With each merchant that retires from the field, the problem of how to get food and other necessities to consumers become more critical. We don't hear a great deal about those other necessities, but they are as important as food.

The retail distribution industry must feed and clothe 130,000,000 Americans. The scope and complexity of its task is tremendous. It is a task that must be carried out smoothly or the war effort will topple like a two-legged stool.

BUCK ROGERS COMES CLOSER

Civil aviation has grown in a startling manner during the five years the Civil Aeronautics Act has been in effect. The possibilities for development of this industry are beyond the imagination of most persons. Buck Rogers and his rocket ship no longer seems so fantastic. It will keep Congress humping to provide suitable legislation under which our air industry can maintain America's peacetime air supremacy in the years to come.

The Lea-Baily bill proposes to amend the Civil Aeronautics Act of 1938 so as to extend Federal regulation to all air commerce, whether between points in the same state or between points in different states. The reason is obvious, for the average passenger journey by air is 380 miles. One air line covers 22 states; two, 18; one 15; and another, 13. The national character of air transportation makes local control impractical.

The long experience of the Committee on Interstate and Foreign Commerce in the House of Representatives in other modes of transportation, has contributed immeasurably to the far-sighted legislation under which the scheduled air lines are presently operating, and has saved the industry from the mistakes of other carriers.

150,000 PRESSURE COOKERS

The 150,000 new pressure cookers which have been approved for manufacture this year will be rationed by County Farm Rationing Committees, or subcommittees established for urban areas. Housewives who come together and form clubs or pools will stand the best chance of obtaining a pressure cooker which is essential for home-canning of non-acid vegetables and meats.

Farm employment on April 1 was the lowest for any April on record, but monthly wage rates were highest, daily rates were high, but somewhat below the record set in 1920.

Land values are up. The Bureau of Agricultural Economics reports that farm real estate values on March 1 were higher than on March 1 a year ago.

* *

Adjustments were made in the milk marketing economies order last week by the Department which removed restrictions on the sale of milk in less-than-quart-sized containers for consumption in factories, schools, offices, on playgrounds, and in similar places. However, the sale of milk in less-than-quart-sized containers for consumption in homes is still restricted, except in rural areas, villages and towns of less than 5,000 population. In such areas the milk marketing economies order does not apply.

ANOTHER WARNING

Persons familiar with the farm situation have long pointed out the danger the nation faced by stripping the farms of manpower, machinery and needed fertilizer. Time has shown their fears were justified. The situation as to our milk supply is grave.

At a recent hearing in the East, after testifying on details of milk marketing orders that can make or break the farmer, Fred H. Sexauer, president of the Dairymen's League Cooperative Association, again sounded a warning as to our future milk supply. He pointed out, for example, that milk must be priced at figures that will enable dairymen to compete with hog raisers for corn.

"There are numerous indications," he said, "that dairy farmers will be confronted with a severe feed shortage late this year or early in 1944. If and when they have no feed, farmers will be forced to slaughter their cows. Then the public will be faced not only with rationing of milk, but with a health endangering shortage, which may even reduce the supply of dairy foods for the armed forces as well as for children and industrial workers."

WILD AND FREE

Bonnie Deane Vaughn

In the days before the arrival of the homesteaders in Kansas, cowboys frequently sighted bands of wild horses grazing on the rich buffalo grass. In fact, a few of these herds were seen occasionally for several years after the country was settled.

These horses were as graceful as antelopes as they ran swiftly across the prairie, their heads, held high and their manes and tails, which were exceptionally long, flying in the wind. Those who saw them said that their manes reached to their knees and their tails usually swept the ground. This manner of carrying their heads high in the air is the natural one for horses in the wild state.

There were other characteristics different from the domesticated horses. Their eyes were more protruding, probably due to the necessity of their being always on the lookout for enemies. In the course of many generations nature had adapted them to their environment.

They were usually smaller than domestic horses too. But they had developed remarkable strength, vitality, and lung expansion, in their wild life where they were compelled to rustle their food and run frequently from danger. Many times too, they raced across the open prairie for the sheer love of running and the joy of freedom.

As to the ancestors of these wild horses, scientists say they were the horses of the Spanish explorer Coronado, who with a body of followers, marched across the plains of North America in 1541. Some of his horses escaped during the severe storms. Others were stampeded by buffaloes and never recaptured. Their number increased until in 1875 it was estimated that there were not less than 50,000 roaming over the plains of Texas, Colorado, Nebraska, and Kansas.

Wild horses were of different colors, those in the same herd being usually about the same color or variations of it. They might be gray, black, claybank, bay, sorrel, etc. But the most common color was a light bay or buckskin. Most of these buckskins had heavy black manes and tails but a few had white ones. The latter were known as **palominos.**

The lives of some of the early day settlers were saved by the wild horses. Sometimes it happened that a man was far away from human habitation. Perhaps in a sandy desert location, suffering from thirst and exposure. When all efforts to find water had failed, he would watch, with a field glass if he had it, for a band of horses. Once having located such a band it was only necessary to follow them for sometimes during the day they were sure to make a trip to some pool or lake to quench their thirst.

ENOUGH, AND IN TIME

If the railroads secure authorization from the War Production Board for new equipment, and even if that equipment is placed in service before next October, it will still be necessary to improve utilization of existing equipment. That is the opinion of M. J. Gormley of the Association of American Railroads, and of most railroad men. It is now conservatively estimated that railroad freight traffic this year, as measured by ton-miles, will be about 10 per cent more than in 1942, and railroad passenger traffic, as measured by passenger-miles, will go up about 25 per cent. If these predictions are fulfilled, the railroads will be handling at least 110 per cent more freight traffic and nearly 200 per cent more passenger traffic than in 1939, and 75 per cent more freight business and 57 per cent more passenger traffic than in 1918. Preliminary reports for January indicate that these estimates are too conservative, if anything.

The big question is, how can the railroads further increase efficiency? They have about reached the limit in making serviceable freight cars and locomotives out of unserviceable ones, through repair. The percentage of so-called bad-order freight cars awaiting repairs is now down to 2 6 per cent, which is less than half of what before the war was considered a practical minimum. The percentage of locomotives awaiting repair is now 4.9 per cent, or about half of what was ordinarily viewed as a practical minimum.

Obviously the railroads can haul no more than at present except by speeding up trains and by receiving yet greater cooperation from shippers in loading and unloading cars more rapidly. This will undoubtedly be done because shoppers and the railroads know full the extent to which the war effort depends upon a smooth functioning, adequate transportation system. However, as present locomotives and cars are used still harder, it becomes increasingly imperative that a replacement program be carried through without interruption. And that is why the railroads must receive authorization fram the government to purchase new equipment, in sufficient quantity, and in time. The war-born expression "too little and too late" must never apply to the railroads.

AN IRREVOCABLE STEP

In summing up the results of an exhaustive study of compulsory health insurance, members of Northwestern University's research staff serve a warning that cannot be ignored:

"One may enter lightly upon a course of action which does not involve any permanent commitment, and one which permits retracting his steps if he later changes his mind. But there are areas of conduct and decision which permit no retracing of steps. There are 'one-way' highway in the affairs of both indiviruals and nations. Most board social policies lie in this area. They involve heavy commitments. They establish contractual obligations or at least contractual understandings. They create large classes of beneficiaries whose interest will not thereafter be relinquished. It is obvious that any large extension of the scope of social security benefits lies in this area of social policy. It is one from which, once entered upon, there will be no possibility of retracing our stens."

We are spending hundreds of billions of dollars to win a war, that we may retain freedom. The resulting tax burden will test the will and resourcefulness of many generations. If, in addition to the cost of the war, we thoughtlessly add more billions of expenditures in an attempt to buy a socialized Utopia, it might well be the final straw needed to break the financial solveneey of the country. In that event, we would have destroyed all hope of security, along with freedom. We would indeed have taken an irrevocable step.

SOME DIFFERENCE

It is one thing for government to broaden individual opportunity and provide a maximum of eare for the needy. It is quite a different thing to build up government to where it dictates to the individual in the commonest affairs of life. The first type of government is what our boys are fighting to preserve. The second type is what they think they are fighting to prevent coming to America.

NEGRO FAMILIES JOIN HOME FOOD PROGRAM

MURFREESBORO, Tenn., April 30—(Sul)—Negro farm families have responded to the appeals for production and preservation of home goods.

More than 500 families already have signed to participate in the state Home Food Supply program aeeording to G. K. Kersey, vocational agrieulture teaeher who also serves as county Negro farm agent.

Kersey said this was twiee the number of Negro families that signed for the 1942 home food supply program. He said he hoped to sign a total of 700 families.

4-H CLUB BOYS TAKING AN ACTIVE PART IN FOOD PRODUCTION

By W. A. Hagins

INDUSTRIAL COLLEGE, Ga.—Negro 4-H club boys are taking an active part in the food production campaign designed to reach into every Georgia farm home, the Agricultural Extension Service revealed today.

Thirty-one Hancock county club boys are carrying poultry projects and there are 2017 chicks in these projects. Also 95 per cent of the club members are carrying gardens either individually or jointly with their parents. Reports indicate that 371 club gardens are now growing with a variety of from five to eight vegetables.

In Peach and Houston counties, 346 club members have pigs for their projects, 327 have corn projects and clubbers are taking the lead in victory gardens. At each of the schools can be found a garden and at each home where 4-H'ers live.

Ten Liberty county club boys have built lamp brooders and placed 50 chicks in each of them. Several Brooks county boys are keeping themselves in school with money made from their poultry projects. Four-H commandos in Grady county made excellent reports on their work with farm families who heretofore grew only two or three vegetables in their gardens. They now have eight or nine growing. Likewise Dougherty county commandos are stimulating more food production throughout the area.

One hundred and eighty-six club gardens were recently started in Glynn county through cooperative seed purchases. It's reported that this cooperative movement has become so well established among the clubbers that many of them look forward to this plan each year for getting their gardens started.

In Laurens county, eleven clubs have been reorganized with an enrollment of 525 to carry food and food projects. Up to date 411 Burke county boys have enrolled to carry out the same type of work and Mitchell county has an enrollment of 376.

According to Alexander Hurse, Negro State Club Agent for the Georgia Agricultural Extension Service, club members are getting better acquainted with what is expected of them and are going about it with renewed courage and interest.

MERIWEATHER COUNTY FARMERS FORGING AHEAD

By W. A. Hagins

INDUSTRIAL COLLEGE, Ga.—Negro farm families in Meriwether county are making a place for themselves in the annals of agriculture. reported P. H. Stone, Negro State Agent for the Georgia Agricultural Extension Service, today. With accelerated farm programs, quite a few of them are bringing their operations up to what they should have been in previous years.

Farm folks are responding to the food production program readily. Some have purchased additional hogs and chickens and have set aside plots to be planted to food and feed crops. The neighborhood leaders are doing a splendid job in helping the agents get basic information over to farmers. Recently eleven neighborhood meetings were held and 70 leaders and farmers were in attendance to better equip themselves for increased food production.

Garden demonstrations are now being carried in 21 communities and a move is underway for each farm family to produce an adequate supply of vegetables for the family and to can and market surplus commodities. Several families have already planted their gardens and turnips, carrots, mustard, rape kale, onions, cabbage, Irish potatoes and peas are now growing.

Several farmers have beef calves set aside for canning and marketing. More than 300 pounds of pork were put in sugar cured mixtures recently and the interest is high for producing special crops of millet, oats, corn, velvet beans and potatoes to feed hogs. Also farmers have inoculated 196 hogs against cholera. Quite a few baby chicks have been purchased and poultry demonstrations have been set up in several communities.

Asked about 4-H club work in the county and State Agent F. H. Stone said: "The work is on the up-grade among these young people, for recently nine clubs were organized with a total of 119 members. Projects of corn, peanuts, hogs, beef cattle, poultry and gardens have been set up among them as a vital factor in the nation's food production campaign."

PHILIPPA SCHUYLER WINS HIGH HONORS, OPENS TOURNAMENT

NEW YORK, June 17 (ANP)—The National Guild of Piano Teachers held its annual tournament for piano students in this city last week ending Saturday with the heaviest enrollment in some years. Philippa Schuyler, 11, was the first to play this year and was judged by Harold Morris, nationally known American composer. For the 8th consecutive time, Philippa got highest honors, a gold star for her repertoire of 21 pieces and the mark of superior.

Mr. Morris especially commended Philippa for her "interpretation, medulation of tone, and imagination." Philippa has the longest record of sustained superiority in New York, and as far as is known, in the country. The Guild now functions in 55 different cities at this time, with thousands of piano students entering. It was founded by Irl Allison of Abilene, Texas 14 years ago.

Mr. Allison was the first to recognize Philippa's great musical ability. At four, when she played for the Guild for the first time, he pronounced her a genius and every paper in New York City, as well as Time magazine, wrote columns about it. At four, Philippa had composed a dozen scales, 10 pieces and knew by memory many compositions by the masters. Just before her fourth birthday, she played Schumann and Mozart on two large radio hookups. She has since lived up to all expectations and predictions of her future made at this time.

FAIRER FILMS NOW BEING RELEASED, SAYS MOVIE CRITIC

NEW YORK, June 17—(ANP)—Bosley Crowther, movie critic for the New York Times, Sunday wrote concerning the apparent trend toward racial equity in some recent films.

Crowther said that this sudden realization of racial equity has run through Hollywood, mainly because attention has been directed by influential persons and groups.

He called attention to the fact that many people have become indignant, distressed and even outraged, over the treatment the Negro generally receives in films. "With good and sufficient reason," he said, "these persons have stoutly maintained that the usual Hollywood constitutes a grave social abuse and that the tolerance of the color line in pictures is one of the bulwarks of the cruel stigma today.

"Naturally, such persons bridle when a Negro is shown on the screen as a bowing and scraping menial of the ole 'yassa, Massa' stripe of a 'kyaw-kyawing' Sambo designed mainly to tickle the white folk with his japes."

In comment on several pictures in which Negro actors participate, he spoke of the film, "Casablanca," in which Dooley Wilson played, as a remarkable break from the traditional ranking of black and white on separate social planes.

He said that Warner Brothers. the studio that made the film, had a more realistic appreciation of Negroes in the film.

Speaking of the studio's frank presentation of the dilemma of a young Negro in "In This Our Life," he described it as "one of the few genuine features of an otherwise trashy film." Crowther called the "respectable conception" of a black man, played by Leigh Whipper, in "The Ox-Bow Incident" one of the many distinctions of that "grimly realistic" film. The Negro soldier, Kenneth Spencer, in the new war film, "Bataan," is characterized as "a fine, dignified notation of the share of the Negro in the war."

Concerning the submarine picture, "Crash Dive," the critic stated, "We blush to mention the clumsy and patronizing way that 20th Century-Fox dragged in a grinning Jazzbo."

He said that steps are slowly being taken to give the Negro his due on the screen "perhaps no more forward than backward, but at least some respectable steps."

He saw no reason for "laboring an anti-racial point (as some have done) in connection with such a "charming and melodious all-Negro musical fantasy" as the picture, "Cabin in the Sky." He said the picture is "no more pretentious of reality than was 'The Green Pastures,' that it is far from belittling Negroes, but that it treats them with affectionate respect.

Crowther commented that although the picture is blurred with "hte usual complacency" toward the Negro's lot (depicting the hero as an always-lovable "no 'count whose wife sings joyously over her tubs; they live in a shack and are contented, superstitious and illiterate), it certainly cannot be condemned of violaing fact and it makes for lively entertainment."

Fire prevention, like charity, should start at home and spread in widening circles until each person is doing his utmost to prevent destructive fire anywhere in his community. Fire department officials are only too glad to point out potential hazards to the uninformed.

Start now to protect your "irreplaceables" against fire. Tomorrow may to be too late.

15 Soldiers in Jail After Clash In Mississippi

Collins, Miss., June 16—(ANP)—Latest communique from the Mississippi sector of the race-hating Dixie front shows 15 Negro soldiers jailed and two shot as the aftermath of a clash Sunday between members of a Camp Shelby baseball team and a state highway patrolman, C. T. Simmons.

This latest racial trouble followed by a few days the slaying of a Negro soldier by a sheriff elsewhere in this state and the request to move an entire Negro regiment, recently sent here from the west, out of Mississippi to a northern location.

Sunday's clash started when Simmons flagged down a truck containing the soldiers as it passed through Mt. Olive, near here. Throwing a gun on the soldiers, he ordered them out of the vehicle. One soldier, resenting the officer's attitude, rushed Simmons and knocked the gun out of his hand. The patrolman went back to his car after another weapon just as a Tri-State bus passed the scene and stopped, the driver and a white soldier getting out to help the officer.

In the ensuing melee, shots were fired by Simmons and the soldier who took his gun, with the white soldier grabbing a fire axe from the bus and joining in th eaffray, clubbing one colored soldier unconscious. The others broke and ran for the nearby woods, with the armed Negro soldier joining them when the gun he had taken became empty. Believed to have been badly wounded, he is still missing.

Simmons radioed for help and other highway patrolmen, civilians and MPs responded. A posse was formed and after firing into the woods, the soldiers were rounded up and placed in the Covington County jail here temporarily, later being moved to Camp Shelby by MPs.

Feeling continued through Sunday night, when an unidentified Negro soldier refused to heed the command of an armed white civilian to stop and was shot through the leg.

LIBERIA SIGNS TO GET LEND-LEASE AID FOR REPUBLIC

WASHINGTON, June 16—(ANP) The state department announced the signing in New York Tuesday of a lend-lease agreement between the United States and the Republic of Liberia.

The agreement on "the principles applying to mutual aid in their common defense" was signed by Henry S. Villard, special representative of the United States and Walter F. Walker, Liberian consul general in New York in the presence of President Barclay and President-elect Wm. S. Tubman of Liberia.

An exchange of notes which accompanied the agreement confirmed the understanding of the two governments that the agreement carries out general principles concerning defense areas in Liberia on which the government agreed at Monrovia on March 31, 1942.

Lend-lease means that Liberia now participates in the group receiving aid, military and otherwise, food and machinery and equipment, as outlined in the agreement between this nation and others of the United Nations. No money is involved as actual cash loans, but foodstuffs, arms, weapons, and military material as well as material for civilian use is included.

Bennett: Your father looks very distinguished with his snow-white hair.

Danny: Yes, he has me to thank for that.

WHITE PASSENGER SLAPPED COLORED WOMAN, GOT CUT

CHATTANOOGA, Tenn., June 16 (ANP)—When Marion I. Cooper, white, a TVA worker and passenger on an outbound Fort Oglethorpe bus Monday slapped a Negro woman for stepping on his feet, the woman followed him to the front of the bus where she proceeded to even things up with 16 cuts all over his body. Like a flash the woman disappeared,. Twenty-seven Negro passengers were arrested in connection with the case but were released after their names and addresses were recorded.

Officers arrested Earl T. Williams as an accessory to the assault. Cooper was taken to the Newell sanitarium where his wounds were reported to be superficial. Police, however, say that the man was cut all over his body.

His assailant, who was headed toward the Negro section of the bus, fell over Cooper's feet and then apologized. She was described as weighing around 200 pounds. She is still at large.

CIVILIAN DEFENSE ORGANIZATION OF CITY HAS MEETING

The Block Organization of the Office of Civilian Defense is conducting a re-organization campaign through mass meetings in the several districts of the city. The first of these two meetings was held in Southwest Nashville at the South Street Center, Monday evening, June 7. The second was held at Seay's Chapel, Tuesday evening, June 8. Both of the meetings resulted in the appointment of new section leaders who have gone to work to establish as authorized Block Leaders in every block of Negro residence. Other community meetings have been planned as follows:

West Nashville met on Monday evening, June 14, at Hadley Park Club House at 8:00 o'clock.

East Nashville met on Tuesday evening, June 15, at Gardner's Funeral Home at 8:00 o'clock.

North Nashville met on Wednesday evening, June 16, at Fisk Faculty Club at 8:00 o'clock.

Central Nashville will meet on Friday evening, June 18, at the Bethlehem Center at 8:00 o'clock.

The certificate of membership in the Citizens Service Corps will be awarded by the Block Chairman to all persons who have given 50 or more hours of service to the program. The district leaders are as follows:

SOUTH NASHVILLE: Mrs. Rachel McCullough, Leader; Co-Workers: Mrs. J. J. Jordan, Jr.; Mrs. Morgan, and Mrs. Fred Brown.

WEST NASHVILLE: Mrs. J. E. Suggs, Leader.

N. W. NASHVILLE: Mrs. James Burnett, Leader.

CENTRAL NASHVILLE: Mrs. S. W. Hewlett, Leader.

HOW TO CARE FOR SHOES PROPERLY

By Arsene McComb, Jr., Division Of Home Economics

Ease of living has led to careless happy-go-lucky ways of using everyday articles. Few persons have felt it was necessary to spend time on keeping clothing in good condition, even if they were not wreckless in their treatment of it. Many articles are cast aside when the proper care at home by simple methods would have kept them in good condition and saved expense.

The war has brought to us a new era, and economy in clothes will probably be required. We know already that shoes are being rationed. This means that the shoes we get will have to be given proper care in order to get the best wear from them. You remember the song, "I Don't Want To Walk Without You, Baby." We can say that about our shoes now.

Shoes are made from leather. Some artificial leather is being used in the production of shoes. Good leather is quite expensive, but is suitable for much wear.

Leather, being the skin or hide of an animal is full of very small pores. Because the skin is not alive, these pores absorb moisture when walks are wet; and at high drying temperatures the moisture literally cooks the leather fibres, destroying the lubricating fats with which they were impregnated during the tanning process. Remember this the next time you are tempted to warm wet feet by placing them against, or even too near, a radiator. Uppers that are cooked, so to speak ,in this manner will lose their pliability and develop surface cracks, or may crack entirely through. Soles, although they may show no external evidence of the destruction that has taken place, will wear away abnormally fast. Wet shoes should be removed from the feet as soon as possible, placed on shoe trees or stuffed with dry paper and left at room temperature.

During rainy seasons, leather soles have a tendency to wear faster than ordinarily. Since this is true it is best to protect your shoes with rubbers. In a time like this we should say as long as we can get rubbers. If the rubbers you are wearing need fixing they can be repaired by using adhesive plaster.

Shoe polish should be used sparingly and liquid polishes should be shaken well before application. Clean white shoes often before foreign matter has had a chance to work into the pores and injure the fibers of the leather, causing cracks in the shoes.

A pair of shoes that is used in alternation with another pair will wear much more than twice as long. Life of your shoes is extended twice as long if the correct size is always obtained. Never make it a practice to say, "Same size as before.

Take care of your shoes, treat them as a friend, and you won't have to walk without them.

COTTON PRICES

The Office of Price Adminstration and the War Food Administration have announced a series of steps which will be taken to stabilize the price of cotton. Among other things, their plan provides for sales of Commodity Credit Corporation stocks at a price of 21.38 for Middling 15-16 inch cotton.

Last year, according to the Crop Reporting Board, 23,302,000 acres were planted in cotton, and 32,602,000 acres were harvested. The lint yield of 272.5 pounds per acre harvested is the highest on record. Total cotton production for 1942 was 12,824,000 bales. This exceeded in 1941 crop by 2,080,000 bales. The total cottonseed production in 1942 was 5,720,000 tons.

ON THE AGRICULTURAL FRONT

TEXAS NEGRO 4-H CLUBBERS TO FEED FIGHTING MEN

Washington, D. C.—Reports from Texas which the Department received recently indicate that Negro 4-H Club boys are behind the men behind the guns. In some counties the clubbers have got together and pledged to grow enough food this year or its equivalent to feed themselves, and one fighting man from their county. Take Caldwell county 4-H Club boys, 115 of them have planted Victory Gardens, 63 have started poultry projects, and 219 are collecting scrap metal. Texans are not alone in this fight. Most of the 200,000 Negro 4-H Club boys and girls throughout the 16 Southeren states have special wartime farm projects.

HERE'S THE FARMER'S JOB

The Nation's 6,000,000 farmers, of which 680,000 are colored, are pitching in, trying to produce the largest food corn the world has ever seen.

Here's the job the Food-for-Freedom goals have assigned the American farmers: to produce enough eggs to fill 308,000 stacks of egg cases as high as the Washington monument, to produce enough cattle and calves for slaughter to make a double line around the earth at the equator, and enough milk to fill a row of quart bottles 200 feet wide stretching along the Nation's entire coast lines.

They must also produce enough hogs to fill a train of livestock cars reaching from New York to San Francisco, back to New York, and again to San Francisco, enough peanuts to fill 14,000 railroad tank cars with peanut oil, and enough sheep and lamb for slaughter to keep a man counting, one a second, eight hours a day for 27 months.

FLOWERS OR FOOD?

Many Victory Gardeners are trying to decide between growing flowers and growing vegetables. Well, there is no sure-shot answer Sound judgment must be used by individual gardeners.

However, every gardener should keep this in mind: the need for food is great. Without doubt, vegetables should take first place this year and flowers second. Here's a fair guide: plant vegetables on the richest, sunniest soil and flowers in the shadier and less fertile areas.

SPICES FOR CANNING

In order to meet the increased need for spices for home canners, the War Food Administration has upped the summer quota of cinnamon, allspice, black and white pepper at the manufacturer-wholesaler level Victory Gardeners need have little worry about being able to obtain spices for the summer canning of their surplus fruits and vegetables.

MORE BREAKFAST CEREAL

With many foods rationed, increasingly families are going to turn to breakfast cereals to meet certain nutritional needs. To increase the production of cereals, Food Advisory Committee of the the Breakfast Cereals Industry Food Distribution Administration, meeting in Washington last week, pointed out that three problems must be solved. These are (1) obtaining package cartons (present supplies are almost exhausted,) (2) obtaining additional sugar, and (3) necessary machinery repairs and replacements.

An extensive advertising program has been planned by the cereal industry to inform the public of the nutritive value of cereal foods, and to show how they may be substituted for scarcer fods.

HERE'S HOW TO STRETCH YOUR MEAT COUPONS

You can have 372 pounds of eggs and poultry meat a year, or a pound a day from a flock of 15 hens, together with abont 50 chicks raised chiefly for fryers and for replacement of the layers, Department poultry specialists estimates. The 372 pounds would be made up of 180 dozen eggs, and 80 pounds of dresstd fryers and broilers. When it comes to stretching your meat ration coupons, a backyard flock is just the thing.

POLITICS SEEN IN BRINGING BARCLAY TO UNITED STATES

WASHINGTON, June 16 (ANP)—Was the visit of President Barclay of Liberia a political gesture, planned to bring back into the Democratic fold the fast vanishing Negro vote? Sentiment in the capital runs strongly to that direction, with many being outspoken in their pointing out that the serious defections of the Negro vote from the Democratic party grew out of the failure of the party to sustain Roosevelt's plans for certain improvements in the condition of the Negro generally.

However, with all of these plans blocked by reactionary Dixie autocrats, Roosevelt and the New Deal are forced to suffer the loss of the Negro vote in the pivotal states where often the black vote is the balance of power.

It is noteworthy, as one of the objectors point out, that Mr. Barclay was taken to states where there is a strong Republican machine operating to the detriment of the New Deal; Ohio, which has a Republican governor, senators and representatives who are not "back seat drivers;" from Ohio into Pennsylvania; then into New York and so on, in each of the states where there is a large Negro vote hitherto Republican, but in recent years, Democratic—now wavering between loyalty and disillusionment.

Care was taken to not offend any deeper than possible the feelings of the strong southern bloc of senators who now control the senate.

The Republicans are saying nothign. They are letting the Democrats go ahead with their plans and with further developments.

ETHIOPIAN SOLDIERS TRAINING FOR CRACK AT MUSSOLINI'S MEN

WASHINGTON, June 17 (ANP)—Ethiopian soldiers are being trained to take part in the allied invasion of Italy, a member of Emperor Haile Selassie's cabinet revealed last week.

Yilma Doressa, acting minister of finance and Ethiopia's leading delegate at the United Nations Food conference, told Sec. of State Cordell Hul that Ethiopian soldiers are now training with modern weapons instead of the spears and antiquated rifles with which they tried to defend their country against the Italians in 1936.

"We have offered to take part in the invasion of Italy and hope to have a place in the vanguard of the assault," the 35 year old minister said.

"We feel, too, that Italy should pay us an indemnity for her seizure of our country," Deressa said, "but that will depend upon how others of the united nations feel and also on what is left in Italy, which probably won't be very much."

C. C. SPAULDING SLATED TO TAKE DICKERSON'S PLACE

WASHINGTON, June 17 (ANP)—Current rumors anent the FEPC heard around in the capital have it that the present membership will be retained with the exception of Earl Dickerson, the stormy petrel of the old group. In his place, it is reported, the name of C. C. Spaulding of North Carolina has been proposed to the President and is regarded as being highly acceptable and in line with the new policy to be adopted by the committee.

The discussants of the problem declare that Father Haas has a long record as a concilliator in labor disputes and that this will be the general tone of the FEPC under his direction. The elimination of Earl Dickerson therefore would be necessary to continue along this line, if the various stories floating around the capital may be relied upon.

This leaves Boris Shiskin of the AFL; John Borphy of the CIO and Webster of the Pullman Porter as the nucleus of the new committee. To these, three more members will be named to complete the six man committee. Chief interest has been centered in the Negro members of the group and with the suggestion that Mr. Spaulding be named as the second Negro in the party, speculation is rife as to how the group will function.

Mr. Spaulding's previous efforts have not been in the field of labor, although he has served on some inter-racial groups and has had considerable success in his chosen field of insurance.

No indication of the identity of the two white members remaining to be appointed has been forthcoming.

HOUSTON WOMAN NAMED COMMANDER OF WAAC COMPANY

HOUSTON, TEXAS— Special (ANP)—Third Officer Alma O. Berry, Houston, member of the Women's Auxiliary Corps, has been named company commander of Company 8, Third regiment, here. She succeeds First Officer Charity E. Adams, who had been company commander since its activation last fall.

Third Officer Berry enrolled in the corps as an auxiliary and arrived in Fort Des Moines in September. After the completion of basic training, she entered WAAC administrative specialist school in downtown Des Moines.

Third Officer Berry is the daughter of Mrs. A. G. Hall of Houston.

Before joining the WAAC, she was employed by the Texas Extension service as a home demonstration agent and was engaged in civilian defense work, having supervised county defense organization for quick communication, metal drives, and air raid wardens.

She also gained considerable repute in her home city for her talent as a singer and public speaker. A graduate of Jack Yates High School, Houston, and Tuskegee Institute, Ala., where she received a B. S. degree in 1935, Third Officer Berry also attended summer school at Prairie View College, where she took post graduate work.

Statue: Have you heard about the kids who made a snowman on a side street and put a shovel in his hands? Well, a couple of days later a WPA foreman came along and gave him a check.

VICTORY SUMMER SCHOOL IN SESSION

Florida Normal and Industrial Institute In Full Swing with Constructive Program

St. Augustine, Fla.—(Spl.)—The Victory Summer-Session of Florida Normal and Industrial Institute opened Monday morning with a record breaking enrollment for the first day of registration. Students registering from all parts of the state have come to take advantage of the special session which the administration has organized for the summer.

Special courses in trades, lasting for ten weeks are offered this summer to full time academic students. This special plan is being offered because of the war emergency and crisis, with an effort to prepare as many people to go into the several war industries in which many workers are needed daily.

Teachers taking a limited academic schedule may complete a ten-weeks special course at the same time, thus fitting themselves for service in War Industries. Placement in war plants is virtually assured graduates of the War Production Training Program. Courses are offered in ship building, foundry and blacksmithing, sheetmetal welding and electricity. Women find ready employment in the latter three fields. No additional charges are made for those taking any of the trade courses.

"Let's Keep Old Glory Waving"

Poem By Mrs. L. Johnson, New Orleans, La., Read Before the S. S. Conress in Dallas, Texas

Let's keep Old Glory Waving over the land of the free for the boys in uniform fighting for you and me.

Why not save the dimes you spend, going to see the shows, put them into stamps for bombs to drop on Tokyo.

Gather all the useless scrap and oold pieces of tin, they will help our fighting boys more victories to win.

They are out there marching, tired and weary struggling on. But still they are marching from noon till dark, till dawn. They patrol the skies in airplanes, in ships, they watch the sea, but each and every one of them, is trying to save democracy.

Let's Keep Old Glory Waving and pledge allegiance to the flag of this dear country.

The dear red, white and Blue.

Miss Louise Johnson, II, True Love B. C., St. Bernard, Pa. La.

Read To Be Ready Read To Be Right

Pride and selfishness spoiled Lucifer and wrought his downfall. We are warned in God's word that pride goeth before destruction and a haughty spirit before a fall.

Let us who know these things today heed the words of Christ who said, Follow Me and abide in Me; also said, Whosoever exalteth himself shall be abased, he that humbleth himself shall be exalted.

GUM IN RUG?

To remove chewing gum tracked into the rug, moisten the spot with carbon tetrachloride and loosen gently with some dull implement such as a teaspoon. Repeat until gum is removed.

TEMPERANCE WORK AMONG NEGROES BEING STRESSED

BALTIMORE, June 24—(ANP)—Expressing the viewpoint that efforts looking toward an increase in temperance are increasingly important and necessary in Negro life, Mrs. Viola Sill Whyte, director of Negro work in the Women's Christian Temperance Union, described the union's objectives in an interview this week.

"The ultimate goal of the WCTU in its work among colored people is the same as its goal among white people. We seek to make the world a better place to live in, to increase and maintain the security and happiness belonging to each home and to secure for each child his inalienable rights," Mrs. Hill said.

Mrs. Whyte has headed this bureau for a considerable period. Her sister, Mrs. Esther Isaacs of Los Angeles and Chicago, is a lecturer and organizer under the auspices of the union. Another sister, Mrs. Ida Hopewell of Chicago, has also been active in the work. These young women come from a famous Baltimore family which has given the race a number of clergymen and teachers. Their mother, Mrs. Margaret Peck Hill, a policewoman here, the first colored person to receive such an appointment, has been state president of the Maryland No. 2 WTCU for a number of years.

"Never before in the history of the United States have we had greater need of sober thinking," said Mrs. Whyte. "Thousands of homes where the men have gone to war leaving the wife and children—children only partly protected because of those mothers have gone into industry—need our constant supervision to offset delinquency.

"Due to crowded living conditions in urban centers, disease and delinquency have increased. This is true in spite of a more enlightened community, superior schools, a more practical church and countless child welfare agencies and departments," she continued. "Recently in making an investigation I discovered a child of 10 years who frequently imbided 'Mr. Boston Gin' or 'Old Rocking Chair Whiskey' or 'R. W. L. Wine', because 'all of the men in our house drink and leave the bottles for us children to take away.' The child, a girl said, 'I started by tasting the drops left in the bottles and glasses and now I like it so much, I ask them to give me some when they have it and they do. They think it funny because I can hold so much.'

"Frequently, too," Mrs. Whyte said, "the drive to appear well is a controlling motive to engage in illicit sex 'affairs', this to procure the necessary money for clothing or the beautician. Such simple, 'taken for granted things' as velvet hair bows, pretty socks, a trench coat or just an attractive pin or ring are the things many girls may trade character for. It is in these fields that the WTCU seeks to work.

"The National Women's Christian Temperance Union as it functions among members of my racial group aims to select the department most reasonably workable in a given community. Generally these are health and child welfare, citizenship or soldiers and sailors.

"Do we want America to win the war? We must remember that liquor and the legalized liquor traffic imperil hope for early victory. Scientific findings, social experience, and industrial evidence all prove that beverage alcohol in its manufacture and sale wastes manpower, destroys food and materials, costs millions, increases crime, causes accidents, delays production, promotes prostitution and disease, ruins recreation and jeopardized victory."

"Everything comes to him, who waits,

Mr. W. Anthony

(Continued from Page 1)

office in Washington to accept the position here.

It was further announced that applidations are being studied from which three additional teachers are to be selected.

Monday Registration

Registration for the course begins Monday, June 14, at 9 a. m., at which time prospective students may enroll. Classes are open to persons who are not now enrolled as students in school, and who are at least 1 years of age. High school graduation is not a requirement. The entire week of June 14, from Monday through Friday, June 18 has been set aside for the first registration period. After which anyone desiring to enter the course may enroll any subsequent Monday. For additional information write President Wm. H. Gray, Jr., Director, War Production Training Program, Florida Nomal and Industrial Institute, St. Augustine, Fla.

HELPFUL HOUSEHOLD HINTS

HOME 'WAR' WEAPONS CHANGE——BUT THERE'LL ALWAYS BE A MOP

WASHINGTON, Feb. 7—(UP)—As the American housewife wages her own private battle on the homefront with dirt and dust, she is finding that her 'weapons" are undergoing many changes, a War Production Board report revealed tonight.

No more dustpans the WPB says—at least, no more metal ones. Something new in the way of paper board and molded fiber dust pans, will find its way to most kitchens soon, the report added.

Grandma used a wooden scrub bucket—and the modern housewife will soon be doing just as grandma did, for no more metal ones will be manufactured for the general public. Pails, buckets and tubs have been enrolled 100 per cent in a new bucket brigade—as receptacles for oily rags, for mixing explosive in munitions plants, for containing cement or rivets on construction projects.

There's probably enough soap for practical purposes, the WPB said. It advised making soap at home. Making soap is a messy job, and besides, the waste fats can be turned to better purposes by being given over to the fat salvage campaign where they'll be used for making explosives, the WPB noted.

Dishpan hands are not yet in view for the housewife, for water softener has not yet been taken off the market, the WPB reported. Only household ammonia is short. The family silver can still be polished, too for metal polishes are being produced as freely as ever.

But the soiled pots and pans are presenting a real problem. Before the war steel wool was the housewife's standby when she forgot to watch the dinner and it burned in the pot. Steel wool could be always depended upon to remove the marks of scorching, but steel wool no longer is being manufactured. Instead scouring powders and elbow grease have come into play.

Sponges, kneeling mats, rubber gloves, window squeegees—all have vanished with the war effort the WPB said. And brushes now will be of horsehair, not of Chinese hog bristles.

There'll be no more vacuum cleaners—not carpet sweepers or carpet beaters. Back again to grandma's broom the housewife must go. A good trick to remember when sweeping the carpet is to scatter little bits of moistered paper on it first, the WPB recalls helpfully.

Brooms still will be available, but there'll not be so much shiny lacquer on the handles and wire will be reduced from two pounds to half a pound.

There'll still be mops—but the housewife will take extra care when she uses them on her linoleum. Linoleum production has been slowed down considerably, the WPB said, because some of its inredients has to be imported.

DR. C. H. BROWN THRILLS THRONG IN ELOQUENT ADDRESS

NEW YORK, June 24—(ANP) In an address which struck a responsive chord in the hearts of the 20,000 persons who heard her in Madison Square garden at the Freedom rally two Mondays ago and which one hears frequently in gatherings still, Dr. Charlotte Hawkins Brown, principal of Palmer Memorial Institute, and noted club woman, extolled Negro womanhood.

"Until the Negro women on the lowest rung of the ladder economically and socially are unshackled from fear, are unfettered in their attempt to breathe in an atmosphere of freedom, all Negro women are slaves," Mrs. Brown declared.

"Until that Negro woman in certain sections of the country dares to call her soul her own, we are all thwarted by the pernicious influence of segregation, injustice and unjust discrimination. Until the Negro woman in Mississippi can be freed from the fear of 'mob law', the Negro woman in New York, the Negro woman in Boston, the Negro woman in Chicago, the Negro woman in San Francisco, is not safe.

"Until that woman in the cane fields of Louisiana and the everglades of Florida is paid a living wage and given a decent place in which to live, the economic level of every Negro woman in America is lowered. Until that Negro woman's children in Alabama, Virginia and North Carolina are given a chance to develop skills to be educated according as the laws of the state provide for all children, the children of all the Negro women in the country are threatened with loss of opportunity to pursue their highest aims.

"When Abraham Lincoln dipped his immortal pen in the blood of the martyrs of the Civil War, he freed only the man portion of our group, for slavery had placed a ban upon Negro women that only her righteous hand could lift.

"Bowed under the yoke of slavery for 250 years, the unwilling mistresses of her overlords, in these 75 years or more since freedom, she has been tramping, tramping through the hinterlands of sorrow and despair.

"The Negro woman through the years and today is the burden bearer of the race. Her boys in Tunisia, her boys in Australia, her boys upon the high seas, in the camps and cantonments of this country suffering all kinds of injustices and inconveniences, are her children, have been nursed from her bosom, have been rocked in the cradle of her love. No wonder that far and near comes the cry, 'I would rather my children would die unborn than be sacrificed upon the altar of prejudice and hatred to preserve white supremacy'—that existing state of affairs which is making the word freedom mockery—that life and death struggle to continue to deny rights to men and women whose skin is black.

"No other woman has ever been called upon to bear what the Negrom woman has borne, for added to the struggle of womanhood as a whole to gain recognition in the affairs of state in America, the Negro woman has had the extra handicap of color, prejudice, discrimination all along the line plus lack of respect for her personality.

"I love America with all her faults. I am conscious that America has given us a chance to prepare for the exercise of the very high rights she now denies us. America has led us to the portals of freedom and refused to unlock the door.

"But freedom has never been given to any people. Freedom is a fighting word and if the Negro is ever to come into his own in this country, he must be united in the efforts to obtain that freedom which the constitution of the United States sets forth as the foundation of American democracy.

"There must be no two schools of thought so far as the Negro's freedom is concerned. There must be no east, no west, no north, no south. We must be as one Negro moved by the suffering of all Negroes; one Negro willing to lay down his very life that from the ground there shall blossom red—freedom that shall endless be."

SAVING GAS

Keep gas consumption low by starting boiled foods tc cooking quickly, then reduce heat, after boiling begins. Also use only as much water, as is actually needed.

SOUTHERN FRONTIER

(Continued from Page 1)

and special emphasis was placed on year-round gardens.

In 1940 the farmers tightened up their activities by organizing a community group. Robert Mitchner was elected as leader. The effect was electric. Right after Pearl Harbor. Mr. Mitchner called the group together and asked them to do something for the Government. Enthusiasm ran high. Some of the FSA borrowers wanted to raise potatoes, beans, onions, okra, tomatoes and other vegetables and send them direct to the Army as an outright gift.

They Raise Food For Victory

When it was pointed out that it couldn't be done just that way, they agreed .to raise all the stuff possible, sell it and buy War Bonds and Stamps with the proceeds. They have been doing this right along.

Furthermore, to show Hitler and his pals they meant business, these Farm Security borrowers laid plans early in the year, divided the section up into groups of four, with a leader foreach unit whose job was to see that the gardens were growing the right kind of vegetables.

In July, 1942, under Bob Mitchner's leadership, these Randolph County farmers put on a fair to display their garden products and canned goods. It impressed all who saw it. On exhibit was everything that will grow in that county, including beet seed, all kinds of canned fruits and vegetables and many varieties of meats. More than 15,000 quarts of food were on display.

Here's what Chief of Police Gormley of Cuthbert, Georgia, says about this community:

"We do not have any more trouble up here in Punkintown. This is one of the most law abiding groups in the county. These people have come from the bottom and they are steadily working their way upward. I might add that they work co-operatively up there, too.

"If one has a planter and another a guano distributor they swap the use of these implements. If one has plenty of peaches in the spring he shares with his neighbors, and in turn his neighbors may give him pears in the fall. In fact, the spirit of cooperative brotherhood is alive in this community."

The progress of this Georgia group is no exception. Recent production summaries reveal that a total of 4,624 Negro farm families in Arkansas alone are enjoying far better living conditions and increased incomes as a result of aid extended them by FSA. At the same time they are adding vital "ammunition" to the Nation's food arsenal.

They Become Owners

Of the 4,624 families, 3,619 live on farms scattered over the State; 801 reside on community farming projects, and 204 families live on farms they are buying with Farm Security loans under the Bankhead-Jones Farm Tenant Act. These families have stepped up their food production for home use a full 91 per cent; their net worth has increased for the average family from $307 to $407; their average income has nearly doubled from $308 to $523 per family and their cash income has increased from $186 to $253.

Not only in Arkansas but in every State the FSA emphasizes diversified farming practices to eliminate the social and economic hazard of one-crop farming. With credit for livestock and equipment plus on-the-farm education the families can gear their home and farm to war production needs. To strengthen this kind of a farming program, the FSA encourages long-term lease, cooperative services in buying farm machinery, equipment and livestock, and a broad health program which in many counties brings hospitalization and medical care within reach of the family's pocketbook.

They Raise Victory Pigs

One patriotic feature that caught on well among FSA borrowers in Florida was the Victory Pig Campaign. Many a small farmer pledged himself to choose a likely looking youngster from a new litter of pigs and name him "Vic" for Victory. "Vic" was given special care and plenty of feed and in the fall was sold at public auction or sent to market along with other porkers. Besides contributing food for war needs, Lend Lease, and civilians, the pigs brought their owners additional income which was converted into War Bonds and Stamps.

As an example, 47 Negro FSA farmers of Jefferson County, Fla., agreed to raise a pig apiece for the victory auction. When the sale closed, it was found that the 47 farmers had purchased $417.71 worth of War Bonds and Stamps with the money their pigs brought, upping the total auction sales to $12,000.

How seriously some of the FSA farmers take this matter of raising food for our fighting sons of freedom is indicated by a story the FSA supervisor tells about Mr. and Mrs. Jim Williams of Randolph County, Georgia.

This aged Negro couple wanted to contribute to what they called the "Food-for-Soldiers" Campaign. They raised 39 chickens in their brooder to frying size and Mrs. Williams sent her husband to town with the fryers.

The Purchasing and Marketing Association sold them at a good price to the hotel and boarding house in Cuthbert, and a neat profit was deposited in the bank to the account of the couple.

When Mrs. Williams heard what had happened, she was upset.

"I raised those chickens for the soldiers to eat," she declared, "and I don't like the idea of those town people eating the soldiers' chickens. I wouldn't even let Jim eat one of them."

When the FSA supervisor assured her that the soldiers would get all the rest of the chickens she raised, she seemed pleased.

"Price don't matter, so long as the soldiers eat my chickens," she said.

Women Work For Victory

Women like Mrs. Ida P. Lowe of the Bethel Community in Guilford County, North Carolina, are doing yeoman service on the home front. Mrs. Lowe, a 56-year-old widow has enlisted her FSA 103-acre farm to produce more food for the war effort as well as a good living for the family. A son, 19, and a daughter, 20, and two younger girls supply their mother with all the help she needs. Recently she bought 100 baby chicks to raise for market.

Farm Security wives and mothers are baking their own bread, churning their own butter, sewing, mending, planning and cooking healthful meals, saving kitchen grease for high explosives besides doing a thousand and one other chores on the farm.

In Gaston County, North Carolina, when six FSA farm ownership borrowers and their wives held a group meeting at the home of Mr. and Mrs. Clarence L. Duncan to discuss plans for bigger and better war food production in 1943, it was discovered that they were making a major contribution to the war on both the food front and the military front.

The six families have a total of 32 children. Of this number, five sons and two daughters are in the military forces. One of the girls is a member of the WAACs and the other is an Army nurse. Two of the boys are in the North African campaign, one in Alaska, one in Australia and one in the Army Air Force.

The farm families made plans for large increase in poultry flocks, dairy and hog production, for soil building, permanent legumes, annual winter legumes, orchards, truck crops and canning.

Farmers Repay Loans

In spite of near failure in cotton last year, they are from 15 to 20 per cent ahead of schedule in loan repayments. Each family received FSA certificates of merit for meeting their 1942 food production goals and all agreed that FSA's Farm Ownership program was the best thing that had ever come their way.

The first Negro farm ownership borrower to pay for his farm under the Bank-head-Jones Farm Tenant Act was Roddie Pridgett of Rankin County, Mississippi. The father of nine children, he and his wife had 40 years to pay off their FSA Loan. Instead they completed payment in little more than four years.

Mrs. Pridgett helped with the budget by selling milk and eggs. Last year her egg sales averaged 20 dozen a week. She also canned 600 quarts of fruits and vegetables with her new pressure cooker. Farmer Pridgett and his boys stowed away 250 gallons of cane syrup, a large quantity of potatoes and killed seven hogs for meat. Point rationing doesn't mean a thing on this farm. This year they have already made plans to increase their production of food, and are putting in some extra acres to soybeans and peanuts to help overcome the vegetable oil shortage caused by Axis aggression in the Far East.

The Pridgetts have nine head of dairy stock, 150 chickens, two teams of work-stock, a wagon and other farm equipment. They are out of debt, have money in the bank for this year's farming operations, and once in a while they like to go in their bureau drawer, get out their War Bonds—their share in America—and look them over.

Folks like the Pridgetts and the more than 60,000 other Negro FSA borrowers who have received financial assistance and technical guidance during the past eight years are returning huge dividends to the Nation in the form of war-vital food and fiber.

They Have A Stake In Democracy

America gave them a stake in democracy and now they are able to help this Nation win the greatest fight in its history.

The 463,941 little farmers—white and colored—constitute only 7.6 per cent of the 6,097,000 farm operators, yet they increased their milk output by 1,419,000,000 pounds. This is more than a third of the Nation's total 1942 milk increase and represents a 20 per cent increase of FSA farmer's output over their 1941 production, compared with a three per cent increase by all farmers.

Farm Security borrowers increased supplies of other war-needed crops from 20 to 106 per cent over their 1941 production. In terms of national increases, they accounted for 27 per cent of the total increase in dry beans, 10 per cent of the total increase in eggs, chickens and peanuts, and 9 per cent of the pork increase.

Out in Missouri, near New Madrid, the LaForge Cooperative Association operating a 6,705-acre FSA project bought $1,500 worth of War Bonds after distributing a $5,774 dividend to its 40 Negro and 61 white members. Both Negro and white members serve on all committees, and the Association operates a store, cotton gin, blacksmith shop, tire service, marketing and certified seed services.

Twist Leasing Cooperative Association, an FSA project in Arkansas for Negroes, had a banner crop year in 1942. The 271 families, cultivating 10,104 acres, put up an average of 98 quarts of fruits and vegetables per person. Sixty-five per cent of all families have sufficient dried peas and beans for home use, they have killed an average of three hogs per family and slaughtered 52 beeves for home use.

Twenty-nine boys from Twist are in the Armed Forces and a total of $9,000 in War Bonds has been purchased.

Yes, the little farmers are digging in for victory, and with their help the Nation has a powerful ally in its fight for Freedom.

In this war there is no fine rapture of conviction, no high vision of achievement. From time to time government officials have sent up trial balloons of inspirational oratory. But not one of their carefull tailored phrases has been able to rise from the earth or lift our vision.—**Rev. Paul A. Wolfe,** at the 175th anniversary of New York's Brick Presbyterian Church.

BARNETT'S ADVICE

(Continued from Page 1)

vegetable seeds are on sale can be relied on for a lot of useful advice," Mr. Barnett says. "Your teacher, especially your vocational agriculture or home economics teacher can give you all the pointers. It requires work to grow a successful garden but there is something about the thrill which comes from watching little green plants shoot up in the spring and then grow into real food to eat, that makes whatever toil put into it seem small by comparison.

"Growing gardens is always a good thing for young people to do, but this year when there is such a crying, wartime need for food, it has a lot of practical value. We must have food to support our soldiers and to help feed the millions of people in the countries who are fighting with us to win the war but who cannot grow gardens themselves because the war is in their countries."

Concluding his statement, Mr. Barnett said, "Last year colored farmers throughout the entire South had a banner year in planting Victory Gardens. This year we hope the folk in the cities and small towns will join the band and that everywhere young and old will have fine gardens full of health-giving vegetables and fruit. The possibilities of raising poultry and livestock should also be looked into. In these days of rationing, they can pay big returns."

FOOD PRODUCTION

(Continued from Page 1.)

know that we in the Department of Agriculture are proud of the excellent job that Negro farmers are doing in the production of food and fibers for the war."

Pointing to the progress Negro farm families have made in growing their own food at home, the director said that eight out of 10 Negro farmers have gardens and poultry, seven out of 10 have workstock, six out of 10 have hogs and five out of 10 have milk cows. "By growing their own food at home," he said, "Negro farmers are easing the load on our transportation system, and relieving truck and livestock farmers who are short-handed; their surpluses of home food will go to our armed forces, our war workers and our allies."

He stated that food is not only being sent to England and Russia, but also to North Africa. During the first four months after the landing of our troops in North Africa, we shipped 126,000 tons of food, clothing, medicine and other necessities to the native population.

The director told the council that when the war is over we must try to shut out of our lives forever the twin spectres of fear and want. He praised the council and its 25,000 member churches for the part they have played in helping to keep Negro farmers abreast of vital wartime agricultural information.

TOMORROW MAY BE TOO LATE

How often the expression is heard today. "Be careful! You can't replace it." That warning has been applied to everything from pins to tractors. Never was the American public so waste conscious. Yet, in one vital respect it is still far too careless. That respect is fire Millions of dollars worth of property and thousands of lives are lost annually by preventable fires.

It is an ironical fact that the man who cares for his car like an only child, will very often not hesitate to leave that car in a garage alive with fire hazards. And the housewife who guards with similar diligence the welfare of the electric range or refrigerator, will blithely disregard the commonest fire hazards such as frayed wiring, trash in the attic, open fireplaces and carelessly strewn matches.

Fire can wipe out a home and every "irreplaceable" object in it in a matter of minutes. Some of those irreplaceable objects may be human lives. Of the 10,000 persons who were burned to death in the United States in 1941 two-thirds perished in homes.

COCOA-COLORED DOROTHY NOW CHOPPING CHOPIN INTO CHAOS

Belle of the Boogie-Woogie Piano Players Travels Tough Road From Saloon to Salon

By Eddie Ellis

CHICAGO, May 1—(UP)—A railroad cook's daughter crouched at a piano in staid Orchestra Hall tonight in a gown created for her by Moni and played havoc with the classics. With nail-bitten fingers she dragged Chopin through a Bogie-Woogie swamp and emerged as Dorothy Donegan, new High Priestess of the Key-board.

Obscured by 2,400 of Chicago's elite sat her brother, Leon, 17, who tagged protectingly after her when first she began swinging it in live dives only four years ago. Faithful Leon has seen his sister rise from saloon to salon: her success is his reward.

Strictly Legitimate

Cocoa-colored Dorothy Donegan, 19, opened her concert with music "strictly legitimate," as she calls it. Her fingers, capable of spanning three keys in casual abandon. They filled the hall with honeyed harmonies.

Clump! The sound punctured her playing. It was her right heel socking the floor. That heel began beating a dervish tattoo. Dorothy crouched lower, her eyes bulged shut, her lips curled into a leer, and she began chopping Chopin into chaos.

Four beats measure she thmuped that trip-hammer heel. Then eight to the measure, almost faster than the eye. Her face grew horrible with grimaces. With heavy lips she ponted, whined, whimpered, wineed, twitched, puckered, panted, moaned, and the chaos merged into jungle rhythms with Chopin visible through the undergrowth.

"I can't h elp my face," she says. "Yes I suppose it's good showmanship, but I do it even when I'm practicing at home."

She has worn out of two pianos in her southside home Although she is playing six hours a night at a Loop cocktail lounge, she sometimes practices an additional five hours a day When the lounge closes in the wee hours she continues to sit at the keyboard, improvising, improvising, improvising.

Orchestra leaders scurry over to the darkened club and worship at her 88-keyed shrine. She never plays the same thing twice the same way. She never plays anything but sheer Donegan, for although she may begin a familiar theme she soon weaves her own swamp ecstacy around it.

"I compose," she says simply, "every time I play."

This is the young Negro girl who at three was picking out tunes on her aunt's restaurant piano in St. Louis, whose first piano lesson was "Jesus, Lover of My Soul," She has taken only seven years of tutoring, all in the classic. She has played in only eight clubs never far from Chicago.

But now she is known beyond her home. Now there are concert offers, movie contracts, records to be waxed.

Success to Dorothy Donegan means this: "A saleslady in a music store," she said softly, "told me that Marian Anderson bought one of my hottest records."

Brother Leon will stay home now. He won't be needed the places Dorothy Donegan is going.

SPLENDID CONTRIBUTION RECOGNIZED

The Officer of Price Administration has issued a public statement thanking the thousands of newspapers in the United States for the millions of dollars worth of space they donated to the government in repeated publication of the voluminous data regarding War Ration Book No. 2. This was aud incalcuable saving to the government in money and man hours, and a great convenience to the public.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., JULY 15, 1943 No. 6.

Mississippi First State To Place Negroes On AAA Staff

MR. WILLIE AMMONS COUNTY AGENT NAMED

With the announcement last week of the appointment of Willie E. Ammons, Negro county agent, to the state staff of the Agricultural Adjustment Agency, Mississippi became the first state to name a Negro to an AAA post.

Mr. Ammons, who will have an office in Jackson with M. M. Hubert, Negro State Extension agent, will work under direction of state AAA committee, according to T. M. Patterson, State AAA administrator. His work will entail assisting Negro farmers in using the AAA program to improve their farms, make a better living, and reach the war crop goals.

In discussing Mr. Ammons' appointment, Dr. F. D. Patterson, and Claude A. Barnett, special assistants to the Secretary of Agriculture who have been advising with State AAA administrators as to the importance of having Negroes on their staffs, point out that it is a major step toward helping Negro farmers of Mississippi make their full contribution to this year's vital wartime food production.

The need for Negro AAA personnel on the state level was brought out recently in a study made by Tuskegee which reveals that Negro farmers lack adequate information on the AAA program. Few of those in the areas studied were doing as many units of soil conservation work as their white neighbors. Three factors are believed to have contributed to this. (1) lack of information, (2) fewer Negroes owned their farms, and (3) Negro farmers generally lived farther from good roads, thus heavy terracing machinery could not get to many of their farms.

Mr. Ammons, a graduate of Alcorn A. & M. college, is said to be well qualified by training and experience to do an excellent job of assisting Negro farmers in developing and carrying out sound soil conservation practices as well as in helping them to participate more fully in all phases of the AAA program. In order to reach the 159,000 Negro farmers in the state, he will organize instructional materials on the AAA program, and will also develop wide contacts with Negro

STRENGTHEN ISLAND TERRITORIES

How many persons know that the island of Puerto Rico, a guardian for the Panama Canal and our eastern seacoast, is a territory of the United States, represented in Congress by Hon. Bolivar Pagan, resident commissioner for Puerto Rico? Our far flung outposts should loom larger in the minds of all of us since our experience on Attu.

Commissioner Pagan has spoken before our House of Representatives urging a study of the political, economic and social conditions in Puerto Rico. He says it would be helpful to Congress and to the Puerto Rican and continental American people.

This is no time to neglect our territories or to countenance political policies therein contrary to the best interests of our republic. Instead, every endeavor should be made to develop such territories and help them become states in our Union

WAR PROGRAM OVER NET-WORK

Negro 4-H Clubbers Explained Their Program

Two Negro 4-H clubbers, who are raising 1,400 chickens for our fighting men, described the wartime program of farm youth in a nation-wide broadcast Saturday, June 5, 12:30 p. m. (EWT) on the Blue Network's National Farm and Home Hour, according to an announcement made by the U. S. Department of Agriculture.

WAR FOOD CHIEF NAMED ON PROGRAM

Francis A. Flood Spoke In Cincinnati

Francis A. Flood, assistant to the War Food Administrator, addressed the thirty-eighth annual convention of the National Sunday School and Baptist Training Union Congress, Friday, June 25. The meeting was held in Cincinnati, Ohio, June 21-27.

Mr. Flood discussed wartime food production in America and in England. He also pointed out how England has handled her manpower shortage and her rationing problems.

COMMITTEE TO AID NEGRO FARMERS

Chester C. Davis Announces Appointment

Chester C. Davis, War Food Administrator, has announced the appointment of a committee to handle projects for improving WFA's services to Negro farmers in the interest of increased food production. Members of the committee are J. S. Russell, assistant to the administrator, chairman; I. W. Duggan, director of the Southern Division of the Agricultural Adjustment Agency; and M. L. Wilson, director of Ex-

JAMAICANS ARRIVE TO HELP WITH CROPS

Lt. Col. J. L. Taylor Issues Statement

Washington, D. C., May 24, 1943—Lt. Col. J. L. Taylor, deputy War Food Administrator in charge of farm labor, issued the following statement last week.

"I have received a report on the arrival of the first Jamacians in the United States for farm work in northern and eastern states where there are acute shortages of workers needed to cultivate and harvest war-vital crops.

"The workers were brought from Jamaica in two ships and were landed at a Gulf Coast port. The smaller of the two ships carried about 400 Jamaican workers. The voyage of this vessel was without incident and, after landing, the workers on board entrained for New Jersey where they will be employed in fields growing truck crops.

"The larger ship had on board about 4,000 Jamaican workers. The vessel was crowded and due to the unfamiliarity of passengers with shipboard routine, considerable inconvenience was occasioned. The sanitation system was overtaxed and difficulties were encountered in attempting to make equitable distribution of food and water. Under the stress of this situation, some of the laborers caused a disturbance. During the voyage one of the workers accidentally fell overboard and was lost at sea. The Jamaican workers are now comfortably sheltered in a government operated camp where they remain pending their placement on farms needing their assistance, which is now proceeding."

BAHAMAN WORKERS

Bahaman workers, brought here several weeks ago by the War Food Administration of the U. S. Department of Agriculture, are playing an important part in helping to save a 30,000 acre wartime bean crop in Florida. Coming here under an agreement drawn up between the United States and the Bahaman Government, the 2,000 workers are guaranteed a minimum wage of 30 cents an hour, government approved housing, subsistence for days when not employed, and protection against war-job discrimination accorded by Executive Order No. 8802. The Duke of Windsor plans coming to Florida to see the Bahamans at work. No. 1, shows a newly arrived worker being given a medical examination by a U. S. Customs doctor; No. 2, part of the huge bean crop; No. 3, a Bahaman woman is shown gathering beans, pickers are shown in the background; No. 4, Camp Pahokee, Fla., one of three camps where the workers are sheltered; and No. 5, Miss Sara Bryant, assistant camp cook.

THE DOCTOR GOES ALOFT

A few years ago the dreams of men proposed four-hundred-mile an hour combat planes which functioned efficiently at 40,000 feet, would have been scoffed at as impossible. Even if the planes were devised capable of such performance, what of the human element? It was thought no person could stand the strain. No person could, then. But medical science managed to keep abreast of aircraft development. Planes and men fight today in the stratosphere at earsplitting speed. They fight at altitudes where the air is so rare exposure means death in a matter of seconds.

It was recently pointed out in Hygeia that, "An airman—this applies to men on the ground staff as much as to flying crews—who is obviously suffering from strain finds in the medical officer a personal friend anxious to assist him in every respect. The doctor usually knows most of the flying men of his squadron by name. By studying their records, documents and flying logs, he can always keep himself informed of their progress."

SUGAR FOR CANNING

A home canner may get up to 10 pounds of sugar for each person in her family but using stamps in War Ration Book 1 designated for that purpose. If that isn't enough she may apply to her local War Price and Ration Board and get coupons which will allow her to buy up to 15 pounds per member of her family in addition to the 10 pounds already received.

WOMAN'S PAGE

YOU'RE CHAIRMAN OF THE CHURCH SUPPER—AND YOU DON'T KNOW WHAT TO SERVE!

Miss Wilson Delves Into History, Comes Up With 'Hush Puppies'

By Mary Lyles Wilson

"What can I serve at the church supper next week? It is my time to plan and buy and I do not know which way to start."

This is the way nearly anyone responsible for a large crowd might feel—now more than ever, when we all are faced with the problems of food shortages and rationing points. On top of it all we still try to have what we think people want.

Cheer up, it is not as bad as it seems. The rationing boards have tried to take care of worth-while needs and they recognize church or school gatherings as such. You have coffee, sugar and your points for canned goods but careful planning is necessary to make them go.

Some one has cleverly said that today we are all shopping, cooking and serving food in the fashion of modern primitives. We get what we all are faced with the problems serve less of this and more of that. We are feeding our families less meat; we are discovering there are more ways to prepare filet of sole than filet mignon.

We are learning to be versatile and quickly plan a meal either for a family of four or a group of 50 at the meat market in collaboration with the butcher, the dairyman and the grocer. Life may be a little difficult but it's far from dull!

With meat sundries such as oxtail, kidney, brains, sweetbreads, liver, etc., still on the free list we're bringing grandma's oxtail ragout and kidney pie up to date.

Menu For Eighty

So go about planning that church supper with renewed energy and interest.

Let me give you a supper menu we served recently for a group of 80. Since there were special guests we served in a little more style than usual church affairs necessitate.

Grapefruit and avocado Salad
Crackers
Baked Sliced Chicken
New Potatoes—Parsley Sauce
Cauliflower, Surrounded by Sliced Beets
Rolls, Buttered
Jam Cake—Soft Custard Sauce

None of this food is scarce or rationed and all of it is popular as well as healthful. The jam cake may be purchased at the bakery or made at home with all or part syrup or honey.

You are probably thinking that soon all fats as well as cheese and meats will be rationed. There are many ways of stretching the supply available of all of these foods.

What could be better than hot bread and gravy? Think of all that good chicken fat and stock. Don't just think about it, use it. Pass bowls of hot gravy with your bread. Chicken fat combined with lemon juice makes a delicious sauce for vegetables. Save your fats and butter for other uses.

If you are planning chicken maybe you would like to know how much to buy. Many are the calls that come to me concerning quantities for large groups. Choose foods that can be served generously rather than scarce ones that require skimpy servings. Sliced chicken for 25 generous servings will require about 10 pounds, 50 servings, 20 pounds, and so on.

If you are looking for something different how about a fried fish supper. Fish is non-rationed, healthful and not too high in prices. Save your bacon drippings and add a little fat and you are off to a good start for a real treat. A man's meal, but you can count on every one enjoying it.

Fish Fry Supper

Deep fried fish (one pound for three or four servings)
Hush puppies
Fresh vegetable salad
(Tomatoes, lettuce, celery, cabbage) French dressing
Lemon or chess pies
Tea or coffee.

Have you ever heard of or tasted hush puppies? Whole ground corn meal is one of the most popular of the whole grain cereals in the United States. From way down in Georgia comes this old, old recipe for bread, serving 12.

Hush Puppies

3 cups cornmeal
6 teaspoons baking powder
1 1-2 teaspoon salt
2 medium size onions
3 eggs
3-4 cups milk or water

Combine dry ingredients and minced onions, add beaten eggs. Mix well, add liquid, mold into round or oblong shape. Drop in hot grease (same as fish is fried in) until deep brown. Serve immediately. No butter needed.

Fresh vegetable salad requirements for 25—2 heads lettuce, 2 heads green cabbage, 3 large bunches celery, 8-10 tomatoes, about 1 pint French dressing (made with vinegar from sweet pickle annd salad oil), 3 or 4 chopped sweet pickles makes a nice addition. For services of 50 double everything except French dressing. Add about one-half pint extra.

There are innumerable ways of stretching meats, in stews, pies, in combination with other foods such as potatoes, macaroni, noodles, rice, tapioca, biscuit or pie dough. After meat rationing starts my guess is that we will have more meat available and a larger selection.

We will have more about meat later. Write me if you need help in any of your plans. I will be delighted to assist you in any way I can.

SAVE PAINT BRUSHES

Paint brushes, old or new, need coddling for the duration. Clean them thoroughly with turpentine immediately after using them. Then suspend brushes in a jar containing linseed oil and turpentine. The oil keeps the bristles soft, suspending the brushes prevents bending.

POTATO DUMPLINGS MAKE NOURISHING MAIN DISH

Here's a suggestion for a nourishing main dish that will help you on days when you have little choice of meats. A small amount of ham or salt pork in the center of dumplings is sufficient to give them a delicious flavor. Serve them with melted butter or margarine, slightly browned, and poured over the top, or accompany them with white sauce or left-over gravy.

Potato Dumplings

1 1-2 quarts mashed potatoes
1 1-2 cups sifted flour
1 tablespoon salt
2 eggs
3-4 pounds ham or salt pork (1 cup)
1 tablespoon chopped onion
1-4 teaspoon pepper

Boil potatoes, mash and cool. Add the eggs, sifted flour and salt. Reserve a small amount of this flour for rolling out. (The amount of flour used varies with moisture in mashed potatoes.) Mixture should be stiff enough to keep shape and handle easily. Form into small cakes.

Cut the ham or salt pork in small pieces. Saute with the onion in a small amount of fat until the meat is lightly browned and the onion transparent. Add pepper. Put a spoonful of the mixture in the center of each cake and press edges of cake together to form a ball. Drop gently into boiling, salted water and cook slowly until they rise to the top of the water. This will take about ten minutes. Serve on a heated platter with melted butter or margarine poured over them, or with white sauce or leftover gravy.

LEMON FLAVORS DRESSING FOR TASTY VEGETABLES

A certain amount of vitamin loss in vegetable cookery is unavoidable but such loss may in some degree be replaced with sauces and dressings. For example, lemon juice is a good source of vitamin C and also contains some A and B vitamins. Beside adding more of these vitamins to a vegetable dish, it brings out the garden-fresh flavor and often enhances the color of the vegetable.

There are other cooking secrets for bringing out the best in vegetables and they are: (1) Put vegetables in the the refrigerator as soon after buying as possible. Wash but don't soak them in water. (2) Cook vegetables in as little water as possible, and only until crisply tender. (3) Serve at once because vitamins are destroyed in long standing. (4) Season with care and make sure that they come to the table in their original shapes and cooked to retain their bright colors.

Here's a suggestion you may want to try the next time you serve spinach. You will enjoy the same seasoning with other greens, too.

.... Lemon Spinach.. .. ...

Clean thoroughly two pounds of fresh spinach. Place in a kettle without water other than that which clings to the leaves after washing. Add one-fourth cup cooking oil, one and one-half teaspoons salt. Mix thoroughly and cook for eight to ten minutes. Stir or lift the spinach occasionally while cooking. Drain annd chop, then add two tablespoons lemon juice. Toss lightly to blend. Serve with lemon quarters as a garnish and to provide additional seasoning for those who like a more tart flavor.

Mustard Hollandaise

Another delicious sauce that can be served with hot beets, cauliflower, broccoli, spinach or kale, is one that is made in a jiffy. Avoid overcooking as the sauce may curdle.

1-2 cup mayonnaise
1-8 teaspoon salt
1 tablespoon prepared mustard
1-4 cup milk

Combine the mayonnaise, salt and mustard in the top of a double boiler. Add the milk gradually, stirring after each addition until smooth. Cook over boiling water for five minutes, stirring constantly. Avoid over-cooking or sauce will curdle. Serve at once over vegetables— especially good with broccoli, spinach, kale, cauliflower and hot beets.

SPARE THE CLEANERS

Drycleaners are asking us to cut down on non-essential cleaning, to allow them to handle the increased burden of factory clothes and uniforms adequately. This does not mean our everyday go-to-work garments but rather the fragile, dressy items which require delicate processing. However, don't hesitate to send out essential clothes. It preserves the life of a fabric.

HANDLE WITH CARE

U. S. fats are ammunition. They are calories on the food-front and glycerine on the fighting front. Handle them with care. Rich sauces, cakes and puddings can be "home-rationed." Deep frying fat can be cut out altogether. Never heat fat to the scorching point—it becomes rancid sooner.

POPULAR COOKY IS MOLASSES FLAVORED

Brownies made with molasses are sure to become favorites to replace chocolate brownies, when chocolate is hard to find in the markets. They are an especially good choice of cooky to make on busy days, for they require no rolling or chilling. The batter is simply spread in a shallow pan and when baked it is cut in bars and sprinkled with confectioners' sugar frosting.

Molasses Brownies

1 cup sifted cake flour
1-2 teaspoon salt
1-2 cup shortening
1-4 cup molasses
1-2 teaspoon soda
3-4 cup brown sugar, firmly packed
2 eggs, well beaten
1 cup nutmeats, coarsely chopped

Sift the flour once, measure and resift with the salt. Combine the shortening and molasses, and cook together over low heat for two minutes, stirring constantly. Add the soda and brown sugar and stir until the sugar is dissolved. Beat eggs until light, then combine with molasses mixture, blending well. Add flour and mix well. Add nuts. Pour into a greased 8 by 8 1-2 inch pan and bake in a moderate oven, 350 degrees, for about 30 minutes, or until done. When cool, cut in bars and sprinkle with confectioners sugar.

TEA, ENGLISH STYLE

A tip from the English on serving tea is worth trying. Put the milk and sugar in the cup first, then pour the tea on top of it. It actually mixes better and makes a better cup of tea.

SERVE CARROTS IN COLORFUL RING MOLD

Fresh carrots are usually lowest in price among fresh vegetables that are found in markets. Because they are such a good source of vitamin A as well as other nutrients, they should be used frequently in menu plans. One good way to serve them is baked in a ring mold.

3 cups finely diced cooked carrots
2 teaspoons minced onions
4 eggs, slightly beaten
1 1-2 teaspoons salt
1-4 teaspoon pepper
1 1-2 cups rich milk

Mix the carrots, seasonings and slightly beaten eggs, then add the milk and mix. Pour into a well greased ring mold. Set in a pan of hot water and bake in a moderate oven, 350 degrees, about 35 to 45 minutes, or until a knife inserted in the center comes out clean. Unmold on a heated platter and fill the center with creamed or buttered peas. Serve at once.

THE FIDDLER'S BILL

Anti-inflation palliatives are doomed to failure unless quickly followed by ecective measures to control the cause of inflation. The cause of inflation is directly traceable in a large measure to Federal financing policies. As long as tax favoritism and wage favoritism toward great masses of voters prevail, and as long as those so favored fail to invest a large share of the record wages in war bonds, now power on earth can stop inflation.

"One little wisecrack about 'globaloney' is worth more in the news than a fight for principle."—Garet Garrett.

CANNED MILK RATIONING JUSTIFIES WARNING

In a letter to the governor of New York, New Jersey,Pennsylvania, Vermont, Massachusetts and Connecticut, and to leading state and Federal officials, Fred H. Sexauer, president of the Dairymen's League Cooperative Association, again warns of falling milk production. In the New York milk shed, as an example, during the first 15 days of May, it was 8 per cent less than for the corresponding period in 1942.

Recent closing of 1,500 dairies and loss of 14,280 head in the cow population, in that area alone, means a drop, in terms of whole milk powder, of 14,595,000 pounds per month.

Mr. Sexauer says: "The nation is about to pay dearly for the unsound price and regulatory policies applied against the dairy industry for the past two years. The cost will be in terms of inadequate supplies of dairy products. There is a constant barrage of propaganda that the farmers' prices are already too high and that they, in asking reasonable prices, are responsible for an inflationary spiral. Threats of subsidies, roll backs on dairy products, seizure of farm crops, should immediately cease. Assurances should be given of prices that will cover increased and increasing cost of labor, feed, supplies, taxes, etc.

"The solving of this impending shortage of dairy products will need the combined efforts of leaders upon whose shoulders rests the welfare of the people of this country."

Horse Sense

As a sedative to numb the fear of public debt, the people have been told that no harm could result from the debt because the people merely owed it to themselves.

Harold G. Moulton, head of the Brookings Institution, has knocked the "owe it to yourselves" theory into a cocked hat in a booklet entitled, "The New Philosophy of Public Debt." He shows that those who pay taxes to support the debt are not identical with those who receive the interest on the debt or the government bounties which the debt makes possible.

While the people may owe the public debt to themselves, the man who is taxed to pay interest on the debt will soon find that the tax collector will take his shirt if he does not pay his taxes, to pay interest on a debt which he "owes to himself."

Mr. Moulton blasts the idea that public debt can go on growing forever without doing any harm. His remarks shoot close to financial and economic advisors of the government, and to the National Resources Planning Board.

He makes it brutally clear that deficit spending and boundless public debt lead either to totalitarianism or to debt repudiation, and that without "a stable system of public finance . . . in the United States, also in other countries, the foundation stone for international reconstruction will rest on quicksand."

His analysis is just plain horse sense which most everybody understood until they were hypnotized with the suggestion that prosperity could be brought about by priming the pump continuously with public funds. He does not try to prove that government debt is bad, but he does insist that it must be controlled.

The time will come when in spite of all the primings, the pump will suck air if the water supply is exhausted. The earnings of the people are the water in the financial well. Those earnings must come from individual effort and production which depend on prosperous operating industries and agriculture. The pump primers produce no new water.

CLOSED SHOP CHALLENGED

In support of constitutional states' rights, Attorney General Watson of the State of Florida has filed suit against two corporations operating under closed shop agreements, to test the legality of the closed shop contract in a nation founded upon principles of justice and equality. In commenting on the suits, Mr. Watson says: "In both cases we have proven that to employ a worker the employer must first send him to the business agent of the union. This business agent classifies the employe to the union which he is required to join. An initiation fee is fixed by the union—these fees in the two cases in question ranging all the way from $10 to $125 per initiation. It was proven also that the business agent could and did in cases arbitrarily refuse to certify the name of the proposed employe either to the union or to the employer; that also, even after certification to the union under applicationn for membership, the union's membership committee arbitrarily refused to admit him, in which case he became immediately disqualified, and if he had gone to work upon a temporary permit from the business agent, his employment was immediately terminated because of the union's refusal to accept him as a member. We also proved instances where men seeking employment, accepted membership by the union, after paying their initiation fee, were shortly thereafter terminated from such employment without cause and solely upon the union's dictum. We also proved that persons were terminated by the union's dictum in their employment for failure to pay union dues, and in several instances where controversies have arisen among union members in the same employment, the union would take the side of one against the other and terminate the membership . . . of the one acted against, and thereby bring about his immediate discharge from his closed shop employment."

These labor excesses have been practiced with the approval and encouragement of the Federal government. This is one of the reasons why the coal mines have been socialized temporarily, why legitimate unionism may suffer lasting injury, and why, when our men come back from war, they may find that before they get a job they must pay tribute to a labor dictatorship just as deadly to freedom as the European military dictatorships.

It is not too late to restore constitutional government. Courageous men like the Attorney General of Florida are leading the way and deserve public encouragement and support.

PLANNED HOUSE OF CARDS

The "planned economy" this nation is living under has promoted high production costs while demanding low prices for consumers. The formula reads well, but it doesn't work. You can't arbitrarily boost the cost of production and hold down the cost of living.

This is being illustrated once more in the falling off of new oil discoveries. Wildcat drilling cannot be carried on with hot air. It takes money—more money than it did before the "war boom." OPA suggests a "government subsidy" (money from every taxpayer's pocket), in lieu of a necessary crude oil price increase, to encourage the search for new oil reserves which will soon be desperately needed by this nation.

Petroluem Administrator Ickes has recommended an average increase of 35 cents a barrel, instead of a subsidy. Oil men do not want subsidies—which mean taxpayer-financing of wildcatting. Many producers feel that the subsidy proposal is an attempt to put the government into the oil business.

A subsidy dodges the basic issue of allowing prices that will cover fair production costs. The people pay either way, but there will be less waste and less inflation in production financed with reasonable profits than with production financed with taxation.

REDUCING PRODUCTION

In stressing the need for a government policy that "will result in maximum food production," John D. Miller, president emeritus of the National Council of Farm Cooperatives, says, "price ceiling experiments tracing back to the Roman Empire have a record of uninterrupted failure as a method of preventing inflation or keeping down the cost of living.

"An effective ceiling on any commodity will in time restrict production. A planned economy spells the doom of our system of free enterprise. Rising commodity prices are not the cause, but the result of inflation.

"Inflation should be attacked on two fronts: First, by adopting policies that will result in the greatest possible food production, thus increasing supplies; and, second, by siphoning off buying power through taxation, thus reducing demand."

Mr. Miller described subsidies as higher food prices with the money being paid by the citizens to the government as taxes, and then distributed to the farmers by government. "Farmers resent being placed in a position where they cannot support themselves, but must accept government handouts. Food prices can be so regulated that farmers will receive a living price, and with consumers paying as low a price as is consistent with production cost, transportation, processing and marketing. This was done during World War I and food production rose to the maximum. But now we have price ceilings which have always resulted in decreased food production."

A-1 RECORDS IN WAR WORK

The fact that no electric utility has yet been awarded an Army-Navy E, despite outstanding participation in the war effort, prompted Electrical World to say editorially:

"From many a factory there proudly floats the Army-Navy E. They are the civilian counterpart of citations on the field of action for extra effort by members of our armed forces.

"These awards, however, have been given only to manufacturing organizations. No electric utility has been given an Army-Navy E. Yet no manufacturing concern was better prepared for the demands of war, has delayed war production less or has shown so little labor disturbance since the war began.

"Why has there been no recognition? It would almost appear as though the Army and Navy were conscious of the fact that electric utility employes have imbred in them the fixed belief that, regardless of anything else, service must be maintained and that no incentive is needed to encourage them to do their best. Like our fighting men. they give no thought to themselves when there is a battle to be won.

"It would be difficult to single out utilities for such honors, because all of them are doing A-1 jobs. They produce the only universal raw material of war production, without which every factory making war goods would have to stop. They make a raw material that cannot be stocked, yet must be instantaneously available wherever and whenever and in whatever quantity wanted. Their men have been drafted, their requests for additional facilities more and more limited, yet they never have defaulted on the job.

"There has been no power shortage.

"Recognition or no recognition, no one can take away from the electric utilities the knowledge that they have done a good job."

All good comes from God.

It is not what we have on the outside, but what we are on the inside.

SUBSIDIZING MISTAKES OF GOVERNMENT

Steps taken by government agencies to reduce food prices threaten the life of the retail food distribution industry. These agencies hesitate to tackle the inflation problem at its roots where it would affect one and all alike. Failure to establish an adequate tax and war financing program, temporizing with pressure groups, appeasement of labor racketeers, political aspirations that take precedence over the welfare of the nation—all of these things contribute to the rising cost of living. And it is the merchant who must pass the accumulated costs on to the ultimate consumer, as those costs are beyond his control.

Irrationally, the politicians, as they witness their mistakes advertised on the price tags of necessities, are seeking to force food distributors to cover up for them by establishing prices wholly out of line with costs.

The mistakes of food administration in the war emergency cannot be kept from the public by a "cover-up" policy which attempts to make retailers the goat. Retail distributors have done a magnificent job of carrying out pric e and rationing controls, just as they have in maintaining an efficient distribution system in the face of overwhelming handicaps. But they cannot and should not be expected to subsidize the mistakes of government.

Attempting to "roll back" or "freeze" retail prices before the cost of production is controlled, is like trying to hold back the tide by an edict that it shall not rise.

DESTRUCTION BY DECREE

With public attention fixed on headline war news, the people often lose sight of domestic issues. For example, the Securities and Exchange Commission, acting under the "death sentence" "construction" of the Public Utility Act of 1935, has ordered the dissolution of the Electric Power and Light Company. There are 24,000 private citizens who own a total of $514,000,000 of the company's securities. Presumably they are to surrender their investment and accept "something" in lieu therefor, whether they wish to or not.

The death sentence "construction" can mean injustice and death to millions of dollars of savings. It can result in the virtual confiscation of property of stockholders in a utility industry. No blue sky promoter ever threatened the savings of American citizens any more seriously than do punitive laws and over-zealous regulators.

The time has arrived when the evil effects of the Utility Act of 1935 should be thoroughly examined by Congress, as well as practices of the Securities and Exchange Commission, with a view to correcting defects in the law and procedures of the Commission.

After all, both the Utility Act and the Commission were created to protect, not destroy industry and investments owned by the people.

Kickers In Heaven

According to figures released by the National Resources Planning Board, the national ratio of physicians to population in this country, before the war, was about 1 to 800, ranging in individual states from 1 to 500, to 1 to 1,400. Similar variations exist in the distribution of dentists and nurses.

In Northwest China there is one physicians for every 25,000 persons. Walking thirty miles to treat a patient is not uncommon. Yet this country, not China, is the scene of much agitation for revamping the medical system along socialistic lines—why, is known only to God and the sponsors of the "change."

We have the best and most progressive medical system in the world. It has achieved miracles. It makes new discoveries every day. It is broadening the scope of medical service steadily. The day is not distant when this system will reach a state of perfection beyond past imagination. In return, American doctors are badgered by schemes to move them hither and yon under revolutionary plans that would completely destroy their rights and dignity of citizenship, as well as medical progress such as we have enjoyed.

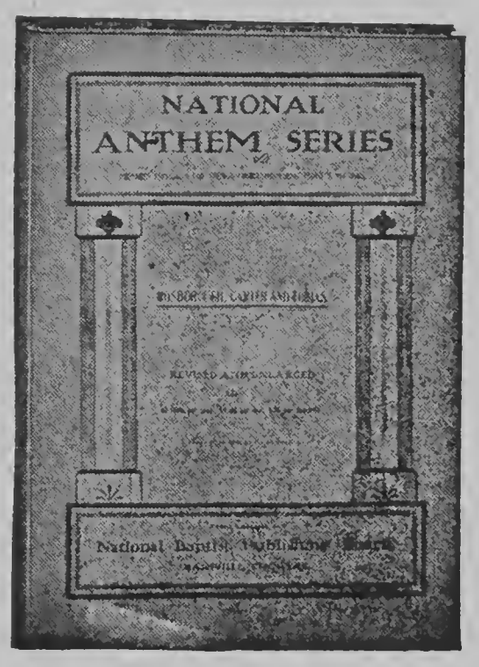
It is just such lack of appreciativeness for the rich blessings we have, which, if not checked, will some day result in much unnecessary suffering in our country.

O God, help me to be worthy of the name Christian.

THIS BOOK OF

"ANTHEMS"

Has proven to be one of the most popular ever gotten out by the Publishing Board.



EVERY CHOIR

should have one of these books. It gives the leading sopranos in the choir an opportunity to fully develop the talents given them.

This book was written; music and words by Negro composers and writers.

Price 50 cts. per copy; $6.00 per dozen.

SEND ALL MONEY ORDERS OR REGISTERED LETTERS TO

NATIONAL BAPTIST PUBLISHING BOARD

HENRY A. BOYD, Secretary,

523 Second Avenue, North **Nashville, Tennessee**

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd --------- Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

THE FAMILY WASHTUB

We have read much of the attempts of the War Production Board to make available to the civilian population increased quantities of civilian goods in which shortages have become critical. For example, it is difficult for the average person to realize the function of the galvanized washtub to millions of our people. Over half the homes of America are without bathrooms, and the galvanized tub, used for laundry, is the only bathing facility for the family. Despite this need, however, there has been for many months an acute shortage of large galvanized tubs.

This situation is cited to illustrate the importance of renewing supplies of essential domestic items which the majority of our citizens must eat, wear and use in order to maintain the morale and health of the country. Only the local storekeeper and the people affected know the importance of such items.

Mistakes were inevitable in establishing any rationing program of food and commodity supplies, but the time for correction has arrived, and washtubs point the way.

THE SUPREME TEST

One of the evils of inflation is the bitter bickering that ensues over who is reaping the benefits of higher prices.

The fact that the retail distribution industry operates under stringent price ceilings that more often than not work a very real hardship on merchants, is not generally appreciated. Retailers, far from making exorbitant profits, are striving to stay in business and better serve the consumer. Not only are their regulatory problems assuming crushing proportions, but each day irreplaceable inventories dwindle.

By improvisation and streamlined operating methods, the distribution system has been held together and carried the burden of rationing and price control. Its stability has been as gratifying as it has been amazing.

Much credit for the strength of the retail distribution industry must go to the chain stores. They initiated the economies of mass merchandising that in the space of a few years revolutionized retailing. The methods of operation which they introduced were rapidly adopted by independents. Giant strides were made toward giving the consumer more for less money. Competition was keen. Stores were made more attractive and sanitary. The advent of war found the retail industry at a high level of service and efficiency.

Retailers are now enduring a supreme test. A cooperative public will help the merchants maintain the best possible customer service in these times.

ANOTHER SNEAK ATTACK

The well planned closing of the nation's coal mines while United Mine Workers' demands were in process of negotiation, is on a par with the Japanese sneak attack on Pearl Harbor.

Words cannot express the contempt of the American people for individuals who are parties to such treachery, and who refuse to work while our soldiers die.

Let us hope that Congress will at last assert its authority and enact legislation providing controls for organized mutiny which endangers public safety for personal gain.

If the enemy had bombed our coal mines, the work stoppage would not have been as complete as when the United Mine Workers deserted their posts. Therefore their action is the equivalent of an enemy attack on this nation

IT WAS NO VICTORY

Subsequent to government seizure of the coal mines, an operator of one of the seized mines noted that some of the miners were referring to their "new employer" with "fulsome praise." They looked upon the seizure as a victory for the miners. But it was no victory. The longer the mines remain in a state of temporary socialization, the more the workers stand to lose.

The National Industrial Conference Board describes exactly what the miners have to look forward to under government ownership: "There is a decisive change in the attitude of the state toward wages when it moves from the position of the arbitrator who is ruling on wages to be paid by someone else to the position of investor who is ruling on the wages to be paid by itself."

There in a nutshell is the difference between this country and dictator-ridden countries wher the citizen has degenerated into a mere work horse deprived of all freedom and initiative. In such countries, government is a ruthless business enterprise—a sweatshop of the worse character. It pays what is pleases and its employes work as long as it tells them to. The price of refusal means death or a concentration camp. There is no arbitrator to whom workers can turn to plead their case. In the United States the government is the arbitrator. Its historic role has been that of umpire. In that role it has encouraged progress. It has encouraged a higher standard of living for American workmen. The coal miners are losing the benefit of government as an arbitrator. The longer the mines remain under government operation, the less potent will become the union.

It is to the interests of labor, more than any other group, to urge modification of one-sided labor legislation such as the Wagner Act and to insist on the adoption of a government policy of equal treatment and encouragement for all—capital, employer and labor alike.

NERVES, PATIENCE SHATTERED

There seems to be a prevalent notion that retail distributors can operate like agencies of government—regardless of profit. Ceilings and "roll back" prices are tossed at them in withering clouds, and margins be damned. While one government authority is playing with prices, another stops the production of everything from clothes pins to refrigerators. To cinch the case, a few czars step in and swing uncoordinated haymakers at trained retailer personnel, with the result that if the Army doesn't get experienced store employes, the shipyards do. In spite of it all, the merchant, as the only source through which the civilian population can be fed and clothed, is supposed to carry on as usual.

In response to queries on the effect of latest price ceilings and other government decrees, one food chain representative remarked: "You ask what food distributors are thinking. . . . Their nerves, their patience, are shattered. The first impulse may be to fold up—but they recognize a responsibility to the public, to their associates and employes, to their stockholders. The loyalty, faithful patronage and service of these people may have made their retirement—escape from abuse—possible. Food chain operators can't let them down now. No, food chains will not fold up. People must be fed. Organized distributors must feed them in times like these."

This attitude is typical of the entire organized retail distribution industry. It explains in a large measure why so far the buying public has hardly felt the effect of war. Retailers have managed to keep an unbroken flow of necessities moving to consumers. They know that maximum war production depends on their continuing effort.

At present the government is attempting to limit the price of goods the merchant sells, without effectively limiting the cost of production of those goods. Even a school child is taught the folly of such reasoning.

CASE FOR THE RECORD

This war has turned up some interesting facts. One of them is that all the claims of public power politicians for the past decade that the nation faced a power shortage and that development of power by the government was, therefore, essential, were unfounded.

Now comes J. A. Krug, director of the Office of War Utilities, and says: "Electric power has never been too little or too late. I do not know of a single instance where the operation of a war plant has been delayed by lack of electric power."

And remember that 85 per cent of our electric power is furnished by private enterprise.

Also remember there is no rationing of power to homes or nonessential industries.

No Army-Navy E's are awarded or asked for in this record. Electricity is just taken for granted in the day's work. Those who have besmirched the private electric power industry should have red faces.

WILL PRICE FIXERS LEARN

Will we next see a disastrous oil shortage because our economic planners again try to go counter to the laws of nature?

Oil men state that we are using up our known oil supplies much more rapidly than we are discovering new ones. Wildcatting for oil must precede refined oil products. To promote wildcatting, ceiling prices on crude oil must cover increased cost of labor, supplies and taxes, and allow a profit, or no new wells will be found to offset those being exhausted.

The same policy is for government to encourage the exploration and development of our oil resources. We face disaster from any other course.

BIG GOVERNMENT ON THE MARCH

The postwar reconstruction plan drawn up by the National Resources Planning Board and now under consideration in Congress, except incidentally, is not a plan of reconstruction at all. It is a proposal to establish in this nation an authoritarian welfare state.

The National Industrial Conference Board has sought to clarify the NRPB plan for average understanding. It points out that: "The government has always carried on economic activities. The important fact about this economic activity by government was that it was . . . not wielded as a single economic instrument in monopolistic control of the market for goods and services and the productive equipment of the nation. It was managed and directed under thousands of 'Corporations,' each a free economic unit not controlled by any overhead power.

"The NRPB plan is in general a proposal for greatly increasing the area of the economy directed by the 'government' and coordinating it into one unified system under Federal executive control."

Under the NRPB plan, political administrators would control indirectly with an iron hand more than 2,000,000 business enterprises, over five million farmers and farm operators, together with the millions of workers in those enterprises. In short, they would control the livelihood of every citizen. Once they controlled that, they would soon be forced to control his political convictions on the threadbare excuse of protecting the general welfare.

The price of individual security as envisioned in the NRPB plan would be destruction of the republic—men, instead of laws, ruling by decree.

A COMMON FALLACY

It is a common fallacy to segregate industries into war and non-war classifications. Actually there can be no such segregation. The war industries could not operate without the support of the "non-war" industries. One of the non-war industries is fire insurance. Yet no shipyard or plane factory could afford to turn a wheel without the protection of fire insurance. Not only do the fire insurance companies pay in the event of fire loss, but they also seek to prevent fire. As Jesse Jones, Secretary of Commerce, recently remarked, in commending the fire prevention work of the industry: "The rate of destruction by fires in the three years since 1939 is 40 per cent lower than the rate for the similar three-year period following the outbreak of the first World War."

The insurance industry is rendering still another service that is of incalculable value. When you buy an insurance policy, you are indirectly helping to finance the war. The premiums for insurance of all kinds are being invested in government bonds. Insurance reserves are non-inflationary. A government bond in the hands of an insurance company is merely an investment which may be used to pay possible claims. It creates no new "credit" money. The insurance industry contributes in no small part to the success of every war bond campaign. Its purchases run into many billions of dollars.

Don't let anyone tell you that this or that industry is more essential than some other industry. All industry today is doing its part to win this war. All industry should share in the credit for victory—not just so-called "war plants" which would be helpless without the support of "non-war plants."

GIVE THEM TOOLS

Two war agencies, the Office of Defense Transportation and the Office of War Information have lately warned that the railroads are being driven to the limit, and that to carry the loads of the future they must be supplied with necessary equipment.

Director J. B. Eastman of the ODT says: "One of the best ways to get the most out of transportation equipment is to keep it going, avoid delays, and increase the amount of work done per unit of time. In the dozen years which followed the last World War, the railroads spent several billions of dollars in the improvement of their road beds, tracks and terminal facilities. They are getting the benefit of that expenditure now."

If they are to continue rolling without delay, their equipment must be maintained and replaced as necessity requires.

The Office of War Information observes that the battle of transportation in the United States is now being won, and the war and necessary civilian transportation load is being carried. "The victories, however, are not necessarily permanent," says OWI. "Railroad . . . . equipment . . . and tank cars are wearing out. Few replacements are being made."

The railroads have been highly praised from all quarters for the job they have done. But praise alone won't haul oil to the East Coast. Praise won't take the place of steal rails or of locomotives. Praise alone won't move freight and troops. Railroad managements will appreciate praise more after the job is done. Right now they are like firemen working against time to rescue the occupants of a burning building. They need the tools of their trade.

YOUTH HELPS

In Missouri, the Future Farmers of America, with 8,000 members, set out 3,500 trees, sowed 169 miles of fence rows with lespedesa for game cover and feed, built 1,907 bird-houses, and put out nearly two tons of feed for birds, in one year. The 4-H Clubs, which have 20,000 members, built 134 farm ponds, maintained nearly 3,000 food patches for game birds, sowed more than fifteen tons of lespedesa, and set out 43,000 trees.

This is constructive work. Wildlife will return if given a chance, and improving conditions so that they can find cover is a very practical way of helping to preserve our wild animals and birds.

LELIA MUNSELL.

A very innocent and obliging curate moved to a Yorkshire parish where many of his parishioners bred horses and sometimes raced them. Shortly after his arrival he was asked to invite the prayers of the congregation for Lady Grey. After the curate had prayed three Sundays for her the church clerk told the good man that he need not do it any more.

"Why?" asked the curate. "Is she dead?"

"No," replied the clerk, "she's won the steeplechase."— Utah Farmer.

SET UP WAR MEAT BOARD

A nine-man War Meat Board is being setup to facilitate the handling of the nation's meat supply. Quarterly and yearly meat requirements for the Armed Forces, civilians, and Lend-Lease will continue to be determined by the allocation authorities in Washington, while the board, headquartered in Chicago, will take steps to make effective the allocation and distribution of the meat supply.

NEGRO SPECIALISTS TO ASSIST CITY HOME CANNERS IN N. C.

Four colored and 19 white home demonstration agents have been appointed to assist city home canners in North Carolina. These special wartime agents will serve during June, July and August, conducting demonstrations on proper methods of canning, drying, brining, and storing surplus fruits and vegetables for home use.

The four Negro home agents who will serve Durham, Winston-Salem, Greensboro, and Wilson are Mrs. Stella V. Austin, Miss Irma Lee Banks, Mrs. Hazel P. Oldham, and Mrs. Dorothy B. Gilliam respectively.

ARITHMETIC HELPS HOME CANNERS

The Bureau of Human Nutrition and Home Economics of the U. S. Department of Agriculture points out that thirty housewives need to know the quantity of fruits or vegetables required to fill a quart jar. In order to aid home canners, the bureau has listed the approximate figures for some fruits and vegetables. For example, it requires 2 1-2 pounds of apples, pears, peaches, tomatoes, grapes, carrots, or beets to fill one quart container, but only 1 1-2 pounds of snap beans, greens, cherries, or plums to fill a quart jar.

BOLL WEEVIL OUTLOOK

Boll weevils may cause serious damage to cotton in the states from Virginia to Texas if the weather is cloudy and wet in the cotton areas during June and July. Hot, dry weather during June and July would do much to relieve the threat, according to Agriculture experts. The Department urges all cotton growers who have suffered losses recently from boll weevils to be prepared to fight them this year.

FARM WAGES RATES IN THE COTTON BELT

Farm wage rates in the Cotton Belt and in all other farm areas of the United States were higher on April 1 than on the corresponding date for any of the other 20 years for which records are available. In South Carolina where farm wages were lowest they had risen from 80 cents per day during the 1936-40 period to $1.40 per day; in Mississippi they had risen from 94 cents per day during the 1936-40 period to $1.75, and in Texas, from $1.25 to $2.60.

BATTLE AGAINST FOOD WASTES

Are you in the battle against food wastes? Well, the Bureau of Human Nutrition and Home Economics of the Department of Agriculture has prepared some questions on food wastes by which you can score yourself. Here are some of them: (1) Do you peel potatoes and apples thin? (2) Do you store glassed foods, onions, potatoes, butter, and flour away from the light? (3) Do you defrost your refrigerator once a week and wash the entire interior, including freezing unit, with warm soda water? (4) Do you leave eggs unwashed to retain the protective film that keeps out air and odors? (5) Do you plan your food purchases carefully in advance of shopping? (6) Have you observed the amount of food eaten by your family at each meal so that you may prepare enough but not too much? (7) To prevent molding, do you cool homemade cake and breads before storing? (8) In hot weather do you store bread well wrapped in the refrigerator?

WFA AIDS FLOOD SUFFERERS

The War Food Administration is mobilizing the credit resources of Farm Credit Administration, Farm Security Administration, and Regional Agricultural Credit Corporation to help farm families in the flood area of the Midwest bring their cropland back into wartime food production.

A grant fund totaling $235,000 has been set up by FSA to provide emergency food shelter, and medical attention for homeless farm families. FSA county supervisors have been authorized to make small grants, usually $30 or less, to distressed families for emergency needs. When the families can return to their farms, FSA loans will be made to those without credit resources to put in new crops. About $780,000 have been made available for such loans.

FARMING IN AFRICA

The lead article in the May edition of Foreign Agriculture, a USDA publication, is devoted to agriculture in Angola (Portuguese West Africa). Written by Sylvia S. Goodstein of the Office of Foreign Agricultural Relations, and based in part on material prepared by Samuel B. Coles, Negro agricultural missionary in Angola, the article describes the whole range of rural life and farm activities in the colony.

For example, it is pointed out that although 90 percent of the land is suitable for farming, only 2,200,000 of Angola's 312,200,000 acres are under cultivation. The natives farm 95 percent of this area, growing Manioc and corn principal native foods. wheat, rice, sugar, beans, peanuts, coffee, palm oil, sisal, rubber, cotton, coconuts, sweet potatoes, and livestock.

Most of the natives grow enough food for their own needs. Increased production has been retarded by low prices, insufficient trading centers in the interior, shortage of farm machinery, and a shortage of trained agricultural personnel to direct the farm program. However, Angola is overcoming these difficulties by establishing experiment stations, breeding centers, and by distributing seeds, by building good roads in the interior, and by extending the railway lines; plows are sold to the natives at cost, and professional agriculturalists are being trained in the schools and colleges to help improve production methods.

The extent to which Angola can help supply agricutlural products to the Untied Nations now and during the post war era is seen in the rising exports from the colony. Corn has increased from 71,000 short tons in 1933 to 170,000 short tons in 1941; sugar from 18,000 short tons in 1933 to 43,000 short tons in 1941; coffee from 11,000 short tons in 1933 to 15,000 short tons in 1941, and beans from 3,000 tons in 1933 to 11,000 tons two years ago. Livestock production is handicapped by unfavorable climate, tsetse flies and ticks, and by the attitude of the natives toward cattle. Meat is not a regular part of the diet. Except on feast days healthy animals are rarely killed for food. The natives regard their cattle very highly. They are not only considered a prized form of wealth, but are often surrounded by religious beliefs. In 1935 there were only 1,929,000 cattle in all Angola. In our own country, Texas alone is scheduled to produce nearly three times as many cattle and calves this year.

4-H CLUBBERS ON NETWORK

Emory Wyckoff and Miss Kate Dell Hill, Negro 4-H Clubbers from Alabama described on the Blue Network's Farm and Home Hour last week the part they are playing in the war effort. Appearing on the program with them were T. M. Campbell, federal Extension field agent, Nicholas Kollock, Negro state agent for Alabama and Miss Ruth C. Coleman, Alabama 4-H Club leader. in charge of girls work.

Following the broadcast, young Wyckoff and Miss Hill pointed out that they will make a sizable profit on the chickens they are raising in addition to helping to feed our fighting men. Said 4-H Clubber Wyckoff, "I have 1,000 baby chicks that I paid $120 for. It will cost me between $50 and $75 to put two pounds on these birds, then I hope to sell them at an average of around 30 cents a pound. Let's see—now that'll bring about $600. After deducting the cost of the feed and the cost of the baby chicks, I should have a little over $400 left." That's real money for a tenant farmer's son to be earning in his spare time. Miss Hill has 400 baby chicks and expects to clear between $165 and $200.

Negro Urged to Purchase War Bonds As Future Insurance Against Post War Disaster

St. Louis, July 1—(ANP)—urging his listeners to purchase all the War Bonds they can afford, U. S. Falls, regional vice president of the National Negro Business League for Missouri, declared Sunday that such an insurance will protect the Negro against the disaster that is sure to follow this war. The occasion was the rendition of the Men's day program at the West Side Baptist church.

Falls told the audience to turn away from its riotous living, to think with regard to the future, to save their money, purchase real estate and to establish business enterprises.

Falls further stated that the Negro will never attain equality and equal rights until he learns how to control his money and build institutions and businesses like Booker T. Washington, the father of the Negro Business League advised 40 years ago.

Negroes Only 6.7 per cent Of Workers In Uses Survey

WASHINGTON, July 1—(ANP)—Negroes represented a bare 6.7 per cent of the 14,673,000 workers in 16,000 establishments reporting to the U. S. Employment service in March, 1943, according to figures released Monday by the War Manpower commission. In July, the figure was 5.8 per cent. About 937,000 nonlwhites are covered by the March figure.

One of the biggest jumps was that recorded in the aircraft industry where Negro employment increased 96.1 per cent compared to the total employment increase for the industry of 35.4. In the shipbuilding industry Negro employment increased 62.8 per cent between May, 1942, and November of the same year. The number working in tank factories doubled in the period of the report.

Of considerable moment is the figure for the coal industry. Negroes made up 23.1 per cent of those engaged in bituminous coal mining, while blast furnaces, steel workers and rolling mills utilized 12.2 per cent.

The report pointed out that in spite of the meagre increased here and there, industry was not utilizing Negro manpower as much as it should in some areas and in some plants. The proportion of Negroes in war industries, it was stated, is not as yet commensurate with their proportion of the labor force, and only about 7 per cent of the employment in war industries.

Reasons attribut ed for these discrepancies were geographic distribution of the Negro labor force in relation to geographical distribution of war contracts; limited occupational and training opportunities heretofore afforded Negro workers, and race prejudice.

Enrollments of Negroes attending office of education supplementary courses, open to employed war workers, tripled during the year. Negroes were also taking fuller advantage of NYA courses than before.

LABOR UNION GIVES DAY ROOM FOR NEGRO SOLDIERS

CHARLESTON, S. C., July 1—(ANP)—"We don't know if we're the first Negro community organization in the south to undertake to furnish a day room for colored soldiers; we are sure that we're the first Negro group in this part of the country to complete such a project."

The speaker was one of the executive board members of the local union of the International Hod Carriers Building and Common Laborers' union of America, here, a gray-haired man who carried his years and the responsibility of his position as a labor leader in the south with equal dignity. The union, along with the Bricklayers and Plasterers' colored local of Charleston, has recently completed two day rooms for Negro troops, one for a quartermasters' battalion, the other for a port battalion, both with the cooperation and stimulation of the Red Cross camp and hospital council.

Some of the funds that went into making these rooms possible for the nearly 2,000 Negro soldiers in this area came out of the union treasuries but most of it came through the contribution of hard earned nickels and dimes from workmen whose sons and brothers are part of Uncle Sam's fighting forces today.

A pool table and ping pong table are major attractions in any day room and the line waiting in the quartermasters' day room to play at these games is long and patient every evening. An orchestra, "Sergeant Dyer's Victory Boys," practices assiduously and prepares for the big evenings twice a week in town when they play for the colored USO. In still another corner, a "quiet" one, a group of boys sit on comfortable and attractive settees and chairs, reading or writing letters home.

In the far end of the hall the battalion jitterbugs crowd around the flamboyant juke box and listen to the "Duke" or Benny Goodman pound out the latest swing rhythm. A few of the boys experiment with some of the new steps they learned before they signed up for "the duration and six."

E. B. Radford, white southern-born business managers of the laborers' union, has been one of the prime movers in the campaign to get the Negro day rooms furnished, aided by William Blueford, one of the Negro members of the executive board of the union, and by L. Howard Bennett, director of the Avery Institute, education center for Negro students of Charleston. Rev. Caesar S. Ledbetter of the Plymouth Congregational church has been an active force in co-operating with the camp and hospital council and women members of his congregation participated in collecting furniture for the day rooms and making curtains for some forty odd windows in one room.

In the bricklayers' union T. W. Robinson, one of the Negro executives, has played an important part in collecting funds for day room furnishings from men on the various defense jobs around Charleston and was instrumental in providing the wherewithal for a Christmas party of the Negro boys of a previous port battalion which has since left for an unknown destination.

Plans are afoot now through the initiative of the camp and hospital council and its secretary, Charles E. Cozard, Red Cross field director for this area, to bring regular cultural programs to the Negro soldiers, including a choral evening and a dramatic evening which will be arranged through the Avery Institute. Since there is no chaplain assigned to these troops as yet, the camp and hospital council is also seeking to arrange for Rev. Ledbetter to conduct regular services for the boys, many of whom have requested such services.

Thus the initial work of the council in furnishing day rooms extends itself and welds a warm and permanent link between the members of the armed forces and the community groups that are enabled through the council to look after their interests and nourish that elusive but all-important fighting man's asset: morale.

POULTRY PRODUCTS WILL GREATLY AID ARMED FORCES AS WELL AS THOSE WHO REMAIN AT HOME

By W. A. Hagins

Industrial College, Ga., June 1—Among the many farm operations the farmers might engage to meet food and feed goals for 1943 is that of poultry production. Every step taken by farm folks in this direction will be most significant in providing members of our armed forces as well as people on the home front with poultry products.

Many Georgia Negro farm families are making unprecedented progress in poultry production. And here's a brief resume of the activity as revealed by State Agent P. H. Stone for the Georgia Agricultural Extension Service.

In the Brooks county area, hundreds of chicks have been secured from hatcheries. More eggs have been placed by farmers to be hatched than ever before so that smaller farm families might have chickens. Hens have been put on an over-time schedule and everything is being done to have a larger supply of poultry products in that section.

Farm families in Liberty county have placed 8560 baby chicks since January, it is reported and in Dodge county 432 brooders have been built since Christmas, it was further pointed out. City folks have caught the spirit too and 4-H club boys are building brooders for them during their spare time. Through recent efforts, close to 90 per cent of the farm families now have brooders for their flocks.

A large number of chicks have been purchased and hatched by farm families in the Newton county area. Neighborhood leaders and 4-H club commandos are assisting with feeding and management problems and sufficient crops have been planted to feed these chickens.

Poultry club members in the Union, Brown Grove and Fishing Greek communities of Baldwin county recently sold 600 dozens of eggs and set 360 turkey eggs. Out of this number 334 turkeys were hatched.

Forty-one Hancock county club boys are carrying poultry projects; 16 of this number purchased their chicks from hatcheries while the others hatched their flocks at home. In Chatham county, Fred Bizzard has 700 chicks that have reached broiler size.

Farm families in the Randolph county area have increased their poultry flocks over that of last year and it is pointed out that farm folks in that section are beginning to learn the advantages of good breeds over that of mongrels.

Bennett: Your father looks very distinguished with his snow-white hair.

Danny: Yes, he has me to thank for that.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar
WM. H. BELL, President

The 1943-44 academic session begins September 20
Freshman Orientation Week, September 16, 17, and 18

BEGIN BATTLE IN S. CAROLINA TO RAISE PAY OF TEACHERS

CHARLESTON, S. C., July 1—(ANP)—The expected court battle to force equalization of South Carolina's teachers' salaries opened in a sudden and surprising move Wednesday when Atty. Harold B. Boulware of Columbia filed copies of a petition on behalf of Miss Malissa Therese Smith of the Burke school faculty with the Charleston School Board and superintendent of schools, Burnett Rhett.

The copy to the school board was sent to John F. Seignious, chairman.

Mr. Boulware said the petition did not constitute the suit itself, but was the preamble, that "after a reasonable time—say about 30 days," if equalization is not granted, court action would come from that city. Boulware said, however, that other cases would be started shortly and that several cities were to be named defendants.

Miss Smith, a graduate of Avery Institute, attended Allen University for two years, and completed her college work at South Carolina State College, Orangeburg. She teaches history at Burke school and has just completed her third year's work in the Charleston system. She left June 29 to do work on her master's degree at New York university.

Interviewed in the home of her aunt Monday, Miss Smith said she was glad to lead the attack for freedom of her people. "I believe firmly in these words of Rousseau," she said. "He who would be free, must himself strike the first blow." Miss Smith explained that she taught her students to seek the justice due them and had long felt that her teachings were not justified so long as she herself smarted under injustices and discrimination because of her race.

"How can I teach the future citizens to fight when I refrain from fighting myself?" she asked.

Miss Smith and other teachers at Burke school have just emerged from a battle over 1943-44 contracts, she said. Although the legislature granted 15 per cent increases to all teachers the Charleston board has refused increases to the Negro teachers and when asked to explain the matter to Burke teachers, said in substance, "You'll either sign or we'll close the damn school."

"I've worked hard to be a good teacher," Miss Smith said, "have done everything to make a record and give good service. Why should we be treated like this? Why should we school teachers be forced to live on sub-standard wages? I know of many students (girls) at Burke who are making more on part time defense work than I make on full time teaching."

Miss Smith saw nothing unusual or heroic in her action. "It's just a job somebody has to do," she said. "I am glad I can do it."

She isn't worried about the future. "I have thought the matter over from all angles," she advised. "I am of age and have made a decision which will benefit me, my colleagues in the teaching profession, and my race. No price can be too high for being able to render this service.

W. W. Layton Gets Position With Urban League

COLUMBUS, Ohio—N. B. Allen, Executive Secretary of the Columbus Urban League, announces the appointment of Mr. William W. Layton, as Industrial Secretary, who will take over the direction of the newly created Industrial Department of the League.

He was formerly employed by the city of Nashville, Tenn., as a social worker and has had considerable experience as an interviewer in several Southern and Eastern States. In 1939, he assisted Dr. Harry Stack Sullivan, noted Psychiatrist, in a study of Negro-White Socia-economic Relationships in a Mississippi town. He was also field worker and interviewer for The American Youth Commission. Mr. Layton is a graduate of Lincoln University in Pennsylvania, and did his graduate work in Sociology at Fisk University, in Nashville, Tenn.

Mrs. Layton, and the two children, Andree and Mary Janet, accompanied Mr. Layton to Columbus.

My Layton is assuming his responsibilities immediately.

NO MAGIC IN BUREAUCRACY

New frontiers of accomplishment that promise not only better living for us, but for the peoples of the world, are seen for the future by Robert P. Barbour, president of the National Board of Fire Underwriters, if opportunity and rewards are not denied and "if government keeps its hands out of business and industrial enterprise that can be handled capably by private citizens."

Speaking at the Board's 77th annual meeting, Mr. Barbour called attention to warnings by Congressional leaders of the dangerous expansion of government of bureaucratic edict and directive, and said: "Only an informed and vocal public can kill this unhealthy growth, which, in so many countries of the world, has made the individual little more than a cipher. Let no one believe any government has magic enough to give something for nothing."

Mr. Barbour cited a world trend to minimize the importance of the individual and to magnify the importance of the state, with resulting loss of personal liberty and initiative. "Even in this country there has been growth of a philosophy that would have us believe we have outgrown the American way of life, that government bureaus and super-agencies can plan for and direct the individual better than he can for himself; a philosophy which tells young people that the opportunities that their forefathers enjoyed have gone and that the government must plan and do for them."

It is a healthy sign when business and political leaders are alert to recognize a menace to freedom on the home front as well as the battle front.

WORKING IN SILENCE

No headlines herald the progress of the medical profession in its efforts to distribute adequate medical care to every section of the country. As usual it serves in silence.

The American Medical Journal points out that there are two objectives which the doctors seek: First, the best distribution of available resources of medical personnel and the health protection of the largest number of people; second, the doing of this in such a way as to preserve the rights and advantages that inhere in local self government.

Moves are afoot to ease medical licensing restrictions between states. This has been a stumbling block in the way of physicians moving from state to state in accordance with the needs of areas critically short of doctors. Another important step was the recent formulation of plans whereby the United States Public Health Service could help meet the need for medical services in critical areas. The doctors are striving, irrespective of thinning ranks, to maintain one physician to 1,500 people. In some cases the average may be less, but even so Americans will still be the best cared for people in the world.

In Germany doctors are practically non-existent for civilians. Russia is no better. This fact should be noted carefully. Both the Russian and German medical systems were prepared for war under "planned" dictatorial economies, yet the test of global war found them both wanting as compared to the progressive American medical system, built on the foundation of initiative, service and sacrifice of our independent medical profession.

A DEAD ERA

In reply to the claims of the food industry that dollars and cents ceilings are in many cases forcing merchants to sell goods below cost and in general threaten the stability of the industry. OPA has pointed out that the stores made ample profits in 1942. Such a reply merely lends weight to the contention of retailers because it does not apply in any respect to current merchandising realities.

During most of 1942, retailers in all lines operated in a free competitive market. Today they are operating in a controlled market where prices are set by decree. Profits of one day alternate with losses the next, depending on orders issued in Washington. The merchant is helpless. The most that he can do is ask for adjustment of prices that will permit him to remain in business. Food retailers have done just that. Tomorrow the clothing distributors may be in the same boat. To correct an intolerable price situation the OPA will have to do much more than talk about profits of a dead era.

"There must be no special privilege in America and the sooner all groups recognize the obligation of government to all the people and stop concentrating exclusively on their own selfish wants, the earlier a new era of good feeling will usher in an abundance and a prosperity in which vast social gains will be automatic instead of synthetic. We must not have an ersatz progress for America. It must be the real thing." —Emil Schram.

Civic Workers Gird To Extend, Keep Jobs For Negroes

Chicago—July 1,—(ANP)— Efforts to extend present employment opportunities for Negroes in American industry and protect those gains after the declaration of peace were intensified at a conference of Negro leaders at the Julius Rosenwald Fund offices recently.

The meeting, held at the suggestion of Dr. Edwin Embree, president of the fund, created a Chicago Charter Committee on Employment to impress upon Negro workers the importance of personal appearance and conduct on the job, the necessity for work efficiency and cutting down of absenteeism.

These factors, it was pointed out, would be prime considerations of employers during the post war period in determinations of employee retention, and would greatly aid the War Manpower commission and FEPC in integration of Negroes into industry.

That employment of Negroes was being accelerated as a result of the war emergency was expressed by Dr. Robert C. Weaver, of WMC, who reported they "are being employed in industry at a rate which would soon do away with the unemployment" of that group. He said however that the two principal problems to be adjusted were those of employment of women and upgrading.

Dr. Charles S. Johnson, chairman of the sociology department, Fisk university, agreed with that opinion because, he pointed out, Negro women have had little previous experience in industry and most times have been hired only under pressure. He also recognized the problem of upgrading but observed that "employment is not the necessary thing at the moment. What is needed is a niche in which the Negro can make himself secure."

The conference set aside the week of September 13, as "Hold Your Job" week in which appeals would be made to workers to increase their efficiency and maintain good conduct, and in which employers and government agencies would be urged to extend employment opportunities for Negroes. Observance of the event is being planned on a national scale with similar committees to be set up in other cities.

C. A. Franklin, publisher Kansas City Call, was elected chairman, and Horace Cayton, director Parkway Community Center here, was elected secretary. Others attending the conference included J. A. Thomas, National Urban League; the Rev. A. Clayton Powell, editor People's Voice; Penetta Welch, executive secretary, National Council of Negro Women; Mrs. Mary McLeod Bethune, president, National Council of Negro Women.

Always underneath and round about us are God's everlasting arms.

WAR PROGRAM OVER NET-WORK

(Continued from Page 1)

4-H club radio program was Emery Wyckoff and Miss Katie Dell Hill of Tallapoosa County, Alabama, together with Miss Ruth C. Coleman, Negro state leader for 4-H club girls of Alabama; and Nicholas Kollock, Negro State Extension agent.

While Mr. Kollock pointed out what Negro farmers of Alabama in general are doing to help win the war, Miss Coleman limited her talk to the contribution which 4-H club boys and girls are making to the war effort. For example, last year the 30,000 Negro 4-H clubbers of Alabama raised 119,000 chickens and turkeys, 4,000 pigs, 13,000 acres of peanuts to help overcome the vegetable oil shortage, and 30,000 Victory Gardens. In addition the 4-H club girls canned 125,000 quarts of fruits and vegetables, planned and served 63,000 meals.

Miss Hill related how she started out in 1941 with 100 chicks purchased with money loaned her by a Farm Credit Administration production credit association and gradually increased her flock. This year she is raising 400 chickens to help feed our armed forces. Some of her chickens will go to Army camps not many miles from her parents' 130-acre farm.

Although young Wyckoff's parents do not own the small farm they operate, both he and they are trying to play their full part in winning the war. He described how he has increased his flock from 103 two years ago to 1,000 now. "I've got two brothers in the Army," says 4-H Clubber Wyckoff, "and I want them to have the food they need. I believe I can help by raising chickens and buying war bonds."

The broadcast originated in the studios of WMAL, Washington D C., T. M. Campbell, Federal Extension field agent with headquarters at Tuskegee, accompanied the group to the Nation's capital.

WAR FOOD CHIEF NAMED

(Continued from Page 1.)

Having traveled extensively in Europe, South America, and the Far East, Mr. Flood has first-hand knowledge of the over-all importance of food in this war.

For a number of years, Mr. Flood was traveling editor for a syndicate of agricultural magazines. In this position, he traveled throughout South and Central America, visited Africa, Australia, India, the East Indies, Europe, Alaska, and the Polar region. During 1942 he served in the Office of Information of the British Supply Council. Mr. Flood joined the staff of the Department of Agriculture for the second time a few months ago when he became assistant to War Food Administrator Chester C. Davis. He served in a similar capacity during the thirties when Mr. Davis was Agricultural Adjustment Administrator. In his present post, Mr. Flood is devoting his full time to food production.

Dr. W. H. Jernagin, president of the congress was deeply interested in the food production program and has cooperated with the U. S. Department of Agriculture on several occasions by working with other ministers in encouraging farmers to increase their food crops.

CHURCH GROUP IN WAR FOOD DRIVE

Bishop S. L. Green of the African Methodist Episcopal Church wired I. W. Duggan, director of the Southern division of the Agricultural Adjustment Agency last week, informing him that the president, faculty, students, farmers and ministers attending the 53rd anniversary of Campbell college wanted President Roosevelt, his Cabinet, and Food Administrator Chester Davis assured they were helping Mississippi farmers meet their war food goals.

MR. WILLIE AMMONS

(Continued from Page 1)

county agents, vacational agriculture teachers, ministers, and church leaders.

Jimmy Hand, member of the state AAA committee, terms the appointment of Mr. Ammons as a step in the right direction. And says Mr. Hand, "A sound informational program will help Negro farmers make a better living and earn a larger income, as well as advance the interest of the entire state.

COMMITTEE TO AID

(Continued from Page 1)

tension Service.

The committee will work closely with Claude A. Barnett, and Dr. F. D. Patterson, special assistant to the Secretary of Agriculture, who are also serving as special assistants in the War Food Administration. It will cooperate with them in the development of reports and recommendations for improving WFA procedures in bringing the assistance of Extension Service, the Agricultural Adjustment Agency, and the Soil Conservation Service to Negro farmers. Mr. Barnett and Dr. Patterson have traveled over a large part of the rural South, and have a first-hand acquaintance with the problems of Negro farmers. In working with the committee, they will seek to develop solutions to these problems so that Negro farmers may make their full contribution to the winning of the war.

FORMULAE FOR HORSES

Etta W. Schlichter

We hear so much of calories and vitamins for people that it is interesting to note what our new Coast Guard Mounted Patrol is doing to keep the horses in fine condition.

Fancy going into a stable and seeing a slate over each stall on which is inscribed the special "formula" for the occupant of that particular cubicle.

A sample formula is furnished us as follows:

"Breakfast, Lunch, Supper
"Oats ....3.....3.....3
Corn ....1.....1
Bran ...1-2.....1-2
Hay A 5
Hay T .....9"

Which, being interpreted, means that the horse for which this particular slate is marked is to have the following diet. Three pounds of oats at each meal; one pound of corn morning and noon; one-half pound bran breakfast and supper; five pounds alfalfa for lunch and nine pounds of hay at night.

Each owner must watch to see that his horse's diet agrees with it. In case it does not, something must be rubbed off the slate and a substitute put down until the formula is found that will keep the animal in perfect condition.

The Coast Guardsmen for mounted duty are being trained in all-round horsemanship and are learning to handle their horses in the old-time cavalry style—as carefully as mothers do their babies. They are even learning the important art of horse-shoeing.

SOLDIERS AND SAILORS GROWING FOOD

Following the example set by comrades overseas who are growing their own vegetables to get the kind they want, Army and Navy men here at home are planting hundreds of acres in Victory Gardens at their training camps, hospitals, and other military establishments.

At some Army camps, prisoners of war are working the gardens, but much of the work is being performed by the soldiers and sailors themselves. It is pointed out that in addition to providing tons of fresh vegetables these gardens will help relieve our transportation facilities, because the vegetables will be consumed right at the camps where they are grown.

The Department of Agriculture is making seed available and neighboring farmers are helping the soldiers and sailors with their machinery problem by lending them theirs.

A SUCCESSFUL BUILDER

Office of War Information

Down in Montgomery, Alabama, there is a fine old colonial mansion which has been preserved as an outstanding example of early American architecture. Visitors to the historic site are told that the the mansion was constructed by Samuel Carter, one of the most famous of the many Negro slave-artisans of the old South.

Today, a namesake of Samuel Carter—the son of one of his most apt apprentices—is carrying on the tradition of the early Negro artisan, and on a scale which the slave-builder could scarcely have imagined.

Within the last eighteen months, this namesake, Samuel Plato, has completed Federal projects costing more than $2,800,000. In his 35 years as a building contractor he has constructed 28 U. S. Post Offices. He has erected armory buildings for the State of Ohio at Zanesville and Xenia.

The 58-year-old Negro contractor has just completed Wake and Midway Halls, residence buildings in Washington, D. C., for the Federal Works Agency. These temporary buildings will house 1,123 women war workers, with facilities for an infirmary, cafeteria, recreation hall, laundry, beauty parlor and other community accommodations.

It is a long step from Samuel Carter to Samuel Plato, but it is a direct step. When the old slave-builder obtained his freedom, he set out to perpetuate his tradition by apprenticing several promising young Negroes in his native Alabama. One of his favorite apprentices was James Plato, an ambitious young resident of Waugh, Alabama, near Tuskegee.

So pleased was Carter at young Plato's aptitude that he bequeathed him his tools at his death. And so grateful was Plato to his benefactor that, when his first son was born, he christened him Samuel in honor of his esteemed instructor.

Young Samuel lived up to his name—early. At eight he had learned to use the tools of his trade. At 17, he received his first big job as a builder—on the construction of a country store. At 18, his skill as a carpenter had attracted so much attention that a white neighbor—Mr. Grant—urged him to set up business as a building contractor and assisted him in his early efforts.

Before he could get established, however, Sam Plato's family, like that of another Alabamaian, Joe Louis, joined the northern migration and settled in Louisville, Kentucky. Young Sam enrolled in the Louisville Normal School and for a while considered a career as a lawyer. He was still considering this career when the family moved the second time to Marion, Indiana.

Again a white neighbor sent Plato back to his tools. A prominent German-American foundry owner, learning of the youth's skill as a carpenter, urged him to become a building contractor and backed him in the venture.

His first contract was for the erection of a residence for the director of the Indiana Business college. The director, who had seen few skilled Negroes in Marion, was so pleased with the job that he became friendly with the contractor and discussed his problems. As a result, Mr. Plato was able to induce the educator to admit Negroes to his school for the first time, after outlining the need for more trained Negro business men and technicians.

Since then, Mr. Plato has aided and employed many trained Negro technicians in his own busiess. His project manager and purchasing agent, Charles L. Christian, who has been with him for twenty-five years, is a graduate of Indiana University. His cost accountant, Milton Wilson, comes from the same school. His chief engineer, James Braxton, is a Stevens Institute of Technology graduate and a former instructor in engineering at Atlanta University. His staff also includes his wife, Mrs. Elnora Plato, his chief accountant, and his brother, William Plato, a civil engineer.

The Samuel Plato organization is not an all-Negro outfit however. The superintendent of production, Charles T. Miller, is white, as are three of the general foremen, William Schultz, William Netherton, and Albert Penderson. A majority of the mechanics who built Wake and Midway Halls are white also, although a large number of Negro carpenters were brought into the local union through Mr. Plato's efforts. The project employed an average of 600 persons, but peak employment reached more than 1,500.

The Washington job was not his first or largest venture in war housing construction. Last year he built a $1,400,000 defense homes project for war workers in Baltimore. Earlier the Plato organization erected a $350,000 Federal housing project in Louisville, Ky. A Post Office which he built at Phillipsburg, N. J., attracted national attention because of the variety of brick and native stone used in its construction.

In the early part of the century, Mr. Plato recalls, the majority of the building mechanics in the South were Negroes. As a name-sake of the great Samuel Carter, he hopes that technical schools and colleges will assist him in carrying on the tradition of the Negro artisan.

THE STURDY OZARK MULE

Alfred O. Philipp

Some day (better late than never) I hope the state of Arkansas will acknowledge its debt by erecting a beautiful statue as a tribute of gratitude to the humble Ozark mule.

The traditional beauty and lure of the Ozark region is an undoubted reality, but the most lavish encomiums are generally heaped upon it by people who don't live there. These voluntary press agents are often northern urbanites whose experience does not extend to the soil. But the Ozark hill farmer knows what it means to drag a plow through rocks, sand, and shale; to eke out a subnormal existence from a soil that ranks low in productiveness. And he knows the region could not have been settled and farmed without the aid of the patient mule.

In these eternal green hills, tractor farming is practically unknown, the orthodox work-horse is an exception, but the sturdy and reliable Ozark mule makes farm life possible. He is usually smaller in stature than the famous Missouri "army mule," and his disposition is more amiable. Throughout much of the year he forages on the free range, maintaining his health and strength, and living to a ripe old age, on a diet of acorns and scrubby vegetation. Only the goat surpasses him in this respect.

But, despite the proverbial poverty of the hill farmer, the Ozark mule is not a cheap animal. A pair of young mules cannot be bought here for less than a hundred dollars, and to save such a lump sum entails greater sacrifices than most people can realize. The Ozark farmer, consequently, is anxious to protect his investment by insuring a long life for his mules. And I am happy to state that the Ozark mule is invariably well treated by his owner. Frequent rests are the rule while plowing, skidding logs, or pulling a wagon over the mountain ridges; and a huge salt block will usually be found in even the most humble barn lot. The whip is not commonly seen here, the children climb upon the animals' backs without fear, and in most cases a new team of young mules will be fully established as family pets within a year.

There is scant literature in praise of the indispensable Ozark mule. But perhaps it doesn's matter, for the typical native "hain't much on book larnin' nohow!" Which is, of course, regrettable. But our regret is happily tempered in the knowledge that he is kind to his mules.

THE ORIGINAL "GAS ATTACK"

L. E. Eubanks

Some people may think that the gas attack is very modern in warfare but the skunk has it in very high development and has been using it for generations. Here is an animal that apparently knows its power of defense, so is very deliberate in movement, not easily frightened; it seems to realize that most animals will try to avoid it.

When attacked, the secretion which it is able to expel with considerable force and accuracy has one of the most disagreeable and persistent odors known. For this reason, skunks have a bad reputation and are often killed at sight.

It is true that they occasionally break into chicken coops, as do many wild animals when hungry, but, on the whole, skunks prefer to keep out of sight of human beings. If allowed to live undisturbed, they are very active in the destruction of insects, worms, snakes and rodents. In this way they are far more valuable to farmers than is generally supposed. Unless they take up residence too near a human dwelling, or become robbers, they are well worth protecting.

STOP WORLD WAR III, NOW

Powerful arguments can be advanced, solely from a dollars and cents standpoint, to show why this country should participate in world affairs and lead the way in promoting international trade. Over and above these arguments is the fundamental proposition that through sound trade relations permanent peace can be established. The truth of this proposition should be the ultimate determining factor in rallying support for any trade program. If trade will insure peace, trade there must be. Individuals or groups who oppose extension of the Reciprocal Trade Agreements Act because of an imagined possibility that the profits of their businesses may suffer in some degree, and who wholly overlook the consideration of future peace, deserve little consideration from the millions of parents whose sons and daughters are fighting the present war.

Twelve hundred of the nation's economists have united in warning against abandonment of the policy of reciprocal trade agreements. Their action is unique in that, while the group included widely divergent philosophies and economic beliefs, on the question of reciprocal trade there was firm agreement, as is eloquently attested to from the following signed statement: "Some of us would like to turn toward laissezfaire; some toward a greater measure of planning. But all of us stand on this common ground: We are convinced (1) that a world-wide reversion toward nationalistic protectionism after the war will hinder the development of all types of reasonable reconstruction programs, (2) that the pattern of cooperative action which the American trade agreement program provides is the minimum basis of United States post-war policy, and (3) that the repudiation of this policy by Congress would inevitably start an avalanche of trade restrictions in foreign countries. The economic preparation for World War III would have begun."

FERTILIZER FOR FOOD CROPS

The War Food Administration has announced allocation of a considerable quantity of ammonium nitrate to specific areas for increased production of food and feed crops. About 24,000 tons are going to Louisiana, Arkansas, Mississippi, Georgia and Alabama for food and feed crops, and to New England states for use on pasture and forage crops. Some may also be made available to North and South Carolina.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., AUGUST 14, 1943 No. 7.

FARMERS SWAP PRODUCE

Food to be Exchanged For War Bonds and Stamps

Kansas City, Mo.—Greater food production and increased purchase of war bonds and stamps are set up as major goals of 165 Victory Clubs operating in 10 Louisiana parishes. Over 3,000 adult farm people, 4-H Clubbers, New Farmers of America, and Progressive Home Makers have become members of these clubs since their organization February, 1943.

The Louisiana Victory Club Movement is sponsored by the Arcadia and Tallulah Production Credit Association—the local cooperative lending units operating under the supervision of the Farm Credit Administration. Farm and home, educational, religious, PCA Advisory Committee members, and other leaders are cooperating in the undertaking. Cornelius King, Special Assistant to the Governor and L. J. Washington, Information Assistant in the FCA, are assisting with this special project.

A Victory Club consists of a group of farm people or farm youth who agree to set aside one or more cows, pigs, a portion of a crop, or some chickens, and dedicate the receipts from the sale thereof to the purchase of war bonds and stamps. Each group has a sponsor, usually a farm and home leader, a minister, PCA Advisor Committeeman, an educator, farmer, or some other leader, who serves as contact representative of the group with the PCA, and represents the group at planning and other meetings in connection with putting over the project on a parish-wide, and an association-area basis. One hundred and eleven such leaders are serving as sponsors.

While over-all figures on accomplishments in the Victory Club Movement have not been tabulated to date, figures taken at random from clubs scattered over the two association territories indicate that bond and stamp purchases will run into more than a quarter of a million dollars.

The Lincoln High Student Victory Club at Ruston, has set as its goal, the purchase of $3,000 of war bonds and stamps. Homer High School Victory Clubbers set their

RUSS USE BUTYLENE GAS TO SPEED TREE GROWTH

The Russians have studied the use of butylene gas, says Chemical and Engineering News, showing that it has a stimulating effect on the speed of growth of trees, such as the apple, apricot, pear, cherry, plum, peach, and walnut, bringing them to fruition much faster.

Where the growth season is too short to allow the full maturing of trees owing to the inclement weather in parts of Russia, so that flower formation and fruit settling are delayed, butylene has been used to hasten the growth period.

The method of treating a tree is to enclose it in a tent for two weeks before the normal or desired leafing, that is start of the growth cycle. Butylene is passed into the tents in concentrations of one part in 100,000 parts of air at temperatures between 69 degrees and 100 degrees Fahrenheit for a period of one to two hours.

Small heaters are probably used to raise and maintain the temperature of the air around the tree in order to obtain maximum effects of the growth-inducing hydrocarbon, butylene.

FOOD RESEARCH SPECIALISTS

War-Time Diet at the A. M. E. Women's Meet

Dr. Louise Stanley, special assistant to the Agricultural Research Administrator, will speak on war-time nutrition at the quadrennial session of the Women's Home and Foreign Missionary Society of the African Methodist Episcopal Church July 23, at Shorter college, Little Rock, Arkansas.

The Society is an important auxiliary of the A. M. E. Church whose jurisdictional area covers 13 Southern states. Mrs. Lucy Hughes president of the Society, points out that its membership is not only interested in nutrition and home preservation of food, but that they are also taking an active part in encouraging increased food production.

The A. M. E. Church itself, through the Bishops Council, went on record in February as being fully pledged to the food production program of the Department of Agriculture. It is also trying to keep its membership informed on various phases of nutrition.

Dr. Stanley, who was until her recent promotion chief of the Bureau of Home Economics which post she had held since 1923, has devoted the greater part of her life to study of home-making, especially food habits, nutrition, and dietary deficiencies. Using as a subject, "Good Nutrition Requires Food," Dr. Stanley will discuss for the A. M. E. Society the importance of balanced nutrition in the wartime diet.

M. CLIFFORD TOWNSEND, SPEAKER

Negro Americans Making Contributions

Washington, D. C.—M. Clifford Townsend, special representative of the War Food Administration, was the principal speaker at Pilgrim Baptist church, Chicago, on July 4, in connection with the launching of a goodwill movement designed to offset racial misunderstanding and conflict.

Mr. Townsend pointed out that Negro Americans in the armed services, in war plants, and on the farm are making a large contribution toward the winning of the war and the establishments of the Four Freedoms. In referring to farmers, he said, "One out of every nine farms in the United States is operated by a Negro. And 49 out of every 50 Negro farms are located in the South. Here is how important Negro farmers are to the South and to the entire nation. Negroes operate one-fourth of all farms in the South and supply half of the farm labor.

"Negro farmers alone, if they meet their goals, will produce enough eggs this year to serve 11 million soldiers and sailors and flyers an egg for breakfast every morning from now until next November. They will produce enough milk to meet the milk requirements of 11 million fighters for the next six months."

John Mitchell Speaks At University of Arkansas

John W. Mitchell, Federal Extension field agent, spoke at the experi-

(Continued on Page 8, Column 4.)

ADMITTED TO BAR AT 51

ON June 7, The Appelate Division of the Supreme Court of the State of New York, with fitting ceremonies, admitted a class of eighty-one new attorneys to the practice of law. Many women, a dozen or more, were among those sworn in as members of the bar. There were also six Negroes in the class, one of them, Augustus Simms, an employee of the Esso Marketers at 30 Rockefeller Plaza in New York. He is shown above receiving congratulations and two gifts—a War Bond and a brief case from F W Pierce, a director of the Standard Oil Company (N. J.).

Mr Simms, age 51, and for more than twenty years an employee of the Esso Marketers, completed his education at New York University, where he received both his A B and the Master's degree in law His earlier education was obtained at Tuskegee Institute, where he was graduated, and from the Kansas State Agricultural College, where for a time he studied with a view to becoming an agricultural agent.

"Augustus," as the general office staff call him, has lived in New York for 23 years, coming here from his home in Flatonia, Texas, where he met and married Lucille Clemmons of Washington, D. C. They live at 1800 Seventh Avenue, Manhattan, and are the parents of two sons: Augustus, Jr., age 23, a corporal in the U S Army with an ordnance battalion, and Harold C., a soldier in the 369 Anti-Aireraft regiment

50,000,000 CHICKENS PROMISED

Texas Poultry Raisers Agree on a Goal

Washington, D. C.—In an effort to help contribute their full part to Texas' poultry goals of 50,000,000 chickens, rural and urban Negro families of Tarrant County are pooling their resources to get the job done. Together they have bought 9 tons of feed, and have constructed 59 lamp-heated brooders. In the month of April alone, 80,000 chickens were reported to have been brooded by these families. Their goal is 800,000. They have a garden goal of 1,000.

Texas Negro families are not stopping here. Thousands of farmers are not only increasing their beef and pork production, but are also taking time out to learn how to protect their animals against various diseases. During the month of April 300 Negro farmers and 4-H Club youths took part in 83 demonstrations in which 2,284 pigs were treated for mange, lice, worms and cholera.

Many of the 4-H Clubbers are out to set a record in pig production. In Fort Bend county they recently completed feeding 30 pigs for market before they were 6 months old. The pigs averaged 193 pounds and netted the 4-H Clubbers a total profit of $334.43.

In commenting on pig production, the War-Food Administration suggests that fall farrowing be kept in line with feed supplies. The WFA statement says: "With the record spring pig crop coming along, farmers report a prospective fall pig crop 21 percent larger than last year. Such an increase would be out of line with our feed resources. On April 10, it was suggested that hog raisers would serve the nation's interest and their own by holding the fall pig crop to not more than 15 percent larger than the fall crop of 1942. Since that time feed crop prospects have grown worse and it becomes increasingly important that the increase in farrowing this fall

(Continued on Page 8, Column 2.)

PRUNING AND FERTILIZING REJUVENATES FRUIT TREES

One worthwhile project for gardeners is to rejuvenate neglected fruit trees which are on the farm or in the yard. Pruning, fertilization and spraying trees which have been neglected in past years will add appreciably to the family food supply.

Pruning should be completed before the buds begin to open but it can be done later if necessary. Dead wood and enough other branches should be removed to permit sun to reach the center of the tree and to allow spray materials to be applied effectively, but extremely heavy pruning should be avoided.

The second important item in rejuvenating fruit trees is the application of a fertilizer containing a high percentage of nitrogen. These are hard to get now but sulfate of ammonia may be available. Cyanide is satisfactory if it can be obtained. Five pounds of sulfate of ammonia for a 20-year-old apple tree is recommended, and mature peach trees will need about two pounds. Chicken manure will help the trees if commercial fertilizer is not available.

It is unnecessary to cultivate the soil beneath fruit trees but a heavy growth of grass should be discouraged. Mulching with old straw or other plant residue will keep the weeds and grass down and will help conserve moisture.

"NATURE'S GARDEN FOR VICTORY"

Last Bulletin of Dr. George Washington Carver

Washington, D. C.—One of the last bulletins published by the late Dr. George Washington Carver, eminent agricultural research scientist, was entitled "Nature's Garden for Victory and Peace." In it he listed more than 100 grasses, weeds and wild flowers which may be used for food. He also gave recipes for preparing them.

Last week the Bureau of Human Nutrition and Home Economics of the Department of Agriculture published a partial list of wild plants which may be eaten. The nutritionists point out that gathering wild vegetables in China and parts of Europe is an old story. Many of these peoples count on wild greens as a regular source of food. Under the stress of war the practice is becoming more wide-spread. In all countries wild plants that are nourishing and edible are becoming popular foods.

In picking wild greens or plants, the important thing, of course, is to know your greens. The bureau warns that wild greens should not be served unless one knows they are edible. Here are some that are safe, and they may be cooked or used in making salad: dandelion, cut the leaves before the yellow blossom forms; lamb's quarters, plantain, poke, purslane, wild chickery and dock.

Negro Agent Promoted In North Carolina

The North Carolina State Extension Service announced last week the appointment of Otis Buffaloe as Negro district agent for the eastern section of the state. Graduated from A. & T. College in 1933, he has made an enviable record during his nine years as Negro county agent of Anson county. Mr. Buffaloe succeeds J. W. Jeffries, who has been named assistant Negro state agent to succeed John W. Mitchell, newly appointed Federal Extension field agent.

CITY Youngsters in Food Drive

Town and city youngsters are in the drive for increased food production. Albon L. Holsey, field officer for the Agricultural Adjustment Agency, received letters recently from the principal of the Charlton-Pollard high school in Beaumont, Texas, and from the principal of the Mobile, Ala., training school explaining the wartime pro-

(Continued on Page 8, Column 1.)

FARMERS FED UP

Many large dairies have gone out of business. More and more is the nation having to rely for its food on the family farm where the members get up in the early hours, milk the cows, tend to the farming during the day, milk the cows at night, and at a late hour call it a day, go to bed, and get up to do the job all over again, seven days a week.

If the farmer worked the short hours and received the high pay of workers in war industries who are constantly striking for even higher wages, those workers would probably be paying a dollar a quart for milk.

Nature's requirements on the farm recognize no artificial production limitations and slow-down sabotage.

There are two good places to put strikers today—in the Army and on the farms. They would then get an idea of what real work is.

WOMAN'S PAGE

AMERICAN HOUSEWIVES LEARN LESSONS FROM ENGLISH WOMEN ON RATIONING

By Mary Lyles Wilson

You have often heard the saying that "Misery loves company." This might be applied to the American housewife as we go more on the point system of living. I refer to our neighbors across the waters. The British housewife can comfort us as well as teach us a lot of things.

She has learned to live healthfully on a ration card, to stretch food to the Nth degree and to face meatless days with the equivalent of "So what?"

Of course, were we to ask one of our English neighbors for advice on coping with the current food shortage, she'd probably say "It's really not so bad as you think."

America has a food shortage but none of us will go hungry. We are faced, for the first time, with restrictions that impose upon us new problems.

How has the British housewife rationalized reality? How do her problems parallel our own? What has happened over in England has come to pass over here. We are sharing our food wealth, so every suggestion and hint we can get from the women of England about food conservation and the utilization of every last particle will be helping our own food front.

Over there, British women realize that what may be plentiful one week may be scarce the next, so it becomes a daily problem how best to feed the family. Certainly this is a familiar problem to the American housewife. The British government and the housewife stress vitamins—not calories as in World War I and plan to diversify in so far as possible the available food so that too great a demand is not made on any commodity.

England, too, has always stressed home-grown produce. Almost every house has its own garden or allotment and takes pride in growing its own fruit and vegetables, so in some ways they are better prepared than we. The encouragement being given to our own Victory gardeners is an extension of this British achievement.

Everything in England is rationed except potatoes, fresh vegetables and bread. With a total monthly ration allowance of 20 points, the British housewife stocks her pantry from the latest point value ratings. She would hardly be so rash as to select a one-half pound can of salmon, for with it would go her whole 20 points; she passes up sardines at 24 points and luncheon meat at 30 points per pound can.

What kind of dishes are these English women serving? While they may lack the variety of foods available in the American market, they manage to achieve new dishes, and to use the foods they have in imaginative, nutritious ways.

They like to use a great many raw vegetables for sandwich fillings and children love some of the new wartime concoctions. A popular filling that appeals to youngsters is one made of grated carrots and chopped bacon, or shredded radishes, chopped watercress, fresh herbs and salad dressing. Here's one with an unusual flavor; finely flaked fish with shredded fresh vegetables and curry powder added to taste.

Sausages in England today leave much to be desired, for they are not the little piggies of pre-war days. Here's one, called a Cheese Sausage that has nourishment and flavor. We are fortunate to have good sausage here.

Left-over boiled potatoes are mashed with a little bacon fat, or chopped pork. Grated cheese is added according to the quantity that can be spared from the weekly ration, a grated onion or leek gives piquancy to the whole and then the mix is seasoned and rolled into sausages (skinless and zipperless, according to a Britisher, so there's nothing to grip the teeth or clog the windpipe). The sausages are coated with mixed grated cheese and browned crumbs, then grilled in a heavy skillet.

Now that Ration Book Number 2 is in use, and we've all taken a deep breath, we find that rationing isn't so bad after all. At least we can all have our fair share of the food that's available.

We've found however, that planning has become very important, and that pencil and paper are as necessary in the kitchen as a good cook book. For greatest wartime economy, plan before you shop. But—and this is as important—make meal plans adjustable.

Make Elastic Plans

If you decide to have a roast beef dinner, for example, and your dealer hasn't any beef on hand, buy a veal, lamb or pork shoulder, loin or leg roast instead. If you listed green peas as the vegetable you could serve string beans, spinach, best greens, broccoli—the possibilities are many. Alternates can easily be fitted into a well balanced menu with no loss of nutritional essentials, if the alternates are properly selected.

Remember that all meats have high nutritive values regardless of kind and cut. Remember, too, that with a wide variety of vegetables, home-makers are all discovering culinary tricks that help to make the most of the food they buy—women are learning what a delicious kettle of soup can be made from a meat bone and bits of trimming, with a few vegetables and rice or barley added.

There are tricks, too, that help make favorite dishes without using up precious ration coupons. Take mock chop suey, for instance.

MOCK CHOP SUEY
(6 Servings)

2 cups thin strips of cooked heart, kidney, or beef, pork or veal (1 pound before cooking)
1-4 cup flour
1-4 cup fat
2 tablespoons soy sauce
1 cup thinly sliced onion
1-2 pound fresh mushrooms
1 cup thinly sliced celery
1 cup shredded cabbage
8 ounces noodles

Dredge heart strips in flour. Brown in 2 tablespoons lard in heavy fry pan. Add to 2 cups boiling water the soy sauce. Brown onion, sliced mushrooms and celery in 2 tablespoons fat. Add to heart, cover. Simmer about 15 minutes. Boil cabbage 5 minutes. Drain. Add to chop suey. Serve on hot cooked noodles, toasted shredded wheat or rice.

It's wise to use rationed foods sparingly until we are used to the idea and can budget our total number of points for the period so they will be equally divided. But there are little tricks that will help to save precious points.

If your recipe for a meat loaf, for instance, calls for one cup of tomato juice, try mixing 2 or 3 tablespoons of catsup with one cup of water and using that in the loaf instead; or use water as the liquid and add a teaspoon each of mustard, horseradish and paprika. You'll like the flavor!

In the following recipes, one-half pound of meat yields four servings:

Swedish Meat Balls With Noodles

1-2 pounds ground beef
1 ounce ground beef suet
1 small onion, diced
1 teaspoon salt
1 tablespoon flour
1 tablespoon fat

Combine beef, suet, onion and salt. Shape into 1-inch balls, roll in flour and brown slowly in hot fat until cooked. Remove from pan. Make a brown gravy with remaining fat, using 2 tablespoons of flour and 1 cup of milk or water to each 2 tablespoons of fat in pan. Season to taste. Serve gravy and meat balls on top of hot cooked noodles.

Scalloped Macaroni and Ham
(Yields: 4 to 6 Servings)

2 cups diced cooked ham
2 tablespoons butter or fat
2 tablespoons flour
1 teaspoon salt,
2 cups milk
2 cups (4 oz.) macaroni
1-2 cup grated sharp cheese
Paprika

Make a white sauce of the fat, flour, salt, and milk. Boil small pieces of macaroni in salted water until tender. Drain. In a greased casserole place half the macaroni, add diced ham and half the white sauce. Cover with macaroni, then white sauce. Top with cheese and paprika. Bake in a moderate oven (350 degrees F) about 45 minutes.

Sausage and Hominy
Yield: 4 Servings

1-2 pound pork sausage links,
1 tablespoon minced green pepper
1 tablespoon minced onion
2 tablespoons drippings
2 cups cooked hominy

Place sausage in a frying pan. Add 1-4 cup water. Cover. Steam 5 minutes. Drain, cook slowly. Turn to brown evenly. Heat green pepper and onion in drippings. Add hominy. Heat. Serve sausage on mound of hominy.

Vegetables should be cooked as short a time as possible and should be served promptly. The cooking water will contain minerals and vitamins and should be used in gravies or soups. Soda destroys some of the food values of vegetables.

Vegetables cooked or baked in their skins are better food than those which are cooked after peeling. This cooking method also saves time and labor in preparing the meal. Peas should not be shelled until they are needed.

Tender cuts of meat should not be overcooked and should be cooked in an open pan. Less tender meat cuts should be browned, covered and cooked slowly in a minimum of water, and only until tender. Eggs should be cooked at low temperatures.

Edible mushrooms contain about 90 per cent water.

HELPFUL HOUSEHOLD HINTS

Color Effect

Color intensity is an important factor in interior painting. Bright colors used over too great an area are advised against by color experts. Many colors properly balanced result in splendid decorative schemes, but too much blue by itself may have a depressing effect. Some color theorists hold that too much purple or lavender may have an irritating effect, while a room painted entirely bright red would be upsetting to the nerves. On the other hand, "cool" colors used on large areas produce a restful effect, and "warm" colors increase optimism and cheerfulness.

CLEAN ALL SPOTS

All rugs and carpets should be swept thoroughly and regularly. The spot under the heavy chest of drawers or the davenport or trunk that is seldom moved is a starting place for both moths and beetles. An entire home could be infested and much property destroyed almost before the owner was aware of their presence. Likewise it is a good plan to give attention to those pieces of furniture set close to the wall. Hair and lint often accumulate in the cracks and in and around the baseboards.

BEET LEAVES DELICIOUS

The green leaves of beets are every bit as delicious as the beets themselves. If you select a bunch with plenty of fresh green leaves you can cook the tops and have two vegetables for the price of one!

The beets and greens can be cooked together, if the beets are young and tender, but this method will make the tops dark and reddish colored. It's best to boil them separately and have the nice contrast between the bright colored beets and the dark green leaves.

BALANCED DIET

Nutritionists suggest the following daily diet: Milk, 1 to 1 1-2 pints; egg, 1 if possible (or substitute if necessary beans, peanuts, cheese, or more milk or meat); meat, fish, or fowl, 1 or more servings; potatoes, 1 or more servings; vegetables, 2 or more servings, one green or yellow; fruits, 2 or more servings. One citrus fruit or tomato, or other good source of vitamin C; cereal and breads, whole grain or enriched; butter, 1 to 3 servings; and other foods as desired to round out the meal.

SUMMERTIME DELICACIES

Like iced tea and potato salad, cobblers are a necessary part of summertime meals. Beginning with early berries and lasting through the peach season they are a high spot that is welcomed and relished. There are many cobbler recipes. Some short and flaky, others sweet and velvety in texture, while still others are firm and full flavored with fruit. The dough must be chosen to suit the fruit, one for soft juicy fruits like berries, another for firm fruits like peaches.

Cobblers can be made without using more than their share of the precious supply of sugar. The dough recipe may be made with less sugar or corn syrup may be substituted for part of the sugar. The shortening may be reduced by using cream or top milk for the liquid. The fruit itself may be sweetened with part corn syrup and part sugar. Our sugar saving techniques put to good use will result in more desserts for the family and sugar to use on special occasions, such as birthdays and anniversaries. And there will be sugar for those recipes like Lime Pie, given below, that are marked "extra special" and that we like to serve occasionally as a treat.

LIME PIE

1 1-4 cup sugar
1-8 teaspoonful salt
6 tablespoons cornstarch
2 cups boiling water
Grated rind of 1 lime
1-4 cup butter or margarine
3 egg yolks
1-2 cup fresh lime juice
Baked pie shell
3 egg whites
1-4 teaspoon sugar
3 tablespoon sugar
3 tablespoon corn syrup
1-2 teaspoon vanilla

Mix sugar, salt and cornstarch. Add boiling water and grated rind. Cook until thickened, stirring constantly. Lower heat and continue cooking for 15 minutes, stirring occasionally. Be careful not to burn it. Stir in butter. Mix beaten egg yolks and lime juice and stir the sugar and cornstarch mixture into it. Let cool a little and pour into baked pie shell. Make meringue by beating egg whites and salt until stiff. Add sugar gradually, beating constantly with rotary beater. Add corn syrup and continue to beat. Add vanilla. Spread on pie and bake 10 to 15 minutes or until delicately browned in moderate oven, 325 degrees F.

MODERN BERRY COBBLER

1 cup flour
1-3 cup sugar
1-3 cup corn syrup
1-2 teaspoon salt
1-2 cup milk
2 tablespoons margarine (melted)
2 cups berries

Add corn syrup and sugar to berries and bring to rolling boil. Sift flour, measure, add sugar and salt and sift together. Mix milk, corn syrup and melted margarine. Pour dough into buttered baking dish. Spoon berry mixture over it. Bake 45 minutes at 350 degrees F.

HOUSEWIVES SHOULD KNOW GRADES FOR WISE SHOPPING

The thrifty housewife should know food grades. This war period is no time to buy a "pig in a pork." When shopping for the family's food, it is very important that she know as much as possible about groceries.

One way to know what you are buying, is to get foods with U. S. government grades whenever possible. Government grades are accurate. By purchasing such graded foods you can get what you want at the price you want to pay. If you get the grade-labeled can, the label tells you whether the food is of A. B. or C. quality. The growers consider size, ripeness, freedom from blemishes, tenderness and uniformity in making up the grades.

Grade C canned goods are of good quality but they are not as carefully selected as the first two grades. However, they may have the advantage in food value because the fruit or vegetables may have been more mature when harvested. You don't need high-cost, Grade A peaches, if you are going to cut them for a salad or cobbler.

Buying the grade that suits your use is a simple way of cutting down on the food budget. It is the thrifty buyer, who buys the lower grades, which are less expensive, when the fruits and vegetables are to be cut up or combined with other foods.

FACTS ABOUT HONEY

All honey is good and wholesome, at least in the temperate zone, even son ivy and poison sumac, but there that made from the flowers of poi- are great differences in flavor and color, dependent on the source of the nectar. In the southeastern part of the country bees often gather honey too bitter to be edible. Experiments indicate that honeybees can pass to the honey many kinds of coloring substances and flavors when these are fed in sugar syrup as a supplementary ration, thus indicating possibilities of more types of honey (which, for commercial use, must be labeled to indicate source) than are possible from flowers alone.

THE INEVITABLE EFFECT

It is no wonder that the Senate War Mobilization Committee in a recent report declared that the home front is "sagging dangerously." A free people have found themselves shackled by bureaucratic red tape at almost every turn.

They try to increase production—they try to get a war job—they try to raise crops—and in many instances they are slowed down or actually stopped by some restriction, decree or law that has so complicated our economic life that a citizen used to doing things for himself is stumped by a multiplicity of bosses.

Don't forget that the success of our war effort has been due to the drive of free private enterprise. Don't expect to hamstring that enterprise and not confuse and bewilder, and even destroy, the spirit of individual initiative and independence which built, maintained and must perpetuate this nation if our country remains as we have known it.

MODERN CHAPLAIN RIDES THE CIRCUIT IN AN AIRPLANE

The war has brought back the circuit rider, that famed clerical figure of another era, but this time he uses an airplane instead of a horse. Chaplain (Capt.) William E. Taggart, who was chaplain of the 19th bombardment group, United States army air forces, has told about it. Chaplain Taggart wears the Silver Star, awarded him for gallantry in the Southwest Pacific.

"An army chaplain assigned to an air corps unit in a combat theater learns that he cannot expect his men to attend his services regularly," Chaplain Taggart said. "So he has to go to the men. Many times I have boarded a plane and gone to the men, hidden maybe in the jungle and awaiting a chance to attack or to fly on a defensive mission. They haven't time to listen to sermons, and the chaplain has to go by each plane, give a short religious message to the pilot and the members of his crew and then hurry on to the next. It is circuit riding all over again but a little more modern than that which we had in the old days.

"A chaplain doesn't have to "sell' the Word of God to his men. His main job is seeing that religion is always made available to them. Of course, he has the never-ending job of visiting the sick and the wounded, the reviving of the spirits of the downhearted and the burying of the glorious dead. He never feels his work is through, but he also never feels that the seeds he sows do not bear fruit. All around him he can see the fruits of his work. There is a need for more and more chaplains and, even with the full quota assigned to us, there won't be enough to do the job as well as we of the church would like to see it done."

INVISIBLE ALLY

When fires occur, fire prevention authorities seek out the causes and endeavor to make them generally known in order that plant managements, in fact all property owners and citizens, can be encouraged to correct similar hazards. Periodically the National Board of Fire Underwriters publishes bulletins with much useful information gained from actual fire experiences. Typical of these is one dealing with the industrial fire hazards of dry rooms, drying ovens, dip tanks, kilns, overloaded electric motors, and overheated bearings.

For example, in commenting on a fire caused by a faulty drying oven, the bulletin states: "Infra-red light bulbs were used to dry refrigerator parts dipped in a tuluol-thinned metal sealer. Falling of a conveyor basket broke bulbs, which caused ignition of vapor and spread fire residue on conveyor carriers. Lessons learned were: A wire guard should be provided to prevent parts from falling and breaking the infra-red lamps. A longer pre-dry period is necessary to prevent excessive fumes and drippage from entering the oven, and mechanical ventilation should be provided for the oven canopy to assure fume removal. Conveyor carriers should be cleaned at regular intervals to prevent accumulations of residue."

No agency is working harder to prevent fire than the fire insurance company. It provides far more than financial protection in case of fire loss. Part of insurance premium money goes to protect life and property against fire before it starts—fire prevention. The insured may not "see" fire prevention efforts of the fire insurance companies, but they are in his place of work and in his home in the form of approved electrical fixtures, safe wiring, fire-resistant construction, and in countless other places. Fire prevention is the main business of the insurance industry, next to the actual indemnity for fire loss. Without this "invisible ally," we could not produce record quantities of war materials.

TRIBE AIDS CHINESE

Lisu tribesmen have gone to war against Japan, 100,000 strong. Their homeland—of immediate strategic importance—is the mountainous border between Japanese-held Burma and China's Yunnan province. China has armed about 10,000 Lisus, replacing their traditional weapon—the poisoned arrow—with rifles.

The Lisus are peaceable, but they like their freedom. Among their neighbors Lisus are famed for their dancing. They are the official dancers for inter-tribal ceremonies. They dance to the twanging, waspish music of bamboo jews' harps. Men and women join in the simple yet graceful figures. One dance is performed to the accompaniment of the crooning voices of the tribesmen. Their songs are all versions of "There's No Place Like Home." They sing of their misty mountain-top homes, and of dim, dripping forests where they hunt.

ARMIES LAND ON HOSTILE SHORES IN NAMELESS SHIPS

The grim drama of invasion could not be staged without the aid of hundreds of nameless little ships. These small craft, troop and tank barges, take over when the big ships have performed their task of bringing troops, tanks and equipment as close to the enemy shore as possible.

The little nameless ships, some of them not even distinguished by a number, circle the troop ships, the tank lighters and, at a given signal, swoop toward one of the troop transports and armed troops swarm down the landing nets and into the barges which roar away toward the shore—a perfectly co-ordinated effort carried out with speed and precision.

From other ships, tanks road down runways and into heavy steel barges. Each of the little ships has a bow that drops when it reaches shore and men and tanks are quickly landed.

The thunder of guns, the deadly and sinister chatter of machine guns isn't a signal that the work of the little ships is done. It has barely started for the same invasion barges race endlessly back and forth bringing in artillery, munitions, food, water, gasoline, trucks and jeeps and hospital supplies—all of the material needed by an invasion force. They work fast and hard, making dozens of trips.

They are probably expendable craft. No single one of these small and nameless craft will ever go down in history surrounded by fame and publicized glory.

DRAFT VARIES

The amount of draft in the chimney depends on the barometric pressure. This varies with the weather so that on some days the draft will be stronger than on others. Thus, it is possible that on a "muggy" day there will not be sufficient draft to take all the products of combustion out of the furnace, if the check-draft damper has been set for a clear, windy day. By reducing the opening in the check-draft door on the smoke-pipe the draft will be increased and smoke from this source eliminated.

MAKE 'TUN' A TON

A half-century ago there was a brisk trade between France and Great Britain in French wines shipped in wooden casks of tuns. So heavy was this channel traffic that ships were measured according to the number of tuns they could carry, the National Council of American Shipbuilders tells us.

The crafty French wine merchants, however, tried to sell as little wine as possible for as much money as possible, steadily decreasing the size of the tuns or casks. Thrifty, thirsty Britons resented this fraud and prevailed upon parliament to do something about it. A law was passed that a ton (tun) of wine worthy of its money and name should contain 252 gallons, old English measurement, or approximately 2,240 pounds avoirdupois.

THE PICTURESQUE LONGHORN

The longhorn of the Southwest was not a very pretty bovine specimen. Its legs were long and bony, its tail too long and its body so long and thin it was often sway-backed. Its color was varied, sometimes brown, sometimes red, black or dun and often a combination of colors. Its horns were its most outstanding characteristic. They curved outward and upward on either side of its head in a great sweep, sometimes almost cork-screwing, and tipped at the ends with needle-sharp points. So heavy were the horns that one wondered how the thin, scrawny neck could support them.

The longhorn reached its growth in about ten years, but the horns kept on growing as long as the animal lived. Sometimes old steers would have horns that measured eight feet from tip to tip, and the bases of these would be wrinkled and cracked to give the appearance of moss clinging to rocks. This caused them to be often referred to as "mossy horns."

The origin of the longhorn is only partly accounted for. They were descended from many different breeds, one of which was the Spanish Andalusian stock, the first breed of cattle imported into America. Other ancestors were the "mustang cattle," a black, sharp-horned breed, very fierce and wild. How the longhorn breed of cattle, descended as it is from so many different strains and species could reproduce itself with such a uniformity of type and characteristics down through the years is a mystery and wonder. Although morose and surly the longhorn was not vicious like some breeds of the Southwest, notably the black mustang cattle. It was hardy and able to survive where other breeds could not. At one time it was very plentiful but the advent of the barbwire fence and the importation of beef cattle gradually crowded the longhorn from the scene. Now the longhorn cattle as a species are more scarce than the buffalo itself.

WALLPAPER CLEANER CAN BE BOUGHT OR MADE AT HOME

Homemakers who want to brighten rooms without repapering them can get good results with wallpaper cleaner, either commercial brands which have been tested or a home-made cleaner recommended by extension specialists in home management of Ohio State university.

An efficient wallpaper cleaner can be made by using 4 cups flour, 2 cups warm water, 4 tablespoons kerosene, 4 tablespoons ammonia, and 4 tablespoons salt. The materials are mixed and beaten until smooth and then cooked until the material thickens. It will be lumpy but should not be doughlike.

After cooking, the cleaner should be kneaded and made into balls. These should be stored in a tight container for several days to permit the cleaner to cure so it will not crumble while being used. The recipe given will make enough cleaner for an average size room.

In cleaning wallpaper, all cobwebs first should be removed with a wall brush or soft wool mop without permitting the brush or mop to touch the wall if the paper is sooty. Soot streaks brushed into wallpaper are very difficult to remove. Cleaning should start at the bottom of the paper; the dirt being removed by short, even, overlapping strokes of the cleaner. The soiled part of the cleaner should be worked into the interior of the ball after each few strokes.

TEACH PEDESTRIANS WALKING

Since the OPA has literally put Atlanta on its feet, the city police department has concluded it must teach pedestrains how to use those feet—as far as traffic regulations are concerned, at least. First step in the campaign was to issue safety pamphlets for pedestrians in which safe walking is stressed. After a reasonable time pedestrians who break traffic laws will be treated just like law breaking motorists. In other words, the chief of police says, jaywalking across the street against a signal light, stepping from parked cars into the traffic stream and other actions which result in accidents will be "out" for the duration.

Bob: I act like a fool when I have four drinks in me.

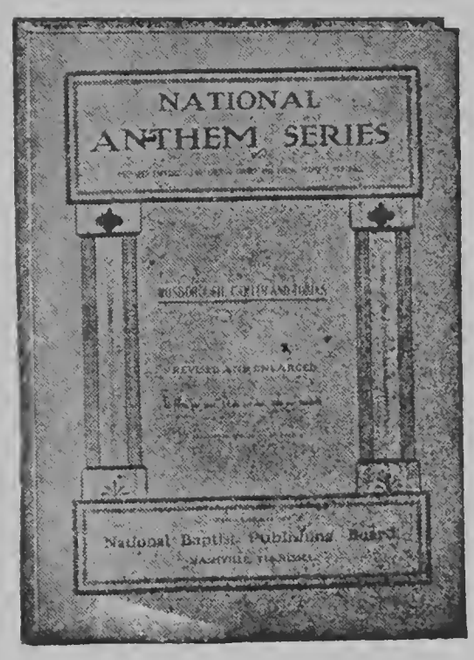
Joe Yeah? What do you do

Bob: I stop drinking .

THIS BOOK OF

"ANTHEMS"

Has proven to be one of the most popular ever gotten out by the Publishing Board.



EVERY CHOIR

should have one of these books. It gives the leading sopranos in the choir an opportunity to fully develop the talents given them.

This book was written; music and words by Negro composers and writers.

Price 50 cts. per copy; $6.00 per dozen.

SEND ALL MONEY ORDERS OR REGISTERED LETTERS TO

NATIONAL BAPTIST PUBLISHING BOARD

HENRY A. BOYD, Secretary,

523 Second Avenue, North Nashville, Tennessee

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. A Unit of the National Federation of Colored Farmers in every community of colored farmers.
2. Co-operative buying, producing and marketing.
3. Every colored farmer a farm owner.
4. Abolition of debt-slavery, injustice and persecution.
5. A written contract for every colored farm tenant and sharecropper.
6. Better rural churches, schools and homes.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

DEHYDRATED FOODS BIG ITEM IN MARINE'S FARE

Since transportation space is one of the biggest problems for supply officers, dehydrated foods are used as much as possible in marine field kitchens. Dehydrated foods have been developed to such a degree that most of the time they cannot be detected from fresh foods. Powdered eggs with bacon and powdered milk with hot or cold cereal, along with canned fruit, constitute the usual breakfast. Coffee remains the favorite morning beverage.

Potatoes are the staple vegetable for dinner and supper, with beans and corn competing for second place. A condensed form of butter which comes in tins and is nonperishable supplements every meal. Canned fruit is the usual dessert. Bread, made by a special tropical formula, is rationed six ounces per man daily. Orangeade and lemonade, made from crystals, and grape and grapefruit juice are usually served once a day as a precaution against beri-beri and scurvy. Dysentery and diarrhea, World War I bogeys, are held to a minimum.

FARMERS ARE DOING THEIR PART TO FEED THE NATION

By W. A. Hagins

Industrial College, Ga., June 23—Georgia Negro Extension workers are unstintingly assisting Uncle Sam with his war efforts, according to monthly summaries of war agricultural activities among them. One of the most significant contributions has been that of "spurring" more farm folks along to increased farming operations for greater food production.

Here are some results of wartime Extension influences of a few farm families as revealed by P. H. Stone, State Negro Extension Agent for the Georgia Agricultural Extension Service: "On farms visited by the workers and neighborhood leaders since January, farmers have had 169,518 chickens. Many of this number are from this year's batch of baby chicks and have now reached broiler size. They have had 36,019 hogs for pork, 6,088 turkeys, 1,737 guineas, 5,854 acres have been planted to gardens with a wider variety of vegetables growing than in previous years, more than 14,000 acres of land have been planted to soil building crops for increased yields and more pounds of milk and butter were collected.

Farm folks also canned 24,544 containers of food products and sold $75742.90 worth of milk, vegetables, beef, eggs, chickens, hogs, etc. It is pointed out that farmers collected 82,231 pounds of scrap rubber and iron and purchased $8154.91 worth of war bonds and stamps.

Neighborhood leaders chosen by Extension workers early in the year are working 'hand in glove' with them in organizing communities for increased food and food production. Of the 2789 selected for this activity, 2663 have made reports to their agents. They have held 1012 neighborhood meetings while agents conducted 936 neighborhood demonstrations. Both Extension workers and neighborhood leaders held 1115 garden and 355 canning demonstrations."

Due to present-day conditions and the dire need of expanded farm operations, greater interest should be shown by all farm families as a means of producing more food and feed for the prosecution of this war.

CAREFUL MANAGEMENT AIDS IN BREEDING GOOD RABBITS

Good breeding and sound management provide the foundation of successful rabbit husbandry, R. E. Callender, wildlife specialist, says. The beginner, he says, may make the mistake of handling the rabbits too much, when they should be handled as little as possible.

"Never lift a rabbit by the ears or feet, but take hold of the loose skin over the shoulders with one hand and place the other hand under the hind quarters so that most of the weight will be supported from beneath," he cautions. "Keep the feet turned away from your body so that you won't be scratched. Fryers should be handled with especial care so they will not be bruised, and their value reduced."

It will pay rabbit raisers, whether they are producing meat for their own table or undertaking a commercial venture, to keep records, the specialist says. Notations should be made of the time of breeding, time of kindling, number in the litter, deaths, number weaned, the date of weaning, expenses, and receipts and other pertinent informaiton.

Mr. Callender has other suggestions on the care of litters. Hutches should be cleaned thoroughly a day or so before the young are expected, and the doe should be provided with a nest box containing plenty of straw. When the rabbits are a day or so old, the weak ones should be disposed of. The number of rabbits left in the litter should not exceed the number which the mother can feed, which will be about six or seven, he points out. Sometimes the extra can be given to a nurse doe, Mr. Callender said.

TEA SUPPLY IS LIMITED BUT ADEQUATE

There has been some speculation among housewives as to whether they will be able to buy enough tea for their needs—and whether or not it will be rationed. The present system of limiting the amount that the retailer may receive is an effective way of rationing and no other method is likely to be used.

There is now a limit on package sizes, and the number of packages available to each consumer is up to the retailer. In this way each grocer limits his customers, which assures a fair share for all. Naturally this method is conducive to conserving tea and it is up to the homemaker to brew her tea most carefully to get the most from what she has.

There are three simple rules for making tea, but they should be followed if you expect the best results from the tea you have.

Always use fresh bubbling, boiling water and pour it on the tea leaves or tea bag. The reason the water should be fresh is because if you use water which has previously been boiled you will get a flat taste. The air has been boiled out. A bubbling boil is necessary because only very hot water will extract the goodness of tea leaves.

Steep tea to any strength you desire—for the way to drink it is the way you like it best. If you like weak tea the best plan is to let it steep three to five minutes to get out of the tea all the essential oils, as they come out slowly, and then add hot water when serving. The fact that tea may get darker doesn't mean that it is getting stronger. One teaspoonful of tea leaves is recommended for each cup of tea and one for the pot or you will not get enough of the essential oils to make the tea richly flavored or to get the full pick-me-up effect.

FACTS WORTH KNOWING

How science discovered some important facts about wheat smut is an interesting bit of history. About 1670, a sailing vessel loaded with wheat ran into a storm and was gounded near Bristol, England. English grain growers were suffering heavy losses from smut, a mysterious disease for which no control had been discovered. Farmers living along the coast salvaged some of the grain from the wreck. They found it too saturated with sea water to use for flour, so planted it as seed.

The soaked seed produced wheat that was fairly free from smut while nearby fields were heavily diseased. During the next century, sprinkling wheat with brine was a common practice. Today, research has determined that the disease is caused by fungi which reproduce themselves and live over from year to year by means of microscopic bodies known as spores that are often present on the surface of the seed.

CEREALS NUTRITIVE

Instead of stressing foods that are scarce, homemakers should put more emphasis on foods which are available in as large amounts as we are likely to want them. Outstanding in this class are cereals. There is every prospect of ample crops both here and in Canada.

As a group the whole-grained cereals have far more nutritive value than most people realize . . . they are rich in several important minerals and vitamins. Used as meat extenders, as breakfast food and in puddings as well as bread, large portions of cereals can be introduced into the diet without our being especially conscious of them. Recent information has been released that all of our white bread will be enriched by the addition of some of the nutrients which are removed in the milling process. This is certainly a step forward. Nevertheless the original whole wheat itself is to be preferred, for in it is every thing that wheat can contribute.

YOUNG BOY SHOULD EAT VEGETABLES FOR VITALITY

In planning meals for an adolescent boy try out all those foods that he never would eat earlier in life. Spinach and collards, for instance; or the various salad greens which he, like many other boys, called "rabbit food"; or the cooked cereals he thought beneath the dignity of one of his years. He needs them all, or he will fill up on the less nutritious foods.

Most boys, especially if they are athletically inclined, want to grow up and gain weight as rapidly as possible. This isn't always so easily accomplished, especially if he insists upon participating in athletic activities and fails to give due attenion to this business of proper diet. Meat and potatoes are good, but they do not contain enough vitamins and minerals. He would have to drink milk to keep those rapidly growing bones well supplied with calcium and phosphorus. Milk also provides riboflavin, one of the B vitamins which is necessary for proper growth and eyes. A quart of milk daily should be the rule.

However, important as milk is, it cannot furnish the iron which is essential for the formation of blood cells in his growing body. Meat, especially liver, contains iron but probably not enough to do the trick alone. Spinach or other green vegetables would help; eggs would also contribute iron; old-fashioned molasses on baked beans would be equally well. Green vegetables and eggs supply vitamin A.

PRACTICE WHAT WE PREACH

Many opponents of the reciprocal trade policy instituted by this country under the Trade Agreement Act, feel that "agriculture has been sold down the river." They believe that our trade agreements with other nations have resulted in letting down tariff barriers on agricultural imports, while manufacturing industries received most of the export benefits.

As a matter of fact, the result of our trade agreements with other countries under the reciprocal trade program should satisfy the shrewdest farmer.

Countries with which we have such agreements have granted i portant concessions on 73.9 per cent of the agricultural products our farmers sell to them, in contrast with concessions on 48.5 per cent of non-agricultural goods sold to them by our manufacturers.

Moreover, agricultural exports from the United States to the 16 countries with which agreements were effective for the year ended June 30, 1939, were 15 per cent higher than 1935-36; in same period exports to nonagreement countries declined by 19 per cent.

In the case of imports, duties had been reduced up to 1939 on only 14.6 per cent of our agricultural purchases from abroad—close to half of this figure representing Cuban sugar —compared with reductions amounting to 23.4 per cent on other imports.

It is worth noting that many of the agricultural concessions made by the United States are relatively insignificant, especially when restrictions by tariff quotas are considered.

The Trade Agreements Act has brought financial benefits to this country. But suppose business men and farmers had been temporarily forced to make a small financial sacrifice? Would it not be worth it if, through trade, a lasting peace could be established? Immediate financial profit is not the real issue underlying the trade question. The real issue is peace or war. Idealism and isolation won't prevent war. That was proved after the last war. War can only be prevented by good business relations between nations. And now is the time to promote those relations by renewing the Trade Agreements Act in June.

We hear a lot of talk about daring plans for a new world. There is no better place to be daring than in the pioneering of trade relations. If we are not daring, if we stick to old-fashioned, tight-fisted methods of bargaining with "foreigners," we can begin training the army of 1965 as soon as it gets out of diapers.

A FEW FACTS TO REMEMBER

Since the last World War, $10,000,000,000 has been spent for improvements to American railroads. For every dollar of additional stocks and bonds the railroads have spent $10 for additions and betterments. In 1918 there was an average of $10,000 worth of railroad equipment for each man employed. Now each man uses $20,000 worth.

Moving fighting equipment and fighting men, war materials, food and fuel has been the biggest transportation job in history. Railroads in 1943 are moving twice as many ton-miles of freight as in corresponding period in 1918.

Freight rates generally are no higher now than when the war started.

There are 600,000 fewer freight cars in service today than in 1918, but they carry 22 per cent more. The average freight train does more than twice as much work in an hour.

There are 26,000 fewer locomotives than during the first World War, but they are better locomotives and turn out more work per day.

In the first three months of 1943, passenger traffic was virtually double that of the corresponding period in 1918. Troop movements quadrupled those in the first World War.

The general level of railway travel costs in recent years has been the lowest in railway history.

Railroad employes in 1942 averaged 1,271,000, as contrasted with 1,842,000 in 1918, and in 1942 employes received in wages $2,932,000,000, as against $2,614,000,000 in 1918.

Railroad taxes, per dollar of revenue, increased from 4.6c in 1918, to 16.1c in 1942.

A GOVERNOR MEETS THE MERCHANT

Ex-Governor Sprague of Oregon has taken occasion to point out that: "Retailers . . . despite curtailment in manufacturig in many lines of merchandise, despite annoying regulations and handicaps of lack of help, do manage to stay in business. Each fresh impediment is a challenge which somehow seems to be met."

Millions of consumers throughout the nation have noted, like Mr. Sprague, that most stores somehow manage to stay in business. Moreover, they have found the merchants to be friendly allies in a struggle to remain undismyaed in the face of a falling standard of living. Their morale has been immeasurably helped by the sight of attractive show windows which in most cases have been kept well filled. Those show windows are an eloquent testimonial to the resourcefulness and stability of our retail distribution industry.

Retail merchants as a whole are doing their best to serve the public with accustomed efficiency under exceeding difficult circumstances. And most consumers are sick and tired of the efforts of OPA and other government agencies to turn housewives against merchants with broad hints that retailers must be watched, constantly, or they will charge "illegal" prices. The public knows, and it is time the government found out, that organized retailers are the strongest bulwark against chaos on the distribution front.

HORSES COMING BACK

Charles Heck, Monroe, Mich., who has shod 300,000 horses in the last 50 years, announced recently that the blacksmithing business is improving this year. Farmers are again using horses instead of tractors, he said.

WHILE THE BOMBERS ROAR

Twice within a generation it has been tragically demonstrated that the days of sailing ship isolation are gone forever. Wars are no longer bound by mountains, climate nor seas. The last echoes of isolation have been drowned in the roar of the bombers.

With recognition of the fact that isolation is an impossibility and that this country cannot shut itself off from future wars no matter where they may occur, it becomes a matter of sheer self interest to help prevent wars. The surest way to prevent war is by taking a hand in world affairs and stimulating international trade. Only through trade can the prosperous and fruitful world envisaged in the Atlantic Charter be realized.

In the United States, the machinery for bringing about expanded trade is already in existence. In the words of Under-Secretary of State Sumner Welles: "It consists of the Trade Agreements Acts of 1934, renewed in 1937 and 1940, under which the President is authorized, by procedure and within the limits stated in the Act, to enter into agreements about tariff rates, quotas, and the like with foreign governments, and to proclaim the changes in American rates necessary to carry out our part of the agreements."

The Act must be renewed in June or we will have in effect served notice on the world that we expect to take no part in efforts to establish lasing peace; that as far as we are concerned peace objectives are words—nothing more. After victory, if we follow the path of isolation, we can retire to raise another crop of youngsters in time for World War III. Along with our imagined isolation, we will have depression and bankruptcy. Our great productive capacity will avail us little without world-wide channels of distribution. And industries which don't produce, don't supply jobs or taxes. The wreckage of our tanks, planes an ships will be scattered in every corner of the world. Our men will be there too, those who didn't come back. We will be "safely" at home with a war debt of several hundred billion dollars, minding our own business until the next war comes along.

Is this what Americans expect of the future? They will get it unless they make up their minds once and for all to swim with the rest of the world toward peace and sanity. At best it will be a long pull, but there is no better way to begin while the bombers' roar is still in our ears, than by wholeheartedly urging renewal of the Trade Agreements Act.

INDUSTRY NEEDS DECENT LIVING STANDARDS ALSO

Another experienced representative of the oil industry warns against the petroleum shortage facing the nation. John A. Brown, president of the Socony-Vacuum Oil Company, recently declared: "Of course, we have had impending crude oil shortages in the past, and the industry succeeded in making great new discoveries. This came about largely by intensive effort and great risk of capital of many individual operators, working with the hope of reward for any success that might be attained. If the oil industry does not continue to make large new discoveries, our country will soon need large imports of crude oil or products . . . . "

The way to find more oil in this country, is the way it has been found in the past. Encourage exploration by permitting profits commensurate with the risks.

Industries are like people. They cannot keep going without money. We talk about a decent standard of living for individuals. But unless industry has a decent standard of living, no one else can. And that goes for the oil industry, the coal industry, the power industry or any other industry. Industrial prosperity must accompany individual prosperity. They are inseparable.

WHY PRIVATE ENTERPRISE?

A leading industrial spokesman recently declared that "Unless the tax laws are modified to take into account rehabilitation needs and creation of reserves, then when the war is over there are going to be many distressed plants." The same opinion has been repeated time and again. But the men who have expressed it invariably make one grave mistake. They expect the public to be concerned over "distressed plants," before they hammer home the eternal truth that the public actually has a greater interest in the plants than the owners, for the very simple reason that such plants contribute to private employment, stable prosperity, and are essential to the operation of representative government.

No one cares particularly what happens to industry from the standpoint of industry itself. But everyone should care immensely what happens to industry once it is clearly understood the part industry—free, private industry—plays in maintaining an economic and political system which guarantees liberty and equal opportunity to the individual citizen.

Private industry is the primary source of jobs. It keeps the door of opportunity open to millions of American citizens. It rewards those who work and produce. It does not interfere with political convictions. As a result, our people are the most independent people in the world. They will retain their independence only if they retain private industry.

Due to the war, nearly one-fifth of the productive capacity of this country is now owned outright by the government. In plain words, a fifth of industry is already socialized. When the war is over this area of socialism will either expand or be gradually replaced by private ownership. If it is not replaced by private ownership, the American people will eventually lose their freedom. They will work for a single monopolistic employer, the government. A gang of bureaucrats will demand political allegiance as the price of a job.

The public must eventually recognize these truths, just as it must recognize that when a plea is made by a business man in favor of postwar rehabilitation reserves, he is talking about something that involves the future of the nation—not just an industry bank book.

WHILE OTHERS CHEER

When the prospect of peace becomes more real, literally hundreds of millions of people will stand ready to join in a deafening tumult of relief and happiness. Victor and vanquished alike will revel in a reunion with loved ones.

But there is one group whose shouting will be muted—the doctors. For them the job of rebuilding the shattered wreck that humanity has made of itself and of the world, will begin. Many of them will not be able to return home. They will have to stay in far away places battling as they never battled during the war, against disease and starvation. They will have to work against time to develop new aids and new techniques in a world-wide struggle to control the spread of fearsome maladies. These men in white know that the war has created medical problems which if not solved could easily make the war itself look like a pink tea. No, the doctors will not cry out in carefree happiness when this war ends.

Laymen, who know so little of the grim task the doctors face, should endeavor to ease their burden wherever possible. The standards of our medical men are high. They serve rich and poor alike to the best of their ability, and the ability of American doctors is not surpassed. We should reflect soberly on these things in the years ahead when the doctors will be fighting the greatest battle of all time—for us—and pause before heeding an insatiable howl for an impossible medical Utopia under the banner of social reform.

THEY DIE BY TWO'S AND THREE'S

Fire losses for the nation during the first five months of this year are estimated at $163,660,000, an increase of $15,578,000 over the same period in 1942.

When anything less than a billion dollars is small potatoes, many people will scarcely notice these figures—unless they happen to be among those unfortunate souls whose property contributed to the ghastly total. And make no mistake, ghastly is the only word that adequately describes the gigantic and wholly unnecessary fire waste in the United States. What is more ghastly than the waste itself is the fact that the country accepts the wiping out of several hundred millions of dollars worth of homes, factories and farms as a routine annual occurrence. The still more ghastly fact of 10,000 lives going up in smoke with costly property, is also callously taken for granted. A man, a woman, a child here and there; they die by two's and three's in the ashes of the nation's carelessness.

Occasionally public complacency is ruffled by horrors, such as the Boston night club tragedy. Then agencies like the National Board of Fire Underwriters can get temporary cooperation to put force in fire prevention measures which public lethargy has long blocked.

And so, slowly through the decades, the science of fire prevention has moved ahead. Steady progress in fire prevention depends upon continuous public education. Individuals must learn to recognize common fire hazards and fear them sufficiently to remove them. Full and effective fire precention is impossible otherwise.

A SAFE BET

Secretary of the Navy Knox has predicted a cruel oil shortage within a year, and exhaustion in 14 to 20 years of present known supplies.

Almost these same words were used during the last World War, and then the oil industry evolved new drilling methods, found new fields, greatly increased the products taken from crude oil, and gave our nation the greatest supply of oil products on record.

There was incentive to do the job. If our lawmakers and regulators will but give the oil industry half a chance and allow a fair return for the risk involved, it is a safe bet that this country won't be out of oil in one year, or twenty years.

Cut the red tape before an artificial shortage is created, and give American enterprise a chance to meet any emergency. Any other policy will be fatal to a nation that uses gasoline and oil products almost as freely as water.

'CONTOUR' FARMING

This is the time to plan those simple soil conservation practices which will increase the production of food without increasing costs for labor and overhead, says Lindley G. Cook, extension soil conservationist.

Many of these simple soil conserving practices not only raise the yield of farm grown food products, but they also save fertilizing elements and reduce the wear and tear on farm machinery.

Cook explains that contour farming means simply farming "on the level." When level farming is practiced, tractors are not forced to go up and down hill to carry out farm operations and therefore do not wear out so rapidly nor use so much fuel. On most farms, tillage can be on the contour without causing more frequent turning, he says.

"Crop yields are consistently increased from 10 to 30 per cent by contour farming because the moisture is kept on the field where the plants can use it and because the topsoil and fertility are not carried away by erosion," Cook points out. "Reports of the New Jersey Experiment station show that even the slightest sheet erosion on gently sloping land removes in one season enough nitrogen to equal that found in 200 pounds of nitrate of soda."

THEY BATTLE FOR HEALTH

There are approximately 41,000,000 persons within the United States for whom no full-time public health service is provided by either local or state government. To cover this gap, the American Public Health Association has proposed legislation which would enable sparsely settled areas to organize local health units. As the American Medical Journal points out: "This legislation proposes that county full-time health departments may be created either by resolution of a county board or by the voters of a county and that multiple county health departments may be set up. If four or more counties wish to associate themselves in establishing and maintaining such a department, prior approval must be obtained from the state department of health. Provision is made for the levying of a special tax not to exceed 1 mill on the dollar on all taxable property in the county or counties involved to finance the operation of the department." The Journal further urged local medical societies to analyze local needs in conference with state health officers and support legislation necessary for providing local health units.

Medical men would be last to oppose sound measures designed to extend medical service. They constantly seek new methods to combat illness and death. And the laboratory is not the only scene of battle for them. They will fight on the public platform, if need be, for proposals which they think will further the cause of health, just as they oppose measures that their training and experience tell them would hurt the cause of health.

TREASURY BARNACLES

Listen to promoters of socalized electric power, one would assume that electricity on the farm was unheard of preceding the birth of the Rural Electrification Administration in 1933.

Grover C. Neff, president of the Wisconsin Power & Light Company, and chairman, from its inception, of the Committee on Rural Electric Service established in 1921 by private electric companies (12 years preceding the REA), dispels this idea. He say that two and a half million American farms have electric service; about one million are served by REA and a million and a half by private electric companies.

In Mr. Neff's opinion, four million farms each using 500 kilowatts a month, instead of the present average of 100 for REA and 180 for private company farm customers, are necessary for full benefit from rural electrification. He says: "The main objective of REA seems to be to extend electric service anywhere and everywhere without regard to whether or not the area served can support the service.

"In many states REA co-operatives have been relieved of local and state taxes, paying only a token tax of three per cent on gross revenues, while electric companies serving farms in the same states pay 25 to 30 per cent of their revenues in taxes.

"Farm electrification calls for radical changes in farming methods and machines, processing of many farm products on the farm and joint studies by electrical an agricultural engineers, manufacturers of agricultural and electrical machinery, and electric operating companies. Farm electrification could not be developed efficiently until electric operating companies had made electric service available to every city, village and hamlet in the country."

Private electric companies are continuing to "electrify" the farms in spite of the publicly-subsidized and often useless duplicating competition of the REA. As war taxes increase, the burden of these government business barnacles, which tap the public treasury and enjoy tax exemptions, will become heavier on every taxpayer.

THE DEBTOR'S PRISON

One of the greatest dangers that can follow price restrictions which do not allow a sufficient operating profit, is the idea that government loans or government subsidies can bridge the gap so that production may be continued and consumers furnished goods at less than actual cost. The danger from this policy is that it opens the door for government ownership or control of industry and business.

Such a system is like the old debtor's prison—when a man could not pay his bills, he was put in prison. The result was he often rotted there, because when in prison, he could not earn the money to get out. The same can easily happen to an industry forced by law to sell below cost of production, and maintain its existence from subsidies or government loans—it might get out from under such bondage.

Political pressure to force subsidies on producers and distributors, instead of permitting necessary price adjustments, could easily be part of a program to socialize American industry, while the public is lulled with the idea that such a palliative will hold down the cost of living. At best it can but take money out of one pocket and put it in another—costs are not reduced.

If industry can be brought under political domination in this manner, we will all become objects of Federal charity.

PRAISE FROM A GENERAL

Lieutenant General Lesley James McNair, commander of Ground Troops in the United States, wounded while visiting the African front, had the following to say of American doctors in that scene of action: "The medical service was superb. I know at firsthand the speed and efficiency with which they worked. I was wounded at 2:30 in the afternoon. Within ten minutes they had me at a Battalion Aid Station. There two medical officers put a tourniquet on my shoulder to stop the bleeding, bandaged me, fixed me up so I could be taken to the rear. I went there in a jeep to the Division Clearing Station, where they gave me blood plasma and checked my dressing. They put me on a litter in an ambulance and started me farther to the rear. At 5:30, only three hours later, I was in a field hospital, had been treated twice, had had X-rays, and was ready to be operated on. That evening I came to in a warm bed, with no after affects from the operation. . . I didn't get this sort of treatment because I was a general officer. Buck privates were getting the same care."

The medical men who attended General McNair in Africa were merely civilian doctors not many months ago following routine medical practices at home. The service which they are now rendering to the troops—general and private alike—they were then rendering to civilians. On the military front, as on the home front, these medical men know only one kind of service—the best possible. That is the tradition in which they have been trained.

Ted: I'm a wow at imitations' baby,
Ollie: Well then imitate a fool.
Ted: Okay, will you marry me?

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar
WM. H. BELL, President

The 1943-44 academic session begins September 20 Freshman Orientation Week, September 16, 17, and 18

Negro Farmers in the Fight

A few weeks ago when there was some uncertainty as to how well the Nation's farmers were measuring up to the wartime agricultural goals for this year, Albon L. Holsey, field officer of the Agricultural adjustment Agency; and T. M. Campbell federal extension field agent, thought they would get out of their offices and take a look.

Working for different agencies, the men naturally planned their trips independently. But it so happened, however, that both of them covered a good part of the same areas. It was check and double check. They found Negro farmers all-out.

In Texas, Holsey found that the Negro farmers in and around Huntsville had formed a Victory Council through which they had leased storage space at the ice house for their 52,000 pounds of cured meat; they had taken over the NYA shop and were using it to repair and rebuild farm machinery. Members of the council had rebuilt 11 haybalers.

Then, there was Jesse Baker who had switched over from cotton to cattle, pigs and poultry and was doing a grand job. There were 1500 chickens on the yard. Still more spectacular from a standpoint of poultry was John Nebane. He had a backyard flock of 2,000 and had already sold 6,000 broilers and fryers. And this was only his part time job; at night he did custodial chores.

In Oklahoma, Holsey met Farmer Albert Lee, who had purchased a thousand dollar war bond with money obtained from the sale of eggs, His 270 White Leghorns were laying at the rate of 15 dozen a day.

Campbell also visited Texas and Oklahoma. In the latter state he met the Jenkins family, Mr. and Mrs. C. L. Jenkins and their two sons—a family that had started from scratch 18 years ago. Today they own an 80-acre farm, a comfortable home, and are making a substantial contribution to the winning of the war. They are milking nine cows and have three heifers that will freshen next spring; they are getting 20 hogs ready for market, have 100 layers and nearly 300 pullets on the yard. By next year, the Jenkins family expects to have a flock of 250 layers. They are also raising eight acres of peanuts to help make up for that the Japs got and they have an orchard and a Victory Garden.

In Texas, Campbell visited farm home after farm home and saw chickens, pigs, milk cows, gardens and pantry shelves filled with canned meats, fruits, and vegetables. It was the same from Louisiana to Florida.

In Georgia, Campbell visited T. P. Patterson, a tenant farmer of Jenkins county who is a leader in meat production. First Patterson showed Campbell his milk cows, his chickens and his pigs; then he walked into his smokehouse and strided out with an 18-pound ham on his shoulder . . . This wasn't all; for the next few minutes he hauled the wares from his smokehouse and exhibited them on a long trailer-bed. There were more than a dozen hams, and several shoulders and sides. When asked about his red stamps, Farmer Patterson was puzzled for a moment, then he replied with a grin, "Oh, you mean the ration stamps—we don't use them."

The trips were eye-openers for Campbell and Holsey. Both of them returned to their offices at Tuskegee beaming with pride.

Soldiers Not Available For Farm Work

To correct the apparently widespread impression that soldiers will be released in groups to harvest crops and do general farm work, H. M. Dixon, acting in charge of the Extension Farm Labor program for FWA, has sent a telegram to State Extension director explaining that soldiers are not available to do farm work. So far the use of groups of soldiers as farm labor has been confined to rehabilitation work in flooded areas.

380 Million Acre Farm For Uncle Sam in '44

The War Food Administration has announced the 1944 food production program which calls for a record planting of 380 million acres to assure a high production of meat, dairy products and eggs. Said War Food Administrator Marvin Jones, "Every crop acre and every farming facility in the Nation should be mobilized for its most productive use.

"Our planted acreage of food crops can be expanded without plowing up land which should be kept in grass if we use the crop land which has been idle during recent years and if we speed up the cycle of crop rotation on some farms. The program recognizes that demands for food will be imperative for several years and that sound practices must be followed to insure highest possible yields over a period of years."

The proposed acreage for 1944 is three million acres above the 1932 record of 377 million acres, and 16 million acres over 1943 crop average.

With regard to meat, it is believed that the total slaughter for the next 12 months will probably be nearly 50 percent above the average slaughter for the year 1936-40.

While specific goals for all crops will not be made until the year's average yields can be determined more definitely, it seems likely that there will be a need for a 30-40 percent increase in dry edible beans, 20-25 percent for peanuts, and 15-20 percent for soybeans for use as beans.

It was also announced by War Food Administrator Jones that cotton marketing quotas will not be in effect for the 1944 crop. The announcement followed the release of the cotton acreage estimate by the Bureau of Agricultural Economics which indicated that farmers had only 21,995,000 acres of cotton in cultivation on July 1. This is about eight million acres less than the acreage permitted under marketing quotas for 1943.

In view of this circumstance and the fact that restrictions on marketing the 1943 crop would have expired on July 31, 1944, the War Food Administrator terminated marketing quotas for the 1943 crop last week.

Although marketing quotas have been terminated, it will have no affect on the basis for which conservation payments are made, or on the cotton loan program. Congress has authorized $300,000,000 for an agricultural conservation program in 1944. These funds will be used to help encourage farmers to carry out production practices which will increase and maintain productivity of their land.

Farmers will be urged to produce as much milk, eggs, and meat as can be produced from the feed supplies that this country will be able to grow or import. The outlook for farm machinery is better. New machinery will be at approximately 80 percent of the 1940 level.

Food For Pets Still Limited

In an effort to conserve as much animal and vegetable protein as possible for the production of vitally needed livestock and poultry feed, the War Food Administration has renewed its limitations on pet food manufacture. Although the reduction of protein is considerable, it is adequate for minimum nutrition of household animals. Pet foods supplied the armed forces are exempt from the formula restrictions.

831 Churches in Food Drive

Twelve Arkansas annual district conferences of the African Methodist Episcopal Church, representing 831 churches, passed resolutions at their recent meetings pledging Food Production Administrator Chester C. Davis their full cooperation in the food production program. The conferences pointed out that they would assist rural and urban families in increasing their food output.

USDA officials indicate that the work of church groups in pushing food production is having an excellent effect. The 57,000 Negro farm families in Arkansas have planted many acres in food and feed crops, and the city folks of Arkansas have thousands of Victory Gardens.

Wickard and Davis Speak

In an address before the Rural Life Conference at Columbus, Miss., last week, Secretary of Agriculture Claude R. Wickard pointed toward better rural living in the post-war world. He discussed soil conservation, the live-at-home program, rural electrification, the elimination of rural slums, more and better highways, and more and better consolidated schools as some of the rural needs which must be met.

War Food Administrator Chester C. Davis used "Teamwork" as a theme for his Flag Day talk on the National Farm and Home Hour. Among other things, he pointed out how United Nations' teamwork is winning on the military front, and how coordinated distribution is winning on the Allied food front. He urged the harnessing of extra purchasing power here at home so that it too can serve our national teamwork.

Said Administrator Davis, "Our civilian consumers alone ate up 85 percent of all our enormous production of last year. Only 15 percent of it went to our armed forces and Lend-Lease . . . The civilian consumer has had more money to spend than ever before, and he has tried to spend it . . . If more of that excess money which is now burning our pockets and upsetting our balance of food distribution can be directed into more useful investment—and I mean investment in our government through higher taxation, and through buying of war bonds to be spent later, after the war, it, too, will be contributing to the teamwork that is necessary in this war."

Forest Fires Increase

There was an increase in the number and extent of forest fires last year over 1941. A total of 208,218 forest fires occurred, burning over 31,854,124 acres; 90 percent of these acres were in 11 Southern states. The number of fires by causes on protected lands was as follows: lightning, 6,707; railroads, 5,020; campers, 3,398; smokers, 18,248; debris burning, 13,944; incendiary, 26,571; lumbering, 1,386; miscellaneous, 6,753; unknown, 3,762.

While the monetary damage reported amounted to nearly $45,000,000, foresters point out that there is no way of obtaining an accurate estimate of damage on unprotected lands. Forest Service reports that 136 million acres of forest land lacks organized protection. Eighty-six percent of the total acreage burned last year was on unprotected land.

India's Record Wheat Crop

India's 1943 wheat crop is now officially estimated at an all time record of 408,352,000 bushels. Three factors account for the increase: a reduction in cotton acreage, and an increase in wheat acreage, unusually favorable weather, and encouragement of increased food production by the government.

Beetles Threaten V. Gardens

Mexican bean beetles are threatening Victory Gardens throughout the eastern section of the country, the U. S. Department of Agriculture reports. Unless the insect is controlled, it can destroy a crop of snap beans, or lima beans.

The most satisfactory insecticide for controlling the bean beetle is scarce retenone. Although its use is restricted, it may be used on bean beetles. If it is impossible to get retenone, cryolite may be substituted. However, cryolite leaves a harmful residue. If it is used after pods begin to form, the pods should be washed carefully in at least three changes of clear water before eaten.

The bean beetle attacks the under side of leaves. For this reason any spray or dust must be applied to the under side of the leaves.

LAY UP A DOLLAR FOR A RAINY DAY

By William Henry Huff (for ANP)

Again the eagle flies your way,
Again the mill wheels roll,
Again you're drawing lots of pay,
Again you're off the dole—

Now, are you wiser than before,
And do you know that rain
Is bound to come when this is o'er?
Hard times will come again.

gram. The Texas youths have planted more than 600 gardens, and at the Alabama school every student is urged to grow a Victory Garden and to raise a backyard poultry flock.

Haitian On Rea Tour

Rene Moravia of Haiti was among the 18 Latin-American engineers who have just completed a 3900-mile tour of industrial centers and educational institutions. The tour was arranged by the Rural Electrification Administration of the Department which is guiding the training of these young engineers who have spent a year here studying the country's rural electrification program.

Crop Corps Certificates

The War Food Administration has announced that Certificates of Service would be awarded to the estimated 3,500,000 persons to be enlisted in the U. S. Crop Corps. The certificates will be presented for patriotic service on the farm or in food processing factories. Workers will be given the certificates by County Agricultural Extension agents when they begin work.

Avoid Farm Accidents

Secretary of Agriculture Claude R. Wickard emphasized in a radio address last week the importance of safety in wartime farming. The Secretary pointed out that farm accidents were accountable for 4,500 deaths and 225,000 injuries in 1941. Among the injured persons, 15,000 were crippled for life .

Although farmers are now working harder, longer hours, and are using many inexperienced workers, they are urged to take precautions and try to avoid accidents. Secretary Wickard said that tractors cause greatest number of accidents; farm animals are second on the list.

In a radio address on April 30 the Secretary urged farmers to put all the money they could in War Bonds so that they would have the money after the war to rebuild the fertility of their land, and to make repairs.

HOLD REGIONAL CONFERENCE TO PLAN WOMAN'S LAND ARMY

Washington, D. C.—Plans for recruiting a Women's Land Army of 60,000 have been further developed at a series of regional conferences in which WLA representatives of each state participated, the U. S. Department of Agriculture announced this week.

The regional conferences were held to discuss farm labor needs in various states and to work out with the state representatives plans for meeting these needs. Present indications are that a corps of 60,000 women will be needed in the Land Army. Recruited locally, the WLA enrollees will help produce vital war crops. The conferences were held in New York on April 21-22, in Chicago, April 23-24, in Memphis, April 26-27, and in Salt Lake City, April 30 to May 1.

Since recruitment will not be done nationally, women who want to enlist in the Land Army are asked to wait for the local call for farm workers which will be made by the County Extension agent. The U. S. Employment Service and local cooperating women's organizations will assist in recruiting.

While the number needed in the Women's Land Army will probably not exceed 60,000 about 300,000 additional women will be recruited for the Crop Corps to do short-time emergency farm work. Some of these recruits will work on their spare week-ends, others will work for a few days during the week, and still others may work for a few weeks.

Ten thousand members of the Land Army are expected to enroll for year-round work while the other 50,000 will enlist for seasonal work of a month or more. WLA enrollees will receive from three to six weeks training in agricultural schools and colleges. They must be 18 years old, or older, and must furnish a doctor's certificate as to their physical fitness to do hard work.

WLA enrollees will wear smart blue denim uniforms consisting of cap, overalls, shirt, jacket, and a wrap-around skirt which can be worn alternately with the overalls. The cap has a visor for protection against the sun, and bears the insignia, WLA. The entire outfit is washable, colorfast and preshrunk.

DEVELOP STRONG GLASS

A new type of tough, bullet-resisting plate glass which has lately been adapted for use in warplanes is being utilized to afford additional protection for pilots and other crew members of America's bombing planes.

Although this glass is somewhat heavier than many of the transparent plastics used in the noses of fighting planes, the weight differential is justified by the fact that the plate not only resists bullets but also protects the pilot from the danger of having his windshield smashed through hitting birds in flight—a serious hazard in the past.

50,000,000 CHICKENS PROMISED

(Continued from Page 1.)
be held more nearly in line with the available feed supplies.

New Food Administrator

Upon taking office as War Food Administrator, Judge Marvin Jones issued a statement pointing out that four major problems must be solved. The problems are: (1) full allotment of materials for new machinery, supplies, repair parts, shelter, storage and processing facilities; (2) farm labor shortage; (3) seed, feed, fertilizer and credti; and (4) a fair return to farmers for their production.

Said Judge Jones: "This war is bringing home to the American people the importance of the farmer in our economy and the value of the products of his fields. Through long hours of hard work, and in spite of shortage of implements, repair parts, and labor, the farmer has stepped up production all along the line."

Judge Jones, who is a former Congressman from Texas, was chairman of the international food conference held recently at Hot Springs, Va. He believes that nothing is more important to the war effort and our domestic economy than a sound and acceptable food production and distribution program.

Wages For Puerto Ricans Up

Minimum wages to be paid sugarcane laborers in Puerto Rico during the calendar year 1943 have been announced by the War Food Administration. Specific rates have been provided which represented an increase of about 13 percent over rates for similar work in 1942.

Free Bulletins

The Department has just released a list of free bulletins which may be obtained by writing the Office of Information, U. S. Department of Agriculture, Washington, D. C. Individuals may receive 10 free bulletins, teachers may receive a total of 100 free bulletins (not more than 5 copies of any one bulletin). Bulletins are not distributed free direct to students.

The list contains 45 bulletins. Here are some many homemakers may want to order: AWI-3 "Fight food waste in the home"; AWI-4 "How to make your refrigerator last longer"; AWI-7 "Take care of household rubber"; AWI-8 "How to make your gas and electric range last longer"; AWI-11 "How to make your ironing equipment last longer"; AWI-41 "Wartime canning of fruits and vegetables"; 1474F "Stain removal from fabrics—home methods."

In ordering, give series number and title. It might be a good idea to write for a copy of the list of free bulletins so that you will have the series number and title of all 45 bulletins listed.

FARMERS SWAP PRODUCE

(Continued from Page 1)
goal at $200, and had to revise it immediately, as members purchased $184 worth of stamps within a few days. The club at the Louisiana Negro Normal assisted in a campaign that resulted in the sale of $1,400 of defense securities.

The Vo-Ag Club members at the Tallulah High School are growing 32 pigs for sale at the Victory Club auction, where payment will be made in bonds and stamps instead of cash. Seventy-one students belonging to other clubs at the Tallulah institution are investing a part of their weekly earnings in war stamps. Money from the sale of 32 pigs, several hundred bushels of sweet potatoes, and other farm commodities have been pledged by the NFA group at Shongaloo, La.

Several individuals have signed up to sell livestock and farm commodities in value up to a thousand dollars each, and invest the receipts in defense securities. Even some farm youth, like the son of County Agent Byrd in Claiborne Parish, have pledged to invest $100 a project earnings in stamps and bonds. In one family of three, in the territory of County Agent F. F. Purvis, the father pledged $200 worth of farm commodities, the mother $50 and the son, a 4-H Club member, signed up for $25.

The patriotic appeal behind the PCA sponsored movement is spreading rapidly. It is even reaching outside of the Arcadia and Tallulah Production Credit Association areas. As one example, the Trusee Board of the Louisiana Masons headed by Grand Master John G. Lewis, learning of the efforts of its farmer-members in subordinate lodges in the areas, pledged and purchased through the Arcadia PCA, bonds in the amount of $15,000. This was done according to Grand Master Lewis, as a matter of endorsing and supporting a worthy movement in interest of the war effort.

During the month of August, participants in the project will assemble in parish-wide Victory Club rallies to be held at central points in Bienville, Lincoln, Webster, Claiborne, Madison, Richland, Tensas, and Franklin Parishes. The program at the summer rallies will consist of reports from clubs on accomplishments, special speakers, sound movies, and other educational and recreational features.

The high point of the Victory Club Movement will be reached at the Victory Sales to be held during the fall. At the sales, Victory Clubbers will bring their livestock and various farm commodities to some central point in each parish where they will be auctioned off to the highest bidder, the seller accepting his pay in bonds and stamps instead of cash. Participants will not only get the highest value for their products, but will also sell them commission free.

Each participant fulfilling his pledge is to be presented a certificate of merit by the production credit associations. In addition, a substantial cash prize will be awarded to the community in each parish making the greatest contribution to the undertaking. Youth groups will also share in the prizes to be offered. High ranking 4-H Clubs, New Farmers of America associations or Progressive Home Makers chapters in each parish will receive one of the eight silver plaques to be donated by the associations.

One official of the New Orleans Farm Credit Administration summarizes the Louisiana Victory Club Movement in these words, "I believe it is an outstanding project, and one of the first all-Negro projects of its kind in the United States. It involves an organized war food production program on a community basis, the purchase of war bonds tied into the production program, and a whole series of very desirable things."

HENCEFORTH WE MUST TREAT ALL RACES with respect as equals and we as Americans must set the example here.—**Mrs. Franklin D. Roosevelt.**

M. CLIFFORD TOWNSEND, SPEAKER

(Continued from Page 1)
ment station of the University of Arkansas, Saturday, June 10, in connection with Annual Negro Visiting Day.

Mr. Mitchell, whose job it is to advise with State Extension directors, farmers and farm leaders in eight Southern states, pointed out in his address that the South has the basic factors— climate, rainfall, soil and manpower—necessary for food production. Said he, "In the South with its mild and temperate climate coupled with ample annual rainfall, it is possible to grow a large variety of seasonal crops. Also, with the abundance of grasses and grain crops, the growing of dairy and beef herds, hogs and sheep can profitably be carried on as is being proved by an increasing number of farms in all the Southern states."

Wickard Praises FSA At Committee Hearing

In addition to praising the Farm Security Administration at a recent Special House Committee hearing, saying, "I feel that as a whole FSA has done a good job in administering its program," Secretary Wickard made five suggestions concerning basic legislature for FSA. They were: "1. Farm Security Administration should be a separate agency and should provide both supervision and credit. 2. There should be frank recognition of the necessity of attacking rural poverty on many fronts at once. No program which is severely limited in approach can deal effectively with the complex causes of human erosion, such as health, insecure tenure, inadequate farm units, and lack of managerial skill. 3. The specific decision regarding individual cases should be made as far as possible at the county level by experienced and successful local farmers who are members of county committees. I think that greater reliance can be placed upon farmer committees than has been done in the past, but that the program necessarily must remain a Federal one responsive to the President and the Congress. 4. Provision should be made for continuity of operation without which efficient administration is impossible. 5. Provision should be made whereby FSA borrowers can be given help toward combining some of their resources in a cooperative manned for the purposes of increasing efficiency in production and storage and marketing.

Food Situation

The National Food Situation, published by the Bureau of Agricultural Economics, points out in the June number that total meat production this year is expected to exceed the record 1942 output. However, supplies for civilians will continue to be smaller than last year.

Poultry supplies will continue to increase until the seasonal peak is reached late this fall. Egg production was 13 percent higher during May this year than it was in 1942. Total supplies of shell eggs for civilians will be as large this fall and summer as they were a year earlier, though seasonally smaller than supplies of recent months.

On the basis of present allocation of dairy products to civilians for the remainder of 1943, the per capita consumption for the year as a whole may be three percent above 1942 for fluid milk and cream, but 15 percent below for butter and dried milk, 20 percent below for condensed and evaporated milk, and 25 percent below for cheese. Total milk production in May was two percent below a year earlier.

The June crop report indicates a 10 percent decrease this year in the production of deciduous fruits, but an all time record production of citrus fruits. Citrus supplies for civilians may be as large in 1943-44 as in 1942-43, and apple supplies almost as large, but the supplies of all other deciduous fruits for fresh use may be only two-thirds to three-fourths as large. It is probable that the total supply of all canned fruits and fruit jucies for civilian consumption in the 1943-44 season will be no more than three-fourths of the supply last season. In contrast to the indicated smaller supplies of fresh and canned fruits, dried fruit production in 1943 probably will exceed that of 1942.

The supply of commercial vegetables for the fresh market so far this season is estimated to be about 13 percent smaller than in 1942, partly the result of abnormally cool temperatures and excess rainfall. However, growers have indicated their intentions to plant a larger acreage of the major processing truck crops in 1943 than was planted in 1942.

Retired USDA Worker Dies

Funeral services were held here in Washington, Friday for William H. Garrett, retired Negro subprofessional worker of the Department's Bureau of Animal Industry. Mr. Garrett, who spent 32 years in the services of the Department, retired in April 1942. He died at Garfield hospital following a stroke. Mr. Garrett is survived by his widow and a daughter, Mrs. W. H. Greene; both are teachers in the District school system.

SECRETARY OF WAR HAS HIGH PRAISE FOR NEGRO TROOPS

Stimson Lauds Boys Who Helped Lay Plans for Drive on Sicily

By Ernest E. Johnson

WASHINGTON, Aug. 12 (ANP)—Negro engineer, quartermaster and anti-aircraft units were warmly praised for their work in connection with the preparations for the Sicilian invasion, some of whom were actual participants, when Secy. of War Henry L. Stimson discussed his 13,500 mile inspection trip to the European and North African theatres of operation at his press conference last Thursday..

The secretary was in good spirit, and a bit jocular as he answered the questions of reporters dealing with progress of the war, his trip, and sundry other items.

During his journey he saw Negro troops in England and others in North Africa, and had occasion to personally meet Lt. Col. Benjamin O. Davis, commanding the 99th pursuit squadron, now stationed in Sicily.

Accompanied by Maj. Gen. John Lee Stimson inspected several colorded unist in England and found what he called an "interesting situation" in which the men were "working very vigorously and getting along well together with all other troops." He had no comment to make as to whether there had been any reports to the contrary.

In Africa he said he had seen a unit of engineers which had previously served in Liberia in the construction of the Roberts airfield, said to be the largest in the world.

"That unit performed very valuable work on the construction and repair jobs at the North African ports from which the invasion of Sicily was undertaken," he declared. "Furthermore, Negro quartermaster units did excellent work in the invasion, and some of these troops were actually with the landing forces in Sicily."

Obviously his statement of the quartermaster unit that was in the landing force was in answer to a question submitted inquiring for additional information regarding the news photo of a Negro soldier rushing up the beach at Gela.

"I personally met Col. Davis of the 99th. which is now stationed in Sicily," the secretary said. "He flew over to Tunis to meet me." Stimson recalled his earlier statement of a few weeks ago that the squadron is doing "creditable work." He also revealed that a colored anti-aircraft unit is in Africa.

Tessie: So your husband is one of the big guns of industry?

Clarice: Yes, he's been fired seven times.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., SEPTEMBER 15, 1943 No. 8.

Madison College Offers Food Of Soybean As Cure For Hunger That Stalks World

Complete Meal from Bean Shows Varied Products

By Norman Parks

Madison College food specialists can't tell you how to make a suit from soy beans, but they can tell you how to eat it when it is worn out.

Foremost experimenters with soy bean food products in the entire nation for three decades, the local college specialists, engaged in official government research, are now devoting their knowledge to a solution of war and postwar food problems, particularly in foreign areas.

Protein and Fats Lacking

Most lacking from the diet of all war-area sufferers are protein and fats—meat and eggs and milk. Even if America had both meat and milk in sufficient abundance to supply all occupied Europe, the problems of processing, preserving, and expense would be difficult to solve. And in the postwar period it would take time to restock Europe's decimated herds and flocks.

What is needed is an all-purpose food that Europe can produce for itself with speed, food that this counry can grow in unlimited quantities and process inexpensively, food that can be dropped from airplanes and that will keep indefinitely.

Madison officials say that the soy bean is the answer and set out a complete meal to prove it—soy sweet milk or butter milk, meat (soyburger, soy cold cut, soy steak or cutlet, or soy meat balls), soy green beans or dry beans, soy bread, soy cake, soy butter, hot soy coffee, and soy nuts. And not a ration coupon involved!

Dehydrated Products

They have already experimented with dehydrated soy products and are now in the process of installing a large amount of dehydrating machinery to carry on more extensive experiments under government supervision.

Used by the Chinese for 5,000 years to replace cheese, butter and wheat and introduced in the United States as a coffee substitute in the Civil War, the bean has remained almost unknown to the average American. Actually, it has practically every known vitamin and combines more concentrated basic food elements than almost any other known vegetable.

Among its virtues as a growing plant are the ease with which it thrives in many kinds of soil, the certainty of a crop in excessive rain or drought, its resistance to insects—so successful as to eliminate the use of insecticides, and the addition of nitrogen to the soil through its roots.

Substitute For Meat

Rich in protein, the soy bean makes an excellent substitute for meat. Pound for pound, the soy ersatz meat has almost twice as much nutritive value as a thick sizzling steak, Madison officials state, and has a pleasing meat taste.

One of their meatless "meats," which is sold under the registered name "Zoyburger," resembles ground hamburger meat in appearance. Patted into hamburger size slices, covered with chopped onions and salt and flavored with tomato sauce or covered in brown gravy, and baked in a medium oven until the onions are brown, this soy product cannot be distinguished from meat by the average person. It is made of soy beans, peanut meal, soy sauce, seasonings, and wheat gluten, the latter giving the

VICTORY FARM VOLUNTEERS

Boys and Girls Everywhere Enlisting to Help Farmers

Washington, D. C.—Boys and girls, colored and white, throughout the nation are enlisting in the Victory Farm Volunteers to help harvest vital war crops, the U. S. Department of Agriculture announced this week. Farm reports received by the Department show that nearly 150,000 youths have already enrolled, and by early September the number is expected to approach half a million.

Last week 26 Washington, D. C., Negro high school boys enlisted in the VFV to help save a 15,000-acre tomato crop in Dorchester county, Md. Under the supervision of Roscoe G. Robinson, teacher at Phelps Vocational school, the boys boarded a school bus and headed for Cambridge, Md., where they will be headquartered. Mr. Robinson will have charge of the living quarters and the recreational activities of the youths.

Extension Service officials, who are assisting with the recruitment, placement and supervision of the Victory Farm Volunteers, point out that they are helping to answer the farmers' prayers. Until these youths began volunteering, many farmers were fearful that their crops would rot in the fields due to the farm labor shortage. For the boys and girls it is not only an excellent summer outing, but also an opportunity to help win the war. Reports indicate they are all enthusiastic.

The Washington youths who left last week for Maryland farms showed a keen interest in the trip and the war job ahead. Said a set of 15-year-old twins, Chester and Alfred Porter, "We want to get out there and help harvest the tomato crop so that the soldiers will be sure to have enough tomatoes."

When asked what they planned to do with the money they earned, the boys replied, "We are going to give some of it to our mother, we're going to buy some new clothes for school, and we're each going to buy another book of war stamps. You see, we already have two books full."

Another youth, Calvin Richardson, who harvested tomatoes last year, said he thought he would be able to gather 75 baskets of tomatoes a day. Told by Farm Agent Martin G. Bailey that he would be paid 6½ cents per basket, young Richardson exclaimed thoughtfully, "That'll be almost $5.00 a day!"

Mylo Downey, in charge of the VFV program in Maryland, estimates that the 26 boys will harvest 12 tons of tomatoes daily. He pointed out to the youths that in performing his wartime job, they are not only helping to relieve farm labor shortage, but are also hastening the day of victory for our fighting men.

APPOINTMENT OF NEGRO CONSULTANT A STEP IN THE RIGHT DIRECTION

With Negro farmers making up one-half the state's total population, Mississippians are awakening to the fact that the Negro farmer is of vital importance to the public welfare and prosperity. "A step in the right direction," according to Jimmy Hand of Rolling Fork, was taken recently when the Mississippi AAA committee of which Mr. Hand is a member, appointed Willie E. Ammons, former Negro county agent, to assist Negro farmers to improve their farms and make a better living. A graduate of the State College at Alcorn, Ammons has had several years' training in agricultural work.

TURKEY FOR THANKSGIVING

Armed Forces Overseas Assured of This Delicacy

Washington, D. C.—Negro fighting men serving overseas are assured turkey when next Thanksgiving, Christmas and New Year's Day roll around. No matter where they are, they will have that old standby. Ten million pounds of turkey for the armed forces' holiday dinners have been asked of the turkey growers of the United States by the War Food Administration.

In order to reach our soldiers in the remoter parts of the world, it is necessary that shipments of this delicacy be made early. September and October should see the shipments on the way to their destination. This means that turkey will not be on the menus at hotels, restaurants, boarding houses and private homes as early this season as is customary. The supply thus saved will find its way to distant points on military fronts, where the holiday bird will link some hard pressed soldiers closer with home.

Civilians will not be greatly inconvenienced, nor will they lose this fine food entirely. The effect on American soldier morale will more than off-set any sacrifice made on this side.

War Food Administration officials point out that the amount of turkey required for soldiers is small compared with the estimated 500 million pounds expected to be produced this year, and the turkey dinner John Citizen foregoes for a short while may make a man thousands of miles from home happy and proud that he is an American.

L. HERBERT HENEGAN WRITES OF F. S. A.

"Food Will Win the War" is a good slogan but back of food is the farmer and his family who plant, hoe, harvest, and market the food upon which the urban housewife depends. Every woman who carries a market basket to town should be vitally interested in any measure calculated to build the moral and inspire the farmer's family in its essential war work.

In the April issue of The Southern Frontier, the front page article, "Little Farmers Dig In for Victory," presenting the human side of food production was written by L. Herbert Henegan, of the Farm Security Administration, who knows first hand not only what this agency does to win the war, but also what it means to lives of the people and the future of the small farmer.

Our apologies are extended to Mr. Henegan for failing to give credit for the splendid article in The Southern Frontier. If we are sufficiently persuasive we hope to get Mr. Henegan or an associate to write another article dealing exclusively with the health program on the Farm Security Administration. —Southern Frontier

FOOD OUTLOOK IS GOOD

If There Is No Waste, All May Be Fed, Is Report

Washington, D. C.—How much and what kinds of foods will we have this year? These are the questions uppermost in civilian minds.

The total food picture is not gloomy, neither is it rosy. According to food distribution officials of the War Food Administration the United States will continue to be best fed nation in the world.

Faced with new situations, that of feeding our own civilian population, the biggest armed forces we ever had, and further helping feed our allies, our food supplies had to be marshalled to the very best advantage.

With not enough food to fully meet the increased demands, we have had to budget our food expenditures. The bugeting is called "allocation" and allocation is simply adjusting requirements to the prospective supply that is utilized to the best advantage in the gigantic war program.

According to allocation figures for the 12-month period ending July, 75 per cent of our total food supply will go to our civilian population; 13 per cent to our armed forces; 10 per cent to our allies and 2 per cent to the U. S. Territorial and special needs.

Last year about 7 per cent of our food was used by U. S. military forces and 6 per cent by our allies. The increase in allocations for the armed forces and our allies is understood when it is known that it takes more food for military operations overseas and that we have to help feed the peoples we liberate. Already we have sent millions of pounds of food to the peoples of North Africa.

Food is distributed much in the same manner as other military supplies, that is, it is sent to the points where it can contribute most to the war effort. This strategy calls for meeting civilian nutritional requirements, but in view of the necessity of using part of the food for other vital war purposes, it frequently does not leave as much for civilians as they have money to buy.

Figures on the meat supplies available indicate that civilians will get 63 out of every 100 pounds of all meats produced in this country, sufficient to allow a continuation of the civilian meat ration at about the present level. Specifically, 66 out of every 100 pounds of beef; 80 out of every 100 pounds of veal; 55 out of every 100 pounds of lamb and mutton and 59 out of every 100 pounds of pork will be available to civilians.

It is estimated that civilians will receive 8 out of every 10 pounds of butter produced; 5½ pounds of every 10 pounds of cheese; 4 1-3 cases of every 10 cases of evaporated milk; 2-3 of the condensed milk supply, but only a small portion of the dried milk produced because fresh fluid milk is available and dried milk, because it saves shipping space, is urgently needed for war requirements.

Civilians will receive slightly more of the dried beans and 1-3 of the dried peas supply.

Of canned vegetables, including soups, civilians will receive nearly 70 per cent of the total supply and

(Continued on Page 8, Col. 3)

BAHAMA LABORERS SAVE CROP

Reports from N. C. Say These Workers Helped Greatly

Washington, D. C.—Reports from North Carolina point out that the Irish potato crop in Pasquotank and adjacent counties would never have been saved had it not been for 195 Bahamans who were brought into the area to relieve the farm labor shortage. The Bahamans are said to have played an important part in the digging and grading of North Carolina's potato crop.

It is estimated that about 100 Bahamans or other workers from outside the area will be needed this fall in and around Elizabeth City, N. C., to help with the harvesting of 16,000 acres of soybeans and 22,000 acres of corn.

A few weeks ago Tennessee farmers around Nashville were desperately in need of workers to help with the harvesting of tobacco. When the colored ministers of Nashville heard about the plight of the farmers they volunteered to help. On Sunday morning, July 4, every colored church in the city carried this announcement: "The harvest is ripe but the laborers are few. Primers are wanted at once. Let us show by working on the farm, that we believe in the saying 'One for all, and all for one.'" The announcement got good results. Within a day or two the problem of labor was largely solved.

ON PRICE PANEL

Negro farm agents are not only doing a good job of helping to show farmers how to grow the vital foods for the war, but they are also carrying on OPA price panels, helping to assure compliance on the part of merchants with price ceilings and general price regulations. One of the first Negro county agents to be appointed to a price panel was Elliot Robbins of Greenville, Ala.

(Continued on Page 8, Col. 2)

PRIVATE SHIPYARDS BUILDING BULK OF U. S. NAVAL VESSELS

Of the 697 naval ships under construction before Pearl Harbor, fully 603 were being built in privately owned shipyards.

The reliance of the government on privately owned yards to produce the bulk and strength of its navy dates back to 1794 when congress authorized the construction of six frigates to suppress the Barbary pirates, the first ships of our American navy.

In the list of our navy's ships built in privately owned shipyards are the Bon Homme Richard, Constitution, Constellation, Alabama, Lexington, Wasp and Hornet.

Only in periods of national emergency, however, has the government awarded more than half of its navy construction program to privately owned shipyards. In one five-year period, for example, the private yards of Great Britain built 5,400 tons of navy ships for every thousand tons of U. S. navy craft built in American privately owned shipyards.

WOMAN'S PAGE

HELPFUL HOUSEHOLD HINTS

EGG DISHES PROVIDE FINE BEEF SUBSTITUTE

By Mrs. Ethel Somers

Don't let the beef scarcity get your family down. When there is no beef try unrationed eggs. Many delightfully savory combinations are possible using eggs as a base.

Fortunately the poultry industry has been able to step up production miraculously so that prospects for eggs are still very good. Their production goal for 1943 sounds like the world's war debt—4,780,000,000 dozen, or almost sixty billion eggs. To make this record, 394 million laying hens are hard at work producing 15 per cent over last year's quota and 31 per cent over the average of the last 10 years. This supplies the armed forces, dried eggs for lend lease and civilian eggs to the tune of 320 eggs per person, which is almost one a day. No wonder it has been suggested that the little red hen be awarded the Congressional medal!

Nutritionally eggs are hard to beat. They are a high-vitamin, sterile package of all the elements needed to grow a healthy chick ready to scratch for its living. Your muscles, bones, blood and teeth will benefit from eating eggs. One dozen two-ounce eggs will yield one-and-a-half pound of body-building protein, which means that you are only paying 33 cents a pound for protein if you are buying 50-cent eggs. You have to pay over 50 cents a dozen to boost eggs out of the moderate cost food bracket and at 40 cents a dozen they are a thrifty food buy.

Many varieties of main dishes may be made with eggs. Only a few can be included here, but there'll surely be a favorite for your family among these.

Eggs combined with cheese make the healthful, savory combination pictured here. Just a few points spent on cheese can work wonders in flavor and zest and will round out a main dish substantial enough for the hungriest family.

(Cut out these recipes for your ration recipe file.)

EGGS FOR BRUNCH
(Three red points needed.)

Prepare a cream sauce using:
- 2 tablespoons butter or margarine
- 2 tablespoons flour
- 1 cup milk

When cooked thick and smooth remove from the heat and add:
- ¾ cup shredded American cheese, Cheddar preferred)

and stir until the cheese melts. Season to taste with:
- Salt and pepper

Saute together:
- 2 tablespoons butter or margarine and ½ lb. fresh mushrooms, sliced

until tender and savory but not browned. Arrange:
- 6 rounds of toast

on an oven-proof platter or chop plate, cover with the sauteed mushrooms and top with
- 6 poached eggs

one on each portion. Pour the hot cheese sauce over the eggs and sprinkle with:
- ¼ cup shredded cheese

Place in a moderate over (375 degrees F.) until the cheese is just melted. Garnish with parsley and serve piping hot. Serves 6.

EGGS WITH ELEGANCE
(One-half to one red point needed.)

Finely chop:
- 2 shallots

cook in:
- 1 tablespoon butter or margarine

stirring constantly for three minutes. Then add:
- 6 peeled mushroom caps, chopped

Cook for five minutes longer. Stir in:
- ½ cup chicken stock (hot water plus chicken bouillon cube)

Cook for 10 minutes and add:
- ⅛ teaspoon paprika
- Few drops of kitchen bouquet

If a bouillon cube is used it will provide salt enough. If chicken soup is used add salt to taste. Turn into a shallow buttered glass baking dish and lay over the top:
- 5 poached eggs and
- 4 tablespoons cream

Dust with:
- Grated cheese (Parmesan preferred)

Set in a hot oven (400 degrees F.) for three minutes. Serves 5.

MEXICAN EGGS
(One red point needed.)

Saute together for two minutes:
- 1 medium onion, chopped
- 2 cloves garlic, chopped
- 2 tablespoons butter

Add:
- 1 tomato, chopped
- 1 cup black bean soup

Simmer five minutes. Strain and turn into oiled glass pie dish. Break carefully into liquid:
6 eggs sprinkled with:
- ¼ teaspoon salt and
- ¼ cup grated cheese

Bake in a moderate oven (375 degrees F.) 10 to 12 minutes or until eggs are set. Serves 6.

EGGS IN GREEN CUPS
(No points needed.)

Oil small custard cups and line with minced parsley. Break an egg into each cup and sprinkle with salt and pepper to taste. Set cups in a pan of hot water and bake in a slow oven oven (325 degrees F.) for 20 minutes. Unmold on small rounds of buttered toast. Serve plain or with mushroom, tomato, or cheese sauce.

COLORFUL EGGS
(About ½ point needed.)

Cook together savory over low heat:
- 1 tablespoon chopped onion
- 3 tablespoons minced green pepper
- 2 tablespoons bacon drippings

for three or four minutes. Then sprinkle the mix over the bottom of an oiled pie plate (earthen ware or glass). Break in:
- About 6 eggs

as many as the dish will accommodate. Dust with:
- Salt and pepper
- Minced parsley and
- Buttered crumbs

Bake in a moderate oven (350 degrees F.) until the eggs are set about 20 minutes. Serves 6.

MIRRORED EGGS IN CORNFLAKES
(About one red point needed.)

Break desired number of eggs in an oiled baking dish. Dot with bits of butter and set in a moderate oven (350 degrees F.) until a film forms over the eggs. Then dust with crisp cornflakes and more bits of butter and cook until eggs are desired consistency.

TOWEL CARE

Turkish bath towels need no ironing or pressing if cared for this way: Hang the towels, well pinned, on clothes lines. Shake them several times while they are drying. When perfectly dry remove carefully from the line and fold. The towels are then ready for the linen closet. Summer sun and wind are excellent for keeping the towels sanitary and well-fluffed.

CRACKERS FOR EVENING SNACKS

Around 10 o'clock at night do you hear that old familiar cry of "let's raid the icebox?" Do you groan inwardly and prance out to the kitchen to supervise the raiders and make sure they don't do away with any of the food that took precious ration points?

If you're smart, you'll lay down some hard and fast rules about what's available for evening snacks and have it on hand always. Conveniently packaged cookies and crackers, peanut butter and jelly, and milk are the makings of a nutritious, inexpensive and unrationed lunch. If these items are kept within easy reach, the raiders will be content, and the danger of their getting away with tomorrow's dinner will be minimized.

SO IT WILL SEW

Keep the sewing machine in good working order. Have it cleaned and oiled well. Run the machine a little while on a cloth after oiling, to remove surplus oil so that no oil stains will come on the material to be sewed.

PROTECT FURNITURE

Dry heat in summer and damp heat in winter can loosen joints, detach veneer, and cause wood of furniture to warp or crack. Oil or polish applied occasionally will seal the pores and help to preserve the wood.

CHROME CARE

To preserve chrome-plated articles apply a thin protective coating of furniture wax after washing and drying. Chrome-plated parts are often found on automobile, porch and yard furniture, plant stands, and other articles about the house.

Pan-fry liver sausage and top with green peas or beans mixed into a savory white sauce.

MIRROR TRICK

If you need a new mirror frame try this trick. Take some cotton lace about four inches wide. Dip it in wet plaster of Paris and stick it around one of the rimless round mirrors. When the plaster dries you will havea firm frame that is like frosted lace and snowy white.

Half a prune pressed into the top of each muffin before baking makes them pretty to look at and extra-good to eat.

REAL CONSERVATION

Americans are learning the meaning of conservation. They are learning from an exacting teacher—war. War has in a matter of months switched this country from a nation of abundance to a nation of scarcity, as far as civilians are concerned. And where there is scarcity, there must be conservation. Automobile owners cannot burn up their ears with speed as they were wont to do a few years ago. Housewives cannot carelessly demolish house hold appliances, or toss out surplus food.

The new effort to conserve must reach farther than slow driving and eating the last crust of bread. It must reach into one of the most important existing fields of conservation—fire prevention. Several hundred millions of dollars worth of property is destroyed each year by fire. The bulk of that loss is sheer criminal waste, brought about by indifference and carelessness on the part of the individuals. This carelessness can be eradicated by education; by learning that preventing a property-destroying fire is as great a step toward conservation as driving your ear slowly to save tires. Fire prevention authorities have emphasized that: "The development of a safety awareness that will control the daily actions of the individual is neccessary if preventable fire and conflagrations are to be redueed to a minimum."

Until our individual conservation efforts are effectively directed toward curbing fire hazards in the home, in the factory, on the farm and every place else where life and property are involved, we have not learned the lesson of conservation.

NUTRITION NOTES

(OWI News Bureau)

Better buy tomatoes now. They're at the peak of their season in many places and they have a heap of nutriment to offer for a relatively low price. Vitamin C is their chief stock in trade, but they also have Vitamin A and B1.

Modern vegetable cookery is a big improvement over grandma's methods. It's easier, faster, and saves fuel. Remember to cook your vegetables in a small amount of boiling water, have the water boiling when you put them in, use no soda. This method saves vitamins and minerals.

Stretch the fat. Favor recipes using little, work out ways to cut down the quota in your favorite recipes. Bake or pan-fry croquettes instead of deep-fat frying; cook fritters in a little shallow fat.

Make your breakfast a real fast breaker. After not eating for 12 or 13 hours your body needs fuel to keep going. Remember that a good breakfast fills one-third of the day's nutritional requirements, a good one made up of fruit, cereal, eggs, milk and bread. Such a one banishes the mid-morning slump.

Peaches possess flavor appeal. They can make the end of a meal a real finale a thing to reminisce over. Serve them sliced, with cream, in peach shortcake, in pie, in upside down cake, or slice them over ice cream. Remember when you add peaches to a dish you're not only adding a food from group three of the basic seven, you're adding flavor.

Milk has done it again. In the Thermoid Plant in New Jersey the employees were given a five-minute recess and a half-pint of free milk. The benefits were four-fold, a 30 per cent reduction in accidents, fewer absences from illness, general improvement of employee health, and increased production.

Buying fresh lima beans and peas ready shelled may mean time saved but it also means considerable Vitamin C lost. That is the verdict of the New York State Agriculture Experiment Station. Lima beans lose Vitamin C soon after shelling, especially in the warm air of the market.

The unrationed member of the cheese family, cottage, has a new role. Try this member of Group 4 of the basic seven mixed with chopped preserved ginger in between slices of hot gingerbread.

Stuffing takes to vegetables like salt pork to baked beans. Try peppers, tomatoes, onions, eggplant stuffed. Seasoned bread crumb stuffing will do, but left over vegetables are good too.

Cover your food when you store it in a refrigerator. Covers keep the odors from spreading to other foods, and in the cases of fruit juices they keep out the air, cut down the loss of Vitamin C.

Corn care pays dividends. Corn has a higher nutritional value and tastes better when served as shortly after picking and purchasing as possible. Don't buy for several days ahead.

Higher points for meat, higher points for butter spells a "toughie" of a problem for the menu-planner. Answer to the riddle of the points is fresh fish. A member of food group 5 of the basic seven, it contains a protein readily digestible, is tasty and palatable. Try some of the lesser known varieties such as whiting and croaker, they're different and delicious.

WOMEN BARBERS REPLACING MEN IN 2,000 SHOPS

All Army Camps Are Calling For Lady Barbers, Where Many Are Earning From $15 to $20 a Day.

Make yourself secure after the emergency and during the emergency. 1500 applications for trained lady barbers are now on our files, not from colored shops alone but from white shops as well. With a common school education, make yourself secure for life. Your security after the war will depend on being prepared to master a trade or profession. The finest opportunity ever opened to colored women of America. Write the first largest and best equipped school of its kind in America, Tyler Barber College, Houston or Tyler, Texas, H. M. Morgan, president.

GENUINE KALE IS WHOLESOME, DELICIOUS FALL SALAD CROP

By Dr. Floyd Bralliar

Tennessean Garden Editor

One of the most wholesome as well as the most delicious of all the fall boiled salad erops is genuine kale. A new smooth-leafed variety of this vegetable was awarded a medal by the All America Seleetions in 1942, for introduetion to the American public in 1943.

We are glad to learn that some of our Nashville seedhouses have a stock of this seed. This particular kale surpasses all of the old varieties in two ways; first, it is the earliest maturing of all salad plants. In good soil, with a reasonable amount of moisture, it is ready for use within 28 to 30 days from the time the seed is sown. In flavor, it is elaimed to be bettter than the best strains of the double-curled Scoteh kale.

Another valuable feature of this vegetable is the faet that it will withstand more eold than any of the old varieties exeept the Siberian kale and is probably as hardy as it is. It is introduced under the name of "Han-Kale" or "Norfolk Hanover Kale."

This vegetable, of course, belongs to the same family as collards, cabbage, and a number of other widely-grown vegetables. In pieking for table use, the leaves are cut off or pinched off. close up to the stalk, but not close enough to injure the stalk.

We ean begin using it when the leaves form a rosette lying flat on top of the ground and even before they are fully grown. Only the larger leaf, of eourse, should be cut at this stage. As the plant grows, the stalk enlarges and grows taller and in due time may reach the height of from 12 to 16 inches. As the leaves reach maturity they are eut off and new ones come.

A few people eat these kales in mixed raw salad; others like to eat them with just a little salt. chopped up with either lemon juiee or vinegar, but the great majority of people use it in the same way that we use turnip tops.

We recommend planting kale in rows about 14 inches apart., dropping one seed as near as convenient about every ineh or two, and covering them not more than an inch deep. Like other seeds of this same family, they germinate quiekly. If sown in moist soil. they should be up in from three to five days.

Mother: "Don't you want to be a girl that people look up to?"

Daughter: "No, I want to be the kind that people look around at?"

Sgt. With Outfit In BWI Receives Prize for Poster

A last-minute entry in a poster contest sponsored by the Army post won for Sergeant Carl A. Egerton of the Coast Artillery Anti-aircraft Regiment stationed at Fort Read, Trinidad, BWI, the coveted prize of a 30-day furlough to the States with all expenses paid. Sergeant Egerton, 29, is a former Philadelphia letter-carrier who has been stationed at the Trinidad post since May, 1942.

The furlough was the grand prize in a recent regimental venereal disease poster contest. Interviewed in Washington recently, en route back to his Trinidad post, Sergeant Egerton was enthusiastic in discussing the post venereal disease control program.

"Of course, I was thrilled over winning first prize," he said, "but I still don't understand how my idea happened to be the one chosen.

"I've had a wonderful time visiting my family. I got to see our new home for the first time, but I tried to do something for the other men in the regiment too."

That "something" meant using a good portion of his leave to visit relatives and friends of some forty comrades. Those forty visits were scattered over New York, New Jersey, Pennsylvania and the District of Columbia. But Sergeant Egerton believes they were worth every bit of the time they required.

"I got a lot of hugs and kisses from mothers and fathers of the boys back there in Trinidad," he said. "I guess it was next best to seeing their own sons. And after visiting with their people I feel I know the men a lot better myself."

A member of the only colored regiment at the post, he is pretty proud of the record his group is making, particularly in regard to the venereal disease control program. From January through July of this year the men of this CAAA Regiment have reduced the venereal disease infection rate of their group from 465 per thousand per annum to 42 per thousand.

According to Sergeant Egerton, keen competition prevails among all regiments at Fort Read regarding the lowering of venereal disease infection rates. Group furloughs are granted to regiments maintaining perfect records for sixty day periods. Since such records must be perfect over a length of time, before the men are granted these privileges, "the men aren't only looking after themselves; they're checking up on the other fellows, too."

Discussing recreation facilities for men on furlough in the Trinidad area, Egerton had particularly high praise for the USO center. Pointing out that hostesses are carefully investigated with respect to personality, background and education, he declared. "The USO does a wonderful job in making it possible for the men to meet the nicest type of girls when on leave."

A former law student at Howard University, Egerton had interrupted his college course prior to Army induction to accept employment with the Post Office Department. When the war is over he expects to go back to his job in order to earn enough to complete his college work. His personal visits while in Washington included a call on Dr. Eugene Holmes, professor of Philosophy at Howard.

After induction into the Army in October, 1941, Egerton received his basic training at Forts Meade and Eustis and Camp Davis before he was assigned to overseas duty in Trinidad in May, 1942.

"Promotions come pretty slow at first," he said, "but things really speeded up when they did start; I was made Pfc., Corporal and Sergeant all within three months' time.

Before leaving on his present trip, Sergeant Egerton had passed the preliminary test for Officer Candidate School, and he expects to take his examinaiton on his return to Fort Read, Trinidad.

Sergeant Egerton was amazed at changes apparent on the American scene since he left the States.

"Women and girls running street cars and driving taxis. And women doing men's work, like welding and riveting. All of that seems strange and new to me. Why," he added with a grin, "even my own sister is in school learning to be an inpector of Navy planes."

Compliance With Price Ceilings Being Encouraged

As a part of its plan to use corps of volunteers to encourage compliance with price ceilings on food in retail stores, the Office of Price Administration, through its regional and district offices, has begun a price survey in 33 principal cities throughout the country, the OPA announced this week.

At the request of the Washington office, especial attention will be given to comparison of compliance with price ceilings between food stores patronized largely by Negroes and those patronized largely by whites. These comparisons will be made by the price panels and price assistants attached to local war Price and Rationing boards in each of the 33 cities. Results will be compiled and sent to OPA district and regional offices which will then send them to Washington.

OPA regional offices were directed to begin the food price comparisons on August 16, to continue until further notice. It was also requested that the first report show the number of Negro price panel members and the number of Negro price assistants in each of the cities.

Price panels and assistants, now operating in most localities having community-wide ceilings, are committees of volunteers, representatives of the community who disseminate information on OPA price regulations, receive complaints and adjust differences between retailers and consumers.

The cities in which these committees have been directed to compare compliance between stores in Negro and white neighborhoods are:

Region I—Hartfort, Conn.

Region II—New York, Philadelphia, Baltimore, Camden, N. J., Wilmington, Del., Washington, D. C.

Region III—Detroit, Louisville, Ky., Cincinnati, Ohio, Charleston, W. Va., Cleveland, Ohio.

Region IV.—Jackson, Miss.; Columbia, S. C.; Raleigh, N. C.; Atlanta, Ga.; Montgomery, Ala.; Savannah, Ga.; Jacksonville, Fla.; Birmingham, Ala.; Richmond, Va. Charlotte, N. C.; Memphis, Tenn.; Winston-Salem, N. C.; Durham, N. C.

Region V—Houston; Dallas; New Orleans; Little Rock; Shreveport; St. Louis.

Region VI—Chicago.

Region VII—Phoenix.

FEPC Seeking To Get Men Put Back On Jobs

Immediate return to work of the Negroes in West Coast shipyards who had been dimissed for refusal to pay their dues into an auxiliary union local of the Boilermakers union is being sought by the President's Committee on Fair Employment Practice (FEPC) as a preliminary move to adjustment of the entire situation, it was announced today by the Committee. As a result of investigation and a conference held in San Francisco on Aug. 20-21, the positions of all parties involved in the dispute have been clarified, the Committee reported.

At present attempts are being made to have worked out between management and the union a procedure through which the dismissed workers may be put back on their jobs at once ending ultimate settlement of the entire dispute.

According to the announcement, the discharge of the workers is explained by the management as being in accord with its contract to discharge any and all workers, regardless of race, creed or color, who do not remain in good standing with the union. The fact that the workers in question are Negroes, the management insists, has no bearing in the matter.

Queried on its position in the case, the union is quoted as insisting that the auxiliary local which has been set up for Negroes meets all requirements and therefore, dismissal of any Negro workers who fail to pay their dues in the manner provided is justified.

The FEPC has received assurance from the complainants that they are willing to pay their union dues but in return they desire full union membership. They insist, however, that the auxiliary local setup does not provide them with that full membership and that if they are required to pay their dues into the auxiliary in order to keep their jobs it is a violation of Executive Order 9346.

"The primary need," said the FEPC statement, "is to put these workers back on their jobs immediately. A thorough examination of the case can then be made in order to determine whether a violation of Executive Order has occurred."

In A Letter from the Homeland. The food is worse than it used to be.

The job is worse than it used to be.
The trains are worse--------
The roads are worse --------
Th houses are worse --------
ONLY THE PEOPLE ARE BETTER.

FEPC Dismisses Complaint Against United Fruit Co.

The following announcement was made by Msgr. Francis J. Haas, Chairman of the President's Committee on Fair Employment Practices today.

"The President's Committee on Fair Employment Practice on July 13, 1943, received from its New York office a report that the United Fruit Company had failed to hire qualified Negro Maritime officers who had presented themselves for employment. These allegations have been investigated and have been dismissed for lack of merit.

The report concerning the United Fruit Company as presented to the New York office, asserted that the Company had requested a full crew and that, when qualified Negro officers applied the Company had refused to accept them. This was found to be without any foundation in fact. No request for a crew was made by the Company. Investigation revealed that a suggestion was made that Negro officers, not specified as to persons or qualifications, be hired by the United Fruit Company. Upon report of the full facts to responsible officers of the Company, a readiness by the Company to employ Negro officers was expressed.

In the course of its investigation of this case, the Committee found that about 25 Negro officers are presently serving in the Merchant Marine and that the total number of qualified Negro officers, including the 25 afloat, is less than 50. Due to the shortening of training time for officers from 36 to 18 months, more qualifying Negro officers are becoming available. The Committee found that the United Fruit Company has employed unlicensed personnel without regard to color.

With respect to the licensed personnel, the Committee has received assurances from the United Fruit Company that any qualified officer meeting the requirements of the War Shipping Administration will be employed without regard to race, color, creed, or national origin.

Blind Defense Trainee Anxious To Aid In War

TUSKEGEE, Ala., Sept. 2—(ANP)—"Just because I am blind does not mean that I cannot assume my share of the war effort," said Ocie Lee McLain, blind ESMWT trainee in the courses of physics and mathematics at Anniston, Ala., last week after the Library of Congress had forwarded him a treatise in braille on "Principles of Physics."

The 35-year-old trainee lost his sight through an accident several years ago. He earns his living by directing the activities of a mattress factory.

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd ... Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

DID YOU KNOW THAT?

Cannon may be guns, howitzers or mortars, according to design, and the purpose for which each is intended. Guns, which have longer barrels, fire a projectile whose path, or trajectory, is a comparatively flat arc. They therefore have longer range than the shorter-barraled howitzers and stubby mortars which by elevation and variation of the powder charge or both are capable of high angle fire. They can fire from close behind crests or from trenches and, with their steeply curved trajectories, drop shells into an enemy trench. They may be said to use a basket technique, while gun technique resembles baseball throwing. Tank destroyers, with their requirement for direct fire, are armed with guns, not howitzers. For instance, the American-built, 105-mm. self-propelled howitzers, effectively used by the British in Egyptian desert battles, **are not primarily a tank destroyer weapon,** although they take tank concentrations under fire when opportunity offers.

JUST A DOG

Just dog, I answer when people say
"What kind of a dog is he?"
Just good plain dog
With a winning way
But ne'er a pedigree.

I've had him now
For a long, long while
Along at my side to jog
But he isn't much
For looks or style—just dog.

Just dog—with a faith that
Will not fail,
And a heart that is made of gold.
Just loyalty fine from
The tip of his tail
To his nose that is moist and cold.

Just a dog who will follow me
Where ere I go,
Though down to the depths I fall,
Just dog—plain dog,
Since you want to know—
That's all'

Just ' dog—philosopher—lover—friend
Unwavering—honest—true.
With deep affection that has no end
What ever I say or do.

DOGS AT CHURCH

E. R. Yarham

ONE Sunday afternoon during the winter my wife and I walked to evensong at the ancient church (it has a thousand-year-old Saxon tower) of an English village. A moment or two after sitting in the pew there came a whining and scraping at the door.

Investigation proved, as was not unexpected from the tone of whine, that the intruder was our pet spaniel. She had got out from the house and followed us to church. It was a new experience for her to go to service, but she behaved tolerably well, although she persisted in following me to the lectern for the reading of the lessons. Her only other misdemeanor, if it is not too severe to condemn it as such, was to pay her respects to the rector's wife and one or two other people she knows well.

Her behavior was, indeed, very creditable in strange surroundings. For Norfolk is not a sheep country, and dogs are not accustomed to go to church as in shepherd areas. The custom was once widespread, and the parish clerk of Barton Turf, in the Boards district, gets the rent for three acres known as 'Dog Whipper's Land." Ostensibly it is payment for keeping the dogs submissive in church, although nowadays the post is a sinecure.

A few years back I was living in the West of England and was particularly fond of the Cotswold country. Stanton church stands at the foot of the hills, and the heads of the last three bench-ends of the middle aisle are deeply notched.

Without doubt these marks were originally made by dog chains and the pews were used by the farmers and shepherds who brought their dogs with them.

I happened to be browsing through a rather famous book Dean Ramsay's "Reminiscence, of Scottish Life and Character," when I came across a reference to taking dogs to church. As in all sheep countries the dogs were well under control—until towards the end of the last psalm, which they knew heralded the end of the service. Then there was a universal stretching and yawning, because there were almost as many dogs as people, and the former got ready to scamper out, some even barking when the blessing began.

The Dean continues:

"The congregation of these churches determined that the service should close in a more decorous manner, and steps were taken to attain this object. Accordingly, when a strange clergyman was officiating, he found all the people sitting when he was about to pronounce the blessing. He hesitated, and paused, expecting them to rise, till an old shepherd, looking up at the pulpit, said, 'Say awa' Sir, we're a' sittin' to cheat the dowgs.'"

Another clergyman, Canon Tristam, used to relate a delightful incident which occurred in the Scottish Border country. He was preaching in a village church, and the congregation consisted mostly of Cheviot shepherds. Nearly all had brought their dogs. These lay down in the aisle outside their respective masters' pews and remained quiet. On this occasion, as there was a special preacher, a number of Presbyterian shepherds had come. As soon as the prayer after the sermon had concluded the dogs belonging to these latter rose to walk out; the others waited until the preacher stood up and had given the blessing, each dog following the usage of his own Church.

When things were less formal than they are these days, even clergymen often took their dogs to church with them. At matins, at Kenwith church, Cornwall, the beloved Bishop Benson (later Archbishop of Canterbury) was always accompanied by his collie, which occupied a seat in the transept. His name was "Watch," and once when the bishop was reading the lesson, he repeated in a loud and impressive voice, "I say unto you, Watch." At this the dog, much to the amusement of the parishioners, left his usual place and went obediently to his master.

NEED TO DEFEND SHIPPING SPURRED CREATION OF NAVY

Late in 1775 the Continental Congress made Esek Hopkins "commander-in-chief of the fleet." Though his tenure was short, he was thus the first, custom-made commodore and admiral of the Continental navy. John Paul Jones was most illustrious of the commodores of the Revolution. When George Washington became President under the Constitution in 1789 there was no United States navy. The Alliance, its last unit, had been sold in 1785.

Foreign trade grew by leaps and bounds in the early years of the new nation. By 1794 congress could see that naval defense against acts of piracy would soon be better policy than the payment of tribute to the Barbary and other pirate groups. Six new frigates were authorized and four captains were commissioned by President Washington from former officers of the Continental navy. By virtue of seniority, John Barry became the new navy's first commodore. America's first Lexington had been his first command.

Several decades of frequent naval action followed to establish the new nation's right to engage in foreign trade. Barry and Truxtun were distinguished commodores in undeclared naval war with France. Bainbridge and Preble won fame as commodores along "the shores of Tripoli." Stephen Decatur and Stephen Cassin added glamour to the title in the War of 1812. At Lake Erie, Commodore Oliver Hazard Perry made a permanent watchword for the navy by his use on a battle flag of the dying words of Captain Lawrence—"Don't Give Up the Ship." From Perry's message—"We have met the enemy and they are ours"—has come the inspiration for other models of conciseness, such as the recent "Sighted sub, sank same."

FIDO'S IN THE ARMY

Willa Hoey

Fido's in the Army now,
(He lives across the street)
And he is the proudest dog
That ever you could meet.
I want to join the Army,
But Mother she says—"No!"
When I'm a little older
Perhaps she'll let me go.
I feel just like a slacker
To sit and wash my paws,
While Fido's in the Army
Helping on the Cause.

NIMOTODE SCOURGE OF MANY PLANT ROOTS, SAID DESTROYED BY PLOWING REPEATEDLY

Sunlight Fatal To Pest Causing Heavy Losses

By Floyd Bralliar

We just today read a report of the very important experiment made on a new method of getting rid of nimotode, that microscopic worm that produces knots on the roots of so many different plants, and especially is destructive to tomatoes and beets. It is almost as destructive to daffodils and onions, because it causes them to decay.

The treatment is to plow the land fairly deeply during very hot weather and let it lie just as it is turned over by the plow in the burning hot sun for four or five days, then harrow it level and just as soon as it gets a little hard, plow it again. After a week or two, plow it the third time. It has been proven that these tiny microscopic worms are easily killed by being exposed to direct sunlight, especially in very hot weather. Experiments have seemed to show that even in very badly infected soil, three turnings of the soil during the hot part of the summer and especially in August are effective in practically exterminating this pest.

Worth A Trial

We would suggest that those of our readers who are having trouble with this pest give this a trial. It looks reasonable and certainly is not expensive. It is practical even though it should not exterminate all the nimotode, for it will certainly put the soil in very much better condition for producing a crop. This applies to soil for flowers, vegetables, and farm crops.

In small plots of course, we would simply spade the ground, and leave it as rough and loose as we could.

At present, nimotode is one of the worst menaces to good crops that we have and because it is microscopic in size, but few people recognize what it is that is ruining their crops.

Potatoes And Beans

We have recently emphasized the fact rather strongly that the fall crop of Irish potatoes, beans and a good many other vegetables should be planted in the first ten days of August but where there has been plenty of rain so that the soil is soaked through and through we would urge that all these fall crops be planted at once, while there is enough moisture in the ground to make sure that all the seeds will come up promptly. This applies, of course, to our perennial flower seeds as well. Hollyhock seed, Delphinium seed, Coreopsis seed and the seed of many other perennials if sown now, will produce plants that will bloom next year provided they are thinned enough to give them room, to develop as soon as they are of any considerable size. It is all right to let them grow closely until they are big enough to transplant.

Weather records show that, if we haven't already had our soil thoroughly soaked, we are al—most sure to have this happen during the first ten days of Aug.

Get Ground Ready

In planting any of our vegetable seeds in the fall or in hot weather at any time in the season, it always pays to get the ground ready and then soak the seed from 12 to 24 hours before planting. If they are immersed in water for that length of time they will take up as much moisture as they would othherwise take up in 4 or 5 days. As a result, they will come up in about half the time it would take them if they were planted without soaking and, too, will have an opportunity to make a good root system before the period of rain that we are almost sure to have at this time has ceased.

In the springtime we do not need to be so particular about the exact date of planting our seeds because all the summer is ahead of us, but from the first of August on, we have only a comparatively short period until frost. True, we have some 75 to 90 days before a good heavy killing frost and this is —abundance of time to bring most of our annual flower seed into full bloom and to bring most of our ordinary vegetables that we usually plant in the spring to maturity, but if we wait a week or two longer than is necessary in planting, we are apt to lose a part of all our crop, because frost arrived too soon.

There is one vegetable that is far too rare in our Southern gardens. This is the Egyptian Shallot, commonly known as the winter onion. This member of the onion family never makes large bulbs; in fact the only thing it ever produces that resembles an onion very closely is the bunch of seeds on top of the leaves. But, it does produce wonderfully fine geen onions In other words, the green, tender stems always will vary in size between that of our little finger to that of our thumb and will stand any amount of hard freezing and can be used all winter long.

These sets are now on the market. You will buy them probably in clusters just as they came off the top of the onion leaf. Break these up into individual onion sets and set them out just as we are in the habit of setting out onion sets in the spring, except it is best not to put them closer than five or six inches apart in the row. Cover the set probably an inch deep with moist soil and when the tops are three or four inches high, give them a little fertilizer worked into the soil on both sides of the row. These green onion are excellent cooked as green onions. The green tops are about equal to chives for chopping up and putting into soups and other dishes to which we wish to give an onion flavor, but of course their chief use is as mild green onions to eat raw.

ONE-MAN MEDICAL SYSTEM

A bill recently introduced in the Senate to radically broaden social security legislation would, among other things, set up a socialized medical system that would ultimately destroy the independence of medical men, the present high standards of the medical profession; together with a medical system which has added more in a few decades to the health of the human race than centuries of medical development in Europe.

The new system that is proposed would place in the hands of one man, the Surgeon General of the Public Health Service, the responsibility of Administering free of charge to the medical needs of more than one hundred and ten million people. He would have at his disposal, to be used as his judgment dictated, approximately $3,000,000,000 to be collected annually from the taxpayers.

It is estimated that, at the present time, there are in the United States, available for civilian practice, 120,000 effective physicians. With $3,000,000,000, the Surgeon General could, after allocating 20 per cent for administration costs, hire every physician in the United States at an average salary of $5,000 a year; buy every available bed in every nongovernment-owned hospital 365 days each year at $5 per day; pay $2.50 per day for each and every government-owned hospital bed 365 days in the year, and still have left for drugs and medicines, $168,565,887.50.

It does not seem possible that free American citizens want a one-man medical system any more than they want a one-man government.

At the Mobilization of Farmers for Victory, the Department of Agriculture reported 680,000 Negro farmers in the Nation.

EMPTY BELLIES

"Despite Pollyanna reassurances . . . , it looks like a long, hungry war," says the Portland, Oregon, Journal.

"Agriculture . . . hasn't gone for . . . food subsidy proposals . It seeks instead what it terms necessity prices, that is, prices sufficiently high to pay increased costs of labor, seed, fertilizer and transportation. It wants all artificial restrictions on food production removed. It demands the abolition of arbitrary and shortsighted limitations placed on agricultural gasoline and farm machinery.

"The decade of farm problem fumbling, experimentation, and bureaucratic bungling, a decade in which a 47,000,000-acre cut was made in 17 leading farm crops, isn't over, it appears. We are still hanging on to some of our outworn crop-restricting regulations. We are still picking at the food problem through half a dozen overlapping, ofttimes conflicting agencies. The . . . theorists . . are still in there pitching."

NEGRO COUNTY AGENTS IN TEXAS PROVIDE FARM LABOR TO WIN THE WAR

Negro county agents of Texas have started a movement among the ministers, public school teachers, college professors and students which may sweep the state and solve the shortage of farm labor during the peak of the crop seasons. Over in Tyler, Smith County, fifteen Negroes of the classes already mentioned answered the call for help in picking the berry crop. County agent B. J. Pryor said that "many Negroes have answered the call with sense of feeling for the present world crisis." From the first day of the call for workers, the Negro labor supply has exceeded the demand. Leaders in the movement in Smith County were Rev N. S. Curry, pastor of the C. M. E. Church and chairman of the Tyler Interdenominational Alliance and Rev. E. C. Swert, Dean of Theology Butler College, and chairman of the Smith County Interdenominational Alliance. No scale of wages was given.

In nearby Cass County the Negroes have organized a "Farm Labor Victory" movement under the guidance of Neighborhood Victory Club leaders. Farmers in need of farm labor will be furnished a list of the Victory leaders to whom they should go for help. According to the Hughes Springs New Era. "The wage scale recommended by Cass County was unanimously accepted by the Farm Labor Advisory Committee Negro leaders and farm operators. Twenty cents an hour for adult workers and proportionately less for children was the wage scale recommended."

In Ellis County, formerly the banner cotton producing county of the world, the Negro pastors and other leaders have organized a volunteer committee to assist farmers in locating all the Negro labor available around Ennis. Rev. O. P. Felder and Prof. B. F. Thomas were elected chairman and secretary. With these Negro pastors and five leaders from each church, the city wide committee was reported by the Ennis News ready to render assistance to farmers needing laborers. According to the News all members of the committee "expressed themselves as pleased with this opportunity to render this service and aid to the food production program of the war effort.' No scale of wages was given.

The Community Consumers' Cooperative for Negroes at Georgia's Industrial College reports having done $20,061 worth of business last year. In May the Cooperative declared a 5 per cent dividend to the teachers, residents of the community, and 700 students who compose its membership.

The Cooperative, now in its ninth year, has taken a leading part in poultry production and victory gardens. Its original 100 chickens have grown to 5000

MISSISSIPPI PLANTERS MAKE PLANS FOR NEGRO FARM WORKERS

Another indication of the aroused interest of the white citizens of the state in the Negro farmer's life and living is the expanded program of the Delta Council to include improvement of specific conditions retarding the Negro's progress. The April issue of Southern Frontier carried the statement of Delta Negro farmers in which were suggested some ways in which race relations might be improved. The statement was addressed to the Delta Council, an organization of Mississippi planters. The expanded program of the Council is the answer to the Negroes It appears in full in another column.

Resolution IV.

Delta Council recognizes the need for expanding its formulated program in the study of race relationships and the maintenance of harmonious understanding between the two races of the Delta, Cognizant of the need for more study of the Negros' problems affecting this section, this organization endorses additional steps to promote practical solution of those conditions.

Delta Council knows these problems to be existent and, realizing the long experience of the people of this section in dealing with the development of the Negro race, believes that a continued effort by the leadership of the South will do more for the promotion of the Negroes' interests than can be accomplished through union organization or social reforms originating in other sections of the country.

Known problems with which the Council will concern itself are better schooling. better hospitalization. and better housing for the Negro population.

(a) Health is fundamental to the efficiency and usefulness of a people, as well as to their happiness and welfare:

Delta Council, therefore recommends that careful consideration be given to public health measures, and to providing more facilities for hospitalization for the Negro people of the Delta.

(b) With a view to promoting and preserving peaceful and satisfactory racial relations and adjustments, the laws of Mississippi and other Southern states provide for the segregation of whites and Negroes in intrastate transportation of persons, both on railroad trains, on buses, and street cars in towns and cities and on the highways. On account of the reduced use of private automobiles, due to tire and gasoline restrictions, and of the resulting increased patronage of public buses and street cars, such public conveyances are unusually crowded at this time.

In view of this, it behooves white people as well as Negroes to carefully observe these segregation laws to the end that their salutary purposes may be fulfilled..

(c) Likewise, as in the case of health, academic and moral education adequate to their needs is a prime factor affecting the efficiency and usefulness of a people as well as their happiness and welfare:

Delta Council, therefore, advocates more and better educational facilities for the Negro people of the Delta, particularly better school buildings, and better prepared teachers, with particular emphasis on vocational education and training.

Teachers and students alike have Victory Gardens. Using a two-acre plot as a laboratory, the Cooperative working with the college gives expert training to its members, 20 of whom are now at work in the Department of Agriculture

PLAIN TALK

Speaking before the twenty-fourth annual convention of the Dairymen's League Cooperative Associaton in New York City Fred H. Sexauer, president, asserted that "the present system of price fixing on food products has all the elements of national scandal."

These are strong words and it takes courage to say them. Discussion of such questions, which underlie the whole war effort, is neither a political nor a partisan issue—it is a duty which no responsible person can shirk.

Mr. Sexauer said: "Food rationing is sound practice only to the extent that it divides supplies . . . OPA has shown an almost total lack of knowledge of human nature . . On milk production they have been completely wrong . . . Therefore OPA and those who formulate its policies must accept responsibility for any suffering the American people endure from food shortages.

"The threat of inflation is being used to induce a nation to accept social reform, regimentation and limitation of opportunity and incentive . . . . Before the war ends it will be used to hide mistakes and conceal the sad state of economic affairs into which this nation has been thrown.

16th ANNUAL NEGRO 4-H CLUB ENCAMPMENT

By W. A. Hagins

Industrial College, Ga.,—The 16th Annual Negro 4-H club encampment, held at Georgia State College recenty, was opened with lectures and demonstrations in beef cattle and hog production by W. S. Rice, Beef Cattle and Sheep Specialist. Athen Georgia. He outlined ways to increase the productions in these enterprises, emphasized proper care and feeding of same and later conducted demonstrations in castrating hogs on the college farm.

Classes in vegetable gardening and conservation of food products and poultry production were also held for boys during the morning session while the girls attended classes in foods, clothing, home improvement, etc. The making of corn meal muffins, biscuits and yeast bread were outstanding events on this program.

P. H. Stone, State Agent for Negro Extension Work in Georgia, addressed the entire group during the chapel exercises at 11:45 A. M. His subject was "What 4-H Club Members Can Do In The Prosecution Of This War." The State Agent pointed out that to make war successfully, all people on the front and these on the home front must have the proper attitude. 'That attitude, is to win the war." he declared. He urged the club members to do the following things: (1) Write to the boys in the armed forces about the happenings at home to contribute to good army morale. (2) Take spare nickles and dimes and purchase war saving stamps and bonds, (3) Continue scrap metal and rubber drives to furnish metals for war equipment, (4). Help their family harvest crops and help neighbors too for there was an acute labor shortage, and (5) Continue to work wholcheartedly wi h the 4-H club food for fighters' program by growing enough food for another member of our armed forces.

The afternoon session—boys division—was devoted to health lectures by Dr. S M. McDew, Jr., Representative of the South Atlantic Medical Association. He told how bad teeth and tonsils affected the body, described the spreading of cancers, outlined the causes of appendicitis, described how gas affected individuals, pointed out how tuberculosis was transmitted and spreaded and its treatment. Dr. McDew also autlined the treatment of colds, typhoid fever, numps, chicken pox, etc. He outlined the precautions and treatment of venereal diseases and pointed out the advantages of eating proper meals, and regularly. After his discussion, club boys asked many vital questions relating to health. The afternoon session for the girls' division consisted of health talk, gardening, poultry, and canning demonstrations. An oratorical elimination contest for each division was also held during the afternoon session.

The evening program was held in Meldrim Hall where the entire group assembled for additional 4-H club reports, stunts, and other forms of recreation.

There were approximately 300 rural boys and girls, leaders and 4 H club sponsors from all section of the state participating in the annual encampment this year. Each of them put forth great efforts to grasp the information given by agricultural experts so as to put it into practice in their home for the persecution of this war!

CHICAGO LEADERS STRESS UNITY TO ACHIEVE VICTORY

White and Negro Speakers Demand Justice for All Minority Groups

CHICAGO, Sept. 2—(ANP)—Expressing the spirit of all-out unity for victory in the war and equal citizenship rights for Negroes and other minority groups, an outstanding group of leaders, Negro and white, met at Metropolitan Community church Sunday and addressed the First and Second Congressional District Equal Rights rally to win the war and the peace. The meeting was called by the Chicago Civil Liberties committee and other cooperating organizations. Ira Latimer is the chairman.

John A. Hackney, president of the Packinghouse Workers union, declared that the Negro people have a vital stake in the choice between a free world and a slave world. Ernest A. Greene, state representative of the first senatorial district of Illinois, reported that the 63rd general assembly recently concluded was for the most part reactionary. He stated that a number of bills were introduced that would aid minority groups but few of them were passed. Of the few that were passed, there was one which expressed sympathy and aid to Nazi victims and persecuted Jews. A memorial to George Washington Carver was voted; congress was memorialized to pass the anti-lynch and anti-poll tax bills. Legislation was also enacted to provide for an FEPC for the state of Illinois.

James Glasker, representing the Jewish people, reported on anti-semitism among Negroes and anti-Negroism among Jews. He declared that the forms of these evils which exist are not organized movements and they were usually fomented by foreign agents. Congressman William A. Rowan told of his work as a member of the D. C. committee which is taking definite action to eliminate the slum area largely populated by Negroes He has introduced a bill for equal rights in Washington which he thinks will have a fair chance of passing. He declared, "Racial discrimination is the battle cry of the axis."

William Patterson of the Lincoln school sounded the keynote when he said, "Unity is needed to win the war. The issues of civil liberties must be fitted into the orbit of the war. The rights of minorities must be thought out only in one way, the winning of the war." He further stated, "There are Negro leaders who say that the riots were caused by President Roosevelt. Is the Ku Klux Klan an agent of the President? No. There are elements in the President's cabinet who are not serving the best interests of our country . . . The strikes were created to hold back the hand of the President. The people must understand that the President's programs are the property of the people. They must speak out."

Fullerton Fulton, regional director of the CIO, charged the 78th congress with having the blackest record in history as far as organized labor was concerned and declared that labor would fight the war to a successful finish and would "smoke out the American fascists." Labor will also fight to maintain in office the men who have fought for labor and the winning of the war, Fulton said.

The Chicago Civil Liberties committee was recently active in the Elmo Vasser case and is at present concerned with the case of Miss Robbie Shields, musician who was excluded from the dormitory at Northwestern university because she is a Negro.

ROBIN ADOPTS BABY CHICK

In Montpelier, Vermont, a hen had deserted her lone baby chick, and it was placed in a coop by itself. It was running about and cheeping, and suddenly a robin with a worm in its mouth came flying down to the coop. It tried to put the worm into the chick's bill, but this did not work. The robin then dropped the worm in front of the chick, and that succeeded. The worm was grabbed and swallowed and the robin flew away, only to return in a few minutes with another. After that it fed the chick as regularly as if it were a baby robin. Vermont robins are evidently of the type devoted to others.—THE JUNIOR'S FRIEND.

NAT D. WILLIAMS GIVEN POST WITH TREASURY DEP'T.

Memphis Editor is Graduate of A. and I. State College

WASHINGTON, D. C. — The Treasury Department this week announced the appointment of Nat D. Williams, city editor of the Memphis World, to the staff of the Third War Loan News Room.

Mr. Williams, who is also editor of Service Magazine, a trade journal published by Tuskegee Institute, Tuskegee, Ala., will assist the department in publicizing the activities of Negroes in the Third War Loan drive which opens September 9.

Working in co-operation with the News Bureau, Office of War Information, the Third War Loan News Room will attempt to obtain full coverage of the contributions of Negroes to the Loan in national and local publications. The News Room will also cooperate fully with Negro newspapers which are sponsoring local drives in various communities.

Mr. Williams is a graduate of Tennessee State College in Nashville. He formerly served as city editor of the **New York Contender**, and as Memphis correspondent for the **Chicago Defender** and instructor in sociology in the Booker T. Washington High School in Memphis.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar
WM. H. BELL, President

The 1943-44 academic session begins September 20
Freshman Orientation Week, September 16, 17, and 18

FARM WORKERS
ARE NOT FROZEN

In a letter to Dr. W. H. Jernagin, chairman of the executive board of the Fraternal Council of Negro Churches in America, Meredith C. Wilson, in charge of Extension farm labor program, made it clear that Public Law 45 in no way restricts the movement of farm workers. Mr. Wilson's letter was in reply to one from Dr. Jernagin requesting a clarification of the law.

Said Mr. Wilson, "As passed Public Law 45 places no limitations upon the movement of individual farm workers under their own resources or with the assistance of employer-farmers or other individuals. The only prohibition is upon the use of funds provided in the Farm Labor Supply Act for the payment of transportation without the written consent of the County Agent."

That is to say, if a worker has his own money or if he can borrow the money, he is free to move from one county to another or from one state to another. However, he cannot be moved from one county to another at the expense of the Government without the consent of the County Agent.

Mr. Wilson said further in his letter to Dr. Jernagin: "It is important in time of stress that every individual lend a hand. Not only should all available labor engage fully in food production work, but employers should release workers not needed for short periods in order that they may work on other farms short of labor. Our Negro Extension Agents, with the aid of volunteer local leaders (many of whom are ministers), are attempting to facilitate the full use of Negro farm labor available in each area."

NEED MORE
FARM WORKERS

The War Food Administration reports that although nearly half a million U. S. Crop Corps workers were recruited and placed between April 29 and June 30, recruitment and placement must be intensified in order to meet the demand for workers during the peak harvesting season immediately ahead.

Employment on farms on July 1 was at a record low for that date and wage rates were at a new high the Department's Bureau of Agricultural Economics reports. It is estimated that 11,749,000 persons were empoyed on farms in July. This was 260,000 less than the number employed on the same date a year ago. However, wage rates were 36 percent above what they were a year ago. In the South wage rates ranged from $1.50 a day in South Carolina to $3, in Texas $3.50, in Oklahoma, $3.75, in Maryland and $4 in Delaware.. Nevertheless, there were 120,000 fewer workers on southern farms than on July 1, 1942.

JAMAICANS AND BAHAMANS
HALF OF FOREIGN WORKERS

According to the July 14 farm labor report issued by the Bureau of agricultural Economics, Jamaicans and Bahamans make up nearly half of the foreign workers who have been brought here to relieve the farm labor shortage. The report shows that there are 8,483 Jamaicans here, 2,918 Bahamans and 23,405 Mexicans.

There are 2,052 Jamaicans in New Jersey, 1,529 in New York, 1,041 in Wisconsin, 1,003 in Connecticut; the others are working in Pennsylvania, Ohio, Indiana, Illinois, Michigan and Idaho. The Bahamans are working in the Atlantic coast area from Florida to Delaware. There are 1,266 in Maryland, 692 in Virginia, and 514 in Florida.

WARNING TO
HOME CANNERS

The Department of Agriculture issued two warnings to home canners last week. One was against waste through improper canning resulting from not knowing how to use the jars, or the new types of caps, or from faulty methods in canning. The second warning had to do with the use of canning powders and other chemical preservatives

Department canning specialists advise that home canners familiarize themselves with their jars and especially the new types of caps before proceeding with their summer canning. They also recommend that the jars be packed hot, but not too full. Cooking the food and packing it hot into the jars, known as the hot pack method, is recommended because in so doing some of the air is driven out of the food before canning starts.

In issuing its warning against the use of canning powders and other chemical preservatives, the Department pointed out that its research administrator, Dr. E. C. Auchter, had asked W. G. Campbell, commissioner of the Federal Food and Drug Administration, for an opinion on the use of chemicals in home canning and had been told that they should be avoided.

Said Mr. Campbell, "Practically all the substances proposed in the past as chemical preservatives have limited value as such and in view of the known harmful effects of some of them and the doubtful safety of others, they should not be used as substitutes for tthe more efficacious and safer processes of sterilization by heat."

REVISE RATIONING
OF PRESSURE CANNERS

The War Food Administration has revised the rationing program on pressure canners in order to speed up their distribution to northern areas and other sections. Percentages of pressure canners have been established for each area based on the number of canners already in each area, the date of harvesting seasons, and the number of pressure canners expected to be manufactured during the next few weeks.

Ten percent of the canners are to go to Alabama, Florida, Georgia, Lonisiana, Mississippi, South Carolina, and Texas; 20 percent of the canners will go to Arkansas, Delaware, Kentucky, Maryland, North Carolina, Oklahoma, Tennessee, Virginia, West Virginia, and the District of Columbia. The remaning 70 percent will go to other areas. The year's production of 275,000 pressure canners will be about 85 percent complete by September 1; War Production Board estimates that 123,000 will be ready by the end of July.

SIR WILLIAM GIVES ADVICE

The Delta planters have been working on their Negro farm-tenant problems for some time. They have on the Anderson plantation a model Negro farm-home project on which is employed a college educated Negro who is occupied full time in studying ways of improving "living, working, and recreational facilities" for the Negro labor. So impressed by this and other places in the Delta was Sir William Beveridge on his recent visit to the state that he expressed the opinion that "Negroes were peculiarly suited to Southern agriculture and particularly to the Mississippi Delta. (Jackson News June 26.) The News reports that in his talk to 15 planters and business men. Sir William told his audience that the Negro should be "'kept here rather than permitted to migrate to Detroit. Harlem, and other of the nation's industrial centers."

Wrong can never win and right can never fail.

SUGGESTIONS THAT WILL HELP FARMERS TO GROW BETTER CROPS

By W. A. Hagins

Industrial College, Ga.,—Since food is one of the decisive elements in the prosecution of this war, farmers have a major role to pay for the men in the armed forces, people engaged in industry and others on the home front are depending on farmers to feed them. By adopting sure, sound agricultural principles, conserving resources, living closer to the land and increasing food and food production, Georgia Negro farmers will have made a vast contribution to the nation's war-time agricultural program.

Here are a few suggestions that will help farmers meet food and feed goals this year, according to the Georgia Agricultural Extension Service. Those who would like to produce more vegetables can plant the following during July; bush beans, corn, okra, pepper, squash, field peas, egg plants and tomatoes.

In poultry production, some culling should be done throughout the year, but there are certain times that are better than others for determing good and poor layers. For a thorough systematic culling of the flock, July, August and Sept. are probably the best months. During these months, it is easier to apply various culling factors such as molt, pigmetation, etc. At this time of the year, poor layers have gone out of production and the best hens will lay right on through the summer months. It is pointed out that for each 100 pullets started in laying houses during the fall, only 50 should be carried over into the next year and that the proper housing, feeding and care should be provided for the flock.

Farm folks can contribute to the war efforts by producing enough food and feed for their own home needs. Among these things are the production of three hogs weighing 225 pounds each and one beef animal weighing approximately 400 pounds to provide the farm family with meat. Two milk cows should be had to provide a year-round milk supply for a family of five .There should be 30 laying hens to supply a family of five with eggs and poultry products for a year. One-half acre garden properly planned and planted will produce enough vegetables needed for the average family. Through proper care and regular plantings, a surplus of vegetables can be produced for canning, drying and storing.

Every family should preserve foods by canning and drying. At least 25 quarts of fruits and vegetables should be canned and eight pounds dried for each person in the family. Two bushels of corn for meal and 2 1-2 bushels of wheat for flour in a year are needed for each person on the farm. A two-acre truck patch will supply the family with quantities of Irish and sweet potatoes, syrup and other food crops.

An acre of home orchard, properly planned and planted, will supply a family of five with fruits and berries. The Extension Service further points out that 1-2 bushel of dried peas and beans, five to 10 pounds of pecans 3-4 bushel of peanuts, one bushel of Irish potatoes and 3-4 bushels of sweet potatoes should be stored for each person in the family for a year.

Also an adequate supply of feeds can be supplied for livestock by carefully planning the farm program to furnish enough pasture as well as cultivated feed crops such as grain and roughage and proper feeding practices etc. Where practical, produce peanuts for the market.

Farmers should also take better care of their equipment by housing it instead of leaving it out in the fields. Where it is broken, repair and pain it and exercise greater care with the work stock to help farm for victory.

By producing more hogs, chickens, beef animals, milk cows' gardens, increasing the size of truck patches and home orchards, preserving and canning more food products, producing more corn, wheat and other crops, farmers can make a vast contribution to the nation's war-time agricultural program.

Harry: So you long for the patter of tiny feet on the floor?

Horacs: Yes, my mother-in-law is afraid of mice, and maybe she'll go home.

COMPLETE MEAL

(Continued from Page 1)
product its stringy, meatlike appearance.

Soy Milk For Babies

Soy milk, which has almost the same nutritive values as cow's milk, is very successful for babies who have difficulty thriving on mother's milk or dairy milk. Sweetened with corn dextrose, it is easily digested.

The beans are cooked and the milk pressed from the mass. The dry residue is used for making meat substitutes and the liquid is recooked. Dextrose and soy fat are added and the milk is then run through a homogenizing machine. It resembles cow's milk in appearance, but is somewhat different in taste. It can be made and retailed for less than half the cost of dairy milk. The Madison factory turns out 200 gallons a day.

One value of the milk in meeting the food needs of the civilian population in war areas lies in the fact that it can be made in the home from soy beans grown by the people. It can be dehydrated and shipped as powdered milk.

If the Spanish civilian population had grown soy beans in quantity, their children would not have suffered from malnutrition for want of milk, it was pointed out.

Rats Used For Tests

It is in the dehydrated products of the soy bean that the government is most highly interested at Madison. White rats are being fed the various products to test the nutritive value of each. Charts kept on rats fed dried soy milk show that they have made more rapid growth and are in better condition that those fed on a balanced diet of standard non-soy foods.

Madison authorities have one derydrated soy product in commercial production. It is used as a meat extender at the ratio of 70 per cent soy extender and 30 per cent meat. It may also be used as a substitute for meat in numerous recipes such as meat balls.

Madison authorities expect to step up their production of all soy products in the immediate future. They are in the process of moving into a new, two-story concrete factory in which production is arranged on the gravity plan. Big delivery trucks are already leaving the plant daily loaded with bread and canned products now being made. Students in the college do most of the work in the factory. The building is being erected largely with student and faculty labor.

Madison already has large markets in western and northern cities for its foods, carload shipments being made frequently to Chicago, San Francisco, and New York. They also make numerous bread, muffin, and pastry products from soy flour for the local market.

Soy bean acreage of all kinds for both animals and man, was nearly half as large as the nation's cotton acreage in 1941 and has since been expanded to offset the rigors of rationing at home. Farm authorities have urged more extensive plantings and have stressed the edible qualities of the lentil, including, for the women, the fact that it is non-fattening.

Woods Yellow Preferred

Though there are five or six popular varieties for human consumption, Madison officials have found the Woods Yellow to be the most satisfactory for canning green, because it does not make a white mucuous at the top of the can. Other varieties do this, creating an unappetizing appearance.

Approximately 85 acres are in production this year on the Madison farms. The beans to be canned will be mowed green about October 1 and run through two giant threshers. A single run through a thresher is enough for green beans or peas, but it loosens only a small per cent of the soy beans, which have much tougher hulls. The threshers at Madison are operated as one machine and the beans pass from the first hopper to the second one on an endless belt.

Madison, a Seventh-Day Adventist Church institution, is operated on the self-help plan. Approximately 60 per cent of its students earn all of their expenses as employes with the 900-acre farm, the college plant, the food factory, and the Madison Rural Sanitarium. The college's interest in soy beans as a meat and milk substitute is in part the result of the denomination's emphasis on a strict vegetarian dict.

"Other groups have experimented with the soy beans for human food, but government officials tell us that we are far ahead of anybody else in the nation," Dr. Floyd Bralliar, Vice President of the college, stated.

If the soy bean plays the dramatic role of helping save Europe's and Asia's war and postwar millions from hunger and all of hunger's miserable train, as Madison's patient researchers sincerely believe, doubting moderns will be confronted with one more good proof that the world makes a beaten path to the door of the man who develops the best mouse trap—or soy product.—Nashville Tennessean.

BAHAMA LABORERS

(Continued from Page 1.)
this war, are raising more than a third more chickens this year than the average chicken production during the 10-year period between 1932-41. The number of young chickens raised on farms in 1943 is estimated at 925,652,000, an all-time record. This number is 36 per cent above the 1932-41 average.

The unusually large increase in chickens raised this year following the record production last year is due largely to the favorable relationship between chicken and egg prices and feed prices. This favorable relationship resulted from bumper feed crops of the last two years with relatively low feed prices on the one hand, and a strong wartime demand for both chickens and eggs on the other.

North Dakota is leading the country in percentage increase. The farmers in that state are raising 93 per cent more chickens this year than during the 10-year average period; South Dakota is second with a 78 per cent increase, and Minnesota is third with a 71 per cent increase. Iowa leads the nation in numerical production. This year the farmers in that state are raising 69,926,000 chickens. Minnesota is second with 53,634,000 and Texas is third with 52,046,000.

Among the Southern states, Texas is number one with an increase over the 10-year average of 51 per cent, Mississippi is second with a 50 per cent increase and Louisiana is third with a 46 per cent increase. Numerically, Kentucky and North Carolina stand next to Texas raising 27,592,000 and 26,666,000 respectively. Looking at the South as a whole, farmers in that area will produce 292,562,000 or nearly a third of the Nation's farm poultry production. Negro Americans, who make up a fourth of the farm operators of the South, will contribute substantially to the wartime poultry production in that area.

SAVE VEGETABLES BY BRINING THEM

Brining is the wartime way to preserve vegetables. The Department of Agriculture points out that garden vegetables may be saved by salting or by brining instead of uncertain canning methods in view of the shortage of pressure canners and other canning equipment.

Snap beans, carrots, cauliflower, many greens, green tomatoes, cabbage and even head lettuce may be salted for use next winter. They should be put down in crocks with light salt or weak brine for about two weeks or until fermented, then packed in glass jars and processed in boiling water. Salt may also be used to preserve corn, peas, lima beans, okra, green peppers, and onions, but these vegetables need heavy salt or strong brine.

The improved method of salting or brining was developed by John L. Etchells, chemist of the U. S. Department of Agriculture; and Ivan D. Jones of the North Carolina Experiment station. For further information on preserving vegetables by salting or brining consult your county farm or home demonstration agent, or write the State Extension Service at your state agricultural college.

MORE 4-H CLUB NOTES OF INTEREST

By M. A. Hagins

Industrial College, Ga.,—The Sixteenth Annual State short course for Georgia Negro 4-H club members, held at Georgia State College recently, was brought to a most successful conclusion. More than 300 rural boys and girls, their leaders and sponsors, from all parts of the state, put aside farm chores for the week to engage in an extensive study of better farm and home making so as to be of greater service in this nation's war-time agricultural program. The group was accompanied to this affair by their farm and home demonstration agents.

The annual "get-together" this year showed a remarkable conversion of a peace-time program to one emphasizing the nation's war needs, placing special emphasis on farm crops, foods, livestock, poultry, soil conservation, vegetable gardening, food preservation, clothing and all types of farm and home improvement. Competitive contests were held also in these enterprises in addition to painting, oratory, bread and cake making, table setting, sewing and many activities adapted to rural life. Keen competition was shown in these events with each club member putting forth his best efforts to gain greater recognition in the field of agriculture and home economics.

An achievement day program climaxed this 16th annual encampment at 11.45 A. M., where the entire group assembled in Meldrin Hall to witness awards bestowed upon accomplished 4-H club members for outstanding work done in many activities this year. Among the many prizes awarded during this occasion was the $100 prizes offered by the Bankers health and Life Insurance Company, Macon, Georgia, for the best all-round 4-H club boy in the four districts of this state. Those receiving this prize of $25.00 each were John Paul Jones, Morgan county; Frank M. Staley, Jr., Chatham county; Clayton Marcus, Mitchell county; and Charlie Clarke, Jenkins county. Other attractions on this program were the introduction of state 4-H club council officers and all of the state winners in various enterprises; a dress review, painting demonstrations, music and others related to rural life development.

Another attraction on this week"s program was the conducting of painting demonstrations by both boys and girls from many counties. This event is sponsored by the American Turpentine Farmers Association Cooperative, Valdosta, in cooperation with the Georgia Agricultural Extension Service. The purpose of this activity is to train 4-H club members in many types of paint work so as to help their parents preserve farm equipment, homes and outbuildings. A. J. Nitzschko, County Agent, Chatham county, served as one of the judges in this event.

Some county winners in various activities were as follows poultry and farm crops judging, in the boys' division livestock Morgan and Walton counties, first place and Chatham county second: painting demonstration contest, Grady county first place and Camden and Liberty counties tieing for second place and Chatham county won the oratorical contest.

W. A. Sutton, State 4-H Club Leader, Athens, Georgia, spoke to the group at the conclusion of this program. He congratulated the club members on the fine job they are doing in the 4-H club food for fighters' program and scrap metal drives and urged the continuance of the fine type of work the club members are doing for the prosecution of this war and post-war period.

Other agricultural leaders and educators appearing on program during this annual event were as follows: T. M. Campbell, Field Agent, Extension Service, U. S. Department of Agriculture, first Negro Extension Agent, and father of four children now serving at key positions in our armed service. He strikingly appealed to his audience to wholeheartedly support their parents in harvesting this year's crops to help offset farm labor shortage so as to preserve the present food demands for the prosecution of this war. This widely known agricultural leader urged the proper type of education so as to measure arms during the present global conflict and post war period.

W. S. Rico, Beef Cattle and Sheep Specialist, Athens, outlined ways to increase the production of beef and hogs; emphasized the proper care and feeding of same and conducted demonstrations in castrating hogs. P. H. Stone, State Agent for Negro Extension Work in Georgia, urged the proper attitude to win the war. He particularly stressed the writing of the boys in the armed service to contribute to good army morale; purchase war saving stamps and bonds; continue scrap metal and rubber drives; help harvest present food crops; and continue to push the food for fighters' program by growing enough food for another member of our armed forces.

J. G. Woodruff, Chief, Farm Tenant Purchase Section, Farm Security Administration and W E. Street, Negro representative of the same firm outlined the functions of the F. S. A. and pointed the oligibility of farm families applying for aid in each section of the organization.

Doctors W. A. Harris S. M. McDew, Jr., and H. M. Collier, Jr., representatives of the South Atlantic Medical Association, Savannah, lectured to the group on health; outlined precautions against various types of diseases and treatments of same; and urged good healthy bodies, proper diets and cleanliness as well as good character for wholesome citizenship.

M. K. Stulive, Director, Public Relations, Union Bag Corporation, Savanah, outlined the functions of this organization and urged greater protection of the forestry. This event was made possible through Leonard Law, Negro representative of the Union Bag Corporation.

M. G. Haynes, principal, Cuyler High school, stressed the importance of education to better equip American youth for the jobs they intend to do in life and told his audience that people should stick to the teachings of Christ and put forth their best efforts to preserve the democratic way of life. President B. F. Hubert of Georgia State College delivered the welcome address, stressing land ownership and the putting of something upon this land so as to make it pay for itself.

This annual event is sponsored jointly by the Georgia State College and the State Agricultural Extension Service and aims to better equip rural youth for greater farm and home improvement, The annual affair was under the supervision of P. H. Stone, State Agent, Miss Camilla Weems, Asst. Alexander Hurse, Negro State Club Agent and Z. T. Hubert, Assistant Negro State Club Agent.

GARDEN CARE

Rose bushes, fruit trees and diseased shrubs should be sprayed with lime-sulphur. Trees, shrubs and lawn should be fertilized with manure and perhaps some phosphate. Pruning should be done so as to preserve the natural shape of the plant to be pruned. Flowering plants that bloom before July should not be pruned. Trees and shrubs should not be allowed to rock around is the wind and wear a hole in the soil around their base. Anchor them with string and stake and keep the soil packed around the roots.

16-YEAR OLD YOUTH WINS ORATORICAL CONTEST OF ELKS

David Dudley Is Student of Dunbar High, Washington, D. C.

PITTSBURGH, Sept. 2—(ANP)—David Dudley, 16-year-old Dunbar high school student at Washington, D. C., won the annual Elks oratorical contest held in the Central Baptist church here over five other finalists. Dudley spoke on the "Negro and the Constitution."

William Edward Tunstall, student at the Washington high school, Atlanta, captured second prize. Other contestants were Betty Jeanne Esters, Indianapolis; Donal Todd, Denver; Addie Bivens, Houston; and Mabyle Brown, Dover, Dela.

Dr. Ethel Charleston introduced the Elks' commissioner of education, Judge Wm. C. Hueston, who presented the contestants. The program opened with a processional of the department led by Hueston, Grand Esquire Eugene Sorral, the exalted ruler and grand daughter ruler, their cabinets and the regional directors. The parade was preceded by another of 300 members in caps and gowns for 1943, a tribute awarded them for meritorious service.

Another feature of the program was the appearance of the Elks' chorus and the singing of the Cincinnati choir. Miss Rosetta Wilson, runner-up in the regional contest in Pittsburgh, was soloist.

Judges were Samuel Mitchell, of New York City, auditor of the grand lodge; Lt. George Lee, of Memphis; and W. W. Saunders, of Charleston, W. Va. Timekeeper was J. J. Porter.

James Kelly, grand secretary, of Birmingham, was contest manager. He was assisted by Oscar Saffold of Montgomery, Ala.

FOOD OUTLOOK IS GOOD

(Continued from Page 1)
they will get 53 per cent of the canned fruits and juices during the next 12 months.

Generally, the supply of canned goods will be less than last year, because canned goods are in great demand by the armed forces. Supplying our fighting men with perishable fresh fruits and vegetables involves great problems of refrigeration and transportation.

This does not leave as much canned goods for civilians to purchase neither as much as they would like nor as much as they have money with which to purchase. But they can supplement the canned goods with fresh goods, which also lend themselves readily to home canning.

Food allocations are not made in a haphazard manner. They are the results of careful planning and studying demands made by various agencies handling foods. Civilian requirements are taken care of by the Food Distribution Administration, which submits estimates covering the population needs. This is carefully considered and weighed against the total food supply. Adjustments are often necessary, but the allocations are as near the demands as possible.

"Because food is such a powerful weapon," said Roy F. Hendrickson, deputy administration of War Food Administration and director of Food Distribution, "there can be no such thing as enough of it in a war like this one. We will have enough food to feed our armed forces well. We will have enough to feed ourselves adequately here at home—not all we would like, or exactly what we would like, but enough to meet nutritional needs."

Chaplain: My man, I will allow you five minutes of grace before the electrocution.

Condemned Man: Fine, bring her in.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., OCTOBER 15, 1943 No. 9.

Green Hill Neigborhood Unit Organized And Chartered In Mississippi

MR. ALEX J. GATES ELECTED AS CHAIRMAN

All Financial Members Are Paid Subscribers And Readers of Mod. Farmer

Belen, Miss.—(Spl.)—One of the largest Units ever organized in the State of Mississippi was perfected here last month and joined the National Federation of Colored Farmers. It is known as the Green Hill Neighborhood Unit. They elected Mr. Alex J. Gates as chairman. They reached their goal in membership, notwithstanding they had worked for nearly sixty days in securing the farmers throughout this county to perfect such an organization in order that they might be in a position to secure all the benefits to be received from a County Unit that will put them in a position to operate what farmers generally call a cooperative organization.

While the organization is not a closed one, the members electing to hold the roll open for their enrollment, they send the names on in to the headquarters, and since then have secured their charter and are now a fullfledged part of the National Federation of Colored Farmers. With the annual membership dues that were paid by each one when the Unit was being formed they also subscribed for the Modern Farmer, which is published in Nashville and which comes out monthly, so that for the next twelve months every member of the Green Hill Neighborhood Unit of the National Federation of Colored Farmers will be receiving and reading this monthly publication, which has not missed an issue in the past thirteen years.

Mr. Alex Gates, the chairman, is optimistic over what he has been able to accomplish in so short a time, and he has not hesitated to predict that the membership will

FARMERS STUMP THE AXIS

Negro Workers On The Agricultural Front

Washington, D. C.—Like the food crop, the American forest crop is also playing an important role on the battle front, and on the home front.

A. E. Fivaz points out in the August number of SOIL CONSERVATION, a U. S. Department of Agriculture publication, that the forest crop is in this war—from the 10 carloads of lumber required for the deck of a big battleship to the vital bits of nitrocellulose in a Garand rifle cartridge from the charcoal in a gas mask to the billions of board feet of lumber required for boxing and crating equipment, food, and other materials for our armed forces; from tanning extracts and walnut gunstocks to paper, fiber board, plastics, and rayon derived from wood pulp; and from wooden barracks to lend-lease shipments.

Since a third of the Nation's wartime forest requirements come from farm woodland, farmers have an important share in helping to

TIME TO ENCOURAGE PRIVATE ENTERPRISE

"According to an estimate of the Department of Commerce, we will have 19 million un-employed persons by 1946 if the war is over and if we achieve a level of business activity no higher than in 1940.

"If the analysis is sound and if this estimate should prove correct, to provide relief at only $2 a day for this number of unemployed persons would involve a public cost of 14 billion dollars a year—or twice our pre-war national budget for all Federal governmental activities including relief. To provide work-relief might cost twice that figure, or $25 to 30 billion dollars a year. Obviously there is no substitute for employment in private industry."—Edgar V. O'Daniel

SCHOOL LUNCHES IMPROVED

War-Time Diet for the Millions of Youngsters

Washington, D. C.—More than a million Negro children are expected to participate this year in community school lunch programs which will be available to a total of over five million American youngsters to help maintain their wartime diets at an adequate level, the War Food Administration has announced.

Aimed at protecting child health despite changes in home life occasioned by war and by food shortages, the program, financed partly by Federal funds with local committee sponsorship and administration, will provide nutritious lunches which will include fruits, vegetables, milk and meats.

Local sponsors will organize lunch projects, purchase food from local merchants and farmers, and be re-imbursed by Food Distribution Administration—up to 60 per cent of the cost of the foods served.

In previous years, the Department of Agriculture purchased foods directly and distributed them to schools through state welfare agencies. This year, buying will be done locally, primarily to simplify the program and release storage and transportation facilities for other purposes. The new plan received a "try-out" beginning last January and the experience gained has set the pattern to be followed as the program operates on a larger scale.

Funds are available to schools and child care centers in the states principally on the basis of the state school enrollment and the state's past participation in the school lunch program.

Equipment, labor and supervision must be provided for by state and local agencies or civic groups.

Under the new plan, which combines the school lunch and school milk projects, foods going into three types of lunches will be paid for by FDA at rates ranging from two to nine cents for each meal, de-

THREE RACES' WORK PRAISED

Mexicans, Jamaicans And Bahamians Active

Office of War Information Department of Agriculture.—Reporting that 57,489 workers from Mexico, Jamaica and the Bahama Islands have come to this country to date for agricultural employment, Marvin Jones, War Food Administrator, today praised the ability of these workers and described their efforts as being of utmost importance to the production of food and fiber for war needs.

Of the total, 43,963 came from Mexico, 8,828 from Jamaica, and 4,698 from the Bahama Islands. The latter two countries are British crown colonies and the workers brought in are English speaking. By the end of August, another 3,139 Mexicans will have arrived to do farm work. In addition, more than 14,000 track workers have been supplied by Mexico to the United States for employment on railroads through the efforts of the War Manpower Commission.

"We are grateful to these workers for the way in which they responded to our appeal for their help in alleviating our farm labor shortage ,and for the valuable assistance they have been giving our farmers," said Mr. Jones.

"These workers are separated from their homes and families by thousands of miles. They have had to adapt themselves to habits, customs and climate condition that differ considerably from their own. Yet these workers have shown an admirable spirit of cooperation and generally have conducted themselves in a way that is a credit to their people.

"Mexico, with a population of 20 million, has already supplied nearly 60,000 workers within one year to a neighboring country. Considering the difference in population, this is equivalent to some Nation requesting our own to supply about 400,000 workers for employment outside our borders. Figures such as these bring home true realization of the magnitude of Mexico's contribution in this field alone.

"Jamaica and the Bahama Islands have made a similar contribution. Both these countries have small populations, compared to our own, and yet they have willingly supplied large numbers of some of their ablest workers."

Mexican Nationals have been employed in agriculture in 12 Western states. The crops in which they have worked include truck vegetables, citrus and other fruits, sugar beets, guayule rubber, long staple cotton and hops. On July

$26,000,000 CROP ESTIMATED FOR BURLEY

Com. C. C. Flanery of the State Department of Agriculaure yesterday predicted a record money crop of $26,000,000 for Tennessee growers of barley, based on an estimated 63,700,000 pound tobacco harvest.

"While this will not equal the production of several previous years," said Flanery, "this price burley will probably bring should give growers more cash than ever before. Assuming a price as good as in 1942, burley growers hope to average not far from $400 an acre, and of course some farmers will do much better than that."

FARMERS RAISE CHICKENS

Negro Tillers of the Soil Supplement Rations

Washington, D. C.—Negro farmers, comprising nearly a fourth of the farm operators in the South, are playing an increasingly important role in helping Southern farmers meet their share of the chicken goal. It is estimated that colored farmers will raise 30 million chickens this year.

The War Food Administration anticipates a wider use of chicken during the early fall, since a large part of the early supply of turkeys is being shipped abroad to our armed forces for Thanksgiving and Christmas dinner.

Reports indicate that chicken is not only taking a prominent place on special menus, but it is also showing a steady increase on the regular dinner table, now that markets are more plentifully supplied, and since it is not rationed.

Last year's record-breaking production totaled nearly three billion pounds of chicken meat. This year farmers and poultrymen are shooting for four billion pounds. Southern farmers are producing a large part of this year's all-time high poultry crop.

Of the estimated four billion pounds of chicken to be produced this year, civilians will get over 90 per cent of it, or an average of about 28 pounds per person, quite an increase over the 22 pounds per person during 1942. Members of the armed forces will get three per cent, or about 300 millions pounds of chicken this year.

HUBERT RESIGNS FSA POST; RETURNS TO JOB AT FISK UNIVERSITY

Washington, D. C.—Giles A. Hubert, well known economist, has resigned as assistant to the director of the Rural Rehabilitation Division of the Farm Security Administration and is returning to his post as professor of economics at Fisk University, the U. S. Department of Agriculture announced this week.

Department officials point out that Mr. Hubert, on leave from Fisk since 1940, has done an excellent job of assisting in program planning and analysis, and in integrating low-income Negro farmers into the program of FSA. He has also done considerable work in the development of special farming areas, based on a study of this approach to family-type farming which he made while doing research work in Denmark a few years ago. Until the decentralization program got underway in 1942, he was stationed in Washington. Since that time, he has had his offices in Cincinnati where several divisions of FSA are now headquartered.

On returning to Fisk, Mr. Hubert will develop a program of advanced training in rural problems and organization through the cooperation of the university and FSA together with the aid of a Fellowship Fund provided by the General Education Board.

Mr. Hubert will maintain his connection with FSA as a consultant. He first joined the staj in 1935 when he served as advisor to the director of the Re-settlement Administration.

A frightened dwarf boa snake coils itself tightly and may be tossed around like a ball without unwinding.

TWO TYPES OF SCHOOL LUNCH

You bet it's good! She has one type of school lunch and he another, but both are tasty and nutritious, and play an important role in the wartime diets of growing youngsters. It is estimated that of the six million children who will participate in the program this school year, more than a million will be colored. Parents who are busy doing war work say the School Lunch Program sponsors purchase foods locally and are reimbursed up to 60 per cent of the cost of the Food Distribution Administration of the U. S. Department fo Agriculture.

WOMAN'S PAGE

POTATO, VEGETABLE PIE

1 lb raw diced potatoes
Salt and pepper
1 tablespoon butter
1 lb. vegetables
1 tablespoon finely chopped onion

Combinations of any of the following vegetables may be used: Carrots, peas, turnips, butter beans or green beans, raw or canned tomatoes. The onion must be chopped very finely. Combine all ingredients and seasoning in a baking dish. Pour in vegetables or meat stock until it can just be seen along the side of the dish. Dot with small pieces of butter. Cover lightly and bake for one hour in a moderate oven. Remove lid for the last 15 m inutes.

The British appreciate potatoes. Vitamin short, they are making potatoes do double duty, eating them three times daily, serving them 198 different ways—not one too many for the British!

TOMATO JUICE

Select firm, ripe tomatoes. Wash well, peel and drain. Cut in sections. Simmer until softened. Stir occasionally to prevent burning. Put through sieve fine enough to remove seeds. Bring juice to boiling and pour immediately into sterilized jars, filling to within 1-2 inch of top. Put on cap. Process in water bath, 5 minutes.—Complete seal. Seasoning such as onion juice, salt, pepper may be added if desired.

CHILI SAUCE

1 gallon chopped ripe tomatoes
1-2 cup chopped white onions
1-2 cup chopped sweet green peppers
1-2 cup chopped sweet red peppers
5 teaspoons salt
1-2 cup brown sugar
1-2 teaspoon cayenne pepper
1 teaspoon nutmeg, grated
2 teaspoons ginger
1 teaspoon cinnamon
1 teaspoon mustard
1 quart vinegar

Peel the tomatoes and onions. Boil all ingredients except the vinegar for two hours. Add the vinegar and cook to desired consistency. Pour into sterilized jars and seal.

PREVENTING MOLD

Another question that may interest many—comes also from Mrs. A. L. M. How to prevent jelly and preserves from mold.

The best way to prevent molding is to seal securely with parafin immediately after filling jars. And keep in dark dry place.

JELLY SEASON'S HERE

Think of the good cheer in a sparkling, quivering dish of jelly to go with your golden brown biscuits or rolls in the cold of winter. Do you need more than that to start you on a spree of jelly-making? My guess is NO.

There's a great interest in jelly-making in spite of sugar rationing, for many is the smart homemaker who realizes what a spark and zest those little bits of bright-colored jelly can lend to wartime meals. So, go out into the berry patch, and let's get started on a batch of jelly.

Cherries, plums and blackberries are coming into season and make splendid jellies. They're all easy to handle and make nice, rich, luscious jellies:

RIPE SWEET CHERRY JAM

(Makes 7 6-ounce glasses)
3 1-2 cups prepared fruit
4 cups sugar
1 box powdered fruit pectin

To prepare fruit, pit about 2 1-2 pounds fully ripe cherries. Crush thoroughly or grind. If a stronger cherry flavor is desired, add a few crushed cherry pits to fruit during cooking.

Measure sugar into dry dish and set aside until needed. Measure fruit into a 5 or 6-quart kettle, filling up last cup with water if necessary.

Place over a hot test fire. Add powdered fruit pectin. Mix well and continue stirring until mixture comes to a hard boil. Pour in sugar at once, stirring constantly. Continue stirring, bringing to a full, rolling boil and boil hard 1 minute.

Remove from fire. Skim. Pour at once into sterilized jelly glasses and paraffin at once.

RIPE PLUM JELLY

(Makes 7 medium glasses)
3 cups juice
4 cups sugar
1 box powdered fruit pectin

To prepare fruit, crush about 3 pounds fully ripe plums. Do not peel or pit them. Add 3-4 cup water, bring to a boil and simmer 10 minutes. Place fruit in jelly bag or cloth, and squeeze out juice. Add small amount of water to pulp in jelly cloth and squeeze again, if there is a slight shortage of juice.

Measure sugar into dry dish and set aside. Measure juice into saucepan. Place over hottest fire. Add powdered fruit pectin, mix well and continue stirring until mixture comes to a hard boil. Pour in sugar at once, stirring constantly. Continue stirring, bring to a full rolling boil, and boil hard 1-2 minute.

Remove from fire, skim, and pour into glasses quickly. Paraffin hot jelly at once.

BLACKBERRY AND SOUR CHERRY JAM

(Makes 8 medium glasses)
3 1-2 cups prepared fruit
4 1-2 cups sugar
1 box powdered fruit pectin

To prepare fruit, crush thoroughly about 1 quart fully ripe blackberries. Pit 1 pound fully ripe cherries. Crush thoroughly or grind. Combine fruits. Measure fruit into a kettle, filling last fraction of cup with water if necessary.

Place over hottest fire. Add powdered fruit pectin, mix well and continue stirring until mixture comes to a hard boil. Pour sugar in at once, stirring constantly. Continue stirring, bring to a full rolling boil, and boil hard 1 minute.

Remove from fire, skim, pour quickly. Paraffin hot jam at once.

You'll enjoy pickles, too, for your winter menu pickups. I've found some perfectly delightful recipes for you which will not take too much sugar—just in case you want to use most of the sugar on jams and jellies. Remember that you must use a pure apple cider vinegar and good, firm, fresh cucumbers to get nice, crisp pickles:

CUCUMBER-RAISIN PICKLES

4 cups sliced cucumbers
1 cup salt
1 cup white vinegar
1 cup sugar
6 tablespoons raisins
1 tablespoon celery seed
1 tablespoon mustard seed

Soak cucumbers overnight in salt solution made of 1 cup salt to 1 gallon water. Drain. Combine remaining ingredients and heat to boiling. Add cucumbers. Boil 10 minutes. Pour into sterilized jars and seal at once.

RIPE CUCUMBER SWEET PICKLES

8 large ripe cucumbers
1-2 pound stick cinnamon or oil of cinnamon
1 ounce cloves (or oil of cloves)
1 1-2 pints vinegar
3 pounds sugar

Pare the cucumbers, quarter. Take out seeds and cut quarters into medium-sized pieces. Scald in salted water. (2 tablespoons salt to 1 quart water). Drain and simmer in clear water until they are tender but firm. Drain well. Tie the spices in a bag and boil them with vinegar and sugar for 5 minutes. Pour this mixture over cucumbers, cover jar and set away. Next day pour off syrup and boil for 10 minutes, then pour over cucumbers again. Flavor is improved by repeating the process several times. With last heating, place pickles in clean, sterilized jars, cover with hot solution and seal at once.

Like fruit drinks for winter? You can make delicious nectars out of fruits easily and use them when fresh fruit juices are no longer available:

PEACH NECTAR

Select sound, ripe fruit. Peel and crush. Combine 4 cups fruit with 3 cups water and heat slowly to simmering. Press through colander, then through fine sieve. To each pound of fruit pulp and juice, add 3-4 pound of sugar. Bring to simmering temperature. Stir until sugar is well dissolved. Pour into clean, sterile jars. Put on cap. Process 30 minutes in a water bath at simmering temperature (180 degrees F.).

LYNN SAYS:

JELLY FORUM: Pectin is the magic ingredient that makes jam "jam' and jelly "jell." There must be a just right amount of it. Pectin is a natural jellying substance found in fruits and berries, but when the fruit or berry is shy of it, a liquid or powdered form of pectin may be added.

Jams and jellies may be kept for various lenghs of time, but for best practical purposes it is best not to try to keep them for over a year.

Melt parraffin for jelly in a small pot over boiling water. Paraffin should not be smoking hot because it might lend a disagreeable odor to the jelly or jam.

It's possible to put up fruit juice to be made into jelly later if you do not have enough sugar to do it during the summer. Prepare fruit according to directions given in the jelly recipes but do not add water to the recipe. Squeeze the juice in a jelly bag if it is for jelly. Fill hot sterile jars with juice and process in a boiling water bath for 20 minutes.

FACTS ABOUT CANNING PEAS AND BEANS

Peas . . . Some like them hot, some like them cold, but nearly everybody likes them canned, or so claims Gladys Kimbrough, Home Service Director of Ball Brothers Company. Not everybody likes green or 'English" peas and that's all right because there are plenty other peas of different color and flavor.

All kinds of peas, lima beans, and butter beans are canned the same way. All should be picked and canned the very day the pods are full enough to be shelled. At that time they will be from small to medium size, tender and sweet.

Peas and beans begin to lose flavor and food value as soon as pulled from the vine and are likely to spoil if time is wasted between gathering, preparing, and canning.

Flat sour and all other spoilage can be avoided by paying strict attention to canning rules, Yes, RULES, they are as simple as this:

1. Check over jars and lids the day before the canning is done. If glass top seals or two-piece metal vacuum seals are to be used, examine the top edges of the jars—the slightest flaw may cause you to have to do work over. The same is true of the sealing surface of glass lids. If there is any doubt as to the tension of the wires on "lightning" jars, fill them with hot water, seal, let stand until cold, then hold upside down and examine for leaks, and don't forget to wash jars, caps and rubbers clean.

2. Use young, tender, freshly gathered vegetables— and they won't be fresh after being out of the garden all night.

3. Prepare no more than your canner will hold and not that many if the canner is large and the help small.

4. Wash the pods clean before shelling. Sorry, but dirt is the chief cause of spoilage, so rinse the peas or beans in clean, cool water after they are shelled.

5. Cover with hot water and cook from 3 to 10 minutes, depending upon size; then pour into the jars while boiling hot—this won't break jars that have been covered with lukewarm water, heated to boiling and kept hot until needed.

6. Leave about an inch space at the top when filling the jar: add 1-2 teaspoon salt to each pint. Pint jars are best for peas and shelled beans because the heat reaches the center of the pack more quickly but whether pints or quarts are used, be sure to have enough water to insure quick heating all the way to the center of the jar. Seal or partly seal jars, depending upon type used; then put into the canner as quickly as possible and process the correct length of time. Young, tender, green peas take 50 minutes; blackeyed and field peas, limas and butter beans are processed 60 minutes at 10 pounds pressure. If no pressure cooker is available, process (boil) 3 1-2 hours in hot-water bath canner. Use the same thing for pint and quart jars. Nothing larger than a quart is safe for canning non-acid vegetables.

The bacteria that cause spoilage in peas and beans thrive in the temperature that makes you say "Whew, ain't it hot in here!" The quicker you make it too hot for bacteria, the better. So don't piddle around when canning vegetables or anything else for that matter. If you have no pressure cooker, use a water-bath canner (never an oven or a steamer for vegetables). And remember to boil beans and peas 15 minutes before tasting them—even if a pressure cooker is used—for about once in a million or so times, a toxin forms in non-acid foods. Such toxin can be destroyed by boiling. Failure to take this precaution has been known to cause serious illness. Reboil non-acid vegetables left over from one meal to another.

To use a water bath right: Have the water steaming hot and deep enough to cover the tops of the jars two or more inches when they are put into the capper. Get the water boling as quickly as possible and keep it boiling steadly every mnute of the time called for in the recipe. Take the jars out of the canner as soon as they have processed long enough; complete the seal on all jars that require it (all except two-piece vacuum seals should be partly sealed before and completely sealed after processing —the vacuum seals are sealed before only); stand the jars far apart on a cloth or folded newspaper to cool. Make sure every jar is sealed when put away for winter and, believe it or not, there will come a day when you will say I didn't dream it possible that canned peas could taste so much like garden fresh ones."

RATION ADDICTS AT IT AGAIN

Admittedly, the coal strike impaired coal production but before ration addicts rushed the nation into another snowstorm of ration blanks, it would be well to consider the opinion of the men who at least nominally still run the coal mines, the former owners and operators. One of the leaders in the coal industry said:

"I think allocation of coal is dangerous to the government; to our war effort, to our civilian population, and to the coal industry. I personally think it is inexcusable. I think if we are short of coal, we are not short over two or three per cent on the year's production. This two or three per cent was lost by strikes which the government could have and should have prevented.

"The way to cure this situation is not to create further shortages. Allocation and rationing will put thousands of people who ought to be at work to interfering with the normal movement of coal. There is a way to cure it. That is by working an extra hour a day until we make up this loss of 15,000,000-20,000,000 tons. If we had an 8-hour day, face to face, this shortage can be made up in between three and four months. Proper government agencies------can arrange this and they can arrange immediately for an additional price to cover additional costs."

GEORGIA NEGRO FAMILIES PLAYING WELL THEIR PART IN WAR EFFORT

By W. A. Hagins

Industrial College, Ga., Aug. 31—Georgia Negro farm families are fully behind the Nation's war effort, both in spirit and practice, P. H. Stone, State Agent for the Georgia Agricultural Extension Service, said today.

After Pearl Harbor, farm folks were told that food would prove a decisive factor in this world conflict, later that food would win the war and write the peace and finally that food was ammunition. A rapid integration of sons into the armed service gave specific meaning to these food slogans and brought about greater co-ordination of farm activities.

Prompted by these and other wartime preparations, hundreds of farm families have handled increased production assignments despite their normal labor cut in half. Community leaders report generally of families planting gardens, brooding out chicks, building pig pens and canning fruits and vegetables for the first time. Pantries with from three to five hundred containers of canned and preserved foods are common, with the season not yet over.

"On analysis, this remarkable response is not a phenomenon to be explained in terms of war hysteria, but rather the reaction which one would expect in a crisis from people who have had some preliminary training and preparation," Stone said. He particularly pointed out that the Extension Service and other agencies have talked and explained a live-at-home economy for years and this crisis found us with an educational structure, public attitudes, terminology and methods ready to go. With the placing of special emphasis on larger gardens and the retaining and building soil fertility, war food needs thus find a heightened opinion of garden-farm relationship and a slightly better soil for maximum food production, the farm leader continued.

"During times of this kind when national safety is imperiled and war demands dig at the foundation of normal living, it's hard to believe that the practical lessons of thrift and conservation being learned now will be forgotten entirely when the war is over. The independence and faith developed now through being able to do more with less should have much carry-over value and a return to farming of families who left a few years ago in search of high industrial wages," State Agent P. H. Stone declared.

WHO WILL PAY?

In the course of the coal strike and accompanying wage controversy, hardly a word was heard as to the effect which the demanded wage increase might have had on the coal industry. The miners have now reached a new wage agreement with the Illinois coal operators, the basis of which is the payment of $1.25 per day to every miner for underground travel time, but which must be approved by WPB and OPA before becoming effective.

How would this agreement affect coal mines The effective date of the agreement was supposed to be August, but the wage increases under the agreement are to be retroactive to April 1. If the agreement had gone into effect on August 1, for the nation's 500,000 coal miners, back wages for the four-month period would amount to $62,-500,000.

As the Herald Advertiser, of Huntington, West Virginia, points out: "Could the coal industry absorb such a ponderous item? Records of the Bituminous Coal Division of the United States Department of Interior show that the gross profit of the industry for 1942—before deduction of Federal income and excess profits taxes and other expense—was only eight cents per ton. On the 1942 production of 600,000,000 tons, therefore, gross profits amounted to only $48,000,000. Net profits did not exceed $24,000,000. Thus, the back wages called for in the 'model contract' would be nearly three times the net profits of the industry for the entire year of 1942!"

If the effective date of the contract is delayed for six months, it is estimated that retroactive wages will amount to $95,000,000. It is now time that we showed some concern for the safety of millions of dollars of the people's savings invested in coal mines.

HOW DO THEY KEEP ROLLING?

Any industry welcomes deserved praise and the railroads have been deluged with it. But what is worrying them now is the question of how to continue to measure up to the high standards of performance they have set for themselves. The railroads are in the position of a successful army. The people back home have grown to expect a lot. They must not be disappointed. On the other hand, they must realize that the railroads, like the Army, depend upon an unbroken flow of supplies. Government restrictions and war shortages have cut the supply line of American railroads threateningly thin. How thin, is well described in the words of Railway Age: "In the five-year period ending with 1929, they installed about 1,500 locomotives and 95,000 freight cars annually. In 1942 they got only 712 locomotives and 62,000 freight cars. In the first six months of 1943 they were able to get only 193 locomotives and 9,415 freight cars. Their continuing inability to get anything approaching an adequate amount of new equipment has created a greatly increased need for materials for maintaining old equipment. The terrific hammering of the tracks also has created need for increased materials for maintaining them. The total inventory of materials that the railroads had on hand at the beginning of 1943 was less than in any year from 1917 to 1928. And yet, in the first four months of 1943 the received only $259,000,000 of materials a reduction of 16 per cent compared with the same period in 1942."

The railroads are doing the biggest hauling job in history. They realize that any slowing on their part will soon be reflected in pinched supply lines to our men fighting overseas. But do the "people back home" realize that the railroads have supply lines too that must be maintained? Apparently many of them do not.

The oldest Baptist church in America, founded in 1775, stands on Main Street in Providence, R. I.

OPEN THE WAY FOR PROGRESS

A fundamental issue with respect to retail distribution must be understood before the nation plunges into the post-war era, or progress toward higher living standards will be unnecessarily delayed. The issue is whether or not politicians and pressure groups are going to continue forcing the passage of punitive tax laws against specified types of progressive retailers. In the past they could do this because many people did not understand the underlying issue clearly—they were led to believe that punitive tax laws to penalize chain stores were legitimate measures to curb alleged monopolies.

The ordinary citizen often failed to discern the utter inconsistency of this carefully nourished belief. He failed to realize that whereas monopolies are supposed to control sources of supply, the chains actually did nothing of the kind—that whereas monopolis tend to create higher prices, the chains tended to reduce prices. And, too, he did not realize that monopoly charges based on size alone were rank hot air, when independent merchants do close to three-quarters of total retail business in the United States.

When the war is over there will be many more innovations in retailing initiated by resourceful individuals. These innovations will make an even more efficient distribution system. Some will be introduced by chains, some by independents and some by newcomers in the field. One and all they should be encouraged in every legitimate way, instead of discouraged as the chains were by special taxes which rob consumers.

KEEPING IN STEP

Aviation is unlike other industries. It must at all times be managed and developed with the knowledge that air power governs the destinies of nations. Many people think that American air power sprang from nowhere almost overnight. In reality, it had its beginning years ago when farsighted aviation pioneers and military authorities joined in recognizing that all our civil aviation resources could be made into a multi-purpose instrument of military power.

According to Congressman Richard F. Harness of Arizona: ". . . Many of the leaders in the civilian industry have very deliberately encouraged steps in the course of the industry's development which have proved of incalculable importance in this war. The civilian pilot training program is an outstanding example of a civilian-inspired and civilian-executed activity without which our military force today would be far less than its present strength. And in the development of the air transport industry there have been extremely vital steps taken in peacetime under civilian leadership—many of them still secret—which have been life-saving at critical moments in the last eighteen months."

The aviation industry, and the airlines in particular, are fully conscious of their responsibilities. The latter are endeavoring to awaken Congress to the fact that government also bears a great responsibility in determining the future of American aviation. They consider the pending amendments to the Civil Aeronautics Act, as embodied in the Lea-Bailey Bill, essential to the stability and growth of private aviation and of direct concern to those interested in the future military strength of the nation.

In commenting on that bill, Representative Harness declared: "The legislation being considered seeks to give concrete application to the lessons we have learned in the last five or six years, and to confirm and elaborate our civil aviation program for the national defense as we have seen it successfully demonstrated since Pearl Harbor."

It is the obligation of Congress, with due regard for state and local right involved, to keep Federal regulation in step with aviation requirements.

KEEP "DIGGING"

Harold L. Ickes, Petroleum Administrator for War, has said that: "We must keep digging to find as near a billion and a quarter of barrels of new oil each year as possible." But the plain fact is that we are not "digging" and this nation which is geared to the use of huge quantities of oil, faces a dangerous crude oil shortages.

Main reason for new well shortage can be found within the government. Restrictions on material and equipment, together with inadequate crude oil prices set by government officials, are threatening our oil supply.

John M Lovejoy, president of the Seaboard Oil Company, alarmed at the complacency of authorities, shows that "wildcat" drilling, far from being sufficient, should be immediately more than tripled. He warns that: "If new discoveries are to keep pace with withdrawals, which is a reasonable desideratum, and assuming a continuation of the percentages of hits and average size of new fields as shown for the year 1941 and 1942 . . . more than 10,000 wildcat wells should be drilled in 1943 . . . Any statement carrying the implication that currently equaling 1942 exploratory activity is sufficient, is misleading and will not bear even casual analysis."

Oil men know the facts about oil resources. Their advice should be heeded.

The Romans were the first to convoy ships with fast galleys.

OFFICE OF PRICE ADMINISTRATION

As a part of its plan to use corps of volunteers to encourage compliance with price ceilings of food in retail stores, the Office of Price Administration, through its regional and district offices, has begun a price survey in 33 principal cities throughout the country, the OPA announced this week.

At the request of the Washington office, especial attention will be given to comparison of compliance with price ceilings between food stores patronized largely by Negroes and those patronized largely by whites. These comparisons will be made by the price panels and price assistants attached to local War Price and Rationing boards in each of the 33 cities. Results will be compiled and sent to OPA district and regional offices which will then send them to Washington.

OPA regional offices were directed to begin the food price comparisons on August 16, to continue until further notice. It was also requested that the first report show the number of Negro price panel members and the number of Negro price assistants in each of the cities.

Price panels and assistants, now operating in most localities having community-wide ceilings, are committees of volunteers, represenative of the community to disseminate information on OPA price regulations, receive complaints and adjust differences between retailers and consumers.

The cities in which these committees have been directed to compare compliance between stores in Negro and white neighborhoods are:

Region I—Hartford, Conn.

Region II.—New York; Philadelphia; Baltimore; Camden, N. J.; Wilmington, Del.; Washington, D. C.

Region III—Detroit; Louisville, Ky.; Cincinnati, Ohio; Charleston, W. Va.; Cleveland, Ohio.

Region IV.—Jackson, Miss.; Columbia, S. C.; Raleigh, N. C.; Atlanta, Ga.; Montgomery, Ala.; Savannah, Ga.; Jacksonville, Fla.; Birmingham, Ala.; Richmond, Va.; Charlotte, N. C.; Memphis, Tenn.; Winston-Salem, N. C.; Durham, N. C.

Region V—Houston; Dallas; New Orleans; Little Rock; Shreveport; St. Louis.

Region VI—Chicago.

Region VII—Phoenix.

JUSTIFIED BITTERNESS

F. H. Sexauer, president of the Dairymen's League Cooperative Association, says'

"In government circles, those who knew food, particularly the production of food, were not heeded, and those who were heeded and made policies knew less than nothing about food production. The sum total of all this is declining food volume."

The tragedy of the food shortage is that while those whose mistakes have brought it about may be removed at once, it will take years to correct the results of their mistakes The bitterness of farmers can be well understood.

NATIONAL BAPTIST

HYMNAL

JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

DECREES DON'T PRODUCE COWS

For sometime past the American people have been reading that they can expect butter and milk rationing. They are therefore partially prepared for such drastic steps. The civilian butter reserve is at the vanishing point, which means that our milk supply is below needed amounts.

Farm labor costs, dairy feed, seed and everything the dairy farmer uses, have shown either normal or abnormal rises. No matter how fine our economic planners spin their theories, all of them combined cannot produce a milk cow in less than three years, by law, executive decree, or otherwise.

There is just one way to get more milk, and that is to allow the farmer who produces it a fair and reasonable profit based on the cost of production and the labor involved. Until that is done, the milk, butter and cheese supply will grow shorter and there is no use in kidding the American people about the issue.

STATEMENT OF OWNERSHIP

The MODERN FARMER as required by the Act of Congress, August 24, 1912.
State of Tennessee
County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the MODERN FARMER and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn in the above caption requested by the Act of Congress, August 24th, 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the MODERN FARMER is Nashville, Tenn., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed)
S. B. WILSON.

Sworn before me this 22nd day of September, 1943.
M. G. Ferguson, Notary Public.
My commission expires April 8, 1947.

WFA HELPS MEET FARM LABOR NEEDS

The War Food Administration announced last week that 1,600,000 placements of orkers were made on farms through the Government farm labor program dming the four months. However, many additional emergency vol unteers are needed during the next few months to help with the harvesting of Corn, cotton, peanuts, potatoes and other fruit and vegetables crops.

The 1,600,000 placement involved 900,000 workers, some of whom worked on more than one farm, or were placed more than once. Among those 900,000 recruits, 700,000 were U. S. Crop Corps workers, comprising 250,000 men, 150,000 women, and 300,000 boys and girls. The farmer and his family have played a big part in meeting the need for increased workers by working longer hours themselves, but they cannot do the whole job, volunteers must come to the rescue.

The response has been good, various groups have lent a hand About 650,000 volunteer neighborhood leaders, organized in rural areas by Extension Service, have assisted in local farm labor and mobilization and in arranging for exchanges of labor and labor-saving machinery. State and County Defense Councils, Service Clubs, Chambers of Commerce, groups, schools, and yet youth organizations have also helped to mobilize residents of towns and cities for farm work.

As for foreign workers, nearly 60,000 have been brought here to help relieve the farm labor shortage. From Mexico 44,577 had been brought in by September 1; 8,828 had been brought from Jamaica and 4,338 from the Bahamas. These workers have helped with the cultivation and harvesting of important wartime crops in 30 states.

Completing the farm labor pisture, WFA reports that farmers have employed 6,000 Japanese internees, 1,000 inmates of corrective and penal institutions, 1,000 conscientious objectors, 50,000 members of the armed forces who have volunteered for farm work, and 6,000 soldiers who were detailed as units by the War Department. However, despite all these recruits, more farm workers are needed, if the essential war crops are to be saved.

Rubber cultivation is the basic economic activity of Liberia.

WHAT IS GOOD?

"What is the real good?"
I asked in musing mood.

Order, said the law court;
Knowledge, said the school;
Truth, said the wise man;
Pleasure, said the fool;
Love, said the maiden;
Beauty, said the page;
Freedom, said the dreamer;
Home, said the sage;
Fame, said the soldier;
Equity, the seer;—

Spoke my heart full sadly,
"The answer is not here."

Then within my bosom
Softly this I heard:
"Each heart holds the secret;
Kindness is the word."

—John Boyle O'Reilly.

USE YOUR HEAD!

Probably the most destructive weapon in the world is the common match. Over a period of years, loss of life and property traceable to this minute stick of wood dwarfs the ghastliest work of the bombers. Fire prevention authorities state that matches and smoking constitute together the largest single fire cause. They have urged upon people the pithy maxim: "Matches have heads, but no brains. When you use their heads, use your brains."

Never before has this advice been so applicable. The nation is at war. Every home, every factory and every farm are part of the struggle. When fire strikes now it strikes with double deadliness. In its ashes lie a portion of the war effort, irretrievably lost. Of course, property swept by fire will one day be restored. But in the meantime, the nation is weakened the same as is a person with a cut finger.

The importance of caution with matches can be well understood when it is realized that each year about 300 billion matches are consumed in the United States alone, or 850,000,000 daily. This means, in terms of averages, approximately 600,000 flames are started every minute. Each of these flames minute. Each of these flames holds the possibility of causing a disastrous fire.

No laws can prevent carelessness with matches. The most elaborate fire department in the world is helpless in the face of the potential destructive power of matches. They constitute a spectacular demonstration of the fact that real fire prevention is largely up to the individual. Use your head!

SHORT MEMORY

Public memory is generally short-lived. A public service well performed by either an individual or a company is soon forgotten—if, in fact, it is ever recognized.

For many years, candidates for political office and elected public officials have made votes and popularity for themselves by attacking so-called big business. Many have even gone so far as to promote the substitute of government-owned enterprise (socialism) for private enterprise. And they have profited, temporarily at least, by such appeals to an uninformed or misinformed public.

It is therefore interesting to look at the record. Industries, such as railroads, oil, public utilities, fire insurance and chain stores, which have taken the worst lambasitng at the hands of political prima donnas, stand today among the few enterprises in the nation whose prices or services have actually been reduced steadily, while inflation was at our throats, or their prices have not advanced, or unavoidable advances have been at the very minimum amount compared with other goods and services.

The question then arises, did constant political warfare against such industries, over the past generation, tend to build strong and efficient companies that could withstand attack, or were these private enterprises established on such a sound basis at the beginning that they have been able to render the maximum service for a minimum cost, in spite of the attacks?

Look at it any way you want—the fact remains that big business, if you please—actually the biggest business in our country—is giving the people more for their money, dollar for dollar, than at any time in history.

NEGRO VFV PICKS ALMOST TWO TONS OF TOMATOES A DAY

Washington. D. C. Any doubt that the 26 Negro Victory Farm Volunteers of Washington, D. C, really meant business when they boarded a bus a couple of weeks ago and headed for Dorchester County, Md., to help harvest a 10,000—acre wartime tomato crop was completely blasted last Tuesday when one of the youngsters, William Hill, picked 103 baskets of tomatoes, or nearly 3,600 pounds.

The Maryland farmers had expected each of the boys to harvest on an average of about 50 baskets a day. But most of the boys have exceeded this figure and this one 15-year youth has more than doubled it.

So pleased are the farmers with the work of these youths that another group was recruited last week. Now more than 50 Washington youths are enlisted in the VFV, helping to save vital war crops.

Latest figures available show that about 150,000 youths, white and colored, are enrolled in the VFV, helping to harvest war crops in various areas where labor shortages exist.

WFA HEAD SAYS FOOD IS WEAPON OF WAR

Judge Marvin Jones War Food Administrator, discussed the importance of food as a weapon of war before the American Farm Bureau's Southern Region Training School held at Monroe, La., last week.

Said Judge Jones: "Nothing is more important than food____. Right now it is more important than ever because it is a weapon of war. It is as important as guns and ammunition_____Our clear cut duty here on the home front is to produce the food and then distribute it so that every pound of it will do the most good."

In discussing the food outlook, the War Food Administrator said, "There are about 2 1-2 percent more milk cows on farms than last year, and the number of heifer calves being raised for milk cows is 8 or 9 percent above the large number of last year. The total number of livestock and poultry units is about 11 percent above a year ago."

Speaking of next year's production, Judge Joues pointed out that he believes the best method of securing production of essential crops is to have a support, or definite price that would last throughout the production and harvesting season.

The War Food Administrator praised the townspeople, women high school and college students for their splendid response to the farmers' labor needs.

4-H FAMILY DAY

The State Extension Service in North Carolina reports that more than 500 colored farmers attended the seventh annual 4-H Family Day program in Halifax county last week. In addressing the group, R. E. Jones, Negro State agent, stressed the need for clearing farms of mortgages, buying war bonds, and building better health.

Other activities of Negro farmers reported in North Carolina include a curb market in Edgecombe county with sales averaging $180 a week: 14,275 certified chicks in Gates county, and the gathering of 13 dozen eggs a day by farmer Grover Brown of Henderson county.

SUGARCANE WAGES UP

The War Food Administration has announced minimum wages to be paid laborers in Louisiana for harvesting sugarcane this season by producers who apply for payments under the Sugar Act of 1937. The basic harvesting wage rate, which is the rate for cutting cane applicable to auult male labor, has been increased from last season's 21 cent per hour to 30 cents per hour this season. As in former years, the producer is to furnish the laborer without charge the accessories customarily supplied him, such as a habitable house and medical attention.

The increased wage rate will assist growers in obtaining the workers needed to harvest the 1943 Louisiana cane crop which is one of the largest in the State's history. A price assistance program for this crop was announced on August 28, provicing for an average added deturn to growers above 1942 of about 33 cents per ton of cane.

EGG MARKET FOR THE SOUTH

The War Food Administration has announced the continuation of the Southern Egg Marketing Program as a means of providing adequate markets and support prices for egg producers in 14 southern states. Texas and Oklahoma have been added to the list of states in which the program is operated.

The program has been conducted during the last two years by the Food Distribution Administration, largely during the seasons of heaviest production it is being continued through the fall and winter of 1943 and into 1944 by FDA. There are buying stations in each state. In Alabama there are 71 buying stations, in Arkansas 25, in Florida, 35, in Georgia, 116 in Kentucky, 6, in Louisiana, 1, in Mississippi, 25, in North Carolina, 29, in South Carolina 29, in South Carolina, 7, in Tennessee, 19, in Virginia, 12, and in West Virginia, 12.

AGRICULTURAL BRIEFS

As parts of the Victory Garden yield their harvest and go out of production. gardeners might well consider planting winter cover crops to store up plant food for next year's gardens. Consult your local leaders, your extension agent, or write the state extension service at your state agricultural college.

The War Food Administration suggests that poultry flocks be culled more carefully this year. This advice is in contrast with that given last year when the demand was for more layers. The number of layers has increased and now feed is the controlling factor. Poultrymen must cull their flocks closely so that no feed will be wasted on old hens and poor layers.

Farmers who are in doubt about the value of timber they are going to sell should consult their county agent before taking a leap in the dark. In many areas farm forresters and Extension foresters are on hand to help farmers with their timber marketing problems.

To get the utmost service from military fabrics and fiber products under the varied conditions of global warfare, Department of Agriculture scientists have stepped up their efforts to devise new and better treatments for mildew and rot and to provide better methods for testing commercially treated fabrics for rot resistance and mildew proofing.

The U. S. Department of Agriculture has announced that serum used in combating hog cholera is now being made in record. breaking quantities.

First diamonds ever discovered in actual rock— peridotite— were found at Murfreesboro, Ark., in 1906.

NON-PARTISAN MEDICINE BEST

The Mansfield, Ohio, News—Journal criticizes the congressional proposal, known as the Wagner-Murray Bill, to create a $3,000,000,000 socialized medical system, in a way that clearly reveals the basic principles involved.

"It has long been the established practice of communities— municipal, township and county—to provide for medical treatment of charity cases, and it has also been the consistently maintained attitude of many physicians and surgeons to base their charges on 'ability to pay,' but it may be doubted if there is even a fair-sized minority of Americans who would wish medical or surgical service to be placed under political management and made a part of a paternalistic government's 'free' service.

"Reduced to individual consideration, there is probably no needed service more subject to confidence, personal preference and right of selection than that of the physician or surgeon to be called in cases of illness or accident. The idea of having any politically appointed doctor who happened to be handy, sent to a home in case of illness, or assigned to perform an operation, would be intolerable to a great majority of people.

"Under what has been—and should continue to be—the American system, the practice of medical surgery has advanced amazingly during the past century and is just now in the midst of some marvelous new achievements.

"The readening effect of political control, which penalizes superiority and glorifies mediocrity, should not be permitted to invade a professional field in which superior ability and skill is preferred above partisan considerations.

"Imagine, for instance, a doctor or surgeon being chosen by methods similar to those used in selecting a postmaster!"

FROM A FARMER

From Granville, New York, Ernest C. Strobeck, Secretary of the Dairymen's League Co-operative Association, says that the League predicted a butter shortage two years ago but that official Washington ignored the warning.

"The small butter making farmers are penalized by a rollback of prices which the housewives are told is to save them money, although the rollback of five cents a pound means an average saving of only sixty cents per year per person. Despite Washington talk of subsidy payments to make up to the farmer what he losses on the rollback, the small farmer making less than 1,000 pounds of butter monthly gets no subsidy. The result is less butter for consumers."

Mr. Strobeck says all the farmers want is production cost rices, and that subsidies merely squander public money and "perpetuate the policy of scarcity."

BEFORE THE WHEELS OF PEACE TURN

Much is heard of the production achievements attained by this country during the war. It is taken for granted that after the war these achievements will automatically be turned to the benefit of civilian consumers. However, just as great production of armaments is in itself no guarantee that adequate supplies will reach the men at the front, so the ability to produce a tremendous volume of peacetime goods is a far cry from placing those goods in the hands of 130,000,000 consumers.

As the time approaches for industry to begin rolling out the implements of peace, some consideration must be given to the lines of supply through which consumers are served. The retail distribution industry at present is spending most of its time filling out government blanks and trying to interpret endless official orders. Governmental agencies have urged the housewife to spy on retailers, the implication being that they are trying to break down the price bulwark so carefully constructed by the authorities to protect her against inflation. She is not told that the bulwark will stand only so long as the distribution industry can exist under it and support it. More than a million retailers, chain and independent, spend long hours every day trying to make the rules fit hard economic reality. When an official publicity bureau in Washington points the finger of suspicion at their endeavors, it is about as sensible as a man driving off the firemen who are attempting to save his blazing home.

The sooner retailers are given a chance to do something besides answer questions, the sooner they can begin turning attention to the formidable task of placing the orders which must cross the desks of manufacturers before the wheels of peace can turn again.

ASK THE FARMER

One railroad official has described the earnings position of the railroads today as akin to an overworked farm. A lot of money is coming in but the plant is wearing out faster than the replacement rate. Any farmer knows what would happen to his farm if every acre was intensively cultivated for several years with no crop rotation or rebuilding of the land. During the period the farm was so used, it would be drained of the fertility of the soil to the greatest extent. If, in addition to exhaustive planting, no money was taken from the income to provide fertilizer and needed equipment, the time would com when the farm could no longer produce.

The railroads today are working every mile of rail and every locomotive they possess at a ruinous pace. Through no fault of their own, they have been forced into the position of having to produce transportation for the nation far beyond their normal capacity. Duc to government restrictions on new equipment, they have been unable to case the load. They have repeatedly warned that a day of exhaustion is approaching, unless they are permitted to take necessary maintenance measures.

In the meantime, it is utter folly to look upon the money the railroads are receiving as true profit. That money will eventually have to be spent to restore the fertility and productive capacity of the rail transportation industry.

SOLDIERS SAVE N. C. FEED CROPS

Washington, D. C., Sept. 13, '43—Negro soldiers from Camp Butner, and white soldiers from Camp Davis have gone into the fields of North Carolina to help save vital feed crops in areas where the shortage of farm labor has created an emergency. Feed is an important factor in the increased production of livestock and poultry. Col. E. W. Huntley of Camp Butner and Col. Adam E. Potts of Camp Davis point out that food and feed crops must not rot in the fields for lack of workers. They are working closely with Extension Service in an effort to provide soldiers for areas where an emergency exists. Soldiers are given a 72 hour leave to help with the harvesting.

NEGRO FARMERS IMPROVE THEIR DIET

Reports received by the U. S. Department of Agriculture, pointing out that an increased number of Negro farmers are participating in the live-at-home program. and eating more nutritious meals, are supported by the August number of the Dairy Situation, published by USRA's Bureau of Agricultural Economics. According to this publication, every state in the South except Louisiana, Florida, and Virginia has shown an increase in milk cows on farms of four percent or more over a year ago. Only states outside the South showing similar increases are Arizona, Kansas, and Nebraska.

LEAF BAKERS OR EMPIRE BUILDERS

Hundreds of millions of dollars of railroad maintenance work that should and ordinarily would be done this year is being deferred. The railroads simply cannot obtain the necessary materials due to war shortages. In recognition of the situation, the Interstate Commerce Commission has authorized the railroads to treat as current expense work which must be done at a later date, and is permitting the setting aside of funds for the purpose. These funds are not considered as profit by the Interstate Commerce Commission. They are earmarked for rail rehabilitation, in which capacity they can provide a backlog for employment for the difficult period of transition from war to peace.

Incredible as it may seem, the tax laws have not been amended to harmonize with the policy of the Interstate Commerce Commission. Instead of being treated as an expense, the deferred part of railroad maintenance is regarded by tax authorities as a present net profit upon which income taxes must be paid. To have a dollar, therefore, for doing after-the-war work, which it would do now if it could, a railroad may find it necessary to set aside not just one dollar but as much as $5.26, upon which it must immediately pay a tax of $4,26. Reserves cannot reasonably be set up under these tax conditions.

With the whole country discussing the problem of postwar employment, and with every politician from the President down swearing that men returning from the army must have jobs, it is not encouraging to find that one of the nation's basic industries and heaviest employers is being blocked in its attempts to provide some of those jobs. American railroads and the men who work on them are empire builders. They are a symbol of greatness. They must be given the opportunity to play their role—unless we have decided to become a nation of leaf rakers while somebody else does the empire building.

BEES DOING WAR WORK

Bee keepers are urged to conserve every ounce of beeswax, because more than a million pounds are needed annually for war uses. These uses include adhesive tape used for sealing shells, waterproofing, and as a protective coating for shells, belts, coils, machinery, and fighting planes. Beeswax is also used in preparations which rangers and commandos use on their faces and hands to prevent their being seen by the enemy.

Before the war the principal use for beeswax in cosmetics and in church candles. Manufacturers of cosmetics are not using very much of it now, and the churches are cooperating by burning fewer candles.

NEGRO FARMERS BUY BREED CATTLE

Reports received by the U. S. Department of Agriculture indicate that Negro farmers are buying breed milk cows. Many families, who have never owned a milk cow, and who are not getting any milk to drink, are buying heifer calves which they will raise for milk cows.

In North Carolina, Negro Farm Agent C. J .Ford has delivered 61 grade Jersey calves to 61 Negro farmers in Person county. The calves came from drouth areas in Mississippi. and sold for from $25 to $40 each.

RETURNED USED CRATES

The War Food Administration is urging consumers who buy fruits and vegetables in bulk to return the empty crates, or hampers to the dealers from whom the purchases were made This will help relieve the critical shortage of wooden containers.

4-H IN THE WAR

Anxious to help with the wartime farm job nearly 1,700,009 farm boys and girls white and colored, are enrolled in the 4—H club program, according to estimates received by the War Food Administration from the State Agricultural Extension Service. It is estimated that Negro 4-H clubholders number well over 200,000.

"The 4-H enrollment does not tell the whole story." M. L. Wilson, director of Extension Service says, "Farm boys and girls in their club projects are concentrating on producing the needed food and doing other war jobs. In a very large percent age of clubs, each member has set as a goal the production of more than enough food in his 4-H project to feed a fighter. In State after State the reports show more and bigger 4-H Victory Gardens."

In Florida 4-H clubbers are working in community canning plants; in Oklahoma 4-H member have sold enough war bonds to purchase three giant long-range four-motor bombers, and hope ultimately to sell enough to buy an Oklahoma 4-H Bomber Squadron. Georgia 4-H clubbers have sold more than six million dollars worth of bonds, enough to purchase three liberty ships.

A CIVILIAN NOW EATS 345 EGGS A YEAR

The Bureau of Agricultural Economics reports that eggs production is up 13 percent over last year and that the civilian population is eating more eggs. The average per capita consumption this year will probably exceed 345 compared with only 320 last year and 342 in 1927 when we reached our previous high. Total farm production of eggs in June was 14,880,000 cases, or about 15 eggs per hen.

BAE points out that because of the record number of young chickens and fowl in the United States farm marketing of chickens will increase considerably in the coming weeks, reaching the annual seasonal peak next fall.

NEED WARTIME FALL GARDENS

In urging the planting of fall gardens, H. V. Hochbaum, chairman of tthe Victor Garden chairman of the U. S. Department of Agriculture, writes in the August number of the Extension Service "Review": "Now is the time to consider fall vegetables—green leafy vegetables, yellow vegetables, vitamin-rich vegetables. Extension workers are putting extra push on Victory Gardens to encourage all gardeners to keep their gardens producing.

"Nutrition leaders feel that it may be difficult for some war workers to get their full quota of protective foods. A study conducted by the Food and Nutrition board of the National Research Council showed that approximately 2 percent of the people working in one of the larger airplane plants of California showed a lack of niacin, 25 percent showed a lack of thiamin, 32.5 percent had less ascorbic acid in their blood than is safe, and 42.5 percent showed some evidences of riboflavin deficiencies. Such vitamin deficiencies may result in loss of efficiency in war work.

No garden should be idle during the fall and early winter. Vacant garden space is slacke space.'"

NEGRO SHARECROPPERS OPERATE CURB MARKET

A Negro curb market, organized in Tarboro, N. C., organized by Extension Farm Agent F. D. Wharton, and operated principally by sharecroppers, is doing a $200 a week business. The farmers dismantled an old dwelling and built their own marketing shed. Edgecombe county farmers are planning a similar project at Rocky Mount, N. C.

DEBT THAT CAN'T BE PAID

A characteristic of the jungle fighting in the Southwest Pacific is the high proportion of nonfatal wounds. Japanese snipers fortunately poor shots. Equally fortunately for our men in that area, there are plenty of highly trained medical men to care for wounds immediately. If it were not for this on-the-spot service, the horror of infection and death would become almost unbearable. Reporting on the heroism of the Army doctors, a news dispatch from Munda states: "It is a heart-warming experience to watch the young surgeons working night and day, ministering to the wounded Americans in the gloomy depths of the New Georgia jungle. The main responsibility for saving lives rests with them . . . It has been the aim of the medical corps in this campaign to give every man preliminary treatment within a few minutes after he has been hit . . . The Corps does its job with the bullets and shrapnel still flying."

These are the same doctors that a year or so ago were striving to build careers for themselves at home. Most of them have families and all of them spent long years of study and privation preparing to practice medicine. They carry with them into battle a wealth of knowledge and the best traditions of the American medical profession.

The parents, wives and sweethearts of the men in service owe the military doctors a debt of gratitude they can never hope to repay.

A MILLION DOLLARS A DAY FOR HITLER

Fire losses in the United States averaged more than $1,000,000 a day for the first six months of this year, according to preliminary reports.

Fires are like strikes. Most of them are preventable, and are therefore inexcusable. A fire in a key plant means production interruptions all along the line. Managements and employes should do everything in their power to erase fire hazards.

A single pile of waste that would have taken but a moment to remove may, tomorrow, wipe out a million dollar armament concern. The man who failed to remove the danger will suddenly realize that his claims to patriotic citizenship ring a little hollow. Somewhere, thanks to his negligence, a man in uniform will suffer for the lack of a needed bit of equipment. The imagined chain of events as so often pictured in advertisements whercin a soldier dies because of the failure of a worker to produce to capacity, is doubly applicable to those who are careless with fire.

Every community has its fire prevention authorities. They work night and day to curb loss of life and property from this menace. Far too often their task is made unduly difficult through want of public cooperation. They repeatedly seek to drive home the truth that fire prevention, to be really effective, must begin with the individual. It is time that we as individuals realized that.

Successful Soul Winners

If one would understand th success of Charles Spurgeon, the grace that rested on Charles G. Finney, the power of George Whitefield, or the marvels wrought through the ministry of D. L. Moody, he must hear each of these evangelists, in agony of soul, utter the Publican's prayer: 'God be merciful to me a sinner" He must learn the joy of forgiveness and the power that comes through full surrender to God.

It is doubtful if any man has ever been a great soul-winner, or ever will be, who has not had the experience of God's grace in personal redemption. Jonah could preach with power to the Ninevites when He himself had been saved from death. Repentance and forgiveness logically precede the commission to preach.

—William B. Riley.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar
WM. H. BELL, President

The 1943-44 academic session begins September 20 Freshman Orientation Week, September 16, 17, and 18

HAITIAN FARMER SETS A RECORD

On five and a half acres of a rocky knoll near Port-au-Prince, Declasse Moise, a Hatian farmer, has set some kind of record. He is growing peaches, plums, figs and cauliflowers in the tropics, something that few farmers have been able to do.

A story of his farming exploits by G. L. Crawford, appears in the September issue of Soil Conservation, a U. S. Department of Agriculture publication.

After getting down to his last $12 raising sugarcane, the magazine reports, Moise migrated to a mountain area, selected a four-acre plot 4,500 feet above sea level and planked down his $12 as a down payment on it. By 1940, five years after moving to the mountains, Moise sold $4,000 worth of fruits and vegetables. From seedlings imported from Florida he now harvests peaches that sell from five to ten cents each.

His consistently fine crops of fruits and vegetables is no accident. He developed his little plot by digging and blasting holes in the rocks and filling them in with rich soil carried by hand, and he continues to carefully build and maintain the fertility of land. Since he had to blast the rocks to get a plot high in the mountains where fruits and vegetables not commonly grown in the tropics would grow, why not kill two birds with one stone? The rocks blasted out were piled into neat heaps. When he got around to it he built himself a beautiful home and furnished it attractively with furniture made from local hardwood.

BUTTER FOR CIVILIANS

In an effort to ease the squeeze on the butter supply to civilians, the War Food Administration has announced a reduction in the amount that producers must set aside for Government purchase from 30 to 20 per cent for September. After this month it is expected that no more butter will be set aside for Government purchase until production begins to pick up seasonally.

WFA is able to make more of the decreasing butter supply available to civilians because a backlog of 210 million pounds was in storage on August 1 for military and wartime needs will total this fiscal year 457,500,000 pounds out of a total supply estimated at 2,127,600,000 pounds. This estimated production provides about 13 pounds a year, or about a stick of butter a week for each member of the family. This is somewhat less than the 16 pounds per year average which each member of the family ate during the period between 1935-39. And production is constantly threatened by increased consumption of fluid milk. Only through the prevention of a further rise in consumption of milk can butter production be maintained at last year's level. The production of American cheese, evaporated milk, and dried skim milk has already declined, and may be 20 per cent smaller than that of last year, because we are drinking more milk.

As for the food outlook as a whole the Bureau of Agricultural Economics estimates that production will be 5% larger than the record crop of 1942. The increase will come mainly from livestock production which is expected to be 10 per cent above 1942. Total production of food crops is expected to be nine per cent smaller than a year ago, although 13 per cent higher than the 1935-39 average. Decreases are indicated for food on the shoulders of hundreds of ingrains, fruits, truck and sugar crops. But potato and dry edible bean crops are expected to be larger than last year.

ENRICHED BREAD

Although there may not be as much butter for our bread as we should like to have, here's one encouraging note: bread will contain more enrichment.

The War Food Administration has called the attention of the Nation's baking industry to a change in Federal standards which require a higher level of enrichment in the manufacutre of white bread beginning October 1.

The new standards for enriched flour, prescribed under the Food, Drug, Cosmetic Act, requires more thiamine, niacin, and iron in the enrichment process. All enriched flour will also contain riboflavin beginning October 1 in amounts specified by the standards.

MORE TEA IN SIGHT

Improved shipping conditions have resulted in more tea being imported into this country to date than had been anticipated under the present purchase plan. This increased quantity is being passed on to the public through trade channels. The War Food Administration has announced that quotas for tea packers and wholesale receivers will be increased one-fifth for the current and subsequent quarters.

A WARM MESSAGE FOR COLD HOMES

Recalling the first meeting of the Petroleum Industry War Council on December 8, 1941, the Petroleum Administrator for War, Harold L. Ickes, recently said of that memorable occasion: "As I looked about the room, I had two dominant impressions—a solemn realization of the enormity of the task ahead and an almost exhilarating sureness that those men around the conference table would see to it that their country ould have every barrel of oil that is needed for victory." The men around the table represented the oil industry. They were oil men.

How well they have done their job is attested in the words of the New York Daily Mirror: "Not one gallon of gas or oil has been denied the armed forces, though petroleum products represent two out of every three tons of military supplies sent overseas.

"There will be fuel for our eventual 185,000 fighting planes, for our 89,000,000 tons of merchant shipping, for tens of thousands of trucks and tanks, for our Navy (a battleship burns 1,000,000 gallons of oil on a short cruise!), for our war industry—and, lastly, for the civilian . . . .

"Our fighters will still get first call—rightly! But the civilian can be sure of one thing: His welfare is in the hands of able, patriotic, practical administrators, who have again demonstrated that America's strength, in war as well as peace, lies in its free system of economic enterprise."

FLAMING COFFINS

Two-thirds of the ten thousand persons who burned to death in the United States in 1941, perished in homes. In spite of these figures, it is hard to convince anyone who has not witnessed or experienced the lightning-like destruction of which fire is capable, that an agile person might be unable to flee the comparatively few feet necessary to reach safety from the confines of the ordinary home. Many remain unconvinced until in screaming terror they pass out of this world, victims of their own ignorance.

Home fires frequently originate in basements. In less than five minutes any fire can generate superheated air to temperatures of from 400 to 500 degrees. This superheated air rises through every avenue to the higher sections of the building and endangers every inhabitant, for no one can breathe air of that temperature and live. Within ten minutes, as the fire progresses, the air temperature increases to between 800 and 1,000 degrees. When air of this temperature concentrates in attic spaces or upper halls, it spontaneously sets fire to every item of burnable material. Frequently fire is found in the basement and on the top floor, with no flames in sections between. Thus is explained the awful apparition of a house spouting flames from every window in a matter of seconds.

Occupants of every home in the country should know whether their places of residence are in reality flaming coffins. In cases where they are, the fault is probably traceable to minor construction details that can easily be corrected—such as improperly sealed clothes chutes, dumbwaiter and stairways, as well as walls without fire stops. These and similar hazards can be minimized or removed at comparatively small expenses. They often spell the difference between life and death.

STARTING POINT OF RECONVERSION

On the day the war ends, the time for stratospheric post-war planning will have run out. The time for action will have arrived. The responsibility of maintaining employment and stability will fall on the shoulders of hundreds of industries, and literally millions of individual enterprises. Between the American people and the glittering new world that has been dangled before their eyes, stand a lot of tough problems to be solved by the ingenuity of practical business men. Before any of the products of industry, for example, can actually reach the public, they must first be bought and distributed throughout the land by thousands of retail merchants. Until the retailers place the orders, goods cannot be produced. Upon the ability of the distribution industry to foresee and meet consumer demands, rests at least partially the fate of immediate post-war planning.

Godfrey M. Lebhar, editor of Chain Store Age, observes that only by keeping the wheels of production turning on a capacity basis can employment be maintained and economic unsettlement averted. He emphasizes that: "The chains and other large scale distributors can make a most valuable contribution to the nation-wide post-war planning effort by the relatively simple course of placing orders now for post-war delivery. . . . The placing of substantial orders now will give manufacturers a firmer basis for their post-war planning."

The dangers of forcing retailers to operate subject to regulations that threaten their existence, are becoming increasingly evident. Every retailer in this country will be direly needed to help re-establish normal civilian life after the war. Mass distribution will be the starting point of reconversion. If this fact is ever forgotten, dreams of great production will remain just that—dreams.

GEORGE CAN'T DO IT

The illusion that government is Santa Claus, if not already dispelled, soon will be. The President is asking for more billions in taxes, and Senator George, chairman of the Senate Finance Committee, has bluntly warned that "any large increase must fall on the middle-income brackets and down to $2,500 and $3,000. The truth is that of our national income (now at 140 billions) some 91 billions goes to people in the lower brackets—people whose income is $3,000 or less."

Any public official who inspires the belief that the rich can be made to pay for the war is doing a disservice to his country. This war must be paid for by the whole people. If an attempt is made to grant tax favors to one group at the expense of another, the result can be none other than disastrous. The tax burden is growing so heavy that unless it is distributed equitably, individual opportunity and the incentive to produce will be destroyed. If that happens, a farce will have been made of democratic government—a farce that will collapse under the weight of its own injustice, taking with it the liberties of all of us. When new tax bills are drawn, the old dodge of "Let George do it," won't work George can't do it.

FARMERS STUMP THE AXIS

(Continued from Page 1)
produce this vital material. While the forest land of Negro farmers is only a small part of the 138,000,000 acres of farm forest in America, it is a sizeable strip. Negro farm owners alone have a forest area comparable to a strip five miles wide stretching from New Orleans to Chicago. When the land operated by part owners and tenants is added the strip widens to nearly 12 miles. From this forest land Negro farmers are harvesting a crop that will help stump the Axis.

However, Mr. Fivaz advises that farmers harvest their forest crop with great care so that no damage is done to this vital resource to retard future production. Wise harvesting means singling out the occasional ripe trees, the cripples and boarders, and leaving the producers to make successive crops for the war years and the years of rehabilitation and national development that will follow.

Our wood consumption last year was a little over 40 billion feet, this year the War Production Board has set a goal of 32 billion feet. Of this amount 85 million cords are needed literally to keep the home fires burning in view of the shortage of other fuels; 2,250,000 cords will be needed for making paperboard boxes and other packaging material, and billions of feet will be needed for defense housing, timbers for mines, railroad ties, construction of war plants, for making paper, plastics, photographic films, and many other articles.

Unless the farmers continue to do their full part a shortage may develop which would hamper our war effort.

TO MAKE MORE PEANUT BUTTER

According to the present distribution program of the War Food Administration, 413,000 tons of peanuts from this year's crop will be made into peanut butter. Of this quantity civilians will get 375,000 tons and the Army and Navy 38,000 tons. Last year the total amount of peanuts used in making peanut butter was 337,000 tons.

Peanut butter is high in protein food and more of it is needed as a spread for bread and other bakery products. Hurried war workers find it handy for lunch boxes.

Aside from peanut butter, the 1,425,000 tons of peanuts which farmers are expected to produce this year will be needed for oil, candy, and other edible uses, as well as for seed, and feed on the farm.

About 475,000 tons will be crushed for oil; 287,000 tons will be eaten either as roasted or salted peanuts or in candies; and the remaining 250,000 tons will be kept on the farm for seed, feed, and other uses.

Whether or not farmers will harvest the estimated 1,425,000 tons of peanuts this year depends on the weather and the manpower situation. A wet fall might reduce the crop by 200,000 tons, and the shortage of farm workers to harvest the crop may result in 100,000 tons remaining in the fields to rot. WFA's peanut industry food advisory committee has recommended the use of war prisoners, convicts and other available workers to help harvest this year's crop.

Last year 80,000 Negro farmers planted peanuts to help meet the critical need for vegetable oil. It is estimated that more than 200,000 are growing them this year.

LESS COTTON THIS YEAR

Cotton is an undramatic subject for city folks until, of course, they stop to realize that it means dresses, shirts, overalls, hosiery, sheets, towels, tires for the car if the ration board agrees, and shortening from cottonseed for biscuits and that occasional steak, as well as cosmetics for milady. Cotton is also important to our fighting men, because it means uniforms, tents, gas mask capes, parachute cords, tires for the jeeps, the trucks and half-tracks as well as explosives for their guns. It requires a bale of cotton linters to make the powder for firing a 16-inch gun a single time.

Cotton is important, too, because in normal times it provides a livelihood for 13,500,000 Americans or 11 per cent of the U. S. population. Over 75 per cent of all Negro farmers grow cotton.

Well, cotton production is somewhat less this year than it was in 1942 due largely to increased food production in the Cotton states. But there is no need for worry, because we have stockpiles stored away.

Here are the figures on the current cotton group: The Crop Reporting Board of the U. S. Department of Agriculture forecasts 12,585,000 bales of cotton (500 pounds gross weight) to be produced this year by U. S. farmers. This is 266,000 bales less than the 1942 crop, but 84,000 bales above the average production during the 10-year period 1932-41.

Texas, as usual, will lead in production. This state is expected to produce 3,275,000 bales; Mississippi is second with an expected production of 1,980,000 bales; and Arkansas is third with 1,300,000 bales. In per acre production, California sets the pact with 573 pounds, and New Mexico is sectnd with 541 pounds, while the national average is 279.4 pounds per acre, seven pounds more than last year and 62 pounds more than the average for the 10-year period 1932-41.

The crop is generally earlier than usual this year. The Census report shows that harvesting is progressing rapidly. By Aug. 1, 108,653 running bales had been ginned, compared with 48,626 last year on the same date, and only 1,969 for 1941.

SCHOOL LUNCHES IMPROVED

(Continued from Page 1)
pending on the type served. Type A consists of a complete lunch including all of the items necessary for a balanced meal. Type B is made up of smaller portions of these same foods and is less adequate nutritionally. Type C consists of a half pint of milk.

FDA officials point out that the program is not limited to low income children because the lunch must be offered to all children in the school. It is desirable, however, to give assistance first to those schools where greatest need exists, since available funds may not be adequate to help all schools asking for Federal aid. Although war has brought about an increase in national income, many families still lack sufficient incomes to provide their children with adequate diets. Higher food prices and relative scarcity of certain important foods have increased these difficulties.

Any non-profit organization is eligible to be a sponsor. This includes school boards, American Legion Posts, religious schools, child care centers, parent-teacher associations and similar civic and service groups. Sponsors sign an agreement with the Food Distribution Administration which guarantees reimbursement at definite rates, provided the amount does not exceed the cost of the food purchased. Under the agreement, lunches must be offered free to all children unable to pay, with no distinction between those who pay and those who do not. Another condition stipulates that prices charged for lunches must not result in profit. Surplus funds must be put back into the project in improved meal quality or service.

Foods listed in the agreement under which FDA reimburses sponsors are: milk and cheese, fresh and dried fruit, fresh and processed vegetables, fresh meat and poultry, eggs, dry beans and peas, soybean products, peanuts and peanut butter, oleomargarine with added vitamin A, butter, lard, and other edible fats and oils, and cereals. Ration stamps will be issued schools and child care centers for rationed foods on this list under the Office of Price Administration stamp allowances for institutions.

Groups who wish to apply for Federal aid under the school lunch program should address requests to the nearest regional office of the Food Distribution Administration. The regional offices are situated in New York City, N. Y.; Atlanta, Ga.; Chicago, Ill.; Des Moines, Ia.; Dallas, Tex.; Denver, Colo., and San Francisco, Calif.

THREE RACES' WORK PRAISED

(Continued from Page 1)
31 there were 22,075 Mexican Nationals in California, 1,930 in Oregon, 1,704 in Washington, 1,257 in Montana, 984 in Arizona, 624 in Colorado, 559 in Idaho, 549 in Nevada, 285 in Wyoming, 284 in Nebraska, 91 in South Dakota, and 67 in Kansas.

Jamaicans and Bahamians have been employed largely in East Coast states and in the Middle West. Some of the principal crops which they have helped harvest are citrus fruit, beans, peas, sweet corn, potatoes, tomatoes, asparagus, sugar beets ,and cigar tobacco. On July 31 the Jamaicans were distributed as follows: 1,942 in New Jersey, 1,524 in New York, 1,046 in Wisconsin, 1,000 in Connecticut, 747 in Michigan, 638 in Illinois, 560 in Idaho, 357 in Minnesota, 314 in Iowa, 309 in Pennsylvania, 186 in Indiana ,and 181 in Ohio. The distribution of Bahamian workers on July 31 was: 1,785 in Maryland, 7754 in North Carolina, 699 in irginia, 393 in New York, 301 in Tennessee, 260 in Florida, 105 in Delaware ,and 13 in South Carolina.

The workers have come into this country to relieve farm labor shortages in critical areas under agreements between the governments of the United States and of Mexico, Jamaica and the Bahama Islands. When the need for their services has passed, the workers will be returned to their home countries.

MR. ALEX J. GATES

(Continued from Page 1)
continue to grow and that ere long they will be able to boast of perhaps two hundred in the local setup, and may, said Mr. Gates, be in a position to invite the next convention of the National Federation to come down into the Delta State.

Plans are under way for the county convention, at which time the group will be photographed and their pictures will appear in the official organ of the Federation.

CAREFUL COTTON PICKING HELPS WAR EFFORT

Washington, D., C.,—The skill and dexterity which many cotton pickers have developed through the year may come to the fore this season and play an important part in the war effort. Uncle Sam needs a large quantity of high grade, long staple cotton for manufacturing important war materials. Some 11,000 cotto items is one of the largest in the state's appear on the procurement lists of the U. S. Army Quartermaster Corps Carelessly picked, trashy cotton lowers the grade, and may reduce the value of a bale of cotton by from $5 to $25. Most important of all, such cotton is not suitable for manufacture into high class war goods.

Careful cotton pickers rank right along with other war workers, because they are doing a vital job—a job that means parachute cords, uniforms, tents, heavy tarpaullins and other supplies for our fighting men.

Looking toward improving the quality of cotton, the War Food Administration has announced the cotton improvement planting seed program for 1944. This program virtually the same as that of 1943, is designed to assist growers of a single variety of high quality cotton in obtaining pure planting seed for improving the quality, increasing the yields, and standardizing production. The program will be administered by the Food Distribution Administration.

The Curtiss-Wright's Interceptor, the 21B built in 1940, could climb a verticle mile in 60 seconds, top well over 330 mph, and turn inside a quarter-mile.

Human Progress Depends On Religion

California Institute of Technology
By Robert A. Millikan, Chairman Executive world

(Note: This article was written at the request of the International Council of Religious Education, Chicago, endorsing the thirteenth annual continent-wide observance of Religious Education Week, September 26—October 3, in the United States and Canada. The Baptist Denomination and forty two other Prostestant denominations as well as one hundred and seventeen state, city and provincial interdenominational council of churches and religious education are cooperating in this observance.)

Two reasons why I wish to endorse the Program of The International Council of Religious Education for Religious Education Week.

First, according to the official U. S. census of 1940 fifty-five million people, a large majority of the adult population of the United States, list themselves as adherents of one or another of the country's churches. This means that quite irrespective of any one's religious views, organized religion is in fact today the greatest social institution in this country. If this is true, then the person who has no knowledge of, or contact with, the life and work of the religious organizations of the country is by that very ignoranee completely unfitted to assume a position of influence or leadership in Amerlean life. The chief function of the Council for the Promotion of Religious Education is to assist in dispelling that ignoranee. Under the leadership of men like its President, Governor Stassen of Minnesota it can be trusted in my judgment to go at that job both sanely and effectively.

Second, I know of no better way of going about the task of finding what is the essence of religion than by trying to discover what is the element that is common to all Christian churches and denominations, for their name is almost legion. That common element certainly has nothing to do with theology, for theologies are as wide apart as the poles, and if any one of them is right then all the differing ones are in this respect necessarily wrong. Nevertheless there is a common element in all Christian churches. It is the attitude or ideal of "othermindedness" commonly called unselfishness technically know as extrovertness This Christlike or altruistic ideal means specifically concern for the common good and the effort to promote it. Nor is this just my individual statement. The man who is commonly regarded as the foremost of living philosophers, A. N. Whitehead, states the essence of religion in these three words:

"Religion is world-loyalty." The spread o this attitude, coupled with the spread of the spirit of science. constitute the two essential conditions of human well-being and human progress. Either one of these two without the other is relatively impotent. Putting the two together into one sentence: human progress depends upon the spread of the spirit or attitude of religion, implemented by knowledge.

These, then, are my reasons for believing in the religious education movement, I hope the net long-time result will consist in furnishing here in the United States an example to the world of how the religious life of a nation can evolve intelligently, wholesomely, inspiringly, reverently, completely divorced from all unreason, all superstition, and all unwholesome emotionalism.

YOU AND YOUR MIRROR

How very sad your mirror must be
If it has to pout all the while
When you are about,
But what a happy mirror you see
Laughing with glee
Whenever you smile so merrily.
—Grace May North.

Army Chaplains Trained For Mission At Home After War

WASHINGTON, D. C.—Chaplains of America have a "tremendous mission" after the war, Dr. William B. Pugh, Chairman of the General Commission on Army and Navy Chaplains, told a group of 40 U. S. Army chaplains recently at an advanced air base in North Africa, the War Department was informed today.

Touring all theaters of opera as successor to the late Bishop Leonard, Dr. Pugh, himself a former Army chaplain with more than 20 years experience, told the gathering of chaplains representing the Twelfth Air Force that men in the armed forces "are going to give you their ears when you go back home because you have been through it all with them."

"You are going to have a great chance and experience," Dr. Pugh said. "The men and women in the service will represent the future of the church in America and perhaps of the world. It is a responsibility that will challenge the best in you.

"I have talked with commanders in every theater I have visited, and I have been amazed, with all the time their duties require, at the way they have been thinking. They are doing everything humanly possible to win this war, and yet, when they have talked with me, they have discussed the peace and the future of the world.

"They can see, as I can, that we can't afford ever again to win a war and lose a peace."

Dr. Pugh emphasized to his audience that they must do all they can to get the churches of America solidly behind the religious program in the war effort. He said the time has come for the churches to "unite and present a solid front on the emphasis of the work you are doing. There must be more effort on the part of the churches to publicize what is being done. The churches must realize and appreciate that you are striving to do the things you are commissioned to do.

"And you must do everything you can to get publicity on your efforts. It won't be a case of blowing your own horn either, because it is only in this way that we can get support from within the churches."

Speaking of the men in the armed forces today, Dr. Pugh said that they "know what life is and are not easily swayed. They believe in two-way traffic and don't want us to do all the preaching. They want to do some themselves."

Dr. Pugh is being accompanied on his tour by Chaplain (Colonel) George F. Rixey, Deputy Chief of Chaplains.

New President Of Talladega College To Be Selected

TALLADEGA, Ala., Oct. 7 (ANP) —A committee from the board of trustees of Talladega college has been named to select a new president to succeed Buell D. Gallagher who has resigned to accept a position as professor of social ethics in the Pacific School of Religion in California.

The announcement of Dr. Gallagher that he would no longer be at Talladega came as a shock to the student body as they arrived Monday for the opening day of school. Dr. Gallagher, familiarly known as "prexy,' 'has been well nigh idolized by students here. In explaining his leave taking at the first chapel exercise, Dr. Gallagher said that his primary interest is in putting the Christian religion to work in life as it exists today. For the past 10 years all of his efforts have been concentrated on race, he explained. Now, he said, an opportunity has come which will permit him to express himself on all fronts and through religion. It was evident that there would be little dimunition of his interest in Negroes and their problems in America.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., NOVEMBER 15, 1943 No. 10

FIRST 4-H PIG SHOW

Com. Rogers Of Montgomery County Captures The Champion's Prize

Nashville, Tenn.— Commodore Rogers of Montgomery County captured the Champion Prize at the First 4-H Club Pig Show and Sale for Negro boys and girls, which was held at the Nashville Union Stock Yards, September 23. This winning Duroc pig was bought by Sears, Roebuck and Company at forty cents per pound. Willie Rogers, a close competitor and also of Montgomery County, won the prize for the Reserve Champion which was purchased by Dr. Eugene L. Price at twenty-three cents per pound. Dr. Price, one of our leading pharmacists of Nashville, is doing his bit to stimulate interest in Negro boys and girls of Tennessee. This is the first opportunity that Negro boys and girls have had to participate in this annual affair.

The Commissioner of Agriculture, Mr. C. C. Flanery, made prizes available for this show in three sections of the State: Nashville, September 23; Jackson, Sept. 30; and Memphis, October 2. Due to the shortage of feed, only a

(Continued on Page 8, Column 1.)

PRICE FIXING RUNS WILD

The American people have read in recent news reports that the OPA has filed complaints against certain of the nation's large variety store companies, charging that they are in violation of MPR-330 which contains a price line limitation provision that prohibits any concern from selling any goods at price lines higher than those carreid in March, 1942. The fact that the price lines handled back in March, 1942, may no longer be available from manufacturers, seems to mean nothing to the OPA.

Among companies that have been cited are F. W. Woodworth Co., McCrory Stores, J. J. Newberry Co., Murphy Co., H. L. Green Co., Neisner Bros., W. T. Grant Co., and J. C. Penney Co.

OPA has failed to control wholesale and manufacturing costs and prices for inexpensive lines of women's and children's clothing. Now it is trying to prevent stores from making those practical adjustments in price lines which must be made in order to supply customers with the best available values from obtainable supplies today.

It is impossible for any fair-minded person to understand OPA's reasoning when it says it is illegal for a store to add a line of children's dresses at $5.98 when the highest priced line previously carried was $3.98—particularly if no more dresses are available at the $3.98 price or if the store wishes to sell a better dress for $5.98.

Regulation of this type has very serious implications which go away beyond what effect it may have on the stores in question or other companies which may later be cited. It is an attempt to prohibit certain perfectly legitimate activities within specified lines of business, and to regulate the business itself instead of regulating prices. If this particular regulation is continued, it will wipe out countless small merchants whose volume comes primarily from the sale of low-priced women's and children's outer wear. Such administration makes a mockery out of the real intent of laws passed by Congress to establish reasonable wartime controls of essential civilian commodities.

$400,000 SENT HOME

Workers From Island Of Jamaica Paid For Work On Farms In U. S.

Washington, D. C.— Jamaican workers who have come here to help relieve the farm labor shortage sent nearly a half million dollars back home during July and August, officials of the War Food Administration report. Part of the money was given their families and the remainder was placed in savings accounts.

Recent reports show that there are 8,768 Jamaicans in the country doing farm work in Northern and Western States. The largest number, 1,529, are in New York; there are 1,275 in Connecticut; 1,267 in Michigan; and far west as Idaho there are 558. While some Jamaican workers earn only modest wages, $3, $4, or $5 per day, others sometimes earn as much as $15 per day. The wide differential is possible becausc the recruits do not always work for an hourly rate; often they perform piece work jobs.

In checking over the amount sent home by the Jamaican workers, WFA officials reveal that between July 1 and September 1 the islanders sent a total of 109,000 pounds (sterling) or approximately $440,000.

DON'T WASTE FOOD

Four cents worth of every 25 cents food purchased is wasted by the average family in the United States, according to the October number of Consumer's Guide, a War Food Administration publication.

Going further, the publication points that estimates based on a garbage survey in 247 cities indicate that the average American tosses away 225 pounds of food a year. Here are some of the items: If you throw away the ends of a loaf of bread you are wasting 10 per cent of the loaf; if every family in the U. S. should burn or let mold just one slice of bread a week, the waste would be enough in a year to make 100 million loaves of bread.

Each pound of fat that families waste would make enough glycerine to fire a 37 millimeter anti-aircraft gun four times. If every housewife in America saved a tablespoonful of fat every day for a week, enough would be saved to make more than 22 million pounds of explosives. If you peel potatoes fast, you may cut away from one-tenth to one-fourth of their bulk and with the skins you throw away valuable vitamin C and iron.

It has been estimated that American housewives threw away in peels last year the equivalent of 24,600,000 bushels of potatoes. These were enough potatoes to fill 42,000 freight cars, or 127 liberty ships. In view of the acutc farm labor situation, the waste is more dramatic in terms of the man-hours required to produce 24,600,000 bushels of potatoes.

This figure is placed at 13 million man-hours, or the equivalent of 5,000 men working 48 hours a week for a year.

Now that our farmers have just about reached the limit of their production, the labor and farm machinery situation being what it is, the new approach to meeting the food requirement of our fighting men, our allies and civilian population is that of food conservation. Every family must waste less in order to have more. The four cents of every quarter, or 15 cents of every food dollar wasted mounts up, too. If the amount is saved, the avcrage housewife could buy a $25 War Bond out of every $115 set aside for grocery money.

NO TURKEY FOR CIVILIAN YET

Until an adequate supply of tur-

OVER A MILLION QUARTS

4-H Clubbers In Mississippi Set New Record In Canning

Washington, D. C.—When the wartime farm production of 4-H clubbers in the various states is added up it will make a sizeable total of food and fiber for our fighting men, U. S. Department of Agriculture officials pointed out this week after checking reports from the field.

Mississippi 4-H clubbers are among those in the vanguard of our youthful soldiers of the soil. Reports from that state indicate that the club members, numbering 91,000, not only make up five percent of the 4-H clubbers in the country, but that they are also doing a man-sized job. Among other things they have canned 1,495,000 qts. of food this year, raised 41,400 head of livestock, and 1,061,000 head of poultry, cultivated as demonstration projects 22,461 acres of food, feed and fiber crops, and planted 9,145 acres in Victory Gardens.

When it comes to collecting scrap and buying Bonds, they play their part here, too. Up to now they have collected 4,256 pounds of scrap metal, 463,000 pounds of scrap rubber, have already bought $147,640 worth of War Bonds and Stamps, and have obtainced pledges for an additional $73,000 worth.

Negro 4-H club members, numbering 44,000, or nearly half of the total number of clubbers in the State, have made a substantial contribution to 4-H club achievement in Mississippi. Reports indicate that Negro girls are taking an especially active interest in 4-H club work. They number 28,886, while white 4-H club girls number only 23,148.

IOWA PLANS TO SIC PESTS ON PESTS IN EFFORT TO DESTROY CORN ENEMY

DES MOINES, Oct. 11—(AP)—Iowa is going into the business of raising pests to destroy pests which are damaging its greatest crop.

The state executive council today authorized the Department of Agriculture to proceed with plans for propagation and distribution of a parasite which attacks the European corn borer.

Harry D. Linn, secretary of Agriculture, said the parasite is a fly which lays its eggs on the borer. When the eggs hatch the borer is destroyed.

Linn said borer-infested stalks would be taken to a laboratory where parasites would be allowed to deposit their eggs on the insects. The egg-covered borer then would be returned to the field, where the parasite would hatch and spread to other borers.

"We won't see too many results for perhaps 10 years," Linn said, "but this method has worked successfully in eastern states where it has been tried."

Linn estimated the project would cost $5,000. The borer first was discovered in Iowa in 1942. This year it has spread to 57 of the 99 counties in the state, which expects to produce one-fifth of the nation's 1943 corn crop.

The borer is a small worm which burrows into the corn stalk and saps its strength so that the stalk breaks over and does not produce.

My first wish is to see the whole world in peace,
And the inhabitants of it as one band of brothers,
Striving who should contribute most to the happiness of mankind.

Harry D. Linn, secretary of Agri—Washington.

FARMERS WAR ON RATS

County Agents Mobilizing To Stop Saboteurs By Using Modern Methods

Washington, D. C.—Negro county agents are mobilizing colored farmers for an all-out war against rats and mice which are sabotaging the war effort to the time of three percent of the Nation's total farm production. It is cstimated that rats destroy as much food per year as 200,000 farmers can produce.

In Texas recently rats were destroying 25,000 sacks of flour per month in a large wharf warehouse. Finally the rats were exterminated. In Massachusetts rats killed 1,500 day-old chickens on a poultry farm in one night. When their total destruction in the various states is added up it presents a staggering figure.

Negro county agents are helping to make farmers aware of this fifth columnist that is within their gates. At a series of meetings farmers have been acquainted with the problem of rodent control, and in many areas volunteer neighborhood leaders have made a door-to-door canvass taking orders for rat bait. During the summer 4-H short-courses, youngsters in several states were given special training in rodent control.

Officials of the U. S. Department of Agriculturc point out that in view of scarce food supplies for livestock and poultry, it is important that farmers take steps to exterminate or control rats and mice which not only consume large quantities of vitally needed grain, and kill small chickens but which also endanger human life by contaminating food with filth and disease germs.

WOMEN HELP SAVE TOBACCO CROP

The WACs, the WAVEs, and SPARs aren't the only women who are replacing men in this war. Reports received by the U. S. Department of Agriculture indicate that women are doing a good job of replacing men in the battle for increased farm production. One of the most unusual cases occurred in the tobacco area. When harvesting and barning time came some tobacco farmers found themselves shorthanded; so they recruited women. To their surprise the women turned in as good day's work as the men. Negro women are said to have made up a large percentage of the workers who came to the rescue.

Of course, only a few of them will wear colorful uniforms (Women's Land Army members) and still a smaller number will receive the plaudits of the crowd, but when next year's smokes start to the boys at the front, these women can smile contentedly, knowing that they, too, had a part in making them possible.

CURB USE OF RICE IN BEER MAKING

The War Food Administration has restricted the usc of table quality rice in the production of beer and ale. This step was taken to assure adequate supplies of rice for food purposes.

Brewers normally use classes of rice that are not of table quality, but because of the shortage of corn, there has been an increased use of rice. Brewers may continue to use non-table quality rice. but the use of table quality rice has been restricted by an amendment to Food Distribution Order 66. Now, in addition to restriction the use of malted grains for brewing purposes so that supplies for food and essential wartime uses may be met, the order also

OCTOGENARIAN MAKES GOOD

Eighty-Years Old Negro Farmer Ships Pulpwood For The War

Washington, D. C.—Being 80 years old doesn't stop W. S. McElrath of Mecklenburg county, N. C., from trying to do his part to help win the war. When the urgent call came for increasecd shipment of pulpwood to the mills for the manufacture of vital war material, he went to his farm woodland and helped the men cut and load pulpwood. Already this aged Negro farmer has shipped a carload of pulpwood.

The U. S. Department of Agriculture points out that pulpwood is needed in increased quantities for the. For example, it is used in making shipping containers, smokeless powder, shell cases, rayon, paper, photographic film, medical supplies, plastics, map and blueprint papers, and hundreds of special products for war uses. Here's the size of just one of the jobs that pulpwood is doing: over two million cords are being used this year to make a single item —paperboard containers for shipment of food, munitions, and other supplies overseas.

1,500 MORE BAHAMANS HERE FOR FARM WORK

An additional 1,500 Bahamans have come to the United States since July to help with the harvesting of vital war crops. In the middle of July there were only 2,914 Bahaman farm workers in the country. By August 31, there were 4,285 working on American farms. The number of Jamaicans has increased only slightly; from 8,483 in July to 8,768 on August 31.

As for the farm employment on the whole, there were 11,502,000 people working on farms on the first of September as compared with 11,020,000 a month ago, and 11,390,000 a year ago. The increase this year is due largely to the fact that more family workers are pitching in to help.

POSTWAR CROP LAND

It may be possible to increasc our crop land area by 100 million acres

(Continued on Page 8, Column 2.)

NATURE'S RAREST PERFUMES DUPLICATED BY CHEMISTS

Chemistry and cosmetics go hand in hand. Many of the rarest of naturc's perfumes are duplicated in the laboratory. Some of these arc within range of everybody's pocketbook where formerly a few ounces of the natural scent cost a princely sum.

Shampoo soaps, depilatories, deodorants, lotions and creams are as stable a part of the chemical industries' production as, for example, dyes and synthetic fibers. Nail polish and its removers are, in fact, tank-car activities.

Only a short time ago it took nearly 25 tons of violets to make a single ounce of the natural oil. Today the violet odor is produced synthetically. Until recently a ton of roses was needed to obtain 10 ounces of the natural oil. Now this odor is produced in the laboratory.

Lilac, available to everyone, could not be produced, irrespective of labor and costs, until it was made by synthesis, for no satisfactory means has ever been found of extracting the natural oil. Moreover, there is no known natural extract so sweet or so peculiarly powerful in odor as synthetic lilac. Similarly, there was no lily-of-the-valley perfume until it was produced synthetically.

WOMAN'S PAGE

SOLDIERS, HOME ON LEAVE, WANT THINGS 'SPECIAL' TO EAT

By Mary Lyles Wilson

Everyone is thinking about soldiers, either their own son, brother, husband, father, relative, friend or sweetheart. We should do everything possible for their comfort and pleasure. They are giving all for us.

For that boy home on leave plan something special—what he likes to do and the food he likes best. Try not to talk too much about the war—give him a rest of mind as well as body.

He will no doubt want to see his friends as well as the family—perhaps all at once—ask them for a chicken pie round-up. Keep your menu simple but bountiful and give it an extra touch.

Before dinner pass canapes and chilled fruits beverages. Use cheese paste, sausage, radishes, olives and other such delicacies for the canapes. Have plenty of them.

Hot biscuits and your best clear tart jelly go with the pie. So do sliced tomatoes with finely chopped green peppers and chives, topped off with a good French dressing.

OLD-FASHIONED CHICKEN POT PIE

(Serves 20)

Ten 2-pound broilers, I pound bacon, 1 pound small onions, 3 bunches carrots, 2 1-2 pounds peas, 15 heads mushrooms, 1-2 pound flour, 1 quart chicken stock, 2 glasses white grape juice, 2 bunches of chives, 3 pounds potatoes.

Clean and disjoint chickens, cut into pieces; salt and dip in flour. Fry slowly in fat on both sides without giving them color. Add small diced bacon, small onions, and carrots. Simmer all together for 15 minutes. Add the mushrooms cut in half and the peas, then add a little flour. Simmer for a few minutes and then add the cream (raw) and the boiling stock. Cover the pot and bring to the boiling point. Arrange the whole stew in an earthenware pot, add some parboiled potatoes, cover the pot with a paste and bake in oven for approximately 15 minutes.

PIE DOUGH

One pound flour, 1-2 pound vegetable shortening, enough water to mix, salt.

Roll out twice by folding each time and let it chill before baking.

Have something particularly delicate, rich and totally unlike army chow when your soldier son or husband comes home for a day or two on a furlough.

APPLESAUCE COOKIES

Flavorful applesauce in spicy cookie dough makes tempting cookies a treat in the off-to-school or off-to-defense-plant lunch-boxes.

Uncle Sam urges the use of plentiful foods, and two of these featured foods make their appearance in the form of Applesauce Cookies. They are enriched flour with its quota of B-vitamins and iron, and juicy, fragrant apples. Cinnamon and cloves heighten the flavor of the applesauce with a pleasant touch of spiciness.

Plump raisins and chopped nuts add their share of extra goodness.

These cookies are designed to help the homemaker. Precious points are made to go a long way. As little as 1-2 cup shortening and 1 cup sugar combined with non-rationed cookery ingredients make 30 servings of 2 generous cookies each.

Applesauce Cookies
1-2 cup shortening
1 cup sugar
1 egg
2 1-2 cups sifted enriched flour
1-2 teaspoon cinnamon
1-4 teaspoon cloves
1-2 teaspoon salt
1-2 teaspoon soda
1 teaspoon baking powder
1 cup thick unsweetened applesauce
1-2 cup raisins
1-2 cup chopped nuts meats

Cream together shortening and sugar. Add egg. Beat well. Sift together flour, spices, salt, soda, and baking powder. Add alternately with applesauce to creamed mixture. Add raisins and nuts. Drop from spoon on greased cookie sheet about 2 inches apart. Bake in moderately hot oven (400 degrees F) 15 to 20 minutes.

Yield: 5 dozen cookies.

Many a child is in his glory when he raids a cookie jar. Perhaps that is one reason why cookies are so popular. The joy of adventure followed by a tasty reward make cookie jar raiding exciting. Even Johnnie's report card may take a turn for the better if Mother favors him with cookies for his good behavior.

Dad finds the cookie jar his favorite spot as he finishes an evening of raking leaves and covering shrubbery for the cold days ahead. Those prize evergreens must be cared for before Jack Frost pays his visit. It's fun for Dad to work when he knows Mother has a plate of tempting cookies waiting for him.

Cookies are one of the pleasantest ways imaginable of using enriched flour. So good are they that the precious B-vitamins of enriched flour are a bit proud to be a part of them

As cookies march to home duty, six Sergeant Cookies lead their recruits to the undefended cookie jar. The six cookie divisions go by the names of Filled, Refrigerated, Bar, Rolled, Dropped, and Molded Cookies. A pleasing variety makes for an interesting cookie jar, and each division offers flavorful cookies eager to satisfy.

Enriched flour with other wholesome ingredients make cookies at their best. Just to mention cookies tempts Mother into the kitchen. Old-Fashioned Gingersnaps or Soft Molasses Cookies blend molasses, as rich in iron as it is luscious in color, with vitamin-rich flour. Dad never suspects they are eating the kind of food that is good for them. Marmalade Drop Cookies owe their popularity to the delightful favorites so much that they will and the boys will like these old combination of enriched flour and fragrant orange marmalade. Flavorful apple-sauce, plump raisins, and chopped nuts are a hearty combination for enriched flour in Applesauce Cookies. Filled Cookies brimful of prune, fig or date filling add their share of mineral and vitamins in a most agreeable manner.

And so the cookie parade marches on. The cookie jar plentiful with generous cookies is as tempting to Dad and the children as the perky fall bonnet is to Mother. A well-filled cookie jar might even help get that new bonnet for Mother if she is needing one, especially if the jar is kept strategically filled with Dad's favorites.

Cookies serve equally well on the war front as on the home front. Lunch-boxes for war workers or school children are especially enjoyable when cookies are included. Boxes of cookies sent to army camps are morale-builders for boys and girls who long for Mother's home cooking, and who like to be reminded often that the family is thinking of them.

TRY THIS WAY OF CANNING TURNIP GREENS

Wash carefully and pre-cook in live steam or place in kettle with just the water clinging to the leaves after the last washing and pre-cook until wilted. Cut into size and pack at once into clean jars, being careful not to press too tightly. Add 1 teaspoon of salt to each quart jar if desired and fill to within 1-2 inch of top with boiling water. After greens have been packed into jars run knife through center to let out air bubbles. Put on cap, screwing firmly tight. Process 60 minutes—10 pound pressure, or in hot water bath 1 hour each day for 3 successive days. Have water cover jars 1 inch above top. Blanching water should be used in covering greens after they are put in jars as far as possible.

FRESH FRUITS WILL YIELD GOOD JUICES FOR CANNING

Those softer fruits which the homemaker must discard for whole fruit canning will give excellent juice provided they are free from bruises and decay and in no way overripe.

You may use rhubarb, berries, cherries, currants, plums, cranberries, or grapes, preferably locally grown. Fruits from your garden or nearby farms are best for juices, since freshness plays an important role in all successful canning. Red raspberries make an especially fine fruit juice that retains the fresh fruit flavor over many months, even though it may lose some color in time. Wild berries, if sufficiently juicy, may be used and also the wild Muscadine grape if it grows in your region.

To preserve the fruity taste, juice for beverages should be extracted from the raw or slightly heated fruit. Since apples and peaches do not give up their juices readily when raw or slightly heated, home economists do not recommend them for home-canned beverage juice.

Citrus juices are hard to put up at home and take a good deal of sugar. Chemists of the department of agriculture have found in their experiments that citrus juice packed in glass and stored at room temperatures darkened and developed "off flavors."

HEALTH HINTS

1. VENTILATE properly every room in your home.
2. Keep DISEASE-CARRYING INSECTS out by screening every window, door, or other opening.
3. Keep all RUBBISH and other FILTH cleaned off your premises and all GARBAGE CANS AND PRIVIES screened against flies.
4. Don't allow STAGNANT WATER to remain on your premises. It is the BREEDING PLACE of MOSQUITOES.
5. SLEEP in the FRESH AIR always; in the open if you can, and, where it is possible, SLEEP ALONE.
6. ALWAYS WASH YOUR HANDS before eating, and do not overeat. This especially applies to meats and eggs.
7. EAT plenty of FRUIT; also some HARD and some BULKY foods.
8. EAT SLOWLY; chew thoroughly. DRINK plenty of WATER daily.
9. See that the BOWELS MOVE freely AT LEAST ONCE each day.
10. WORK, PLAY, REST, and SLEEP in moderation.
11. DON'T WORRY. Worry is the foe of health. NOTHING has ever been changed by worry, but your health.
12. BEWARE of PATENT MEDICINE. CONSULT YOUR PHYSICAN when your system shows signs of impairment.

PROTEINS ARE NEEDED TO BUILD MICROBE RESISTANCE

Recently we have learned the ehemical composition of antibodies, the materials necessary for the acquisition of increased resistance to microbic agents. These antibodies ere now known to be globulins. formed by the body's cells and transferred to the blood and lymph as anti-body-globulins.

Although a complete analysis of globulin has not as yet been made. we know that it contains at least 14 of the 20-odd "amino acids," including six or more of the essential ones. The essential amino acids are so-called because the body cannot form them itself but must get them pre-formed in food.

This means that antibody-globulin cannot be synthesized unless the individual has available in his diet a large assortment of amino acids, including the essential ones. This necessitates a reasonably omnivorous diet.

The amino acids of the food must come from proteins, and protein scarcity constitutes a serious menace to every starving person, but particularly to the growing young.

DEVELOPS ELECTROLYSIS

The electrolytic method now used to produce aluminum was discovered in 1886 by an American, Charles Martin Hall, then 22 years old. By an odd coincidence, a young Frenchman of the same age, Paul Louis Toussant Heroult, working independently in France, was making the same discovery. Their process, which involves the solution of aluminum oxide in melted cryolite, was destined to revolutionize the entire industry, because the metal could be produced at a fraction of the cost of previous methods. It sold for $8 a pound in 1886, within five years was less than $1 a pound, and today is quoted at 15 cents a pound.

CLEARING THE TRACK

It has remained for Joseph B. Eastman, Director of the Office of Defense Transportation for the government, to recognize officially the fact that a lot of our manpower shortage is the result of rules and regulations that were often devised for the specific purpose of making two jobs where one was sufficient.

Unless vigorous remedies are undertaken at once, the country is headed for a crisis in railroad manpower, says Mr. Eastman. In a 13-point program to forestall such a crisis, he recommends as an important essential the suspension for the duration in certain circumstances of full crew laws and engine mileage limitations.

Mr. Eastman recognizes that the railroads have gone the limit in expanding service under many restrictions, and that the time has come to remove any artificial barriers which block the fullest use of available manpower and equipment in this critical period.

This should be haled by both labor and management as an opportunity to once more demonstrate that America's rail transportation system and its workers can and will conquer problems as they arise. As a war emergency, it is to be hoped the suggestion of Mr. Eastman will be considered in this light.

TURKEY DRY TABLELAND

Turkey is a high, dry tableland fringed with a fairly fertile coastal belt. From the lofty mountains of Armena on the eastern frontier the land levels off in a series of prairielike areas partitioned by treeless, wind-swept ridges. Rivers live up to their names only in spring. In summer they go dry, trace their courses only as sun-baked streaks of sticks and stones.

Uplands yield grain and grazing for goats. Large-scale agriculture prospers on the Aegean coastt. Fruit, cotton and tobacco take big slices of acreage. East of the Straits and the Sea of Marmara Turkey is a rolling, grain-bearing plain, a "bread basket" for the nation.

U. S. HELPING SO. AMERICA BUILD OWN FISH INDUSTRY

Even the fish are doing their bit to promote the Good Neighbor policy. Finny denizens of the Great Lakes and Potomac are winging their way southward to provide other American republics with an important new industry.

For several years, according to the newspaper, the United States Bureau of Fisheries, the Division of Agricultural Co-operation of the Pan-American Union and the Venezuelan government have been working jointly to stock Andean mountain streams and lakes with trout, bass, perch, carp and other edible fish. The fish have taken so readily to their new environment that countries like Chile, Colombia and Venezuela can look forward to commercial fishing as an important new industry and a permanent source of food.

Experiments began in 1933, when the Bureau of Fisheries analyzed samples of water taken from Lake Valencia in northern Venezuela and recommended stocking it with carp and catfish. Six hundred fish of both species were taken from the Potomac and other streams, but none survived the trip to Venezuela. The following year 800 black bass, carp, catfish, perch, crappies and sunfish were shipped to the South American republic by boat, train and truck. Enough reached their destination to warrant successful experimentation.

Fish were bred in large enclosures built into the lake, to protect them from the voracious baba and guabina. Fry were collected, marked and released in batches of 100,000, with careful checks kept on their development. Results were so favorable that the three agencies concerned began to experiment with brook and lake trout. For several years the Bureau of Fisheries flew batches of several hundred thousand trout eggs to Venezuela each year. To these were added about 200,000 eggs a year, harvested in the South American republic.

NAPOLEON DECREED BEET GROWTH

When the French were cut off from the West Indian trade by the English blockade during the Napoleonic wars, they had to look about for a new source of sugar. Making use of earlier experiments by Marggraf, a German chemst, in the extraction of sugar from beets, they turned to sugar beet culture. Established by the decree of Napoleon, the sugar beet industry of France thrived.

It spread throughout Europe rapidly, to Germany, Russia, the Balkans, Engiand. From E ngland it came to the United States in 1836. Since that time, the domestically produced beet sugar has become a vital factor in the nation's peacetime economy—and an outstanding example of the many foods we have found we can produce at home.

VERSATILE LEATHERNECK

Most marines boast of versatility and Corp. Floyd R. Edmondson of Long Beach, Calif., is no exception.

Two of his buddies stationed at a tropcal island outpost wanted to organize a string band for the entertainment of marines, so Corp. Edmondson went about the task of making a banjo.

All he needed was a milk can, a piece of coconut wood and fish gut. The milk can, salvaged with coconut wood to make the instrument's box. The fish gut was obtained from natives and the banjo's neck was shaped from coconut wood.

Rookie: Do you know how to throw a schewball?

Friends, NAACP And Other Groups Working To Get Rid Of Evil Brought By Dixie Workers Afflicted with "Superiority Complex."

ATLANTA, Ga., Nov. 25—(ANP) Southern white war workers infiltrating California war industries have made themselves unhappy, the Californians uneasy and Negroes resentful, while carrying their sectional prejudices and customs forward at every cost, a young war worker returning to Atlanta revealed Wednesday.

Robert Scott Kenning, who worked six months at the Hunter s Point Naval Dry docks three miles out of San Francisco, said he quit his job, got a release and returned to Atlanta because of growing discrimination and prejulice, resulting in low morale and inefficiency at the California shipyard.

Kennon added that those who carry "supremacy" ideas to the coast are the "most unhappy Americans" there, attempting to carry out the letter of their prejudicial belief about life and racial customs in general.

Kennon, who is 20, went to the west coast in May, enrolled in the NYA training school at San Luis, Calif. Having finished his course. he was employed as a machinist's helper, second class, at $60 a week.

The young Atlantan said he was in the first section of trainees who went into the new quarters at Hunter's Point and that at first there was no problems, since non-segregation was the rule. But when the southerners moved in, there developed antagonisms about everything.

Whites from other sections were confused by their demands, he said.

Kennon was in the midst of efforts to alleviate tensions, working in the personnel department of the San Francisco Recreational commission. He said he helped to quell a minor riot which started at one of the units. It is the belief of southerners that the Negro is inferior, unclean, criminally minded and othrewise offensive.

Then, too, the navy's policy of keeping Negroes back in helpers' jobs disgusted Kennon. He revealed that ace workers who had served for years as first class joprneymen and machinists' mates were relegated to helpers' second and third class when they arrived at Hunter's Point. There seemed to prevail a feeling that Negroes were simply not to get upper class work at upper class pay. Similar conditions did not prevail at private yards, he said.

Several organizations are at work trying to combat the rising and existing prejudices being shown at the yard and in nearby San Francisco, Kennon declared. Foremost among these are the NAACP branch and the Friends, a branch of the Quaker movement.

Bayard Rustin, a worker with the Fellowship of Reconciliation and a disciples of Mahatma Ghandi, was said to be one of the leading and guiding lights in the anti-bias movement.

With the movement of all Japanese from San Francisco's Jap Town, Negroes were moved over into the area from the Fillmore sector and problems loom which may outshine those of crowded Harlem, Kennon said. The Negro population of San Francisco has quadrupled upwards from around 4,000 and they have been restricted to the Fillmore and Jap Town areas. Organizations, he said, are at work on these problems.

TUSKEGEE TRAINED FLYERS LEAVE FOR BOMBARDIER COURSE

Former Pursuit Aspirants Get Chance to Deliver "Knockout Blows" From Air

KESSLER FIELD, Miss, Nov. 25 (ANP)—More than 100 former aviation cadets from Tuskegee Army Air field arrived here last week to begin training as bombardiers. The men were scheduled to go through psychological testing this week before being assigned to regular training schedules.

All of the men have flying experience because all of them formerly were aspirants to become pursuit pilots. Failing because of academic requirements or some little quirk which prevented their winning the coveted wings of a pursuit pilot, the boys have a new opportunity as they strive to become "air marksmen" and take their places in bombing crews. It is understood they will also receive navigation training, the jobs of navigator bombardier being combined in the future.

Practically every ex-cadet on the Tuskegee field except those were eliminated because of some physical disability was eligible and eager to join this the first group of Negro cadets to get bombardier training. In giving the men who had sought to be pilots and opportunity to become bombardiers the air corps is following the same procedure used with white flying students.

At the same time a dozen cadets who had finished training at Tuskegee in twin engine flying, left for Mather field for further training as bomber pilots

These movements indicate that bomber crew training is definitely on its way. The men will get their first training at Tuskegee field and then be assigned to other bases for further training. Half of the classes at Tuskegee in the future will be twin engine trainees for bombers. The balance will specialize on the single engine jobs and be used to form replacements for the men of the 332d group now training at Selfridge Field, Mich.

---

pital medical workers, 1 psychiatric worker and 3 clerical workers; and 6 at Tuskegee, including 1 field director, 1 assistant field director, and 1 clerical worker, all assigned to the camp; and 1 assistant field director, 1 recreation worker and 1 clerical worker assigned to the hospital.

Parent: Young man, do you really think you should be taking my daughter to night clubs and roadhouses all the time?

Suitor: Indeed not. Let's try to reason with her.

"SOAPLESS SOAPS"

"Soapless soaps" represent another important contribution of the research laboratory to our daily lives. Starting with ordinary vegetable and animal oils, the chemist makes "fatty alcohols" which, in combination with sulfuric acid and other chemicals, known as "fatty alcohol sulfates."

Although chemically quite different from ordinary soap, certain of the fatty alcohol sulfates are the best "detergents" known. They are similar to ordinary soap in cleansing properties, but better in that they work in hard water as well as in soft water. Even with briny ocean water they form billows of foaming suds.

Awaits Navy Commission

ATLANTA, Nov. 25—(ANP)—Joseph L. Pierce, son of Mrs. Geraldine L. Pierce of this city, is studying at Tufts college in Medford, Mass., in preparation for a commission under the navy training program, his mother disclosed here this week.

In the roster of naval students published Nov. 10, he is rated as a member of V-12 in the engineering course. There are two Georgia boys among the 1,000 men stationed at the college, Pierce being the only Negro.

Love tells of today its forgiveness.

98 MEN AND WOMEN SERVE RED CROSS HERE AND ABROAD

Colored Personnel Taken From Many Jobs and Professions

WASHINGTON, D. C.—Bending their varied talents toward the single vital objective of backing up America's fighting men, Negro personnel in Red Cross uniform numbering 98 are serving in Army camps and hospitals in the United States in major war theaters overseas, and in Red Cross clubs in overseas leave areas.

Their job is to solve the problems, great or small, of United States servicemen wherever they are stationed. In the South Pacific, the British Isles and North Africa, at Fort Huachuca, Ariz., and the Army Flying School at Tuskegee, they shoulder the burdens of soldiers far from home and helpless to cope with family difficulties. To meet a family emergency, the Red Cross field director is able to communicate by telephone, cable or radiogram with the Red Cross chapter in the soldier's home town, and the chapter Home Service stands ready to help.

At Army hospitals in the United States, Red Cross workers serve the hospitalized servicemen and the military personnel on duty at the hospital. Moving pictures and other medically approved recreational activities are planned and directed to speed recovery of invalids. Ill or convalescent servicemen and the able-bodied alike may avail themselves of the Red Cross field director's aid.

The problem of an overseas soldier on leave may be merely where to go and what to do, what sights to see in a strange land. He may make his home at Red Cross club, where lodging and meals are provided at a nominal charge, and friendly Red Cross workers will "show him the ropes." Facilities for many types of recreation, for showers or for "just plain sittin'" in attractive surroundings and with good company are available at the club, and the Red Cross girls or men will probably remind him to write home if he hasn't recently. Or they will direct him to local points of interest if sightseeing strikes his fancy.

In the more remote areas where clubs cannot be established, Red Cross clubmobiles operate, visiting military outposts and dispensing hot coffee, doughnuts, cigarettes, candy and chewing gum. Books, magazines and sports equipment also are carried in the vans. In such spots especially the soldiers appreciate the opportunity to "chew the fat" with folks from back home in the States.

Coming from many types of peacetime jobs, these Red Cross workers include former lawyers, teachers, insurance salesmen, public welfare workers and many others, who have put their careers in the background for the duration to "get closer to the war," serving the men of the Army. Before going to their overseas posts or to military stations in the United States, they are trained for their new jobs at Red Cross national headquarters in Washington.

On duty in the British Isles are 50 Negro Red Cross workers, including 1 field director, 8 club directors, 7 assistant club directors, 9 program directors, 12 assistant program directors, 10 personal service directors, 1 staff assistant (general), and 2 staff assistants (clubmobile).

Sixteen such workers serve in Australia: 1 field director, 1 assistant field director, 1 assistant field director (recreation), 2 club directors, 3 assistant club directors, 4 program directors, 2 assistant program directors, and 2 personal service directors.

In North Africa are 12 workers: 2 field directors, 4 club directors, 4 assistant club directors and 2 program directors.

In the United States, 20 Negro Red Cross workers are on duty at two military stations: 14 at Fort Huachuca, comprising 4 assistant field directors in the camp, 1 assistant field director in the hospital, 3 hospital recreation workers, 2 hos-

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

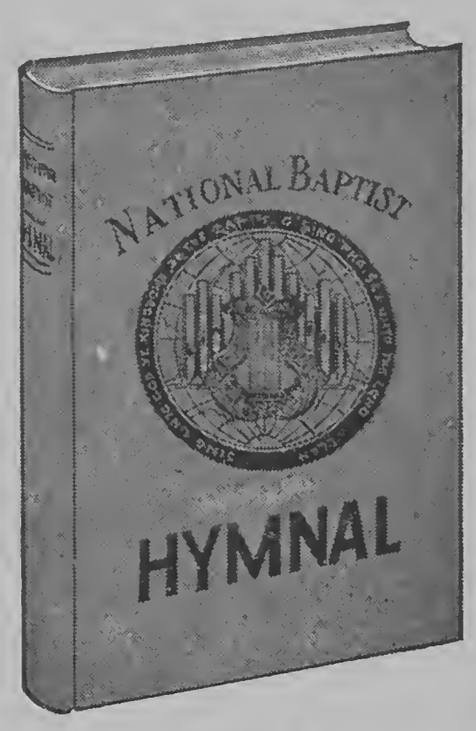
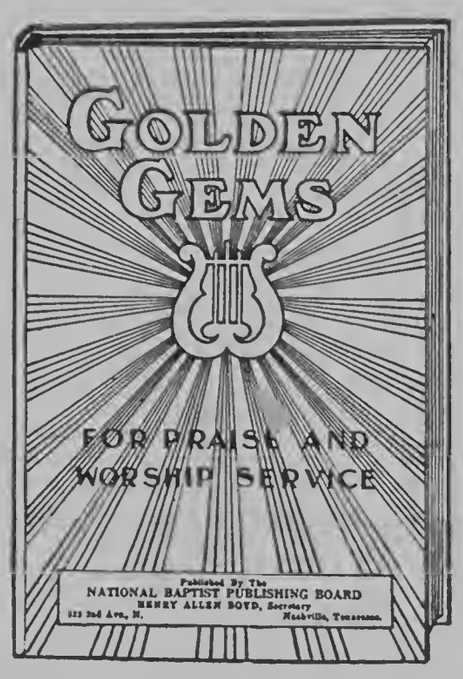
HENRY ALLEN BOYD, Sec.
523 Second Avenue, North,
Nashville, Tennessee



PRICE $1.00



Our Newest and Most Popular
SONG BOOK

Contains Such Popular Songs As:

He Understands He'll say well Done
Gospel Waves
Is He Yours
The Unseen King
Singing as We Go
I'm Out on the Battlefield
He is Coming Soon
He's My Everything
Only Give Me Jesus
Over in the Glory Land

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd ---------- Owner
Offiee, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truek Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Seeond Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under aet of Mareh 3,-1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer. 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used

Subseription price $1.00 per year. 75c for six months, payable in advanee. Personal eheeks must be eertified. Make all cheeks or money orders payable to The Modern Farmer.

Advertising rates and sworn eireulation figures presented upon applieation.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

AN EVENING PRAYER

We beseech Thee, Lord, to behold us with favor, folk of many families and nations, gathered together in the peace of this roof; weak men and women, subsisting under the convert of Thy patience. Be patient still; suffer us yet awhile longer.....with our broken purposes of good, with our idle endeavors against evil... suffer us awhile longer to endure, and (if it may be) help us do better. Bless to us our extraordinary mercies; if the day come when these must be taken, have us play the man under affliction. Be with our friends; be with ourselves. Go with each of us to rest; if any awake, temper to them the dark hours of watching; and when the day returns to us, our sun and comforter, call us up with morning faces and with morning hearts—eager to labor-----eager to be happy, if happiness shall be our portion----and if the day be marked for sorrow------strong to endure.

—Robert Louis Stevenson.

FRIENDSHIP

"Friendship is a strong and habitual inelination in two persons to promote the Good and Happiness of one another.

Such at least was the friendship in the seventeenth century if we are to believe the novelist and historians of that day. And to those same writers, extolling individual friendships, do we owe the many famous examples which have endured even unto this day, and to which there seems no counterpart in our modern eivilization with its petty jealousies, rivalries and the always present mercenary motives which seem to actuate our very contaet with our fellows. Today every man is ready to give a long catalogue of those virtues and good qualities he expeets to find in the person of a friend, but few of us are careful to cultivate them in ourselves.

Love and esteem are the first principles of friendship which are always wanting. Jealousy and gossip are the greatest destroyers of friendship. Competition in home life; houses. furniture, elothes, automobiles children, servants, leisure and popularity destroy friendships and lessen regard which might easily develop into friendship.

Friendship immediately banishes envy under all its disguises. A man who can once doubt whether he should rejoiee at his friends being happier than himself may depend upon it that he is an utter stranger to his virture.

CALLING ALL INSECTS

BELIEVE it or not, the world's most skilled radio operators are the inseets. Long before mankind dreamed of such a thing these tiny creatures have been using the radio as a means of communieation.

One of the most skilful radio experts in the world is the eockroaeh. Shut one of them up in a box and leave another outside, although neither ean see the other they ean communieate. Every eockroach is equipped with feelers which are really antennae. By waving these back and forth the inseet sends out a flash that has a wave length of half an ineh. The same antennae can also reeeive the message sent in reply.

Even the mosquito is believed to possess radio equipment. His feelers are eovered with hairs, each having a separate tone like a piano or organ. By the tones, the mosquito can send a message and reeeive a reply. That buzzing whieh warns us of his presenee is the sound of his broadeasting station. When you slap one you destroy one of the most ingenious of all radio sets.

Spiders are believed to possess wireless apparatus. At any rate it has been found that nothing will make a spider any angrier than to strike a tuning fork near him. The sound probably interrupts his broadeast.

Many insects have their radio sets in queer places. The moth has his in his stomaeh; the grasshopper has a hole in his leg below the knee through whieh he receives his messages. The common housefly has a set of knobs on his body which act as reeeivers for messages.

—Albert A. Rand

SILK WORMS SPIN COCOONS

American-born silk worms reaeh their maturity in a month, at whieh time they get down to the serious business of spinning their eoeoons. The worms will spin enough silk within a few hours to conceal themselves from outside view, and will then eontinue to spin for several days until the cocoon is completed.

Ten days or so later the silk worm emerges as a moth and breaks through the silken shell. Sinee the moth possesses no ehewing meehanism it softens the cocoon by secreting a solvent material and then claws its way to the outside. Ordinarily these moths do not fly, because they have lost the use of their wings through generations of domestication.

GOD IN NATURE

If I can lead a man who has been blind
To see the beauty in a blade of grass;
If I can aid my fellow men to find
The friendliness of trees they daily pass;

If I ean stir a soul to view the dawn
With seeing eyes and hold the vision clear
So he may drink the rapture when 'tis gone,
To purify some sordid atmosphere;

If I ean help the human ear to hear
The gladness in the waterfall's refrain;
The tenderness of Robins piping clear;
The healing in the sound of falling rain;

If I can rouse but one to that rebirth
Which sees God mirrored in eaeh flower and tree—
To feel his oneness with the whole of earth—
Why, that will be priceless joy to me!

—Grace G. Bostwick.

PRESERVATION OF IMPORTANT VEGETABLE SEEDS NECESSARY

FOR BEST RESULTS NEXT SPRING, CARE MUST BE EXERCISED IN PROTECTING FROM VARIOUS ILLS

ByFloyd Bralliar

Last week we wrote about the importanee of everyone saving as many of their own seeds for next year's planting as possible. Since that time we have received a eommunication from Washington asking us to stress this again for it is very certain that there will be a shortage in any kind of important vegetable seeds next spring.

We did not mention the importanee of treating beans, peas and similar seeds in order to prevent weevil last week. It is highly important to do this, especially with beans and peas for the eggs of weevil are very apt to be already inside many of the seeds we save. In order to properly kill these without injuring the germination of the seeds, fumigating with earbon disulfide, whieh ean be obtained at any drug store and at most seed stores, is recommended.

Put the seed to be treated in a tight box or ean and set a shallow saucer or jar lid on top of the seed and pour a half teaspoonful of earbon disulfide in this. Now put on the packaging lid or cover this box with a number of thicknesses of cloth. Leave it for 24 hours The earbon disulfide turns to a very heavy and poisoning gas that will kill these weevil, both eggs or young larvae. Now remove the seeds from the fumigator, air them thoroughly in the open, put them in eloth bags until planting time next spring. In handling earbon disulfide, it is vital to remember that this gas is very poisonous and very inflammable and explosive. So in fumigating, be sure that there is no fire—not even in a lighted cigaret—anywhere near..

Many, of our readers do not understand that their own potatoes are just as good for seed as those that someone else raised a thousand miles away. Neither do they understand that while we should never plant small potatoes year after year, that when potatoes are high priced as they are this year it is not only safe but sensible to pick out smaller potatoes and save them for next year's seed. Any potato of an ineh in diameter on up, if kept over until early next spring, can be planted with every prospeet of producing a good crop. The seed potatoes sold by the regular seedman are only ordinary potatoes carefully kept through the weather so that they do not sprout too badly and sold to you at an advance in price of the regular eating stock.

Sometimes regular potatoes intended for food are treated chemically in such a way that they will not sprout at all. The only difference between them and the ordinary seed potatoes is that they have been treated while the seed potatoes have not. Any potato that shows sprouts in the eyes will grow. Of course potatoes are not likely to sprout until spring, but usually they begin sprouting by the time they are ready to plant.

In keeping seed potatoes ove winter it is best to put them in shallow boxes or eloth bags, the bags being preferred, and store them where the temperature will not go down quite to freezing but will be below 70 degrees Fahrenheit at all times. Of eourse if they should go above 70 for a little, it will do no serious harm other than encouraging them to sprout.

Keep Air Moist

Potatoes should never be stored elose to the furnaee or in any plaee that is too dry. On the other hand it is better if the air is moist at all times where they are stored. It must not be damp enough to eause the potatoes to get wet and rot. Most of us have some place in a basement or in some shed where we can store potatoes with just a little extra protection, to keep them from freezing in very eold weather.

There are those in the South who selcet small potatoes from an ineh to an ineh and three-quarters in diameter, plant them late in November and let them lie in the ground until the following spring. In doing this, the potato is not cut at all but planted whole and is covered four or five inches deep. We do not recommend this way of planting potatoes, but we have seen some exeellent stands and exeellent yields from potatoes that were planted in this way. The greatest diffieulty in doing. this kind of planting is that some of the potatoes are apt to rot in the ground and not apt to eome out evenly in the spring. Often there is as much as 30 days between the time the first ones come up and the appearance of the last ones. Of course this means that the erop ripens unevenly.

Saving Dry Peas

Those who are saving dry peas for winter use, and there should be plenty of such among our readers, need to remember that these peas are apt to be infested by weevil. At present, these weevil are prboably in the egg stage and eannot be seen because they are too small. Put if not treated, they eertainly will show up before the winter is over. Any peas or beans kept in the dry stage for eating purposes should be fumigated just as we suggested above for fumigating seed The fumigation of these beans and peas will not injure their food value or ehange their flavor in any way, but will prevent plenty of trouble later on.

It is not too late to plant radishes, Hanover kale, or blackseeded Simpson lettuce, to be eaten when the leaves are small. Neither is it too late to plant any of the multiplier onions or Egyptian shallots, commonly known as winter onions. Now that we know that we must feed Italy, it is very sure that we will need all such foods as we can grow. In fact we have no reason to believe that there will not be a shortage of these foods in our own neighborhood.

Seventop turnips, or even the ordinary variety, may still be sown in much of our territory. Possibly we will not get turnips themselves, but the leaves of the ordinary turnips are just as good for boiled greens as are those of the seventop variety. The seeds are very eheap and worth taking a ehanee. We are almost sure to get plenty of tops, at least, from turnip seeds sown now.

LOCKER PLANTS IN U. S.

From less than 250 in 1935, the number of frozen-food loeker plants has grown to an estimated 4,600 in 1942, and restrietions on materials have reportedly halted the construetion of 2,000 more plants. The average plant provides 338 loekers. The industry handles nearly one billion pounds of food annually and serves nearly six million eonsumers.

THE CHAMP COMES HOME

Read this! It will make you feel good! It will make you proud of Ameriea initiative!

The eountry's railroad transportation system, though pressed nearly to the limit of its resoures, has been able to meet the demands made upon it by the war effort, according to the Board of Investigation and Review appointed under the transportation aet of 1940. "Prior to the war," reports the Board, "it was feared that transportation plants had been built beyond any requirements, but this so-called surplus has proved a lifesaver. Without it the eountry would have been in a desperate position."

Commenting, the New York Herald Tribune says: 'This is interesting as far as it goes. But it is a pretty routine statement of fact. It doesn't even hint at the real story of the transportation miraele of 1940-'43, whieh is a humdinger. This is the story of how that 'overbuilt,' 'overeapitalized,' 'outmoded,' 'moribund' branch of transportation known as the railroads has eome baek in World War II to show those upstart new competitors of the last twenty years who is top dog when it eomes to handling a really big traffic. job.

"For the railroads haven't just swung their own share of the war traffic. They have had to take up . . . a good share of the loads of handle only a nominal part of the oil movement to the Eastern seaboard, for example, the earriers their competitors. . . . Geared to stepped in when the U-boat struek down the eoastwise tanker serviee, and . . . raised their share of this vital traffic from 10,000 barrels a day to 1,000,000, a 100-fold expansion. They took over bodily the war-dammed traffie of the Panama Canal. When wartime restrietions halted the manufaeture of motor trueks, they absorbed mueh of the potential increase here. And, in addition to handling troop movements four times as great as those of World War I, they shared with the motorbuses the movement of millions of travelers who found themselves unable to use their private cars beeause of rubber or 'gas' shortages.

"There is a toueh of drama in this Comebaek of the Champion, not only to relieve but to surpass the deeds of his youth. But there is also in it a profound lesson. . . We have seen it demonstrated . . . that railroad transportation possesses an emergeney . . . . expandibility which is unrivaled among its eompetitors. This must be a basie eonsideration when the time comes to formulate a postwar long-term national transportation poliey."

FACTS ABOUT RAILROADS

Washington, D. C.—There were 134,217 cars of export freight, exeluding eoal and grain, handled through United States ports in September this year eompared with 80,528 cars in September last year, an inereasc of 67 per cent, aecording to reports just compiled by the Manager of Port Traffic and made publie today by the Association of American Railroads.

Export grain unloaded at the ports totaled 2,842 ears, eompared with 1,559 in August, 1942, an inerease of 82 per cent.

In addition, the railroads also handled 714 earloads of coastal freight in September this year, eompared with 831 in the same month last year, a deerease of 15 per eent.

The total of 137,773 cars of export and eoastal freight, exeluding eoal, handled in September this year through the ports, while slightly less than in August, represented an average daily unloading of 4,592 cars, the highest on record, compared with a previous high of 4,508 in August, 1943.

BEAN DISEASES THRIVE IN RAINY, HUMID WEATHER

Blight and anthracnose can be destructive to beans. Both thrive in rainy, humid weather. The organisms causing these diseases are carried within the seeds, and cannot be controlled by chemical seed treatments.

The signs of these diseases appear early. Young plants grown from affected seed often show black or brown sunken spots on the cotyledons, or halves of the bean that come up, or on the stem where the first true leaves appear. A white, yellow or pinkish, sticky ooze may appear on these spots. This contains the disease organisms.

Later, anthracnose can be recognized by blackened, dead veins on the underside of the leaves. Blight may show as irregular brownish splotches on leaves, sometimes with yellow or reddish margins.

Successful control of the diseases depends on preventing spread of the organisms from diseased to healthy plants by wind driven rain, splashing water, insects, man, and other animals. From the time the first leaves appear, plants which exhibit the described symptoms or whose cotyledons and young leaves are misshapen and stunted, should be destroyed. Two or three early-diseased bean plants left in a garden can result in total loss of the crop.

SEA WATER UNDRINKABLE MIXTURE OF ELEMENTS

How to "unscramble" sea water chemically so that a drinkable, life-sustaining liquid results, is one of the latest discoveries stimulated by war conditions—in this case by the tragic plight of hundreds of mariners and fliers set adrift at sea, many to die of thirst. A kit for treating the sea water, developed by scientists of the navy and other agencies, will be placed in ships' lifeboats and in the rubber rafts carried by overseas airplanes.

From the point of view of drinkableness by man, sea water is just water with an assortment of ill tasting and poisonous chemicals. It is a sort of "world soup" leached and stewed from the bony framework of the earth through untold geologic ages.

Almost every conceivable substance has been washed by rains and rivers into the sea, but some are there now in solution in tremendously greater strength than others. Of the 92 elements that make up the earth and everything in it, 49 have been found in sea water. It is likely that traces of many of the other 43 are there too.

The ease with which materials dissolve is one important factor in what is found in the sea today. Silicon (chief ingredient in sand), aluminum, and iron are the three most abundant solid elements in the earth's crust; but because they are so hard to dissolve, sea water is practically free of them.

OLD MAN OF SEA

The "Story of the Seven Voyages of Sindbad of the Sea," one of the fabulous tales of the Arabian Nights, recounts the strange adventures of Sindbad. On his fifth voyage he met on an island an old man who indicated he wanted to be carried across a stream. Sindbad lifted him to his shoulders but while they crossed the stream the gnarled old fellow wound his legs around Sindbad's neck, nearly choking him, and would not get down. After carrying him for many exhausting days, Sindbad made some grape wine and the old man drank it until he became intoxicated, whereupon Sindbad managed to throw him to the ground, then struck him on the head with a stone until he died.

Later, passengers on a vessel told Sindbad. "This old man who rode upon your shoulders is called the Old Man of the Sea, and no one was ever beneath his limbs and escaped from him excepting thee."

IT DOESN'T ADD UP

Commenting on the situation of the oil industry, O. D. Donnell, President of the Ohio Oil Company, says: "The petroleum situation in the United States has now reached the point where the industry can no longer guarantee sufficient crude oil to meet war and essential civilian requirements unless petroleum products, particularly gasoline, domestic heating oils and fuel oils, are used conservatively.

"More and more of each barrel of crude oil that formerly went into civilian automotive gasoline is now going into 100 octane aviation gasoline, toluene for TNT and munitions, butadiene for synthetic rubber, diesel oil for the Navy and distillates for reprocessing in catalytic cracking plants for the manufacture of war products.

"The situation is aggravated by tremendous decline in discovery of sufficient new large fields over past two years to maintain an adequate backlog of crude oil reserves."

The Petroleum Industry War Council blames the falling off in discovery of new reserves on arbitrary and inadequate price ceilings on crude oil. The cost of wildcatting, including labor, material and taxation, prohibits necessary risk taking in this field. Must the nation suffer an oil famine before this simple fact in recognized?

No industry has worked more conscientiously or has had more detail to comply with in connection with OPA rulings, than has the nation's food industry.

OPA would be helpless in carrying out a rationing and price ceiling program without the co-operation of the stores. Therefore, it is an obligation of OPA officials to simplify rationing and price ceilings as rapidly as improvements are possible. Friendly cooperation by the three parties at interest—the government, the stores and the consumers—will secure results unobtainable by antagonistic policies.

WHY BE COPY CATS?

The argument has been advanced that if one believes in a free public school system, one should not object to "free. medicine" controlled and paid for by the state.

There is considerable difference between a public school system to give every individual a chance for mental equipment with which to earn a living and care for himself, and furnishing the individual, at state expense, the various necessities and luxuries of life.

"Cradle to the grave security" sounds appealing, but a nation which accepts that plan sells its independence and admits that its people cannot care for themselves.

The American medical system has been the wonder of this war. It was not developed or fostered by the state. It was the result of enterprise and initiative of American doctors who over a long period of years have been determined to make American medicine supreme.

American medicine probably gives more actual free service to those who need it, than do the so-called socialized medical systems of foreign countries, which load the cost of their "free" service onto the individual in the form of special taxes.

Why should we in this country even consider disrupting the greatest medical system in the world to copy experiments of nations which cannot match ours in medical progress?

We have but one life here and what comes after it
We cannot with certainty say,
But it pays, no matter what comes After it,
To accomplish something in this life
And not merely to have a soft and pleasant time.
—Theodore Roosevelt.

SERVICE for OCTOBER, 1943

RAIDER WORKING IN U. S.

The people of the United States have again been warned that suicide air raids by the Axis may still be expected. In the meantime another raider, fire, is working daily in our midst destroying millions of dollars worth of vital property.

Whether a factory or a home is burned or bombed, the loss is the same. With warehouses now full of irreplaceable farm crops, and with vital war materials stored throughout the country, a warning should go out for every citizen to be doubly alert to fire hazards.

All over the nation, possibilty of fire has been increased by housing developments of a flammable character, by war industries operating in buildings never intended to house them, by storage of irreplaceable materials in warehouses where grass or trash fires constantly menace them, and by inadequate or inaccessible water supplies in areas never prepared for storage or production purposes. These are but a few of the fire risks common to every war congested area today. They are potential hazards as deadly as any bombing raid.

There is little excuse for the existence of such hazards. They are generally controllable through painstaking inspections. Every individual in every plant and home should be enlisted to help with such inspection and fire prevention work, just as they are enlisted to sell war bonds. It is as important to prevent a fire which destroys property or goods which the nation buys with the money from war bonds, as it is to sell the bonds. It may not be as spectacular to prevent fires as it is to fight them, but it certainly is a more effective means of conserving immediately needed resources.

ATTACK GARDENS

Gardeners growing cucumbers, melons, squash or pumpkins may expect trouble from bacterial wilt and powdery mildew. Both diseases affect young plants and both are fortunately controlled by the same simple means.

To be most successful, control must be applied before symptoms appear, hence recognition of the disease is of little importance. In wilt, the plants wilt and die rather rapidly, one leaf at a time; in the powdery mildew, a white mealy growth appears on the upper side of the leaves, and the leaves may wither and die.

Control may be accomplished by using a dust containing 5 per cent insoluable copper, to which is added 10 per cent calcium arsenate. 10 per cent ordinary wheat flour, and the balance of talc. Such a dust may be obtained from dealers under the name "melon dust." Melon dust formerly contained rotenone but the use of this material is now restricted and other materials such as calcium arsenate are used as substitutes.

SIGHTS IN BUENOS AIRES

The Avenida de Alvear in Buenos Aires leaves the city and extends for some distance parallel with the River Plata. Some of the most lavish residences may be seen on this street, while numerous consulates and embassies are situated in the vicinity. Some outstanding monumental works are seen here, while Palermo park is located in the same district. This park extends for many hundreds of acres, has pretty lakes and gardens within its borders, as well as a cricket field, many riding trails, sports clubs, etc. It is a real boon to the citizens owing to its proximity to the city. Four subways serve the people's transportation needs. The cars are brightly lit, spotless, and well-kept generally. The stations produced a similar impression, while they were made more striking by the beautiful murals, depicting Argentine life, which were painted on each platform wall at each station.

There are more than 675,000 workers in U. S. maritime shipyards.

PARAGUAY RICH, COLORFUL

On June 11, 1911, Paraguay separated and established its independence. She waged a five-year war of horror against Argentine, Brazil and Uruguay. Today Paraguay is known for its beef products, hides, cotton, tannin, oranges, tobacco and vegetable oils. Yerba mate was first grown here. Quebracho wood from Paraguay's forests is important in tanning hides. Itaugua lace, sheer as cobwebs is made by the Guarani Indians. The lovely old city of Asuncion, the remains of Jesuit temples, the beauty of the Parana river, wild birds in the palm trees of the Chaco region there are highlights in Paraguay.

MEMORIAL DAY

Memorial Day, or Decoration Day, originated in the South when in 1865 James Redpath led a parade of Union soldiers, citizens and children to nearby Union soldiers' graves and there planted flowers.

The following year the custom was taken up by Southern women for their dead, and in 1868 Gen. John A. Logan, commander-in-chief of the Grand Army of the Republic, designated May 30 for the observance of the celebration, the day now genrally marked by Northern states. Some Southern states have set aside April 26, the date on which Gen. Joseph E. Johnson surrendered, and others, June 3, Jefferson Davis' birthday.

WAR LEVELS PARAGUAY

Independent Paraguay, blessed with immense natural riches and a mild climate, prospered until 1865, when a disastrous war w ith Argentina, Brazil and Uruguay repleted the country's wealth and population. The war was so bitter that only 50 per cent of the population survived it. Of the 225,000 survivors, only 22,000 were males.

The little republic was just recovering rom the effects of a war fought 50 years before when a frontier dispute with Bolivia plunged it into another tragic conflict in 1932. The Chaco war was ended by an armistice in 1935, followed by a peace treaty which fixed the battle lines between the two nations as their frontier.

Famed Singer Views Recent Election Results As Very Significant

NEW YORK, Nov. 25 (ANP)—Victory for all Americans in the war is delayed by economic discrimination against the Negro people, by the segregation and inferior status assigned to Negroes in the armed services and by the southern poll tax system, declared Paul Robeson last week to an audience which comprised the Herald Tribune forum

The renowned singer-actor said the cowardly attacks upon the Negro people in Detroit and elsewhere last summer, are attacks upon all Americans. He pointed out that the Negro peoples' yearning for democratic freedom pre-dated fascism, and that ever since the fascist attack on Ethiopia the Negro people have seen the connection between their own interests and the struggles of all oppressed peoples.

"Today's militant protest of the Negro people, as illustrated in the recent election of the Negro communists to New York City's council," said Robeson, "and the general trend of the Negro vote toward acceptable candidates rather than party labels—this militant protest represents the development of a clearer understanding among Negroes of their goals, their allies and their enemies.

"Negroes know that their rights can only be achieved in an America which has realized all of its democratic rights.

"They know that their struggle is bound up with the struggle against anti-Semitism and against injustices to all minority groups.

"They know also," he said, "that the Negro people's chief allies are found in these sections of organized labor which have membership on a plane of strict equality."

Labor Leader May Give Order To Go To Capitol Next Spring

DENVER, Nov. 25 (ANP)—I advise you that you may expect instructions and the call to march on Washington perhaps next spring," was the final message of A. Philip Randolph, president of the International Brotherhood of Sleeping Car Porters and organizer and national director of the March on Washington in three appearances in Denver last Sunday and Monday.

Sunday night he told an overflowing crowd at Scott Methodist church that the government is much more likely to move in the direction of its pressure than a worthy cause, and that Negroes like labor, capital, the south and other groups must develop pressure if they would have their problems solved as only the federal government and the President can solve them.

Monday afternoon Mr. Randolph went into details concerning his direct nonviolent, good-will action technique before a youth session at New Hope Baptist church where he also heard a clear statement of discrimination as it affects youth from the youths themselves.

Monday night New Hope was again crowded when he declared that the Civil war was "an uncompleted bourgois revolution" which must be completed by the Negro, labor and liberal elements in the nation if indeed its purpose of freeing and giving status to the Negro is to be realized. "And now is the time," he asserted.

The speaker declared that fascism and discrimination are on the increase in the U. S. and called attention to the fact that discrimination is the government policy regarding the Negro; anti-Catholic movements exist in the south and mid-west, there are 200 anti-Semitic groups in America and persistent discrimination in the armed forces, in war industries and in government against Negroes continues.

Dr. C. F. Holmes for the Colorado Committee of Equal qualities, Margaret Roher for the Fellowship of Reconciliation; Mrs. Cora Peters, Council of Clubs; W. F. Turner for the NAACP; Rev. Joseph A. Johnson Jr., for the Ministerial alliance and Mrs. Corrine Lowry for the Iota Phi Lambda sorority and Atty. Thomas Campbell for the Colored Civic association reported on the work of their several organizations in bettering the conditions of the Negroes in Denver at the workshop held at New Hope Baptist church Monday night.

The Sunday meeting was chaired by President Slater, the Monday afternoon meeting by Leon W. Steward and the Monday night workshop by James Chappell, vice president of the unit. These men were the committee in charge of the project.

Boy 13 Slays His Father

ATLANTA, Nov. 25 (ANP)—Rushing to the aid of his mother, 13-year old Matthew Talmadge shot and killed his father, A. B. Talmadge, 49-year old Fulton county farmer Monday night, county police dsiclosed Tuesday.

The shooting, E. W. Wilson said, occurred when Talmadge attacked his wife with a butcher knife and threatened to kill her. The boy shot his father with a .22 rifle which he aimed through a crack in the door, according to police reports.

The youth is being held in Fulton county jail pending action by the grand jury.

Soybeans are an important crop in Manchuria, where 150,000,000 bushels are produced annually.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar

WM. H. BELL, President

NEGRO VFV PICKS ALMOST TWO TONS OF TOMATOES A DAY

Any doubt that the twenty-six Negro Victory Farm Volunteers of Washington, D. C., really meant business when they boarded a bus a couple of weeks ago and headed for Dorchester County, Maryland, to help harvest a 15,000-acre wartime tomato crop was completely blasted last Tuesday when one of the youngsters, William Hill, picked 103 baskets of tomatoes, or nearly 3,600 pounds.

The Maryland farmers had expected each of the boys to harvest on an average of about 50 baskets a day. But most of the boys have exceeded this figure, and this one 15-year old youth has more than doubled it.

So pleased are the farmers with the work of these youths that another group was recruited last week. Now more than fifty Washington youths are enlisted in the VFV, helping to save vital war crops.

The latest figures available show that about 150,000 youths, white and colored, are enrolled in the VFV, helping to harvest war crops in various areas where labor shortages exist.

Extension Service officials, who are assisting with the recruitment, placement, and supervision of the Victory Farm Volunteers, point out that they are helping to answer the farmers' prayers. Until these youths began volunteering, many farmers were fearful that their crops would rot in the fields due to the farm labor shortage. For the boys and girls it is not only an excellent summer outing, but also an opportunity to help win the war. Reports indicate they are all enthusiastic.

The Washington youths who left last week for Maryland farms showed a keen interest in the trip and the war job ahead. Said a set of 15-year-old twins, Chester and Alfred Porter, "We want to get out there and help harvest the tomato crop so that the soldiers will be sure to have enough tomatoes."

When asked what they planned to do with the money they earned, the boys replied, "We are going to give some of it to our mother, we're going to buy some new clothes for school, and we're each going to buy another book of war stamps. You see, we already have two books full."

WFA Head Says Food Is Weapon of War.

Judge Marvin Jones, War Food Administrator, discussed the importance of food as a weapon of war before the American Farm Bureau's Southern Region Training School held at Monroe, Louisiana, recently.

Said Judge Jones. "Nothing is more important than food --Right now it is more important than ever because it is a weapon of war. It is as important as guns and ammunition Our clear cut duty here on the home front is to produce the food and then distribute it so that every pound of it will do the most good."

4-H Family Day

The State Extension Service in North Carolina reports that more than 500 colored farmers attended the seventh annual 4-H Family Day program in Halifax County last week. In addressing the group, R. E. Jones, Negro State agent, stressed the need of clearing farms of mortgages, buying war bonds, and building better health.

Other activities of Negro farmers reported in North Carolina include a curb market in Edgecombe County with sales averaging $180 a week; 14,275 certified chicks in Gates County, and the gathering of thirteen dozen eggs a day by farmer Grover Brown of Henderson County.

4-H In the War

Anxious to help with the wartime farm job, nearly 1,700,000 farm boys and girls, white and colored, are enrolled in the 4-H club program, according to estimates received by the War Food Administration from the State Agricultural Extension Service. It is estimated that Negro 4-H clubbers number well over 200,000.

"The 4-H enrollment does not tell the whole story." M. L. Wilson, director of Extension Service, says, "Farm boys and girls in their club projects are concentrating on producing the needed food and doing other war jobs. In a very large percentage of clubs, each member has set as a goal the production of more than enough food in his 4-H project to feed a fighter. In State after State the reports show more and bigger 4-H Victory Gardens."

In Florida 4-H clubbers are working in community canning plants; in Oklahoma 4-H members have sold enough war bonds to purchase three giant long-range four-motor bombers, and hope ultimately to sell enough to buy an Oklahoma 4-H Bomber Squadron. Georgia 4-H clubbers have sold more than six million dollars worth of bonds, enough to purchase three liberty ships.

Need Wartime Fall Gardens

In urging the planting of fall gardens, H. W. Hochbaum, chairman of the Victory Garden Committee of the U. S. Department of Agriculture, writes in the August number of the Extension Service Review; "Now is the time to consider fall vebetables—green leafy vegetables, yellow vegetables, vitamin-rich vegetables. Extension workers are putting extra push on Victory Gardens to encourage all gardeners to keep their gardens producing.

"Nutrition leaders feel that it may be difficult for some war workers to get their full quota of protective foods. A study conducted by the Food and Nutrition Board of the National Research Council showed that approximately 2 per cent of the people working in one of the larger airplane plants of California showed a lack of niacin, 25.7 per cent showed a lack of thiamin, 32.5 per cent had less ascorbic acid in their blood than is safe, and 42.5 per cent showed some evidences of riboflavin deficiences. Such vitamin deficiencies may result in less of efficiency in war work.

No garden should be idle during the fall and early winter. Vacant garden space is slacker space."

STRANGE BUT TRUE

By F. J. Worrall

PROBABLY the most primitive bird in the world is the Kiwi, or apteryx, a native of New Zealand.

About the size of a domestic fowl, it lays one or two enormous eggs a year.

It is tailless, practically wingless, and has coarse, hairlike feathers. Though its legs are short, it runs rapidly. It has a short neck and a long bill with nostrils at the tip and it makes sounds resembling the growls of a dog.

Then, in West Africa and Southeastern Asia, we find the pangolins, rarely seen, however, because they are nocturnal by habit and hide during the day.

Absolutely toothless and unable to fight, they baffle their enemies by rolling into a tight ball, encased in impenetrable armor of sharp horny scales which cover them from nose to tail tip. They live on ants which they capture with their long tongues by digging in the soil.

The hyrax or "rock rabbit" is found in Africa, Arabia, and Syria. In superficial appearance it resembles the domestic rabbit: also in size and habits, though it lives in rocky places. However, it is believed to be more closely related to the rhinoceros, tapir, and horse because of a similarity in formation of its teeth and feet.

There are many others seldom seen, either because of their scarcity or the fact that they live in inaccessible places, such as the proboscis monkey of Borneo, the spectacle Bear of the Peruvian Andes, and the duckbill.

Probably the queerest of all is the duckbilled platypus of Australia, which is a cross between a bird, a mammal and a reptile, in character. It is built for the land and water.

Like the duck, it has web-feet, a beak, and lays eggs. It is the only poisonous mammal in the world. On its hind legs are spurs connected by long tubes to poisonous glands near the thighs. The poison, though apparently seldom used, resembles snake venom.

It has hair and feeds its young from the breast. It has a pouch on the stomach in which the eggs are hatched, and it growls like a puppy.

In spite of its eccentric appearance it is a timid creature. Once captured, it is easily tamed and is found to be quite intelligent.

UNIQUE RECORD

RUSTY(" a German shepherd, owns probably a unique record. He is the proud possessor of an Honorary Discharge from the U. S. Army.

Belonging to John Prowse, Fireman First Class of the U. S. Navy, Rusty was handed over to the Army to be used as a sentry dog when Prowse was sent to an overseas base. Rusty's home was the "boot camp" for dogs at San Carlos, California.

The German shepherd perferred the environs of home and three times he broke loose and trudged 16 miles homeward. His escape was termed miraculous, as he pulled out the staples from the kennel doors and yet did not slip his collar. He had been housed in a unit devoted to sick and dangerous dogs.

After his fourth escapade, the Army Colonel in charge termed the dog an impossible and what is probably the only discharge from the Army for a dog, was made out for Rusty.

The Honorary Discharge papers read, "Eyes—big and brown; Complexion—ruddy; Occupation—Ambassador at large without portfolio; Horsemanship—None; Martial Status—single; Participated in Battle of San Carlos versus Mesa Verde."

The paper was signed with a wobby X and had dog's footprint at the bottom of the page.

—Henry F. Unger, Y2c, USNR

EARNING DEPENDS ON PRODUCTION

A few facts have come out of the controversy over cial miners' wages, which are startling. The record shows that 453,245,000 tons of bituminous coal were produced during 1940, and that the sales value of that coal at the mine was $861,000,000. In that year, 431,000 men were employed at the coal mines.

From this it is plain that if the whole of the sales value of the coal had been paid to the employes, there was only $2,000 a year available to each of them. After deduction of operating costs, the amount would be materially lower.

Too high wages mean higher coal prices. Higher coal prices would result in less coal sold and less work for the miners. High wages mean little when there is no work.

One sound way for miners to increase their real earnings is greater production per man with resultant lower unit cost. Modern machinery will help achieve this objective.

MILLION DOLLAR CAPE

THE MOST expensive garment in all the world is a cape made of feathers, which was worn by King Kamehameha the Great, of Hawaii. The garment is valued at, and insured for, one million dollars.

This remarkable cape is priceless beyond merely monetary value because it is made of tiny, golden feathers no larger than a child's fingernail, gathered over a long period of time from the wings of the Hawaiian Mamo, a bird which has been extinct since 1870.

As only two of these tiny feathers were taken from the wings of each bird, it was necessary to obtain feathers from countless thousands of the birds in order to assemble this single garment. Moreover, we are informed that over one hundred years of labor were required and that the completed feather cape represents the highest development in native Hawaiian art.

The plumage of the Mamo was at one time equivalent to gold currency in the Hawaiian Islands and it represented the country's greatest treasure.

The garment is preserved at the Bernice P. Bishop Museum, in Honolulu.

FARMERS WAR ON RATS

(Continued from Page 1)

regulates the use of rice.

WICKARD PRAISES ENRICHED FLOUR PROGRAM

Secretary of Agriculture Claude R. Wickard praised the new standard for enriched flour in a statement released last week. Said he: "The increase in th evitamin of the Federal Food and Drug Act which went into effect October 1 will be of far reaching benefit to the people of the United States. This increase has been recommended by some of the most distinguished scientists and physicians in the field of human nutrition and health. Bread is basic in the American diet and, therefore, this enrichment program is highly important in wartime nutrition."

The new standard for enriched white flour requires more thiamine, niacin, and iron in the enrichment process, and all enriched flour is to contain riboflavin.

NEGRO FARMERS BUY MORE MILK COWS

In an effort to further increase their contribution to the war, Negro farmers in several states are buying milk cows, or heifer calves which they plan to raise for milk cows. For example, in North Carolina Negro farmers are taking no chances of having good milk cow buys slip through their fingers. In two counties they have deposited money with the Negro County Agent in advance for the purchase of 32 Jersey heifers. The youngsters are in this fight, too. A large percentage of the heifers to be bought will go to 4-H clubbers.

Preliminary calculations of 1944 farm production goals indicate an increased need for milk. The farmers will be shooting for 122 billion pounds of milk, or about four billion pounds more than they are producing this year.

SET COTTON PICKING WAGES

Two dollars and a quarter per 100 pounds of seed cotton has been set as top wages for picking American Upland cotton in six California counties, the War Food Administration has announced. An average worker can pick about 300 pounds of this cotton in a nine-hour day. Picking season usually ends around the first of January.

Any appeal from the established rate, and any application for adjustment in wages are to be made to the USDA Wage Board for California at 2288 Fulton Street, Berkeley, Calif.

CONTINUE LARGE FOOD SHIPMENT TO ALLIES

A billion pounds of food and other farm products were delivered to shipside during August for shipment to our allies, the War Food Administration announced last week. This brought the total for the year to seven billion pounds.

The principle items delivered for shipment in August were evaporated milk, pork, lard, and sugar. These items alone accounted for 645 million pounds.

GUNSTOCKS

By furnishing black walnut logs that can be made into gunstocks, many farmers are carrying the fight directly to the enemy. In one North Carolina county the farmers have already delivered 131,879 board feet of black walnut logs for the war effort.

FIRST 4-H PIG SHOW

(Continued from Page 1)

small per cent will be able to make a creditable showing. The number showing pigs will represent an enrollment of 12,474 Negro boys and girls in Tennessee. These club members have done a big job in their patriotic effort to assist in winning the war by collecting scrap, buying bonds, producing pigs, chickens, eggs and other foods and making an extra effort to aid in the labor problem.

The Show and Sale for white 4-H Club boys and girls was held at the same time.

W. H. WILLIAMS,
State Agent in Negro Work.

$400,000.00 SENT HOME

(Continued from Page 1)

key is assured our fighting men for the holiday season, civilians will have to continue making themselves satisfied with other meats. The War Food Administration has announced that the turkey embargo order is continuing in effect until the requirements of our armed forces are met.

The embargo order was put into effect August 2 to obtain 10 million pounds of turkey for shipment to our fighting men overseas. However overseas needs now total 12 million pounds. To date about eight million pounds have been obtained.

In addition to overseas shipment. a supply of from 20 to 24 million pounds of turkey is required for service men in the United States. The embargo will continue in effect until all these needs are met.

TO DISCUSS '44 GOALS

A two-day meeting is being held in every state during the month of October for the development of 1944 state farm production goals. Representatives of the War Food Administration will attend these meetings and consult with the groups, Marvin Jones, WFA Head announced last week.

Suggestions for expanded farm production next year to meet ever-increasing needs have already been sent to every state for consideration by State Agricultural War Boards and other farm representatives. The State Boards have been asked to formulate 1944 goals in such a way that every farmer will be able to make his greatest contribution to wartime food production.

PROPOSED CHANGES IN WLA

The National Advisory Committee of the Women's Land Army of the U. S. Corps has recommended that WLA membership include any woman who works on a farm to save food crops for war uses. This year membership was restricted to women 18 years old and older who worked on a farm for at least a month. Proposed liberalization of WLA membership requirements is based on an increased need for volunteers next year to help meet greater wartime food production.

BUY FERTILIZER EARLY

The War Food Administration is urging farmers to help ease the problem of fertilizer delivery during the coming crop year by making their applications now for mixed fertilizer needed this fall and next spring, and by accepting delivery as soon as same is possible. Farmers used a record total of ten and a half million tons of fertilizer during the past crop season. It is expected that between 10 and 12 percent more chemical fertilizer will be available to farmers in the 1943-44 crop season.

OCTOGENARIAN MAKES

(Continued from Page 1)

after the war according to the Soil Conservation Service of the U. S. Department of Agriculture. This will mean a total of 480 million acres of crop land; this year's crop goals call for 380 million acres.

The possibility of this huge increase in acreage (manpower and equipment available, of course) ties in with a recent address made by Secretary Wickard in which he discussed "The Kind of World Farmers Want."

Among other things, he pointed out that farmers wanted a world that is well fed. That means a full table for every family everywhere in the world: in China, Africa, India, Australia, Europe, South and Central America, the islands of the sea, and our own country. It means the eradication of hidden as well as hollow hunger. In playing her full part to help achieve "freedom from want," our country may need those extra acres.

"A" FOR EXCELLENCE

An "A" for excellence will be awarded to counties in which farmers have achieved exceptional production, and to seasonal food processors with outstanding production records, the War Food Administration announced last week.

A statement from President Roosevelt will accompany the awards. It reads as follows: "Food is a decisive weapon of war. Victory depends as much on our ability to produce food as on our ability to manufacture guns, planes and ships. Our army of farmers and processors are fighting an important battle on the food front. Working diligently and skillfully, they are speeding this Nation and our Allies to victory.

PUERTO RICO'S FOOD PROBLEM

A partial answer to Puerto Rico's critical food situation may be a program of crop sequences which Soil Conservation Service of the U. S. Department of Agriculture is helping the island farmers to achieve.

T. S. Buie, regional conservator for SCS, points out that farmers in the drier areas of Puerto Rico normally planted only one crop a year until the SCS experiment station demonstrated that three or four crops could be grown a year through the continuous growing season.

While wartime shipping has highlighted the food situation in Puerto Rico, it has been increasingly acute for some time. The little island's total land area is only 2,000,000 acres, but its population is close to two million people and is increasing at the rate of 36,000 a year. Negro farmers in the United States operate an acreage 15 times the size of Puerto Rico and own an area five times the size of the island.

A recent study made by the USDA War Board for the territory shows that if every arable acre on the island could be planted in a staple crop like rice, and good yields obtained, the production would still fall short of meeting the food requirements of the population. However, with farmers (in areas where it is practicable) growing three or four crops a year, it is possible for the islanders to meet a larger part of their food needs. This type of farming is now provided for in the farm conservation plans of Soil Conservation Service.

MORE SOAP ON THE WAY

A 28 percent increase in the production of soap for civilian use, which will get underway soon, assures consumers a greater soap supply within a few weeks, the War Food Administration announced Wednesday.

Increase in soap production is made possible through the allocation of additional quantities of fats and oils to soap manufactures, WFA points out. Under the new production program, household packages and bar soaps will be increased from the present 17 pounds per person to 22 pounds per person. The over-all shortage of soap supplies is a result of reduced production caused largely by shipping conditions which prevented, until recently, importation of large quantities of fats and oils. However, present shortages are caused mainly by hoarding.

G'S BEND DIGS OUT

By Gabe Harris

Part I

Gee's Bend, down in the deep South where the Alabama River twists its muddy way, yellow with clay washed from the scarred hillsider gouged and gullied by generations of un-terraced cotton fields, stretches a peninsula of some 10,000 acres of fertile soil.

On this pencil of land in the heart of the cotton belt and almost cut off from the outside world, lives today 100 Negro families direct descendants of the slaves who plowed and chopped and picked mountains of snowing cotton in these very fields long before Abraham Lincoln was old enough to read borrowed books by the fire light in his Kentucky cabin home.

When Alabama, as a state, was not yet ten years old, this land in the bend of the Alabama River was bought by Charles and Sterling Gee and became known as Gee's Bend, the name it bears today. The Gees, who had come from Halifax, North Carolina, soon sold out to their nephew, Mark Pettway. Numbers of slaves were brought in to work the rich fields and bring large crops. Big families were encouraged to produce more workers and correspondingly larger crops.

Mark Pettway died shortly after the Civil War when the plantation was taken over by his son, John Pettway. According to records of the United States Department of Agriculture, John Pettway continued in charge of the plantation until 1900. According to another authority, at the close of the Civil War the plantation passed into the hands of A. S. Vandergraph, and eventually to his heir C. H. Vandergraph, who was the owner until the government took a hand in 1934.

Ex-slaves Take Charge

But regardless of ownership, it appears that the plantation has been run by the Negroes themselves since 1900. They have had a community all their own. Shut off almost entirely by the swollen Alabama, "they shared few of the pleasures and benefits of the outside world, but fortunately suffered from few of its sins. Even today, some of the older people can speak a language that outsiders cannot understand—probably an African dialect. While very few families ever came into Gee's Bend, at the same time few families ever left."

"For a time, so far as Gee's Bend was concerned, frequent contact with other people was unnecessary. The community raised most of its own meal, meat, and molasses. It had its church and its community leaders. When a young couple married, the men built them a log cabin—a few pennies for some nails were the only expense. Minor problems rose from time to time, but they were easily solved. Names, for instance, for awhile became quite a problem. Many of the folk had the surname of Pettway, adopted from the plantation owner at the time that they became free men. When children were given the first name of one of their elders, there was confusion. "But the way out was simple. Vowels were added to the first names and there was enough variety for all. Tom-o-Pettway and Tom-i-Pettway are two of the family heads today."

But although native ingenuity helped the offspring of the O-Pettways and the I-Pettways to tell themselves apart, it could not cope with five-cent cotton. In 1929, this community along with the rest of the South, found the depression cutting deeper and deeper gullies into plantation credit, bleeding the farmers of their independence, even as the one-crop system of agriculture had been draining the once productive fields and hillsides of their fertility.

When the cotton was picked and baled, Gee's Bend did not have enough to pay for fertilizer and "furnishing" to make the crop. Gee's Bend had to go in debt, further and further in debt.

The "furnish" merchant with the spirit of the born cotton gambler—all cotton planters, have the gambler's spirit—knew that drought years in succession would not keep on forever and, come a good crop year, honest hardworking Gee's Bend would pay out. So every day he filled a new page with charges for meat, meal, and molasses.

But even friendly "furnish" merchants are mortal. In 1931, the "Furnish" merchant died. Administrators came to settle up his estate. Looming large, on the books were the unpaid bills of Gee's Bend, runing over a period of three or four years. Cotton merchants and planters are dreamers; they live in the future. Legal administrators of estates are realists; they live in the present. That this "present" happened to be the middle of the growing season at Gee's Bend, made no difference.

Hard Times

The Tom-O-Pettways and the other Pettways saw wagons drive into their yards. Farm tools, hogs, chickens were loaded on; cows, mules, horses were lined up with the wagon train that drove off to the town ten miles away—leaving Gee's Bend to stare and to starve.

With the coming of winter (1932) the American Red Cross sent "meat, flour, and meal to the families. This kept them alive, but when spring came, they saw little chance and the good farm year that was needed to lift them back to independence. They lacked tools—they had no place to turn for credit. The owner of the plantation land, at that time—a Mr. Van de Graff—(or Vandergraph) was willing to let them stay without paying rent, but he was not able to supply their fertilizer, food, work stock, and seed—everything necessary to make the crop and carry the farmer until the crop was made.

These were dark days for Gee's Bend. Cabins became shacks; overalls became rags; hard muscles grew flabby, community life was almost a shabbles; a square meal was the exception, and under nourished children the rule.

In the summer of 1933 there was a little road work for the men, but with the coming of winter, without the C. W. A. and the Alabama Relief Administration, Gee's Bend would have faced utter destitution.

In 1934, the government came to the rescue, not with temporary relief this time, but with an attempt at habilitation "Under the F. E. R. A., a State Rural rehabilitation Corporation was set up especially to help low—income farmers. Through its loans, the families began to regain their mules, plows, livestock, and to obtain cotton seed and fertilizer."

"Later came the Resettlement Administration and its successor, the Farm Security Administration which has continued to supply the yearly credit the families need."

New Day at Gee's Bend

What is the picture at Gee's Bend today, nearly a decade since the government took over? Eleven thousand acres of land and 105 families—the whole alphabet of Pettways, their cousins and in-laws, have been included in the program. A hundred houses, a school building, a community center, a health center, a canning center, and a shop have been built.. The principal, the teachers, the farm manager, project nurse and other personnel are also living in comfortable houses. Every house has tight walls and roofs and screened windows—all novelties at Gee's Bend.

One of the most effective agencies in the improvement of Gee's Bend has been the school. The original school house was a little outcast frame structure about 14x16 feet with no inside ceiling. One teacher taught in this building, while just across the road another teacher taught in a big barn-like church. Both places were very uncomfortable. The benches were made of split logs. There were neither windows nor blackboards.

In 1938, a seven-room school building was erected. It was well equipped with shades, seats, tables, blackboards, maps, and charts. A home economics room furnished with range-type stoves, oil stove, sewing machine, and a vocational shop with necessary work benches and tools provided facilities for the practical training essential in the rehabilitation of these people.

The first year, the enrollment of the school was 209 students. Of these, 108 were enrolled in the first grade. Such unbalanced registration presented no small problem for the eight teachers chosen to help Gee's Bend get on its educational feet. This, however, was but a small part of the worry—the age range was frim six to twenty-two years! With the help of the W.P. A., a librarian, a matron, a cafeteria supervisor, and an N. Y. A. project supervisor were added to the staff.

WOMEN AID SILK CULTURE

GLENDALE, Cal.,—(UP)—Women war workers at the assembling airplane engines plant of Kinner Motors have developed still another sideline to help with the war. Owing to the presence of mulberry trees in the vicinity of the plants, the women have engaged a professional Chinese sericulturist and during their spare time nurture along the silkworm eggs through their metamorphic stages until they are hatched and begin producing silk.

Sicily is 90 miles from Africa, two from Europe.

Merry Christmas, Happy And Prosperous New Year

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., DECEMBER 15, 1943 No. 11

State-wide Meeting For Negro Farmers And Home Agents Planned For 1944

DIRECTOR I. W. DUGGAN MAKES ANNOUNCEMENT

Messrs. Campbell, Mitchell, Davis and Holsey Will Cooperate

Washington, D. C.—Steps are already being taken by the U. S. Department of Agriculture to more effectively assist Negro farmers next year in the furthering their contribution to the Nation's food production program, according to I. W. Duggan, director of the Southern Division of the Agricultural Adjustment Agency.

Here in Washington, T. M. Campbell and John W. Mitchell, Federal Extension field agents, and James P. Davis and Albon L. Holsey, AAA field agents, have been helping Department officials lay plans for a proposed series of state-wide conference with Negro farm and home agents in nine Southern states for the purpose of mapping a program to more adequately provide Negro farmers with important wartime agricultural information.

Conferences have been proposed for Florida, Georgia, Alabama, Mis-

MARKET HOGS EARLY

400,000 Negro Farmers Raise Record Crop

Washington, D. C.—The 400,000 Negro farmers, who have helped to raise a record crop of hogs this year to keep America and her fighting men well fed, are urged by the War Food Administration to market their porkers early, even at lighter weights, to avoid over burdening of shipping facilities and processing plants during December and January. The same request is being made of all big growers to prevent a possible market glut.

WFA points out that the number of hogs offered for sale in December and January may exceed the capacity of plants to handle them. It is also probable that transportation facilities may be inadequate to move all hogs to market when they are offered for sale. As a means of preventing waste of material and manpower, which would result from excess marketing during peak season, farmers are being informed by WFA on several important facts. Among these are: (1) hog slaughter during the last three months of 1943 will probably be to to 30 percent above the last quarter of 1942, (2) food supplies must be con-

(Continued on Page 8, Col. 4)

"It's for the soldiers," says little 6-year-old Catherine Brown of Prince George county, Md., as she fondles one of her neighbor's turkeys she has helped to feed. Millions of turkeys, like this one, have been shipped to our armed forces in North Africa. Italy, the South Pacific, here in the United States and in other areas. Wherever our fighting men are stationed, they will have turkey for Thanksgiving and this holiday season. The War Food Administration has assured 12 million pounds for overseas troops and between 20 and 25 million pounds for troops stationed here at home. It is estimated that more than 400 million pounds of turkey will be on hand for civilians this year.

"BIG FACTOR," SAYS SECRETARY

Negro Farmers Play Part In War-Drive

Washington, D. C.—Negro farmers are making a substantial contribution to wartime food production, declares Secretary of Agriculture Claude R. Wickard in the foreword of a Government publication, "Negro farmers in Wartime Food Production."

The pamphlet, just off the press, was prepared by the Department of Agriculture and shows the part Negro farmers are playing in the war effort; it also points out how Government assistance is helping to make the contribution of Negro farmers more effective.

Pictures play an important part in the pamphlet. Pictorial illustrations are used throughout the 16-page bulletin to emphasize Negro farm production. Among other things the pictures indicate that almost all Negro farmers signed up with the Government this year to grow vital food crops; they also indicate that 300,000 colored farmers are growing peanuts to help overcome the vegetable oil shortage, that 400,000 are raising pigs for our fighting men, that Negro farmers are producing enough milk this year to meet the milk needs of 11 million fighting men for six months, and that they are raising 30 million chickens and producing nearly 100 million dozen eggs.

Secretary Wickard points out in the foreword that this increased food production by Negro farmers is helping to keep America fed and in top fighting trim. Says he, "The 681,000 Negro farmers in the country, operating 30 million acres, are making a substantial contribution toward the attainment of our production goals."

Referring to many small farmers who are having some difficulty getting into production, the Secretary says, "Some of these farmers need small loans to see them through. The Government is helping many of them, and they in turn are doing all they can to help win the war."

Although the Government has printed only a limited number of these pamphlets, it is making them available to both urban and rural people. Copies may be secured by writing the Office of Information, U. S. Department of Agriculture, Washington, (25) D. C.

SOYBEAN CROP PROVIDES FOOD AND FEED

Despite increased production of edible soya products to meet an expanded military and civilian demand, more than 90 percent of the soy meal of the large soybean crop is being used in the production of livestock feed, the War Food Administration said this week.

Soya flour, a high-protein food, is being used in the United States as an ingredient of soup powders, bread pancake mixes, as an extender of meats, and in other ways. Because of its high nutritional value and relatively low cost, this food is considered highly suitable to ship to the allies to help maintain a satisfactory protein diet for their military forces and war workers. It also is planned to utilize soya products in the emergency feeding of liberated nations.

ADDRESSES LAND GRANT HEADS

Hon. Claude R. Wickard Heard In Chicago

Washington, D. C.—Secretary of Agriculture Claude R. Wickard headed a group of officials from the Department who addressed the Conference of Presidents of Negro Land Grant Colleges held in Chicago, October 26-28.

Other Department speakers were Claude A. Garnett and Dr. F. D. Patterson, special assistants to the Secretary; Reuben Brigham, assistant director of Extension Service; T. Roy Reid, director of USDA Personnel; T. .N. Roberts, special assistant to the personnel driector;

A CHRISTMAS PRAYER

We open here our treasures and our gifts;
And some of it is gold,
And some is frankincense,
And some is myrrh;
For some has come from plenty, Some from joy,
And some from deepest sorrow of the soul.
But Thou, O God, dost know the gift is love,
Our pledge of peace, our promise of good will.
Accept the gift and all the life we bring.

Herbert H. Hines.

GREEN HILL UNIT OF N. F. C. F.

MR. FRANK HEARNS REPORTS FROM MARKS, MISS.

Among the active members and strong supporters of the National Federation of Colored Farmers, is the Green Hill Unit, with its headquarters at Marks, Miss. The last report was sent in by Mr. Frank Hearne, who reported the addition of three new members, and who further stated that the Unit is having its regular meetings, and they are planning to do bigger things in 1944. He declared that there would be no let up of these regular monthly meetings because they had not decided to abandon their organization for the duration, but are tightening up on the work to be done, even to the extent of connecting up with legal talent to guide and direct their officers. They are regular readers of the Modern Farmer, the official organ of the National Federation of Colored Farmers.

The officers of the Green Hill Unit are A. J. Gates, president, F. H. Hearns, secretary, Levi Gathright, treasurer, E. J. Morgan, marketing agent, J. C. Steele, chaplain. The newly-added members reported at the last meeting were Mrs. Ora Greenwood, Rev. T. B. Boykins and Mr. James Wilson.

The Unit was chartered as No. 113, and the recognized headquarters is at Belen, Miss. They have their regular stationery, and they operate not only their Market Department, but their Cooperative Buying is being pushed rapidly and perfected, so that they feel that ere long the entire state will be following their good example.

FRANK HANCOCK NEW HEAD

Former N. C. Congressman Assumes His Duties

Washington, D. C.—Frank Hancock, former Congressman from North Carolina, assumed his duties as administrator of the Farm Security Administration Monday, November 15.

In announcing the appointment of Mr. Hancock, War Food Administrator Marvin Jones said. "I have selected a man who, I believe, can do this job; and I am placing complete responsibility on him for administering the FSA program in such a way as to make the most effective contribution to the war effort."

FSA is helping 60,000 low-income Negro farmers grow wartime food crops; nearly 5,000 of these are buying farms of their own and more than 50,000 are being assisted in converting their farms to all-out food production.

Out of this year's appropriation of 30 million dollars for loans to low-income farmers for the purchase of farms, about four million will go to promising Negro farmers, if their participation continues at last year's level. This will mean that approximately 750 Negro tenants and sharecroppers will be lifted into ownership and into a position to make a larger contribution to the food production program.

In allocating the 30 million dollars for farm purchases, the largest share went to Texas, $2,565,670; Mississippi received $2,257,494; and Georgia was allocated the third largest amount $1,996,629. Other Southern states receiving over a million dollars were Alabama, Arkansas, Kentucky, Louisiana, North Carolina South Carolina, Oklahoma and Tennessee.

MINISTER GROWS FOOD CROPS

Negro ministers have not only passed Food-for-Freedom resolutions in their conferences, urged increased food production from their pulpits, helped with the organization of cooperatives for the promotion of increased food production, but some have rolled up their sleeves and gone to the fields.

The Department has received numerous reports of ministers who have organized members of their congregations into effective farm labor groups. In some areas they have measured the difference between saving and losing valuable food crops.

Now that harvesting is slowing down, reports are beginning to come in of Negro ministers who have operated farms themselves to help increase the production of important food crops. In Arkansas, the Rev. E. L. Blissett, pastor of True Church, operated a farm as a sharecropper this year. From it he harvested 900 bushels of corn, 100 bushels of sweet potatoes, 85 bushels of Irish potatoes, and some cotton; he also raised 40 hogs and 200 chickens. His wife canned 500 quarts of fruits and vegetables. The Rev. Mr. Blissett is also secretary-treasurer of the Twist, Ark., Leasing Cooperative Association.

WOMAN'S PAGE

AS THE HOLIDAY APPROACHES OUR MINDS TURN TO GOOD THINGS TO EAT

PUT SNAP IN YOUR SOUP WITH SHRIMP

Shortage of tin means a shortage of canned soups and a revival of the home-made kind, so sharpen up your soup-making techniques for the cold days coming. Cream type soups are nutritious as well as filling—just add a salad and beverage for a quick complete lunch—and canned shrimp are convenient for flavor, so combine the two for the bisque in the picture and the variations given below:

Shrimp Bisque

1 No. i can shrimp
4 cups milk
2 slices onion
1 bay leaf
1 cup chopped celery
3 tablespoons chopped parsley
1-3 cup butter
1-3 cup flour
3-4 teaspoon salt
1-8 teaspoon pepper

Drain shrimp and chop, reserving 8 whole shrimps. Scald milk with onion, bay leaf, celery and parsley; remove bay leaf and onion. Melt butter, stir in flour, salt and pepper. When well blended add scalded milk slowly, stirring constantly over low heat until mixture boils. Add chopped shrimp, and cook for an additional 5 minutes, stirring constantly. Pour into serving dishes and garnish with whole shrimp floating on top of bisque. Makes 4 to 6 servings.

Shrimp Chowder

1-2 pound salt pork, chopped
1-2 cup sliced onions
3 cups diced potatoes
2 cups boiling water
1-2 teaspoon salt
1-4 teaspoon pepper
2 No. 1 cans shrimp, chopped
1 quart milk
2 tablespoons butter
Crackers

Cook salt pork in large saucepan until crisp on all sides. Add onions and cook 3 mniutes. Add potatoes, salt, pepper and water. Cover and cook 10 minutes. Add shrimp with liquor, milk and butter, and cook about 10 minutes more. Arrange crackers in hot soup plates and pour chowder over them.

Makes 6 servings.

Cream Shrimp Soup

1-3 cup butter
2 No 1 cans shrimp
1 quart milk
1 1-2 teaspoon salt
1-8 teaspoon pepper
1 teaspoon paprika

Melt butter, add drained shrimp, and cook 3 minutes. Add milk, salt and pepper and bring almost to the boiling point. Serve hot at once. Garnish with paprika. Makes 6 servings.

Make luscious point-saving fresh fruit excellent table fare. By extending fragrant fruits with enriched bread and enriched flour, families may enjoy flavorful foods throughout the year in a most inexpensive manner.

Cranberry Sherbet

1 pound berries
2 cups water
2 cups granulated sugar
1-2 tablespoons lemon juice
1 teaspoon grated orange rind
1-2 teaspoon grated lemon rind
1-4 teaspoon salt
2 egg whites, beaten

Boil berries and water until the berries are soft. Press through a sieve and add the sugar. Boil a minute. Cool and add the juices and rinds. Freeze until nearly firm and add the salt and whites. Beat well and freeze until stiff.

For extra flavor add two tablespoons finely chopped candied ginger when mixing in the whites.

Leafy vegetables are low in calories but high in vitamins and mineral salts.

Dark Fruit Cake

All-purpose flour, sifted, 5 cups
Baking soda, 1 teaspoon
Cinnamon, 2 teaspoons
Allspice. 4 teaspoons
Mace, 3-4 teaspoon
Nutmeg, 1-2 teaspoon
Raisins, seeded, 1 pound
Raisins, seedless, 1 pound
Currants, 1 pound
Candied lemon peel, 1-2 pound
Candied orange peel, 1-2 pound
Candied cherries, 1 1-2 pounds
Candied pineapple. 1 1-2 pounds.
Candied citron, 1 1-2 pounds.
Almonds, blanched and shredded, 1 pound
Pecan meats, chopped, 1 pound
Shortening, 1 pound
Brown sugar, light, 1 pound
Eggs, separated, 12
Molasses, light, 1 cup
Strawberry jam or preserves, 1 pint
Brandy or cider, 1-2 cup
Orange or pineapple juice, 1-2 cup

1. Sift flour. measure, add baking soda, spices.
2. Add prepared fruits and nuts and mix.
3. Cream shortening, add sugar gradually; cream together until light and fluffy.
4. Add well-beaten egg yolks, molasses and strawberries.
5. Add liquids (brandy or cider and juices).
6. Add flour and fruit mixture and mix until well blended.
7. Fold in stiffly beaten egg whites.
8. Turn into greased pan lined with waxed paper. (Batter should fill 3-4 full 3 round pans of 6-, 8- and 10-inch diameter, 3 inches deep.) Use pans with solid bottoms or spring form pans with tight closing. Cover tops of pans with heavy waxed or parchment paper, fasten well with string; then steam and bake as follows:
9. Steam 6-inch pan 2 1-2 hours; 8-inch pan 3 hours; 10-inch pan 3 1-2 hours; using any utensil that cake pans will fit into without resting directly in water; for example a rack placed in a clothes boiler, preserving kettle or double roasting pan. Keep heat very low but steady so that there will be a constant supply of steam.
10. Remove covers and bake all sizes for 1 1-2 hours in slow oven (250) degrees .)

Note: If an all-baking method is desired cover as for steaming during all but last hour of baking period; 4 hours for 6-inch pans, 4 1-2 hours for 8-inch pans and 5 hours for 10-inch pans. All baking makes for a drier cake than part steaming. This makes 15 pounds of cake.

Pearl Frosting

Beat 2 egg whites until stiff; add 1 cup confectioners' hugar and beat until smooth and thick. Cream 1-4 cup vegetable shortening; add 1-2 cup confectioners' sugar and mix until well blended. Combine these two mixtures; add 1 teaspoon glycerine (opitional) and 1-2 teaspoon almond extract. (The glycerine helps keep the frosting glossy and soft.) Gradually add about 1-2 cup more confectioners' sugar until frosting will hold its shape, beating constantly. Use to decorate cake, which has already been frosted with white frosting as described in the paragraph below at the left.

Plum Pudding

1 cupful flour
1 cupful brown sugar
1 cupful of raisins
1-2 cup chopped citron
1-2 Teaspoon allspice
1 nutmeg and salt
grated rind of one lemon
1 teaspoon baking powder
1 1-2 cupful bread crumbs
1 cupful chopped suet
1 cupful currants
1-4 cupful chopped almonds
4 eggs
1-2 cupful grapejuice
1-2 teaspoonful soda

Mix the dry ingredients thoroughly, and the liquid ingredents also thoroughly together; add soda last, dissolved in a little water. Add the liquid ingredients into the dry ingredients. Pour into a mold and steam for 6 hours. Serve with a hard sauce.

Light Fruit Cake

2 1-2 cups sifted cake flour
1 teaspoon double-acting baking powder
1 teaspoon salt
2-3 cup finely cut candied cherries
2-3 cup fineiy cut candied pineapple
2-3 cup finely cut citron
1 1-3 cups chopped blanched almonds
3-4 cup shredded cocoanut, finely cut
2 teaspoons grated lemon rind
3-4 cup butter or other shortening
1 cup sugar
6 egg whites, unbeaten
1-4 cup lemon juice
1-2 cup orange juice

Sift flour once, measure. add baking powder and salt, and sift together three times. Sift 1-2 cup flour mixture over fruits, nuts and coconut mixing thoroughly. Add lemon rind to butter and cream well; add sugar gradually, creaming until light and fluffy. Add 3 egg whites, one at a time, beating thoroughly after each. Add flour, alternately with fruit juices and remaining egg whites, beating thoroughly after each addition. Add fruit mixture and mix well. Makes about 3 pounds mixture.

IN THE SWEAT OF EVERY MAN WHO LABORS

A man in a far Western city who owns his home and has a family, is now earning approximately $92 weekly. His is not a temporary war job. He works in the communications industry. He is an almost invisible speck in what is so popularly called middle class America. He is a good citizen—the best type that this country can produce.

But this middle class American is worried. Every other week when he receives his check, he finds that $45 has been deducted—taxes, bonds, old age insurance. etc. He is worried because he is thrifty and that $45 deduction virtually eliminates the possibility of gradually accumulating savings, that is, savings over which he can exercise his individual judgment. The $45 taken from him every two weeks is subtracted from his check by the company for which he works. He never sees it. It goes directly to the Federal government where it is eventually turned over to various agencies to be applied to "essential" activities—among them Social Security. Money that this man labored long hours to earn, and which he has never even seen, is expended by unknown officials thousands of miles away who know or care nothing about his personal affairs.

This man, this ordinary American citizen, does not begrudge in the slightest, the money given to the government from his check for taxes and bonds to fight the war. But when some bureaucrat now proposes "free" medical care, or free this or that, under a greater paternalistic bureaucracy, he becomes more than skeptical. He sees red. He knows that every such scheme means more deductions from his dwindling check and less chance for him to shape his future on his own initiative. His money, together with that of millions of other citizens, is keeping the bureaucrat going. And someday the bureaucrat is destined to feel his wrath.

AGRICULTURAL UNIT MAKES CROP FORECAST

Washington, Nov. 11—(AP)—An increase over last year in peanut and sweet potato production, a record soybean crop, and a slight decline in the tobacco output are in prospect this year, the Agriculture Department reported yesterday.

The peanut yield or 1943 was estimated at 2,681,955,000 pounds, 475,000,000 pounds above last year's crop and more than double the 1923-32 average harvest.

Sweet potato production totaling 75,801,000 bushels, the department said, is expected to be the largest since 1935 and 16 per cent greater than the 1942 output.

Soybeans, while the crop still faces some risk, are estimated at 206,000,000 bushels or more than 100,000,000 bushels more than in any preceding year.

Fruit production is expected to drop 9 per cent below last year's figure, but citrus crops are estimated at 3 per cent higher.

The report, based on conditions November 1, showed near-record yields of peanuts per acre in old commercial sections of the southeast, but the average was brought down by lower yields on farms of new growers outside the established areas. Estimated production by states included:

Tennessee, 13,500,000 pounds; Georgia, 950,400,000; Florida, 106,080,000; Alabama, 495,200,000; Mississippi, 26,600,000; Arkansas, 18,000,000; Louisiana, 9,000.000.

The sweet potato estimate was about 1 per cent above that on October 1, but yields in Atlantic coast states are generally lower than indicated last month.

The production by states: Georgia, 9,500,000 bushels; Louisiana, 8,568,000; Alabama, 8,000,0000; Mississippi, 7,656,000; Florida, 1, 742,000; Tennessee, 4,752,000; Arkansas, 1,680,000.

The 1943 tobacco crop of 1,400,873,000 pounds was estimated at 1 per cent below last year's crop, but the November 1 outlook was slightly improved over that of a month earlier.

The forecasts included: Georgia, 65 889,000 pounds; Florida, 14,914,000; Kentucky, 329,460,000; Tennessee, 97,176,000.

Flue-cured tobacco is expected to total 781,638,000 pounds, fire-cured 69,500.000, and burley 390,165,000.

Other crop estimates included:

Rice—Arkansas, 12,690,000 bushels; Louisiana, 23,978,000.

Soybeans—Mississippi, 1,764,000 bushels; Arkansas, 2,168,000.

Corn—Georgia, 43,572 bushels; Florida, 8,151,000; Tennessee, 64,530,000; Alabama, 46,635,000; Mississippi, 44, 912,000; Arkansas, 24,488,000; Louisiana, 22,786,000

Sugarcane—Louisiana, 5,960,000 short tons; Florida, 990,000.

Sugarcane syrup—Georgia, 4,000,000 gallons; Florida, 2,040,000; Alabama, 2,760,000; Mississippi, 2,992,000; Louisiana, 5,405,000.

Sorgo syrup—Georgia, 1,320,000 gallons; Tennessee, 1,180,000: Alabama, 2,112,000; Mississippi, 1,495,000; Arkansas, 722,000; Louisiana, 120,000.

Pecans—Georgia, 22,000,000 lbs; Florida, 4,524,000; Alabama, 9,600,000; Mississippi, 8,580,000; Arkansas, 3,950,000; Louisiana, 9,500,000.

V-GARDEN FERTILIZER

Victory gardeners will have a much improved fertilizer for use in 1944, according to the War Food Administration. Only one grade (3-8-7) was available for the entire country in 1943. Those for next year are 6-10-4 for Pacific coast states, 4-12-4 for Midwest states, and 5-10-5 for Atlantic coast and Southern states.

Victory gardeners also will be able to purchase small quantities of nitrate of soda. ammonium nitrate and superphosphate to supplement the mixed fertilizer, where such is needed.

In 1938. the Air Corps trained only 2,000 technicians, but at the end of 1940 the army schools were producing about 25,000 trained mechanics a year.

A Thrifty Housewife

With pantry shelves filled with meat cured as can be seen from the ham on the lowest shelf, this family is assured that they can go through the winter with a well balanced meal for all members of the family.

20,000 NEGRO 4-H CLUBBERS GET "FEED-A-FIGHTER" AWARD

Twenty thousand Negro farm youths received "Feed-a-Fighter" awards last week in connection with the annual observance of National 4-H Achievement Week, ,November 6-14, the U. S. Department of Agriculture has announced.

While receiving the awards highlighted the observance, 4-H clubbers used the occasion principally for reviewing the year's accomplishments, reorganizing their clubs, launching a membership drive, and laying plans for further increased production in 1944.

Reports received by the Department show that the 200,000 Negro 4-H club members and 1,500,000 white clubbers of the Nation have helped to produce and conserve this year five million bushels of Victory Garden products, nine million head of livestock, 12 million pounds of peanuts, soybeans and other legumes. As for scrap and war bonds 4-H club members have collected over 300 million pounds of the former. and have purchased or sold 20 million dollars worth of stamps and bonds.

The achievements of 4-H club members were measured this year largely in terms of the number of fighting men they are feeding. For example, it takes 200 quarts of milk, 365 pounds of meat, 57 pounds of chicken, 250 pounds of potatoes, 30 dozen eggs, 168 pounds of leafy vegetables, 30 pounds of butter, 274 pounds of cereal, plus a total of 406 pounds of various other food items to feed a single fighting man.

During Achievement Week, 4-H clubbers who had produced the equivalent of enough food to feed a fighting man received awards.

Taking a cross-section of the South where 98 percent of all Negro 4-H'ers live, here's how the score looks: Maryland Negro County Agents Martin G. Bailey and Louis H. Martin report that 20 clubbers in their state received "Feed-a-Fighter" certificates. The outstanding award recipient in the state was George W. Queen of Prince George county. In addition to milking six cows, feeding 20 hogs. 100 chickens, he helps with the operation of his father's 612 acre farm. Says George, "It's either cutting corn, gathering hay, digging sweet potatoes, or feeding the horses and gathering the farm machinery to keep it in good shape." George has produced enough food this year to feed three fighting men. Maryland 4-H girls also received awards. Among them was Martha Duckett of Brandywine, who has raised and sold broilers this year.

From Georgia, P. H. Stone, Negro State Agent reports that about 5,000 clubbers in that state received "Feed-a-Fighter" awards. In summing up the achievements of Georgia 4-H'ers he points out that they operated 12,525 wartime projects, collected 567,041 pounds of scrap metal, 185,585 pounds of salvage, and 5,054 pounds of waste fat. Their Victory Gardens number 5.489; and 14,265 club members have worked a total of 107,689 hours on farms of neighbors to help relieve the farm labor shortage.

Four outstanding club members have also received $25 awards from a local insurance firm. They were Frank M. Staley, Jr., of Chatham county; Charles V. Clark of Jenkins county; John Paul Jones of Morgan county, and Clayton Marcus of Mitchell county. Young Staley has marketed 1,000 dozen eggs; Clark has two milk cows, Jones has two milk cows and Barcus has a calf, some pigs and chickens.

J. E. Taylor, Negro district agent of Oklahoma, reports that several hundred 4-H clubbers in that state received recognition during Achievement Week for outstanding accomplishments. He points out that in many areas of the state 4-H'ers formed cooperatives this year in order to increase their production of food crops.

In Creek county 40 clubbers got together and purchased 2,000 baby chicks which they raised for the market. In Okmulgee county 140 4-H'ers raised 4,920 chickens this year; and in another area 47 club members are raising 1,164 chickens, 18 cows, and have canned 1,409 quarts of vegetables from their 38 Victory Gardens.

The ranking 4-H clubbers of the state are two brothers, Melvin and Tommie Jenkins of Logan county. Melvin milks six cows, tends 34 dogs, and has harvested three acres of peanuts. Tommie has 82 layers from which he has collected this year 977 dozen eggs; he has 176 fryers, and a Victory Garden. In addition both boys help their father work his 70-acre farm.

In North Carolina, nearly 4,000 club members produced enough food this year to feed a fighting man, according to estimates made by R. E. Jones, Negro state agent. He points out that the 27,360 4-H'ers in the state are all growing important food crops. Some have calf projects, some have milk cows and hog projects, and almost all have poultry and Victory Gardens.

Richard Bailey of Iredell county milks four cows from which he has sold 5,740 pounds of milk and kept and equal quantity for consumption by himself and the rest of his family. Richard also raised a Victory Garden and he has 150 chickens.

Georgiana Smith of Anson county has canned 75 quarts of vegetables; 40 quarts made from her own Victory Garden.

Mississippi's Negro district agent, M. M. Hubert, reports that about 3,000 of the state's 44,000 Negro 4-8 clubbers qualified for "Feed-a-Fighter" awards. He reports also that most of the clubbers in the state are all-out for increased food production. The youngsters are raising livestock, poultry, fruit, vegetables and important field crops. One of the outstanding clubbers of the state is Silvester Gibbs of Lauderdale county. Young Gibbs, who has two brothers at the fighting front, has sold 80 bushels of corn, 20 bushels of sweet potatoes and 1,200 pounds of vegetables. Within the next few weeks he expects to market 200 chickens, two hogs, and a calf. Says Silvester, "Maybe I'm too young to fight, but I can feed."

Alabama's 30,000 Negro 4-H club members have made a substantial contribution to the production of livestock, poultry, eggs, and vegetables, according to V. C. Turner. state 4-H club agent. He indicates that over 2,000 received recognition for growing enough food to feed a fighting man.

The Clay brothers, B. J., and C. P. are among the ranking 4-H'ers in the state. They have 500 broilers and 110 layers. From their layers they have been collecting as many as 35 dozen eggs a week. They also have a pig project.

In Perry County, 72 4-H club boys operated pig projects this year. Already 40 of them have sold their hogs. One youngster sold his for $45, enough to pay all of the expenses, buy a $25 war bond and put $6.75 in his pocket. The 39 boys' hogs weighed a total of 7,254 pounds and brought $870.40.

9-YEAROLD GROWS WAR CROPS

One of the most interesting reports that the Department of Agriculture received from the field during National 4-H Achievement week came from Oklahoma. It had to do with Joe Wilson, a 9-year-old 4-H clubber who is producing beef, milk, poultry and eggs to help feed his two older brothers in the front lines.

It all started a year ago when Joe was only 8. It was then that he applied for membership in the local 4-H club. The membership committee took a look at Joe and then asked how old he was. When it was discovered that he was only 8, they told him to wait until he was 10 and then come back. (Membership in 4-H clubs is usually restricted to youths between the ages of 10 and 21.)

Joe wanted to be a member right away. So, he pleaded with the committee to admit him, pointing out that it wasn't how old he was, but how much he could do that really counted. Give him a chance was all he asked. The committee relented. So Joe got into production: First he obtained a small poultry flock, then a sired Jersey heifer. The heifer freshened last spring and since that time Joe has been selling cream to the creamery every week. He saved the calf, a bull, until this fall when it was sold to a packer.

From his poultry project, Joe has been selling broilers, fryers, and eggs. After taking out for feed and a payment on his note for the purchase of the cow, Joe has put the rest of his money into war stamps. During Achievement Week he was listed as one of the outstanding 4-H clubbers in Oklahoma. He fell just short of producing enough food to feed a fighting man. "But." says Joe, "next year I hope to grow enough to feed both of my brothers in the Army and they're big eaters, too."

YOUR PROBLEM

A well-founded fear is growing concerning the future of small business. Total war has tended to centralize industry. Somehow the trend must be corrected. But in correcting it, the belief should not be allowed to develop that there is something wrong in size alone. This is a big country. It will always need the productive effort of big industry just as it will need the productive effort of little industry. Moreover the problems of both big and little industry will to a large extent always be inseparable. For example, the small business man cannot remain indifferent to the present danger of permanent socialization of industries such as electric power, transportation and natural resources.

If, when this war is over, the field of public ownership is extended to include basic industries employing large numbers of workers—and voters—the way will have been opened for the destruction of representative government. Any government that controls the jobs and resources of a people will not be content to play long the role of servant. Our basic industries at present are owned and operated by millions of private citizens under stringent public regulation. This is as it should be. The individuals who pioneer and take risks in the development of an oil well, a mine, a railroad or any other enterprise, should be allowed to enjoy the fruits of their efforts, just the same as the newsboy who spends months building up a clientele on a certa cinorner deserves his just reward.

When it comes to questions of property rights and rewards for achievement, all must receive the same treatment. It can be no other way. If these things are restricted or taken away from one group, as has again happened in the case of the coal mine owners, it is only a question of time before they are taken from others, even the newsboy.

A white mink coat was recently shown in New York City. The appearance is like that of wild mink—its advantage over ermine is that it never turns yellow with age. It has an occasional black hair scattered very lightly in the fur.

FADS OR FREEDOM?

We are going through a period of history made up of scrambled economics flavored with fascism, socialism, communism, bureauism, and countless other "isms."

Each "ism" claims to be the "dear people's" savior from toil, and promises to take from those who "have" for those who "haven't." All the "isms" claim to be the cure for war, but they all teach class hatred—hatred of the man who has "saved."

The United States has not been an aggressor nation, it has fought only for equal rights and individual freedom.

We in this country must not allow ourselves to be fooled by "isms." We can make adjustments without upsetting a nation of contentment. We have a constitutional government that has survived depression and obstacles before, and it certainly can pull out of its present problems, if "isms" do not undermine its foundation.

Blaming war on capitalistic abuses and trying to incite our people against capital (private savings), doesn't make sense. The countries that claim to be non-capitalistic are the most war aggressive. And anyway. where there is a wheel turning there is investment, which is capital. No matter whether the people do the investing, or the government does it, the people in the end are the investors.

In the progress of America, the people have put up their own capital and the government has remained their servant as our Constitution intended it to be.

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

SIMPLIFY REGULATION —ENCOURAGE DISTRIBUTION

The president of the Independent Retail Meat Dealers Association of Portland, Oregon, says: "The public does not have the points for much meat after it has purchased butter and cooking fats. Meat markets are finding it quite difficult to move roasts and other higher point values. The butcher can't move his meat, and as a result the meat is backing up in the coolers. The markets are not buying from the packers, and before long this situation will back up to the farm and the farmer will not be able to sell his livestock."

There is bound to be controversy about the rationing and regulation of food. But certainly in a country like the United States, there is no necessity of anyone going meatless. We should constantly aim to make regulation less burdensome for the producer, the distributor and consumer. Only by that process will we encourage increased output.

WINNING

It takes a little valor,
And a little self-control,
And some mighty resolutions,
If you want to reach your goal.
It takes a lot of struggling,
And a staunch and firm set chin
No matter what the contest
If you really want to win.

There's no idle road to glory,
There's no flowery path to fame,
Life is just the way we view it,
It's no simple pleasure game.
But it's honor's call for striving,
For courage and for grit
For grim determination
And a "Don't know when to quit."

THROUGH THE ROOF

Civilians with war-inflated pocketbooks are spending money as they never spent it before. Income taxes and bond buying have barely touched the huge amounts of cash created for millions of individuals by government borrowing and spending. Anyone walking through shopping centers can hardly be blamed for concluding that at least one group is making a lot of money out of the war, and that group is retailers.

In fairness to the retail distribution industry, a few figures on chain store operations, compiled from a recent survey, should be brought to public attention. They show that new sales peaks have not meant new profit peaks. Chain store earnings—and the same is probably true of independent retailers—have felt the heavy hand of the tax collector and the pinch of rising costs. Eighteen representative chains cleared $131,000,000 last year, against $141,000,000 in 1941. The drop was brought about mainly by drastic increases in taxes. In fact, according to the survey, "Taxes went through the chain store roof." Ten variety store chains paid $75,000,000, against $17,000,000 in 1940. Two food chains paid $17,000,000 against $4,000,000.

The survey also showed that "in the past few years the chains have fought a valiant battle to keep their prices steady in the face of rising costs all down the aisle. Profit margins have been cut drastically." Rising costs have been met by heavier sales volume and still greater operating efficiency.

The public is getting better service at less cost from the distribution system than would have been thought possible by the merchants themselves a comparatively short time ago. This is something to keep in mind the next time you see shoppers stacked six deep around the cash register of the neighborhood merchant.

NEGRO FAMILY OF THE YEAR

Mr. Ambrose Shief, Jr., and his wife are clerical employees in Government service in Washington, D. C. Both of them have been working more than twenty years in the same capacities.

But that is not the remarkable fact about the Sheif family. Their accomplishments in this feat of holding their jobs so long, along with other achievements, of course, place them in the realm of the remarkable. And you will hear more about that later.

But the feat which gains the Shiefs this writer's vote as the "Negro family of the year" is something more current and significant. The Shiefs, husband and wife, have been using 75 per cent of their combined incomes to buy War Bonds for almost two years now.

Practically, with the outbreak of war on this country's part, they started buying bonds and have kept it up without a break. Each one draws two Government pay checks a month. They buy bonds twice each month. At the end of each month, they have between them four $100 War bonds. During the Third War Loan they got together and bought a $1000 security.

When asked the inevitable question, "How do you eat and buy so many bonds," the head of the Shief family lightly waved the sheaf of $100 War Bonds which he had brought with him to confirm his buying record, and said. "My wife is a very thrifty woman and knows how to practice economy. I was born into a poor country family of twelve near Pass Christian, Mississippi, and I soon learned how to save and take care of my earnings. I've been doing that over the years."

Patriotism also serves as a motive in the family's bond buying. Shief said, "We are buying bonds to help win the war. We are an All-American family and believe in this country. We feel that buying War Bonds is the best investment we can make. For, if the United States loses the war, or the government goes broke, our money won't be worth anything anyhow. And since I am not eligible for the Army, I feel I can do my bit by buying bonds."

When reminded to tell something of his and his wife's background, Mr. Shief disclosed that both are graduates of Howard University. Each worked to pay expenses through college. Mr. Shief holds a degree from the Howard Law School and is a member of the local bar. Mrs. Shief has an A. B. degree in Education and is affectionately known among the members of the sorority, the Delta Sigma Theta, in which she takes great interest, as Jennie Baer, her maiden name. She is a native of Pennsylvania.

A modest and retiring couple, the story of their bond purchases would not have been revealed but for a friend, Mr. Woolsey W. Hall, who felt that their unique achievement serves as a fine example of what thousands of Negroes are doing to a greater or less degree in this country's behalf. He also feels that their activity points the way for future security for thousands of other colored families now enjoying the war-time prosperity.

The couple is well-known in the nation's capital, and reside at 1408 Hopkins. N. W., Washington D. C.

BUTTER FOR HOSPITALS

Up to five million pounds of butter will be released to hospitals from stocks held by or set aside for the Food Distribution Administration, the War Food Administration said last week. The butter is intended to supply hospitals during the period November through March. This program was developed in cooperation with the OPA. Ration coupons will be required in the usual way through the OPA for all butter purchased.

Hospitals or agencies purchasing supplies for hospitals may apply for a quantity of butter not to exceed three-tenths pound per bed per week.

TO HOLD WAGE HEARINGS IN PUERTO RICO AND VIRGIN ISLANDS

The War Food Admtinistration held hold public hearings in November in Puerto Rico and the Virgin Islands to receive evidence on 1943-44 sugarcane crop wage rates for field workers and on prices to be paid for cane by processors who, as producers, apply for conditional payments under the Sugar Act of 1937.

The Puerto Rican hearing was held November 12 in San Juan, while the Virgin Islands hearing was held November 16 on St. Croix

The Sugar Act requires that in order to qualify for payments, producers must pay wages at rates not less than those determined to be fair and reasonable by the War Food Administrator, after public hearing and investigation. The Act also provides that processors who, as producers, wish to qualify for conditional payments, purchase sugarcane at rates determined by the Administrator to be fair and reasonable.

OUR SECRET WEAPON

An advertisement of an oil company makes a unique comparison between the price of gasoline and the price of other commodities, pound for pound. Consumers in Los Angeles, for example, pay 3 cents a pound for flour. at least 6 cents for potatoes, 6 1-2 cents for sugar, 8 cents for bread, 30 cents per pound and up for meat; a $45 suit costs about $11 a pound, a $6 pair of shoes about $3 a pound. Regular gasoline of tax, by contrast, costs 2 to 2 1-2 cents per pound, depending upon where you live.

A gallon of gasoline in 1920 cost far more and was greatly inferior to that produced today. Competition between oil companies has been responsible for the improvement both in price and quality. What is true of gasoline is also true to a relative degree of every other commodity and service produced in this country. Our planes fly higher and faster than the enemies, thanks to American industrial competition. Our jeeps, tanks and armament are products of the same competitive system. Their quality and quantity are the envy of the world. The subjects of the dictators know not the meaning of the word competition. That is why they are losing the war, the bitterest competitive struggle of all time.

BULLETIN DESCRIBES WORK OF PATTERSON AND BARNETT

A new agricultural bulletin, "Negro Farmers in Wartime Food Production," which has just been published by the U. S. Department of Agriculture describes in part the accomplishments of Dr. F. D. Patterson and Claud A. Barnett as special assistants to Secretary Claude R. Wickard.

Says the pamphlet, "These two men have been charged with the responsibility of helping to insure the full integration of Negro farmers in the Food-for-Freedom program. They have gone into many farming areas, visiting large and small farms and have talked with owners, tenants and sharecoppers in the interest of food production. Through the work of these two leaders, together with that of some 50,000 Negro neighborhood leaders, Negro farmers have not only been further encouraged to increase their food crops, but also have been kept better informed on the wartime agricultural program.

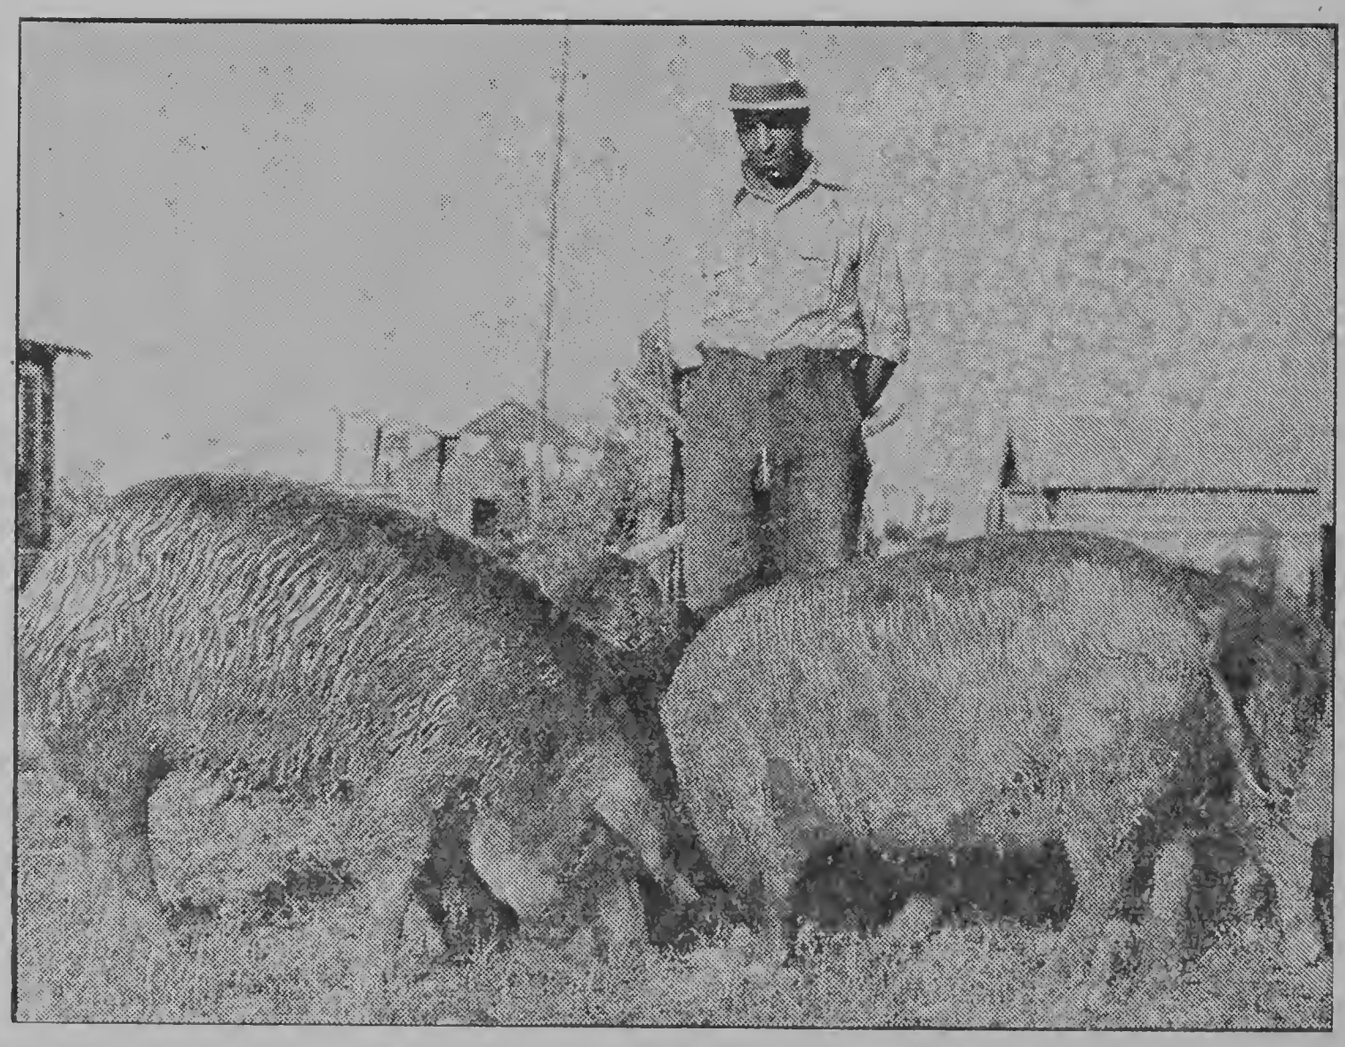
"The full value of this leadership is seen in the fine way that it has buttressed the work of Negro agricultural field representatives and helped to further extend the services of the various Department agencies in upping the food production of Negro farmers. Last year estimates show that 9,000 Negro farmers who had never owned milk cows acquired them; 21,000 Negro farmers began raising pigs for the first time; 24,000 began raising chickens, and 47,000 planted their first garden."

Copies of this bulletin may be obtained by writing the Office of Information of the U. S. Department of Agriculture, Washington (25) D. C.

WORTH CONSIDERING

"A thousand years ago, while kings and princes were quarreling over boundaries and thrones. millions of people were hungry. Today the statesmen and rulers are doing the same thing, and again millions of people are starving. Instead of now creating super-governments, and instead of planning more responsibility and more authority for government we may do better to strip government down to the essentials. Then keep it out of the way of the farmers, workers, engineers, scientists and business men who can, if not interfered with, produce food and prosperity and happiness for the people of the world."—Farm Journal and Farmer's Wife.

Something To Be Proud Of



Joe Henry Lipscomb with some of his fine hogs, which with other live-at-home projects, has taken the place of cotton. Mr. Lipscomb's farm is in Lee County, Alabama.

A LIFE WORTH LIVING

By Col. Noel F. Parrish
Commanding Officer, Tuskegee Army Air Field

On a small farm a few miles from this airfield there lived a woman named Elizabeth Smith Love. She was known to her family and friends, and to all others, simply as Lizzie Love, the wife of a Negro tenant farmer, William Henry Love. On August 27th of this year Lizzie Love died. She was buried in the churchyard of Zion Church near her home.

The passing of Lizzie Love was not announced in any newspaper and the only people outside the eastern part of Macon County who knew anything about her death or her life were relatives down beyond the big swamp between Warrior Stand and Hatchechubbe. But there was a good crowd at the funeral. Old Zion Church was filled with people who were proud to have known Lizzie Love, not because she was famous or prominent or well-to-do, but just because everybody liked her and because it was a pleasure to know her and to remember her. After the preacher finished talking, one person after another arose in the church to say how good she was, how friendly she was and how faithful she was.

Lizzie Love had never traveled anywhere, nor had she held any office, or even attracted the attention of anybody who did not know her. She showed no particular talent other than her natural good voice for singing and humming the simple melodies she loved. She could not read or write and her husband could not read or write. Although she was hungry for more knowledge she had little chance to learn anything other than the simple facts of everyday life. But she must have learned something that many of us never learn. She must have learned how to live and how to enjoy living and how to make others enjoy living too.

Lizzie Love was the mother of thirteen children. Some of the children are grown now and have children of their own, though her youngest child is only three years of age. All of her children are living and all of them are and in some way like her, for they have all been good children, good to themselves and to each other, and to other people, ready and willing to work, and able.

Because a few of us have become somewhat educated, because a few of us can worry more about the tastiness and variety of our food than we ever worry about the quantity and quality of it; because a few of us can complain about the comfort or regularity of trains or buses or planes when we travel wherever we choose; because a few of us can complain about working nine hours instead of eight; because being tired, to few of us, means being tired of just sitting still; because in our snugness. In our shallow wisdom and our blindness we think the whole world has most of the advantages we take for granted, we are inclined to get discouraged about the progress of other people. It's easy for us to call other people stupid when they are ignorant, to call them lazy when they are hungry for an adequate diet, to call them grasping and greedy when they reach for things we enjoy and hold outside their grasp, to call them shiftless when we fail to lead them to a better way of life. Because of all this selfish blindness we have forgotten about people like Lizzie Love. We have forgotten about people far more deserving than ourselves who struggle with real problems while we fret over the definition of words. People who work nights and days to be able to provide for their children and hold up their heads without begging or asking favors while we worry about whether we are receiving proper credit or getting enough attention and parade our weak hurt feelings so that others will be as sorry for us as we are sorry for ourselves.

So to me Lizzie Love is an inspiring example of the finest qualities in human nature. She wanted the best things in life; to be active, to be useful, to be independent and free from charity and pity, and to cause other people to live and to be happy in living. These were some of the things Lizzie Love wanted; she wanted them badly enough to work night and day for them, and she had them all through most of the forty-seven years of her life.

When Lizzie Smith was seventeen years old she married William Love and went with him to live on a farm in the big swamp country. William Henry was a few years older than she, and he already owned a strong pair of mules. There was land to be farmed and there was also a sawmill nearby where he could work for cash. While he worked at the sawmill all day his wife worked the farm. She ploughed alone until he came home from the mill, then during the rest of the long summer days they would often plough together, he going ahead with the sod buster, behind one mule, and she following with the broadcaster behind the other mule. She could handle a mule and plough a furrow as straight as any man and she was rightly proud of that ability, just as her husband was proud to have such a woman to work beside him.

After the first child was born Lizzie was up and about in less than a month. Her husband said she never did lie up in bed like some women. For thirteen births she never had a doctor or a nurse, other than "Granny," as she called her, who acted as midwife. Only once, when she had her teeth pulled, did she ever seek medical attention.

The family grew up taking care of each other, looking out for each other, working with and for each other. The children were taught to work in the fields when they were five or six. Some days when mother was working around the home, they wanted to stay with her, and they could have helped her a little and she liked their company, but she sent them out, both the little boys and the little girls, to help father. "Go out to the field where your father is working," she would say to them, "He needs you out there, he's looking for you, he wants you to help him." On Saturdays she seldom planned to go to town, but the older children insisted on taking her. When there was money she enjoyed buying things for the children, things like dresses and shoes and something good to eat. She was simply not interested in things for herself. Her husband often suggested that she buy something fancy to wear, but she always said: "I'm not a single girl. I don't need to show myself off, we've got these little children and we want to take care of them first"; and she meant it. She was not making a sacrifice, she was doing what she wanted to do.

But she was not interested in her own family alone. More often than she went to town she went to church, because that was where the other people went when they wanted to be together and think about each other and help each other. She was not interested in the kind of church or the preacher so much as in the people, for she went to several churches, most often to a church to which she did not belong. "We want you to belong to our church," they would say, "you work more in this church than the members do," but she said she didn't care about belonging. "You all can belong," she said, "I just like to come and help out where I can."

She always helped to plan and make the crop and to gather it, and almost every night she sewed and patched and quilted so that the children could always keep warm. Many nights after everybody else was in bed she sat up to sew and patch by lamplight. When they wanted her to get some sleep, she would say, "OYou go on off to sleep. I've got something here I want to do. I'll come to bed after awhile.

Last spring she told her husband, "I'm going to help you make your crop this year, but I won't help you gather it." He told her she couldn't possibly know such a thing, that only the Lord knew such things. She didn't argue. She didn't work in the field so much this year, but she sewed and quilted more than ever. She was more anxious than ever about gathering the peas and getting everything ready for winter, ahead of the usual time. One of the older children said to William Love, "What's happened to Mamma? She's not like she used to be." Then he told the girl the things Lizzie had told him in the spring. "I'll help you make this crop, but I won't help you gather it." He told the girl not to worry and not to say anything to the other children, that maybe it wasn't so. But it was so.

Lizzie Love became ill suddenly; the owner of the farm sent for a doctor immediately, but the doctor could do little more than ease her pain. After a few days of illness she felt much better. One day when her husband came in she was sitting on the edge of the bed, laughing and joking as she used to do. He said, "That's fine. you are going to get well now," but she just said, "I feel a lot better today."

The next day the children sent for William Love in the field. The doctor had come again too. "I'm bad sick today," was all she would say about it. She knew she was going to die soon, but she didn't want them to worry. She tried to send all the children away, to spare them the pain of seeing her die. To her married daughter she said, "You all look tired and sleepy. You've been worrying with me too much. I'm all right now, you go home and get some sleep," and to the other children she said, "You all go lie down now and get some rest. Go and take care of your business. Haven't you got some business you want to take care of—I'm going to sleep pretty soon. You go along so I can sleep." When they asked her what business she wanted them to take care of, she said. "Just whatever you have to do. I haven't any business now except my Father's business." After she spoke of taking care of her Father's business, she said no more.

Her husband was watching her, and knew she was dying, but he did not let on to the children. They thought she was falling asleep. and he let them think so, even when they roused her a little to take some medicine, because he knew she didn't want them to know. She couldn't slip away from him, he knew she was dying, but she was able to spare the children. "She's asleep," they said; and after awhile he said. "Yes she's asleep all right. she's slept clear off now. She's done slipped away from all of us. She's gone."

Everybody had done everything that could be done. Her husband said white people and colored alike offered to help in every way. Somehow, even in death, Lizzie Love had won. Her only fear of death had been that it would make her family unhappy, and she managed to make her passing as quiet and painless to everyone else as the death of the mother of thirteen children could possible be. The quilts were all made, the peas were gathered, and the older girls went right on cooking and cleaning for the men and caring for the little children just as she would have done. She left them not only the lives which she gave them; she left them her way of life. which was worth even more.

In many ways Lizzie Love was fortunate, more fortunate than people who can make a great display of the comforts and luxuries and polish they possess. But I do not honor her for her lack of any of the good things of life. She should have had more of them. It would have been far better if she had not had to work quite so hard. It would have been better if she could have had more education and if she could have had a chance to move about more and see more people and to affect more people with her cheerful and helpful personality. It would have been better if she could have lived in a better world.

We cannot all be like her in many ways, and we should not wish to be, for there are many problems to be faced and solved today which Lizzie Love could not know or understand. But if, in our efforts to bring about a better and a fairer world, we become self-conscious and become over-sensitive and self-important, we may spoil the world we are trying to save. For any advance of a nation, or of a part of a race within a nation, or of the whole human race, must be based on those qualities Lizzie Love showed so well: the love of life, the ability to live happily, the love of labor, the love of little children, the pride of independence and achievement, and joy in all that lives and moves for the good of all human beings everywhere.

—Service Magazine.

Milk And Butter Without Points

Mrs. Mary L. Simpson, Mt. Zion Macon County, Alabama, milking the family cow for milk and butter for home use.

DEATH IN THE NIGHT

As winter approaches, fire losses soar upward, indicating that faulty heating installations are a prime factor in causing many dangerous fires. The National Board of Fire Underwriters has outlined a set of fire prevention suggestions with the statement that safety from fire goes hand-in-hand with efficient heating.

In order to avoid trouble with heating equipment, the Board recommends precautions for everyone who operates a stove or furnace. First, the unit should be cleaned thoroughly every year and kept in good repair. In checking equipment, look for worn, broken or rusted parts and replace them. This check-up should include an inspection of smokepipes which may have become rusty or sagging. Any holes or open joints are dangerous, as sparks may fly out and ignite burnable material. If smokepipes are in poor condition, new ones should be installed and the Board recommends that they be placed at a safe distance from combustibles, or that such materials be protected with sheet asbestos or metal with an air space between it and the material to be protected. Chimneys also should be checked once a year. Clean out the soot and look for cracks and holes through which sparks might escape. Additional precautions are: Place hot ashes in metal containers instead of wood or cardboard cartons; be sure papers and rubbish are at a safe distance from the heating plant; do not permit accumulations.

Everyone should recognize the need of special efforts in this wartime winter to conserve fuel and avoid preventable fires. Heating plant fires sweep with incredible speed through the heart of a house, often trapping and bringing swift death in the middle of the night to sleeping occupants. Now is the time to avoid this tragic fate in your home—before it is too late.

New Law Voids Closed Shop In Alabama

MONTGOMERY, Ala., Dec. 17—Alabama's recently enacted labor regulatory law voids any closed shop agreement now in operation in the state, in the opinion of State Labor Drector W. Emmett Brooks.

Referring to a ruling by Atty. Gen. William N. McQueen, Brooks said in a statement Wednesday that "it is my position that the legislature has declared a closed shop agreement to be contrary to public policy in this state and, therefore, void."

Negro labor leaders were conjecturing whether or not Director Brooks' ruling would open new avenues of employment, long closed because of closed shop agreements with unions barring Negro membership. The Southeastern conference "secret" agreement between southern railroads and the Brotherhood of Locomotive Firemen and Engineermen, designed to eliminate Negro firemen and trainmen from present jobs and to prevent the hiring of any more, would come thus be void under this interpretation of the new Alabama law, it was argued.

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar

WM. H. BELL, President

PLANNING NOT NEW

So much is heard latley about planning that a natural assumption would be that there had never been any planning in the past. Successful enterprises have always had to plan, sometimes years in advance. An example of the kind of planning that keeps this country going is that of the retail distribution industry.

Right now retailers are swamped with customers, bedeviled by dwindling inventories, and subjected to dismaying manpower problems. Even the most efficient of them are walking a deadly cost-price tight rope that demands the utmost concentration. Under these conditions, merchants could be excused for abandoning planning and merely living from day to day. And yet they are working constantly on long-range plans that extend far into the peace. Their planning is both broad and detailed.

Large retailers, chain and independent, in addition to considering ways and means of placing orders immediately as an aid to manufacturers in their own postwar planning, are doing everything in their power to be ready to resume operations in a free competitive market. Knowing that courteous service in normal times is half the battle for existence, they are, among other things, continuing unabated their training of employes in courtesy to the public. They know, as the Mansfield, Ohio, News Journal observes, that: "When the war has been ended in victory, and when production of consumer goods has been restored to normal, retail stores will again be in a competitive situation in which their most valued asset will be their customer list, and the important item of good will is one that should be closely guarded, even under present handicaps."

Intelligent planning is and always has been an essential part of the competitive system; the same system that has given this country unprecedented comforts in peace and the tools of victory in war. Retail distribution planning, like that of all other industry, is currently based on the belief that this system will continue after the war.

ALL OF US

Every year the nation observes Fire Prevention Week. This year the Week, proclaimed early in October by the President, took on new significance. Because, while we have taken the offensive against the Axis, we are still on the defensive as far as fire is concerned.

That fire prevention should be made a 52-week program was graphically illustrated by Governor Thomas E. Dewey of New York when he recently said: "It is a matter of record that fire loss in the United States, during the year 1943, amounted to $315,000,000 according to the figures of the National Board of Fire Underwriters. Thus, in our first war year, we lost $15,000,000 more by fire than normal. It is also a matter of record that in two years the Nazis, with all their bombing, inflicted damage on Great Britain amounting to $480,000.000, very little more than our loss by fire (in one year).

"Our nation must make every effort to avoid losses which injure our war effort and delay victory. It is the duty of all of us to be vigilant against such aid to the enemy."

When Governor Dewey appealed to "all of us" he put his finger on the secret of effective fire prevention. The enemy, fire, cannot be routed by an army of planes and tanks. It is not that simple. It cannot be seen and smashed once and for all like a Panzer division. No squad of parachutists is needed to subdue a pile of oily rags in a dark corner; merely the attention of one person, a person alert to the deadly menace of combustion.

"All of us" working in thousands of small, often unobserved ways, can prevent most uncontrollable fires before they start. That was the lesson that was hammered home during Fire Prevention Week. We must not forget it.

PROGRESS OF SAFETY

The public seldom hears of the labor and research being carried on to make the railroads constantly safer. Devices like the tight lock coupler developed in 1937 to reduce the amount of slack between car couplings and to prevent them from riding over each other, which often results in dread "telescoping," are merely strange expressions to the layman. The same is true of the improved highspeed airbrakes of recent years. Only experienced trainmen know how these brakes, with a system of graduated pressure, can bring a heavy train to a stop in a minimum of time and space; or of the additional safety factor embodied in the new type axle developed by the Association of American Railroads after two years of exhaustive tests, and now standard equipment. The passengers of a transcontinental limited, at this moment speeding across the country, would be amazed if they were told that cars like the ones in which they are riding had been tested in a "squeeze" machine under stresses of 1.000,000 pounds.

Perhaps most interesting are the rail detector cars. Through the use of these cars, which "feel" with magnetic "fingers" for hidden defects within the rail, it has become possible in recent years to discover the causes of incipient breaks and remove the rails from the track. In 1941 detector cars were moved over 142,500 miles of track. In 1943, 193,-000 miles of track were so inspected. It is expected that in 1943 something more than 225,000 miles will be given similar inspection.

These are only a very few of the safety developments of the last few years on the American railroads. Others include heavier tracks and improved signalling equipment.

No headlines herald the safety progress of the railroads. But it is reassuring to know that such progress is continuing without interruption, even in wartime.

FIRE IS HELL

When a famous General remarked that, "War is Hell," he summed up in three words the opinion of all mankind. The same description aptly applies to another universal evil—preventable fire. Like war, something must sooner or later be done to curb it.

In the tragedy of the Cocoanut Grove night club at Boston, last fall, 490 lives were abruptly snuffed out by fire. A few days earlier, American troops disembarked from hundreds of ships on the hostile shores of Algeria and Morocco and quickly achieved the capitulation of those two territories comprising 14,300,000 population. It was officially reported that 360 of our soldiers and sailors were killed in this vast landing operation.

This gives a small idea of the problems which this country faces in its effort to put a brake on our $300,000,000 annual fire loss.

In proclaiming Fire Prevention Week a short time ago, the President of the United States said: "This nation's war program is menaced by an alarming increase in preventable fire losses. Since Pearl Harbor the destruction caused by fire in the United States has been comparable to the damage caused by all enemy bombing over England during the first two years of the war. The loss to this nation is just as real as if the destruction had been wrought by enemy bombers over America, or by saboteurs.

Fire prevention Week is past. But the echo of its message must not be allowed to fall on deaf ears during the 51-week interval before it rolls around again.

SELF-CONFIDENCE

It is astonishing how the world makes way for a resolute soul, and how obstacles get out of the path of a determined man who believes in himself. There is no philosophy by which a man can do a thing when he thinks he can't.

—Orison Swett Marden in "He Can Who Thinks He Can."

DID YOU KNOW THAT

1. Farmers produced about a third more food this year than they did during the pre-war years (1935-39)?

2. The total amount of food set aside for U. S. civilians this year is not less, but about the same as the amount available during the pre-war years?

3. Out of our total food supply this year, we are sending our Allies through Lend-Lease 10 percent of it?

4. Most of the food we send to Russia goes to the Army?

5. Our fighting men abroad require a food reserve not for 10 days, not 10 weeks, but for **nine** months?

6. An American soldier eats about one and a half times as much as the average civilian?

7. About one fourth of our food supply is either wasted or lost every year?

8. Keeping food costs down is important for everyone, but it is particularly important for 20 million people whose salaries or incomes have not increased?

9. One big reason for food price control is that the American people as a whole have much more to spend than there are things to buy?

10. You can share food fairly through rationing only if you use the right number of your own stamps? If you use your neighbor's stamps, or give expired stamps, or give no stamps at all, then you are getting more than your share which means that some other fellow may not get his full share.

Food will fight for freedom and shorten the war if we produce, conserve, share and play square.

UP OR OUT!

Months before Pearl Harbor the oil industry realized that war was inevitable. It set about mobilizing its resources against the nation's call to arms. When war came, the industry—almost overnight—accelerated the production of military gasolines, including 100 octane aviation gasoline, super lubricants and hundreds of other petroleum products critically essential to the conduct of modern mechanized war. Thanks to the foresight of oil men, every military demand has been met, as well as essential civilian needs—to date.

But these same men now sternly warn that oil production will not meet future essential needs unless prompt steps are taken to adjust the price of oil to meet rising production costs. Price is no longer merely a question of academic discussion. This country is running short of oil. Wildcatters are not drilling, because the possibility of profit, or of even recovering cost, is too scant to cover the risk.

Warnings of impending oil shortage and what to do about it have been sounded by many others besides representatives of the oil industry. Typical is the comment of Col. Ernest O. Thompson, member of the Texas Railroad Commission, who says: "If the price of oil had been permitted to advance on a parity with other basic commodities, 'wildcatters' would have found oil and the anticipated 500,000 barrels a day shortage would have been supplied. As it is." he concluded, "crude oil is on a day to day basis—well to refinery to user. There is no longer a surplus of stock in storage to draw from."

Is it reasonable to expect the price of crude oil to remain stationary? It will go up to meet cost of production or the country will go without oil. It will be either up or out!

A REASONABLE REQUEST

Much thought is being given to the problem of providing reemployment for men returning from military service. So far as possible, old jobs are being kept available. But this does not apply to one group in the service whose jobs were the result of years of training and individual effort.

When a doctor goes to war his job cannot be preserved for him. His patients must go elsewhere. When he returns, he must find new patients, a slow, tedious task that will not be made any easier by the fact that tens of thousands of other doctors released from the armed forces will be doing the same thing.

However, the doctors are not kicking. All the average doctor asks is a chance to work in the way that he is best fitted by environment and training—the way of the individual doctor under the traditional American medical system. It is a reasonable request.

Nicaragua has now in the field 3,000 rubber gatherers in the jungle.

Negro Farmers And Farm Workers Harvest Vital War Crops

Peanuts for oil, fruits, vegetables, and grain for the nation's food basket, hay and other feed for livestock and poultry production, and cotton for gunpowder, parachute cords, uniforms, and tents are among the important war crops that Negro farmers and farm laborers are harvesting this year. A good many of the younger men have gone off to war, but the older men, the women and the children have stepped into their places to keep farm production going. They are soldiers of the soil, everyone, fighting on one of America's vital fronts. Top, left to right, a Negro farmer in Georgia stacks his peanut crop; in Maryland, a Woman's helping with the harvest of hay and grain; in Alabama, an older man shakes and stacks peanuts, while in Mississippi a still older man helps with the bagging of peanuts, for shipment. Bottom, left to right, a woman and even a small boy help with the harvesting of carrots in Florida; in Maryland a 'teen age girl picks tomatoes; in Mississippi, it's a smile of pride on this worker's face; knowing that Uncle Sam needs high-grade cotton for the manufacture of important war goods, he picks swiftly, but carefully as this armful shows; in Florida, a farm worker fills crates with peppers; in South Carolina, its snap beans that this youth has picked.

sissippi, Louisiana, Texas, Oklahoma, Arkansas and South Carolina during January and February. Mitchell will direct such meetings as are held in the two latter named states, and Campbell will be in charge of the meetings in the other states. They will be assisted by State Extension Service, and AAA personnel. Both Holsey and Davis will address the conferences. Among other things, these AAA representatives will discuss the AAA aspects of the production goals, including the production practices to be followed in attaining them.

Davis and Holsey spent several days last week conferring with AAA executives, getting first-hand information on the nation's food needs for 1944, how these needs are to be met, and especially how the AAA production practices can assist in meeting these needs.

Campbell and Mitchell are in conference with Extension Service and AAA officials this week, helping to complete the details for the proposed state meetings. It is felt that these meetings will go a long way toward providing Negro farm and home agents, and in turn Negro farmers with important wartime agricultural information which will assist the farmers in making their maximum contribution toward winning the war.

GEORGIA FARM FAMILY ITEMS

By W. A. Hagins

Industrial College, Ga.—Georgia Negro farm families continue to emphasize war agricultural efforts by the proper storage and preservation of food and feed items and tending more diversified farm operations, according to P. H. Stone, State Negro Agent for the Agricultural Extension Service.

He further reports that farm folks are planting soil building crops, culling out poultry flocks, getting hogs "ready for the knife," marketing surplus farm products, making syrup, and generally getting things in shape for the 1944 live-at-home program.

On the 1706 farms visited by the 26 Negro county agents, during October, farm families canned 26,310 containers of food-stuffs and dried 3,430 pounds of food items, sold $20.887.92 worth of farm products and invested $6.615.18 in war bonds and stamps, Stone declared.

Farm families on these same 1706 farms had 36,592 chickens, 12,409 head of hogs, 289 beef animals, 862 turkeys, and 598 guineas for home consumption. They also had 829 acres planted to soil building crops and 602 acres planted to fall and winter gardens. Outbuildings, farm implements and homes are being repaired by families also.

It was further pointed out that 315 neighborhood leaders, in reporting to the Extension farm agents, conducted 91 meetings on community organization for greater food production. These same county agents gave 74 neighborhood demonstrations on the proper storage and preservation of food items, the planting of winter crops, and conducted 129 demonstrations in gardening and canning.

Approximately 30,000 Negro 4-H club members are contributing toward food production and preservation by working "hand in glove" with their parents and other farm families in diversified farm operations as well as adjusting their club projects for larger producing capacity in 1944, the State Agent concluded.

MORE CANNED FOODS FOR CIVILIANS

Civilian supplies of canned pineapple, asparagus, corn pumpkins, spinach, and figs will be increased soon, the War Food Administration announced last week. The increase is made possible through the release of part of the supplies owned and held by canners, but set aside for Government purchase.

Known quantities of these canned foods that will reach grocers' shelves are 540,000 cases of pineapple and 77,000 cases of figs. It is not possible to estimate at the present, exact quantities of the various vegetables, but it is thought that they will be substantial.

These foods will reach some retail markets within a few weeks—about the time that fresh fruits and vegetables are in lowest supply.

This action is in line with the Food Distribution Administration's policy of making available to civilians all possible supplies of food not actually needed for direct war requirements, officials said. These releases are the third to be made recently. The release of 2,970,000 cases of canned peaches, peas, and catsup was announced November 2 and on November 19, 2,400,000 cases of canned grapefruit juice were released from Government stocks.

MARKET HOGS EARLY

(Continued from Page 1)

served; (3) transportation facilities for marketing are limited, (4) manpower shortages exist, especially in packing houses, and (5) chilling facilities will not be available.

WFA officials declare that if farmers are to benefit from the government support program, it is necessary that they cooperate in marketing hogs no faster than available facilities can handle them. With a congestion of these facilities, it may be necessary to control hog shipments until the market is cleared. Farmers should make sure that they have an outlet for their hogs before they send them to the market.

The demand for meat since the war, particularly pork and pork products, has been greater than ever. WFA points out. And while farmers have demonstrated their ability to rally to the war needs of the nation by exceeding all previous production records, some of their effort will be lost unless more hogs are moved to market immediately.

One of two courses may be followed. Farmers may have to market their hogs earlier than usual, or hold them for later sale. In the first case, the hogs will be somewhat lighter than weights marketed in the past few years. In the second case, feed is limited and the most efficient use must be made of the supplies available. The individual farmer is asked to follow the course which will best meet the situation in an effort to get the greatest benefits from the fine hog production this year.

ADDRESSES LAND GRANT HEADS

(Continued from Page 1)

and C. O. Henderson of the personnel division.

Among other things, Secretary Wickard emphasized the importance of nutrition now and in the post-war era. Said he, "It is unwise to permit malnutrition and underconsumption to exist in the midst of farm surpluses."

MORE CANNED FOOD FOR CIVILIANS

Approximately 2,790,000 cases of canned peaches, peas, and tomato catsup are to be released to civilian consumers, the War Food Administration announced last week. The foods to be released are a portion of the reserves owned and held by canners to meet possible emergency requirements of the Government.

Present Government requirements do not indicate a need for canners to hold the full amount of these contingency reserves. Therefore, upon specific release by the Office of the Quartermaster General, which purchases canned foods for all Government needs, individual canners will be permitted to sell a part of their reserves, However, it may be several weeks before these released canned foods will reach grocery stores.

WFA has announced removal of governmental set-aside requirements for dry peas and split-peas, and a reduction in the required reservation of dry edible beans.

A TIP TO FARMERS

While the recent War Food Administration order permits a farmer (for a period of 90 days) to slaughter on his farm, without a permit or license, hogs owned by him and deliver the meat, there are still price and rationing restrictions on the meat.

In other words, a farmer may slaughter his hogs, but hogs only without a permit during the 90 day period between November 17 and February 17. However, if he sells any of the meat he must collect ration stamps for it, and he must not sell it for more than the ceiling price. If a farmer is going to slaughter beef or sheep, he must register as a seller and obtain the proper permits. He must also observe grading requirements. All ration stamps collected should be reported on a regular report form each month to the local war price and rationing board. Stamps should be reported on all rationed foods, including pork.

THE MODERN FARMER

VOL. XVI. NASHVILLE, TENN., JANUARY 15, 1944 No. 12

SAVE VITAL OIL CROP

600 Negro Townspeople of Americus, Georgia Active

Washington, D. C.—Joining in the "Peanut Shaking Holiday," 600 Negro townspeople of Americus, Ga., helped save an important wartime oil crop recently, according to reports received by the U. S. Department of Agriculture.

When Sumter County growers began to worry a few weeks ago about sufficient labor to save their peanut crop, County Agent J. K. Luck, white, and Negro County Agent F. M. Staley got together and planned a "Peanut Shaking Holiday." The holiday was to be one day set aside on which the the townspeople would take a vacation from their regular jobs and join the harvest of peanuts.

Everybody was enthusiastic. Many of those who could get away from their jobs signed up. When the day came 1,000 of the town's 9,000 population joined in the 'Peanut Shaking Holiday," and went to the fields to shake and stack peanuts. Among the volunteers were 750 Negroes and 250 whites. During the day this group stacked 187 tons of peanuts.

The county agents point out that the volunteers were responsible for the harvesting of half the peanuts gathered in Sumter County. They further state that because of the help given by the townspeople, not an acre of peanuts was lost for lack of labor.

The importance of the work of these volunteers looms when one takes into account America's critical need for fats and oils. The Jap sneak attack cut off our vegetable oil supply in the Far East. Therefore, U. S. farmers are not

(Continued on Page 8, Column 1.)

PUSH WAR TIME FARM OUTPUT

Negro County Agents Doing Commendable Work

Washington, D. C.—Negro farm and home agents, numbering nearly 600, are doing a good job of their wartime productive capacity, according to reports received by the U. S. Department of Agriculture. Not only are they advising farmers on how to plant and cultivate certain vital crops, and how to care for their poultry and livestock, but they also are advising them on how to store potatoes, how to form cooperatives and buy heavy farm machinery, how to can, and how to check and repair stoves and flues so as to reduce the hazards of fire.

In connection with National Fire Prevention Week, stove and flue clinics were held in many communities and farm families were told how important it is to prevent fires. In some communities groups were formed to check and repair stoves, flues and chimneys.

Protecting livestock against diseases is another important work of farm agents. In one week, M. W. Coleman, agent for Bertie County, N. C., vaccinated 342 hogs for cholera. He also gave the owners advice on improved sanitation and feeding methods.

Home agents are checking on families to find out how many can meet their own food needs. In one community, out of 706 families, only 24 had no garden, while 112 had cows and were getting sufficient milk, 204 had enough hogs, and 162 had enough poultry. The agents are putting on campaigns in

(Continued an page 5, Col. 1)

F. S. A. BORROWER PAYING

Twenty-six Per Cent Have Taken Up Their Loans Already

Washington, D. C.— Families buying farms under the Bankhead-Jones Farm Tenant Act have repaid on their loans 26 per cent more than the proportion necessary to pay out in full over the 40 year period, the War Food Administration said today.

Heavily increased payments out of 1942 income, from which the Government collected the equivalent of a year and a half's installments in a single year, put the average farm purchase borrower substantially ahead on his average annual obligations, the Farm Security Administration, which administers the program, reported.

These payments 'ahead of schedule" are the result of a variable payment plan followed by 77 per cent of the borrowers. Under this plan families are billed for smaller than average amounts in adverse years, but are billed for larger than average payments when good incomes justify it.

Most borrowers accordingly were billed for much larger payments out of 1942 income than necessary to keep them up to schedule on a 40-year basis. As of June 30, 1943, these increased maturities on farm purchase loans made during the six years of the program's operation totaled $18,807,447 in principal and interest. This compares with about $15,000,000 that would have been due if repayments had been based on a fixed amount each year over the 40-year period. On the larger amount billed, the borrowers had re-

(Continued on Page 8, Col. 4)

PREPARE POST-WAR TAXATION POLICY NOW

Of the domestic post-war problems there is none more important than that of taxation and government expenditures. With a Federal post-war debt of probably $300,000,000,000, and interest charges of some $6,000,000,000 a year, it is imperative that all other expenditures of government be limited and that a sound policy of taxation be adopted.

No tax policy can succeed which ignores the fact that the all-important thing is to increase the national income and at the same time expand the country's total wealth and productive capacity.

Failure on the part of our lawmakers to recognize this fundamental truth will lead to the destruction of private enterprise and substitution of some form of national socialism.

Recognizing this danger, a movement is now underway in the 48 states to secure an amendment to the Federal constitution limiting the power of Congress in peacetime to impose taxes on incomes, inheritances and gifts, to a maximum of 25 per cent. Fifteen states have already passed resolutions requesting Congress to call a convention for the purpose of proposing such an amendment. Supporters of the measure emphasize that Congress should no more have unlimited power over one's property than over his person; for, in the language of Chief Justice Marshall, "The power to tax involves the power to destroy."

"HAVES" AND "HAVE NOTS"

Survey Reveals Plans for Important Jobs in 1944

Washington, D. C.—Making plans for the important job of helping to meet the 1944 farm production goals, Negro farm and home agents are making surveys of the communities they serve in an effort to determine the extent to which Negro farmers can further contribute to the nation's wartime food needs.

Next year's goals call for something like 122 billion pounds of milk, the farrowing of 17 million sows (if the litters average only seven that means 120 million pigs), the raising of 900 million chickens on farms, the production of four and a half million dozen eggs, and a total of 22 million Victory Gardens, to mention just a few of the items.

To guage the outlook for the production of these important items by Negro farmers, farm and home agents are taking a look. Well, here's what they saw in one North Carolina community of 219 families: 77 families had cows, 199 owned hogs, 195, had chickens on the yard, 197 were growing gardens, 130 had canned fruits and vegetables during the summer and early fall, and 129 families had preserved fruits and vegetables by the drying process. When it came to feeding the soil to keep it in top shape for production, 99 of the farmers had planted winter legumes.

Of course, the big job is to get the other families into production. To do this, efforts are being made to get more family dairy cows into the state. Already, Extension agents have procured about 2,400 dairy calves and bred heifers from Mississippi and Tennessee. Of these Negro farmers purchased about half.

STOP WASTING FOOD

One of the most important contributions that home front fighters can make toward winning the war is in the conservation of food. Here's how important conservation is: our farmers have just about reached the limit of their productive capacity and yet, our fighting men and our allies need still more food. Where is this extra food to be found The answer is: in your garbage can. We must reduce this waste.

The War Food Administration estimates that the American people are wasting between 20 and 30 per cent of the annual food supply. A survey of garbage cans in 237

(Continued on Page 8, Column 2.)

NO RATION BOOK FOR ELECTRICITY

"Like the nation's transportation system, the electric industry has proved a tower of strength since the United States entered the war," says M. S. Rukeyser in New York Journal-American. "In spite of the great and unexpected peak load, especially in war production areas, the electric industry has proved no bottleneck; on the contrary, nationally, it has done a remarkable overall job in providing light and power for war industries and military projects, as well as for regular industrial, commercial and residential users. Unlike other industries which have donned khaki, this industry has not ceased giving regular service to civilian customers."

INDIA'S FOOD SITUATION

Helpful Discussions at U. S. D. A. Agricultural Meeting

Washington, D. C.—"India's millions, living on a bare 1,700 calories per day, can benefit by participating in a world food organization," declared Sir Girja Shankar Bajpai, Agent General for India and former minister of agriculture, in an address Tuesday before the 21st annual Agricultural Outlook Conference in session at the U. S. Department of Agriculture, October 18-23.

Speaking on the subject, "World Food Program," Sir Bajpai pointed out that his native India could be helped toward "freedom from want" in three specific ways by taking part in a world food organization. "We could," he said, "benefit from joint research, from a farm machinery pool which would make more of the world's supply of heavy machinery available to India, and we could benefit from the exchange of technically trained personnel."

The Indian agriculturist, who was a delegate to the United Nations food conference, and who is now a member of the Interim Commission, addressed an audience of 500 delegates and Department officials in attendance at the Outlook conference. The delegates included farmers, farm experts, economists and persons in allied fields from every section of the country. He described for them India's critical food plight, and called upon them to cooperate in the development of a world food organization.

Analysing India's food production, the Agent General listed

(Continued on Page 8, Column 1.)

GOVERNMENT HAS LIMITATIONS

The government itself has presented one of the strongest arguments against the ultimate socialization of medical care. Efficient, prompt and competent treatment are the cardinal requisites of a medical system.

Everett W. Jones, head hospital consultant of the War Production Board, in opposing compulsory hospital insurance under government management, comments that: "Federal agencies cannot hope to approach private initiative and enterprise in efficient management." After working fifteen months in Washington, he says: "I have no delusions left as to the efficiency of governmental agencies. Delay and red tape just can't be eliminated in any political organization as gigantic as our Federal government. The record speaks for itself."

The more gifts and services people demand of government, the more complex and inefficient it becomes. There are those who think the government should supply everything but eternal life. At the same time, they complain of growing bureaucracy and taxation. They forget that our government is a political organization never intended to manage the personal or business affairs of its citizens. Shifting the responsibility of medical care to government would not simplify the health problems of the individual. It would add to them by the destruction of medical efficiency and further pyramiding of bureaucracy.

A Child With His Hands Filled With Cotton

Children of farm families often begin picking cotton at a very early age. When too young to carry the cotton picker's bag, they pick it and pass it on to a grown-up.

WOMAN'S PAGE

BRISK FALL WEATHER BRINGS URGE FOR INFORMAL PARTIES

Simple Recipes Provide Appetizing Viands For After the Football Game Get-Together

By Mary Lyles Wilson

Brisk fall weather and the opening of football season puts us in the humor to have the crowd over for a simple, informal party. What better opportunity than after the next football game—providing of course you aren't on Saturday afternoon at the plant.

If the weather is crisp, hot food will taste better. You might serve chili, frankfurters or hamburgers in buns, scrambled eggs and bacon, waffles and sausage, or just a tray of hot toasted sandwiches. Whichever you choose, piping hot cups of coffee on the side are a must.

Unless you happen to be one of the few people who are ration-point-rich, you'll probably wish to select food that will not require too many points, and extend the meat you serve with other foods, such as plenty of beans in the chili, barbecue sauce on the franks or hamburgers and so on down the extender list.

Plan Your Time

Another consideration is the time required, if you are both hostess and cook. You wouldn't want to leave the game before the finish, so plan refreshments that will require little time and effort after your guests arrive.

Chili can be prepared in the morning and reheated just before serving—as a matter of fact chili seems to taste even better when it has simmered twice. A good stew, improved in flavor, too and by the way, a savory meat and vegetable stew with good gravy is a dish that tastes mighty good to hungry people. Sandwiches could be prepared beforehand and toasted when the guests arrive. Or set up a make-your own sandwich tray and let the guests make what they want as they want it.

If the refreshments are to be a whole meal, you can use any of today's suggestions but just before serving, toss a salad (the vegetables could be washed and trimmed beforehand and kept in the refrigerator) and provide a simple dessert, Cookies, cup cakes, or, if you fancy, individual pies can be ready and waiting.

Tamale pie is a favorite with many and may be prepared in advance.

TAMALE PIE

Yield: 10-12 servings.
1 pound diced pork shoulder
1 pound diced veal shoulder
1 cup chopped celery
4 teaspoons salt
2 slices salt pork or bacon
4 tablespoons diced onion
1 1-2 cups yellow cornmeal
1 cup cooked tomatoes
1 cup cooked corn
1 teaspoon chili powder
2 eggs

Simmer veal, pork, celery and salt in water to cover until meat is tender—about 2 hours. Brown diced bacon. Brown onion in bacon fat. Cook cornmeal in 3 cups of the meat broth, stirring constantly until thick. Combine meat, onions, cornmeal, tomatoes, corn, chili powder and beaten eggs. Pour into greased 2 quart casserole. Bake in a moderate oven (350 degrees F.) about 1 1-2 hours. This is very good reheated.

Elaborate food is no longer necessary for entertaining. Delicious flavor, high nutritive value and tempting appearance are the three qualities now desired in food for any occasion. Waste is to be eliminated, even when entertaining large or small groups. An attractive table is appetite inspiring. Eating good food is patriotic—and there is no reason why we should not enjoy it as well. Set your table the prettiest way (this doesn't mean the most expensive). Arrange your platter of salad made with the colorful fruits or vegetables on the market now, in party attire with a bed of green lettuce, curly celery, radish roses and golden sticks of carrot, rings of pepper. Or if fruit is your choice, rings of avocada filled with honeydew balls garnished with bundles of pink grapefruit and oranges, glistening with a dressing made with fruit juices, plenty of lemon, very little oil, coral with paprika.

A platter at the opposite end should offer real satisfaction with its contents of sliced roast turkey or chicken placed over pones of fluffy dressing, mounds of creamed potatoes or beds of steamed rice. Clear creamy gravy is waiting in a covered dish. An a la king of chicken or turkey served in a ring of dressing is both appealing and appeasing. The extras could be cranberry relish, pickled cucumber or fruit, stuffed or ripe olives and celery hearts. Hot rolls, coffee and dessert will send everyone away from the table in a happy state of mind—and body!

ROAST IDEAS

FIRST DAY: Season a 4-lb. lamb-shoulder roast, bake 2 1-2 hrs. in slow oven in uncovered roasting pan. During last 40 minutes place 3 apples, halved, around meat. Baste with mint syrup made by boiling 3 minutes cup chopped mint, 1-2 cup boiling water and 1-4 cup sugar. Garnish with mint sprigs and apples.

SECOND DAY: Serve part of leftover meat sliced cold, with a salad.

THIRD DAY: LAMB RICE CUTLETS: Simmer together 1 cup cubed roast lamb, 2 cups lamb gravy, 8 small cooked white onions, 1 cup cubed cooked carrots. Pile in center of corn bread ring.

FOURTH DAY: RICE MEAT CUTLETS: Combine 1 cup ground lamb, 1 cup cooked rice, 1 cup thick white sauce, 1-2 teaspoon grated onion, 1 teaspoon chopped parsley, salt and pepper. Form into cutlets, chill. Then dip in egg roll in crumbs and fry until brown. Serve cooked sliced green onions and garnish with mint jelly.

SWEET POTATO PUFFS

Bake six sweet potatoes until tender. Remove from shells and mash well. Add one-fourth cup molasses, 2 tablespoons butter, 1-8 teaspoon nutmeg, and 1-2 cup milk. Beat until light and fluffy. Return to shells and bake in moderate oven until brown.

BAKED STUFFED POTATOES

Scrub potatoes well, remove a core from the center, and stuff with link sausages. Bake until potato is well done.

APPLE YAM ESCALLOP

2 cups sliced cooked sweet potatoes
2 cups sliced raw apples
3 tablespoons flour
1-2 cup raisins
2 slices lemon
1-4 teaspoons cinnamon
1-4 teaspoon salt
2 tablespoons butter
1-2 cup brown sugar (syrup)
1-3 cup water

Pour mixed ingredients into buttered casserole. Cover and bake 15 minutes, uncover and bake 20 minutes in moderate oven.

PLAN MEALS AHEAD WITH BEEF POT ROAST

Wondering how some women manage such big meat meals on their ration allowance? Well, a lot of them start with a big, basic meat cut and use the leftovers for delicious followup meals.

Beef Pot Roast is a grand "basic" dinner. For with what's left you can fix meat pies,stews and other interesting meals later on.

Get a 3-4lb. round-bone or bladebone chuck roast. Try to get Armour's branded beef. For it's rich and fine flavored . . . a meat packed with essential proteins. Heat pot roast kettle 5 minutes. Place roast in kettle, cut side down, and brown VERY slowly all sides for 20 minutes. Add 1 onion, sliced, during last 10 minutes. Turn heat low, add 3 tsps. salt, 1-4 tsp. pepper and 1 1-2 cups boiling water.

Cover tightly and simmer 3 1-2 hours or until tender. Remove roast, skim any excess fat from broth. Thicken gravy with 2 tbsps. flour mixed smoothly with 1-2 cup cold water. Serve surrounded by noodles.

GINGER COTTONTOPS

As in the days of the spinning wheel and the stiffly starched surplice, spicy ginger is still a favorite seasoning. Ginger Cottontops bring plain muffins to the family table in gay new style, seasoned with memories of days gone by.

A crinkly topping makes new a favorite muffin recipe. Delicately moist and fragrant with spice, Ginger Cottontops served with vegetable or fruit salad satisfy hunger easily. Good enough to pass for plain cake, this spicy bread can do extra menu duty.

Ginger Cottontops go hand in hand with Hallowe'en hijinks. Muffin baskets bulging with Cottontops delight both young and old merrymakers. Especially pleasing are Ginger Cottontops when accompanied by jams and jellies from the home-maker's victory cupboard.

Topping:
1-4 cup enriched flour
1-4 cup sugar
1-2 teaspoon ground ginger
1 egg white

Mix together flour, sugar, and ginger. Add to egg white and blend thoroughly. Drop 1-2 teaspoon on top of each muffin before baking. (Add egg yolk to muffin batter.)

MUFFIN BATTER

2 cups sifted enriched flour
3 teaspoons baking powder
1-2 teaspoon salt
1 teaspoon ground ginger
1-4 cup brown sugar
1-4 cup melted shortening
1 egg
1 egg yolk
1 cup milk

Sift together flour, baking powder, salt, and ginger. Beat egg and egg yolk, add milk, brown sugar, and shortening to flour mixture. Fill greased muffin pans half full. Put a teaspoonful of topping on batter. Bake in moderately hot oven (400 degrees F.) 20 to 25 minutes.

Yield: 18 2-inch muffins, or 12 3-inch muffins.

Coffee Cake lends charm as its goodness becomes a breakfast treat. When fruit is part of the coffee cake, other fruit may even be omited from the breakfast. It also is an excellent way to satisfy the family as a dinner dessert.

The old-fashioned crumble Coffee Cake is a number one favorite on the hit parade of delicately sweet flavored coffee cakes. A pleasing addition to the crumble family is cinnamon sugar topping. It is made by mixing together 1-2 cup brown sugar, 1 tablespoon cinnamon, 2 tablespoons enriched flour, and 1 tablespoon melted butter or fortified margarine. Into a greased pan place 1-2 coffee cake batter and sprinkle with half the cinnamon sugar topping. The remaining batter then covers this mixture, and the additional topping is sprinkled on top. The golden richness of the brown sugar and spicy tang of the cinnamon keep children clamoring for more of this crumbly cake at breakfast time. They will enjoy a generous serving of coffee cake after they troop home from school, and they will love carrying a generous square of it in lunch boxes.

A deluxe version of the coffee cake family is Filled Coffee Cake. A mixture of orange marmalade, chopped nuts, nubby raisins with brown sugar, cinnamon, and butter or fortified margarine gives a festive note when used as a filling for coffee cake batter. For a holiday note, this rich filling makes coffee cake time most irresistible. Served with a cup of piping hot coffee, Filled Coffee Cake reaps a harvest of compliments as a snack for callers or as a part of any menu.

VICTORY GARDEN EXPERIENCE GIVES VALUABLE INFORMATION

Soil Fertilized in Previous Fall Produced Better Crops Than That Worked During Spring

By Floyd Bralliar

Having spent a considerable portion of our time this past year in the advisory way on the victory garden work for Nashville and Davidson County, we have had an opportunity to observe literally thousands of gardens and different methods of culture and practice. We would have had to be dumb indeed if we had not learned some lessons worth passing on to our readers, and what applies to the victory garden applies with equal force to flower gardens. We believe that these observations will be of value to our reader as a whole.

First of all, it was very plain to be seen that soil that was fertilized the previous fall produced much better crops, especially early crops, than soil that was not worked until spring and that, other things being equal soil that had been cultivated several years was decidedly more productive and easier to cultivate than soil that was not broken until spring. Furthermore soil that was not plowed or spaded over until late in November had very few cut worms or other similar pests; whereas s oil that was worked early in the fall, say September or October had an unusually large number of these pests.

Cultivate In November

Undoubtedly this was due largely, if not entirely, to the fact that insects that spend the winter in the ground do not usually go into the ground in the South much before October or the first of November and so are not destroyed by early plowing of the soil. Most of these insects when they go into the ground bury themselves less than six inches deep and they usually bury themselve in a little room that they have prepared and plastered with a waterproof plaster which they themselves secrete. When this hibernating room is broken up, the insects die. This applies even to many of the insects that spend the winter in or on the ground in the egg stage. This being true, it is very evident that it pays very handsomely to cultivate the soil thoroughly and deeply sometime in November.

Our second observation was that land that was fertilized with stable manure in the fall or even up to the first of February produced better and was in more tillable condition than if fertilized in the same way in March, April, or May.

First Class Gardens

We have also observed that one can raise a good garden in almost any kind of soil. Four of our demonstration gardens in Shelby Park lay adjacent to each other on land that had been well prepared for and used as croquet and tennis courts for years. True, they were gravel and cinder courts instead of cement, or they couldn't have been used for a garden at all. They were fertilized heavily with stable manure either late in March or early in April, plowed with an ordinary turning plow and disked with an ordinary field disk. They were then worked up by those who raised the gardens and were planted. These gardens probably had to have twice as much care as they would need in the same ground next year, but they produced first class gardens. The soil naturally was a heavy yellow clay. The whole outcome was about as unpromising for a garden as soil can well be.

Our next discovery, and it is an important one, was that it still pays to plant the small lima bean rather than larger improved ones . . . . Henderson's Bush Lima, Wood's Bush Lima (for bush limas) and the California Sena varieties (for pole lima beans). Those who planted them very early picked three and some of them four crops off the vines, especially off the bush varieties and the plants were still loaded with partly developed beans when they were killed by frost. The lesson is that these beans should be planted as early in the spring as weather will permit and cultivated and kept clean all summer.

Cultivate Vines

When one crop of beans matures and is picked, cultivate the vines thoroughly and they are almost sure to immediately come into bloom and put on another crop. The last crop just before frost is usually the heaviest crop of the season. The same is true of the pole Senas, only they do not produce their beans in crops so much, but produce them more steadily right straight through, beginning to bear close to the ground and bearing higher and higher as the vines grow taller.

Okra, thinned so as to set 12 or 18 inches apart in the row, produced just as large a crop as that which stood closer in the row and the plants did not grow so tall and spindly and were much easier to pick. That which was thinned also began to produce a little earlier than that which was not.

We have frequently heard the statement that okra could not be successfully transplanted, but we saw a number of gardens this year where plants that were cut out in thinning and were set in other rows did practically 100 per cent of them grow and produce good crops. They were a little later, to be sure, than those that were not transplanted, but not very much later at that.

Staking Tomatoes

But, the most conspicuous and outstanding thing—something that was observed by many gardeners who tried growing their tomatoes on stakes and other supports and allowing part of them to lie on the ground—was that, without exception those which were staked had very much better yield, very much less disease, and finer tomatoes than the plants which were not tied to stakes or some other similar support. Those that lay on the ground showed much more disease and quit bearing much earlier than those that were staked. Most of the staked tomatoes, that were given any kind of care, bore straight through until frost and had plenty of green tomatoes on them when the frost finally hit the vines. We advise all who expect to grow tomatoes next year to prepare ahead of time good strong stakes at least six feet long and lay them away until they are needed next spring. We will be much more sure to get stakes if we keep it in mind and get them this fall than if we wait until spring.

Another thing that was very noticeable was the importance of planting varieties that are known to be resistant to disease and especially to wilt or blight.

DOWN TO EARTH

Every thoughtful citizen knows the importance of maintaining the solvency of our country and the industries that furnish jobs and payrolls which create prosperity. But he also knows that the necessity for taxing income until it hurts should not mean taxation to the point of destruction.

There is no difference between tax destruction of earnings that enable an industry to operate, and destruction of seed reserves which are needed to produce new food. There is a point beyond which it is dangerous to go in either the taxation of earnings or the reduction of grain supplies.

At last governmental economies to offset new tax demands seem unavoidable in order that the tax-earning ability of the nation, and therefore its solvency, may be preserved. This is the problem that now faces Congress, and it will take wise and nonpartisan statesmanship to handle our country's financial problems from now on if the earning ability of the nation for postwar readjustments and job-making activities is to be preserved.

If Washington desires to tap swollen war earnings and retard the inflationary trend, let a sales tax be adopted rather than a general increase in income taxes, which leaves largely untouched four-fifths of the national income. The hard-pressed taxpayer can control to some extent his sales tax through his purchases, while those squandering war wages would contribute a part of their excess purchasing power in taxes to the government.

RECOGNITION AT LAST

War has one virtue. It reawakens a people's sense of values. For example, in peacetime everyone takes the local newspaper pretty much for granted. Its value to the community and to the ideals of freedom which the editor symbolizes with every opinion he expresses, is almost wholly lost to sight.

In ordinary times the editor is painfully reminded of the arbitrary value placed on his services. Advertising is hard to obtain. When it is obtained it is strictly on a basis of getting so many customers for so-and-so's gadget. Any advertising manager who bought space in newspapers with the partial objective of encouraging a free press and free enterprise would, a few years ago, have been looked upon as light-headed by his colleagues.

But today circumstances have changed. The nation is at war. It is at war to restore freedom to other nations and to perpetuate it in this country. Our people have had abundant opportunity to contemplate the horror of nations where freedom is dead.

Our business men, all of us, have observed that in those nations disappearance of personal liberty was accompanied by the disappearance of the virulent free thinking and free speaking editor. After the disappearance of the editor came the iron hand of dictatorship. It is not surprising that we begin to look upon the editor and the free press he represents as something to be preserved at all costs in this country.

Industry realizes at last that without our free press there could be no free enterprise. Industry realizes now that if it wants to do business at the same old stand after the war, it will have to first help preserve a system of government that will let private enterprise live. War has reawakened industry to the value of the editor. Its representatives have discovered that the American press renders a service far beyond selling a few yards of Blank Company's cheesecloth. They are finding out that this latter service—the keeping alive of freedom—cannot be measured in dollars and cents, or bought by the inch.

ENCOURAGING WORDS

The bituminous coal industry is fully prepared to keep American coal bins filled this winter and take care of any foreseeable fuel needs in foreign countries occupied by the armed forces, declares Harry M. Vawter, Director of the Bituminous Coal Institute, if it is not hampered by strikes, inexcusable absenteeism and restrictive regulations.

Vawter said he believed domestic users of coal had been needlessly frightened by a "phantom of fireless days" in the coming winter, and in some cases had termporarily obstructed the smooth-running machinery of the industry by hoarding.

He said that $400,000,000 had been spent in recent years in modernizing mines and mining methods, and the industry was now producing more coal per year than it did during the first World War, with 150,000 less miners.

TINKERS AT WORK AGAIN

The commerce of the United States is one of the marvels of the world. Its immensity and variety are due to the combination of many things—soil, climate and resources, people, political institutions and opportunity for business enterprise. Not one of these things alone, but all of them together, made possible the development of continent-wide commerce upon which the American way of living is founded. Indispensable in this structure was:

A system of railroads adequate to the needs of the nation in war and in peace.

And on those railroads a flexible system of freight rates designed to meet the varying needs of a community rather than to fit some theory—to help the producer reach the widest market—to give the consumer the widest choice of source of supply—rates made to make commerce move. That's what the shippers want, that's what the railroads want, that's what the consumers want. And that, by and large, is what all three get in America.

But now the tinkerers with our economic pattern of life propose to change all this by act of Congress, fixing freight rates in a rigid pattern determined by mileage, and mileage alone. If freight rates had been based on that theory, the groves, orchards and gardens of the Pacific Coast, Rio Grande Valley and Florida, would be small affairs and the people of the 48 states would not enjoy the fruits and vegetables gathered from the four corners of our country. The raising of livestock would concentrate around processing plants, and the dinner tables of all America would be poorer for the change.

If rates were made on distance alone, the average American never would be able to live in a house built with brick and lumber or millwork from north, east, south and west.

American freight rates have been made to meet the actual needs of producers and consumers. Under the pattern proposed, based on mileage alone, commerce would be compelled to reshape itself to fit an inflexible system of rates made on an unworkable theory.

FAKE PRICE FIXING

Anyone reading the answer of the W. T. Grant Company to the complaint of the Office of Price Administration charging violation of the "no higher price line limitation" under Maximum Price Regulation No. 330, would find it hard to believe that such practices are countenanced by the OPA as fair and intelligent regulation. The same charges are made against other leading merchandisers in an endeavor to enforce a regulation confining sales to price lines carried in March, 1942.

For example, the Grant Company operates 492 stores located in 40 states. Under the OPA's ruling, the defendant is denied the right to sell, in four of its stores, dresses in higher price ranges than $1.29, because that was the price in March, 1942. In four stores, the price limit is $1.59; in 11, $1.98; in 23, $2.98; in 47, $3.98; and so on through a long list. The fact that many of the articles sold in 1942 at a certain price, are no longer manufactured, seems to have no bearing on the case.

But OPA does not prevent a competing store from selling the same dresses at higher prices based on today's manufacturer costs, if the store did not sell such dresses at lower prices in March, 1942. A new store could sell the dresses, based on current costs.

Such regulation demoralizes established lines of business, and it shakes public confidence in official claims of cost control.

In the interest of the public and sound merchandising, it is to be hoped that the stores will fight this type of inequitable price control through the last court.

Beating The Gun

By Alvin Moses

NEW YORK, Dec. 23 .ANP)—THE MELTING POT THAT IS . . . America is the only home we Negroes have known since 1619. The world of sport looks to the widely discussed post-war-era as a revolutionary one for Americans of dark skins. Militant Negroes who have championed the cause of their fellow citizens in an endeavor to break down barriers denying them the right to participate in certain branches of sports are today drafting a blueprint for tomorrow with dyed-in-the-wool (net phony); white liberals.

The Shame Reaches Olympus

How in God's name anyone with an ounce of gray-matter can envision prejudice keeping the Negro out of such fields as national tennis and golf tourneys, soccer, college and pro basketball, (in New York City specificially we refer to) swimming meets, handball and pro-football in the post-period; is all over my head. The whole idea is so untenable, so un-American, so undemocratic that . . . the stench reaches high-heaven.

Showdown Just Around Corner

Everywhere one goes the question is raised by prominent white-Americans: "Why does this condition remain against the most loyal and long-suffering group in our nation's history?"

The matter will have to be brought to a head and we Negroes should play an important part in this connection. Do you want to see your sons carve out careers in baseball with its high-salary inducements? Then let's face facts.

We Must Do Job—Ourselves

That baseball pow-wow of last week struck me as nothing more or less than window dressing. The brilliant group of Negro writers, publishers, and scholar-actor-singer-goodwill ambassador . . . Paul Robeson, are due the lasting gratitude of Black America.

They were in dead earnest. Their presentation of our side of the baseball tragedy was masterful to put it mildly. But IT IS NOT ENOUGH. We writers, merchants, educators, politicians, statesmen, professionals in all walks of life (Negroes we mean) . . . must campaign day in and day out until the job is successfully completed. Dr. Powell, publisher of the N. Y. Amsterdam News, has been more in the public print since he sought and secured the boxing commissioner post than ever he was as x-ray specialist, and co-owner with Dr. Savory of bread-baking interests,, insurance, and money-lending enterprises . . . aye???

Let other home-staying professionals come out into the open and fight the fight of 13 is it 18? million American Negroes. We bemoan the fact that ignorant, or little trained glorified opportunists hold the highest political (city) offices in years gone by. That was chiefly because the snooty members of so-called Negro literati or intelligensia . . . deigned to come out and mill around political clubs and make soap-box speeches. The matter of sports is also a matter of politics. Never forget that for a single second.

Dan Burrows, political leader (ox) of the 19th district, saw to it that one of his club members was appointed to the boxing business. Pemberton of the Puerto Rican-Negro bolt, did likewise. Gov. Dewey saw the political expediency of appointing capable, intelligent and personable Dr. C. B. Powell. Band together with white liberals and bring the Negro in American baseball to a successful ending ere 1945 roll around. I pledge myself never to cease presenting the facts,—even as I am attempting to do now.

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

IT'S A DATE DEC 10

If you were operating a railroad, an express company, or the post office, you would have been looking ahead with apprehension to the flood of Christmas packages which were seeking transportation. You would have known that one human failing was to leave Christmas shopping and Christmas shipping until the last minute.

"December 10" was made a deadline for shipping Christmas packages which were delivered in the United States, said L. O. Head, president of the Railway Express Agency. Millions of special holiday labels carrying the words, "Do not open until Christmas," were available to the public without charge at all Railway Express offices.

Packing, wrapping and addressing should be done more carefully than ever before to withstand the stress of record-breaking shipments, and delivery problems. All helped!

FEASTING

Leslie Clare Manchester

"Dere's a rustle in de branches
Ob de tall persimmon tree;
Something climbing, something clinging
An' a-looking down at me.
It's a 'possum full an' fluffy
In a coat ob gray an' white;
Its a possum—eyes like lanterns—
Up dere in de quiet night.

"Such a feast ob wild persimmons,
Fragrant sweet an drenched wid dew
In a banquet-hall ob heaven
Domed an' tapestried wid blue;
Such a feast for Mister 'Possum
Wid its viands an' its wine.
He's a guest in leafy spaces
Where de stars like candles shine.

"He has left de rocky crannies
An' de hollows in de hills;
Left de sumac thickets turning
Scarlet by de dancing rills.
He has had an ole-time yearning
When de autumn's touch is cold,
For persimmon apples purple
In a foliage ob gold."

FATHER OF NEGRO FARM EXTENSION WORK IN LOUISIANA UPS WARTIME FOOD OUTPUT

Washington, D. C.—The Negro farmers of Louisiana are turning in a record production of food this year, according to reports received by the U. S. Department of Agriculture.

Although falling slightly short of 100 million pounds of milk they were aiming for, it is estimated that Louisiana colored farmers have over shot their goals for beef, pork, chickens, eggs and some vegetable crops. Reports indicate that they have produced this year about 60,000 head of beef cattl had 40,000 sows to farrow, raised nearly two million chickens, produced approximately five million dozen eggs, and harvested considerable quantities of peanuts, sugar cane, rice, fruits and vegetables.

The potential for this record production of food to fight for freedom has been in process of development for some time. One big factor in the process goes back to a hot August day in 1913 when T. J. Jordan, then recently graduated from Tuskegee, was appointed the first Negro county agent in Louisiana.

Taking up his duties in Bienville and Claiborne parishes, Jordan found most of the farmers growing cotton for the gin, corn for their workstock, and debts for themselves at the grocery stores and plantation commissaries. As a boy in Bienville parish (where Ollie Stewart, war correspondent now at the front, was also reared) Tom Jordan has become familiar with the local pattern. He had always heard of the John Joneses, and Henry Holmses who, when they had paid their grocery bill, cleared sometimes only $20, or maybe $5, or sometimes nothing at all from their crop and the year's work performed by the entire family.

It was simple arithmetic. Jordan knew that if these farmers raised more of their food at home, they would clear more from their cotton crops at the end of the year. He set about working with individual farmers. Putting his Tuskegee agricultural training into practice, he helped farmers get gardens started, showed them how to raise enough chickens to meet a large part of their meat and egg needs. Here and there he urged farmers to raise a gilt up for a brood sow, or save a heifer calf for milk production.

Little by little the idea caught on. Extension Service officials in the State saw the effectiveness of the work and appointed Negro agents to work with the farmers in other parishes. Jordan's work expanded. By 1922 he was elevated to the position of state or district agent, which post he still holds. Thus, from this one agent in 1913, the number has now increased to 21 farm and home agents. "By no means all that are needed to service the 59,000 Negro farmers in Louisiana," Jordan says. "but it is a beginning and the men and women who make up the beginning are doing an effective job."

Growing enough food to live at home is no longer the sole objective, these agents are urging the farmers, and showing them how to grow additional food for our fighting men, our allies, and the city folks here at home. They are making the farmers aware of the importance of food in this war.

Extension officials point out that behind the whole program stands Tom Jordan, a man who has put a lifetime of service into his job. The idea that "food fights for freedom" is nothing new to him. He has seen it work right there in Louisiana. He has seen a home garden, a pig in the pen and a few chickens on the yard free tenants and sharecroppers from debt and poverty.

A few weeks ago, State Agent Jordon rounded out his thirtieth year in Extension work. To him this was not an occasion for celebrating. He spent the day confering with farm groups, explaining to them that still greater production is needed in 1944 to meet our wartime food requirements.

State Agent Jordan is married and has three daughters, one on the staff at Hampton Institute, one in the public school system of Louisiana, and the other a member of his office staff.

MAYBE ANOTHER SURPRISE PARTY

The American people were long suffering at the hands of the European troublemakers. Our amiable disposition caused the bullying bosses of enslaved peoples to think they could kick us around with impunity. Well, they have had their eyes opened.

A somewhat parallel situation exists at home. We want peace in the labor field. Under our constitution, workers have a right to join a labor union if they choose, or the right not to join, although this latter right has been abrogated in many cases.

But labor unions have gained such power that in our country's crisis some of them have been kicking our people around after the pattern of the European dictators.

The people have endured coal strikes, war industry strikes, and all manner of work stoppages which have deliberately defied our government, as did the Axis nations.

Now with the third coal strike in progress, and with a rail strike threatened, the gang which has promoted labor dictatorship in the United States may be given a surprise party by a disgusted American public, as unexpected as the one given the European bullies.

FACTS CONFUSE CRITICS

The critics of the progress of Puerto Rico, under the colonial policy of the United States, are confounded by figures which show that the population of that island in 1901 was 978,000; in 1940, 1,877,000. Its exports in 1901 totaled $8,500,000; in 1940, $85,000,000 worth. The value of Pureto Rico manufactures increased from $36,000,000 in 1909, to $111,000,000 in 1939. In the period from 1920 to 1940, illiteracy on the island was reduced from 55 per cent to 31 per cent.

Such figures fail to substantiate the strange charge made by Rexford Guy Tugwell, Governor of Puerto Rico, that this island is no better off than when our country won it from Spain in 1898. But they may awaken the people of the United States to the importance of Puerto Rico.

As the President has already recommended that Congress pass legislation to give Puerto Rico "opportunity for free exercise of powers of local self government in all three branches of government, executive, legislative and judicial," it is an appropriate time to recommend that Puerto Rico be admitted as the 49th state of the union, as permitted by our Constitution, and block propaganda to alienate it from this country.

SCHOOL LUNCHES TO IMPROVE WARTIME DIETS OF MILLION NEGRO CHILDREN

More than a million Negro children are expected to participate this year in community school lunch programs which will be available to a total of over six million American youngsters to help maintain their wartime diets at an adequate level, the War Food Administration has announced.

Aimed at protecting child health despite changes in home life occasioned by war and by food shortages, the program, financed partly by Federal Funds with local committee sponsorship and administration, will provide nutritious lunches which will include fruits, vegetables, milk and meats.

Local sponsors will organize lunch projects, purchase food from local merchants and farmers, and be reimbursed by Food Distribution Administration—up to 60 per cent of the cost of the foods served.

In previous years, the Department of Agriculture purchased foods directly and distributed them to schools through state welfare agencies. This year, buying will be done locally, primarily to simplify the program and release storage and transportation facilities for other purposes. The new plan received a "try-out" beginning last January and the experience gained has set the pattern to be followed as the program operates on a larger scale.

Funds are available to schools and child care centers in the states principally on the basis of the state school enrollment and the state's past participation in the school lunch program.

Equipment, labor and supervision must be provided for by state and local agencies or civic groups.

Under the new plan, which combines the school lunch and school milk projects, foods going into three types of lunches will be paid for by FDA at rates ranging from two to nine cents for each meal, depending on the type served. Type A consists of a complete lunch including all of the items necessary for a balanced meal. Type B is made up of smaller portions of these same foods and is less adequate nutritionally. Type C consists of a half pint of milk.

FDA officials point out that the program is not limited to low income children because the lunch must be offered to all children in the school. It is desirable, however, to give assistance first to those schools where greatest need exists, since available funds may not be adequate to help all schools asking for Federal Aid. Although war has brought about an increase in national income, many families still lack sufficient incomes to provide their children with adequate diets. Higher food prices and relative scarcity of certain important foods have increased these difficulties.

Any non-profit organization is eligible to be a sponsor. This includes school boards, American Legion Posts, religious schools, child care centers, parent-teacher associations and similar civic and service groups. Sponsors sign an agreement with the Food Distribution Administration which guarantees reimbursement at definite rates, provided the amount does not exceed the cost of the food purchased. Under the agreement, lunches must be offered free to all children unable to pay, with no distinction between those who pay and those who do not. Another condition stipulates that prices charged for lunches must not result in profit. Surplus funds must be put back into the project in improved meal quality or service.

Foods listed in the agreement under which FDA reimburses sponsors are: mlik and cheese; fresh and dried fruit, fresh and processed vegetables; fresh meat and poultry; eggs; dry beans and peas; soybean products; peanuts and peanut butter; oleo-margarine with added Vitamin A, butter, lard, and other edible fats and oils; and cereals. Ration stamps will be issued schools and child care centers for rationed foods on this list under the Office of Price Administration stamp allowances for institutions.

Groups who wish to apply for Federal Aid under the school lunch program should address requests to the nearest regional office of the Food Distribution Administration The regional offices are situated in New York City, New York; Atlanta, Georgia; Chicago, Illinois; Des Moines, Iowa; Dallas, Texas; Denver, Colorado, and San Francisco, California.

MORE THAN 30,000 4-H CLUBBERS

By W. A. Hagins

Industrial College, Ga., Nov. 8—More than 30,000 Georgia Negro 4-H club members assembled at churches, lodges, schools and other places of attraction in their respective communities and reviewed the work done by them this year during National 4-H Club Achievement Week, November 6-14. The event brought to a close the work accomplished by club members during 1943 and sets up project activity goals for 1944.

National 4-H Club Achievement Week will give club members an opportunity to acquaint more rural and urban people with the objectives of the program and also with what they have done to help with the nation's war efforts through their project activities.

They reviewed their accomplishments in victory gardens, chickens, hogs, dairy and beef animals, farm crops, war stamps and bond drives, the food or fighters' program, scrap salvage campaigns, food preservation, painting activities and many other rural-life enterprises. Interesting stories were also told as to how they helped other farm families harvest crops so as to save this year's food supply and their work with the neighboring leader system was further outlined.

During this event, 4'hers set up educational exhibits in public places, using illustrative material embracing all phases of club work. Appropriate programs were worked out by both farm and home demonstration agents at which time, progress cards, club pins and other certificates of honor will be awarded those having made outstanding accomplishments toward the war efforts.

It is pointed out by Negro Extension officials for the Georgia Agricultural Extension Service that the review of 4-H club accomplishments this year surpassed those of past decades. For despite war havocs and amidst an era of frustration and perplexities, thousands of club members revolutionized their projects so as to bring them up to a larger producing capacity to help feed the "fighting men" in our armed service.

PLANNING FOR PEACE

A committee on Utilization of War Plants and Surplus Property has been formed under the chairmanship of Albert C. Mattei of San Francisco. On the committee are 25 or more business men from all classes of industry and all sections of the country. They will study how to best utilize or dispose of surplus war plants and supplies. On their analysis and recommendations will largely rest the future industrial program of this nation. Business men have been invited to bring phases of the problems that are of particular concern to them to the attention of the committee.

The immensity of the job is a staggering undertaking. But the men in industry who built up the nation's war production and surpluses needed by our armed forces, will figure ways to dispose of or utilize the production capacity acquired by the government in such a manner as to not cripple or destroy private activity, both large and small, in the days of peace to come.

This committee should have the hearty and unselfish cooperation of every section of the country, for on the soundness of its planning will depend much of the future employment and prosperity in this country.

PUSH WAR TIME FARM

(Continued from Page 1)

several states to encourage more of the families to be self-sufficient in food production.

Reports indicate that farm agents in Mississippi, Georgia, and North Carolina are holding meetings for the purpose of explaining to farmers how they may safely store their potato crop. They expect the farmers to save 75 per cent more potatoes this year than ever before.

Farm Agent R. T. Church of Jenkins County, Ga., has helped assure the harvest of peanut crops. Knowing that farm labor would be short this fall, he advised six enterprising farmers as early as last May to form a cooperative and make application for the purchase of a peanut picker and power hay press. The farmers got together and applied. When their application was approved, they peeled off $400 and made the down payment on the picker and press which is costing them $1193. They are using the machinery to gather in their own peanut crops and the crops of neighbors for miles around.

In scores of ways farm and home agents are helping Negro farmers do a more effective job of growing vital food crops.

FOOD FIGHTS FOR FREEDOM

During the month of November when harvesting will be winding up in most areas of our country, we'll not only pause, as did the Plymouth colonists, and give thanks for our wartime crop, but we'll also set in motion our Food Fights for Freedom campaign. The entire month will be devoted to mobilizing the whole nation and making it aware of the importance of food in this war.

Here's how Americans can win the war on the food front:

1. PRODUCE more food of the right kinds on farms and in Victory Gardens. This means that our six million farmers (including 680,000 Negro farmers) and our 3,500,000 volunteer farm workers are being asked to produce as never before. It is estimated that our 15 million Victory Gardeners produced 7,500,000,000 pounds of food in 1942, and that our 21 million gardeners produced 10 and a half billion pounds of food this year. Well, we'll need even more next year.

2. CONSERVE: and here's where all of us can pitch in and help. Even if farmers and Victory Gardeners break all production records for 1943 and 1944, there still won't be enough to go around unless we save more of the food that we are now throwing away. It is estimated that we waste between 20 and 30 per cent of the food produced in America.

3. PRESERVE FRESH FOODS. If most fresh foods are not eaten or preserved almost immediately they become a part of our huge wastage, robbing our country of vital "ammunition."

4. SHARING is one of the best ways to make food fight for freedom. We must share with our fighting men and our allies, and share through rationing with the folks at home. Farmers can share their seed, feed, fertilizer, manpower and machinery.

5. EAT THE RIGHT FOOD, or the food that will keep you strong and in fighting trim. The important thing is not taste, but nutritious, energy giving food.

6. SUBSTITUTE PLENTIFUL FOR SCARCE FOODS. For the duration some of our favorite foods are going to be short; most of these will be rationed. It's a war job for every homemaker to learn how to make one food take the place of another so that her family may continue to eat well-balanced meals.

7. KEEP FOOD COSTS DOWN within the reach of all. You are helping to do this when you refuse to pay more than the ceiling price for food items as well as other items.

8. PARTICIPATE IN COMMUNITY FOOD PROJECTS by joining one of the home front committees, or by making a pledge that you will pay no more than the ceiling price, and that you will accept no rationed goods without giving up ration stamps.

9. PLACE THE WAR FIRST; EXPECT TO ADJUST AND COOPERATE. The wartime food situation is subject to constant changes; weather, insects, emergency needs of our fighting men and our allies. But consumers and farmers can help lick the problem by becoming used to adjusting and re-adjusting to new foods and the shortage of various items.

Let's keep in mind that food is "ammunition" and we can't afford to waste it; the law of "selective service" must apply to every pound of food, to every acre of farm land and to every row in our Victory Gardens.

4-H ACHIEVEMENT WEEK. November 6-14 will be observed as National 4-H Achievement Week. During this period the 1,700,000 4-H clubbers in the country, including 200,000 Negro members, will not only take stock of what they have accomplished during the year, but they will also lay plans for stepping up production of certain critical crops next year.

One of the outstanding features of the observance will be a radio address by War Food Administrator Marvin Jones on November 6 on the Blue Networks National Farm and Home Hour. Throughout the observance in the various communities, youngsters who have produced enough food to feed one or more fighting men will take the spotlight as they receive awards.

While production figures for 1943 are not complete, we can get some idea of the size of the job that 4-H clubbers are doing by looking at last year's record. Here it is: they cultivated 407,749 acres of field and truck crops, planned forestry programs on 53,452 acres; they raised 608,679 animals including 311,902 hogs; they raised 8,236,489 chickens, managed 5,617 colonies of bees, and canned 12,805,641 quarts of food. Club members also collected scrap and bought several million dollars worth of War Bonds and Stamps.

Negro 4-H club members are playing their part in the wartime program. They made a substantial contribution to these production figures. Even in a state like Kentucky where Negro farmers number less than 6,000, the youngsters are active in club work. Take Clyde and Claude Taylor, twin brothers of Jessamine County, Ky., they are growing smokes for the boys and steaks, too. They recently harvested an acre of Burley tobacco, and they have a herd of 15 calves. Their sister, Marie, canned 250 quarts of vegetables during the summer.

Roland Blain of Clark County, Ky., raised 75 chickens this year. Scobie Green, a neighbor, raised a purebred Poland-China gilt weighing 250 pounds, and assisted with a half acre garden, and a flock of 220 chickens. In Fayette County, 4-H clubber Bertie Sleet raised a sow and five pigs, 100 chickens, and canned 50 quarts of vegetables.

RICE SUPPLY NORMAL

There may not be as much rice at the grocer store as you would like to buy, but on the whole, the rice supply is slightly above 7,200,000 pockets (100-lb. bags) that we consumed per year during the period of 1933-42, the War Food Administration points out. Of the U. S. commercial supply of 20 million pockets of rice expected to be on hand this year, 7 1-2 million pockets will be available to civilians. The rest will go to our fighting men and our allies, both in this hemisphere and in other parts of the world.

A controlled distribution has been set up which will provide supplies of rice to each area in the proportion of normal consumption during previous years. In some areas allocation will average 25 pounds a year per capita; in other areas it will average only five or six pounds.

Nicaragua has now in the field 3,000 rubber gatherers in the jungle.

BE INTOLERANT! ! !

By Ruth Taylor

It isn't a bad thing to be intolerant on some subjects. In fact it is a good thing, provided you are careful to be intolerant only of the evil, to have good reasons for your prejudices and dislikes. Keep your intolerance—only save it for what your heart tells you is bad.

Remembering that the dictionary definition of intolerance is to "be unwilling to bear or endure," of what should you be intolerant?

Be intolerant of treason—of those people who say "America is all right—But" and then proceed to repeat the enemy's charges against our nation. They are half-hearted patriots. They wouldn't live anywhere else, but because they cannot get all they want, they just won't play the game, or do their part in working for the good of the country as a whole.

Be intolerant of discrimination—of those people who, while condemning our common enemies, still ape them in this country by putting personal prejudices and dislikes ahead of democracy and equality. They are the people who won't hire or work with men of a different race, creed or color, who really want to keep all jobs for themselves, who don't want competition except from their own people.

Be intolerant of hatred—of the bitterness that condemns a whole group for the actions of a few, disliking what is not understood. It makes no difference whether the group against which hatred is leveled be Black or White, capitalist or worker, Jew, Catholic or Protestant. We all have those in our own group with whom we are not in accord. If we judge other groups by the actions of some of their individual members, we cannot complain if we in turn are judged by those we deplore in our own group.

Be intolerant of condescension. No man is good enough to look down upon any other man. Condemn the action, but not the individual. Repudiate the individual but not the group. Censure the group if it acts as a bloc, but not the individuals who—undesiring—are classified with that group.

Be intolerant of all evil. Be bold enough to condemn it wherever it exists—but condemn it, don't compare it! This country is based upon freedom for all, and the right to think, speak, write and worship as the individual conscience dictates—but it does not include the right to try to keep this privilege from any one else. Never let our constitutional rights be used by any one group to destroy another which is entitled to the same rights, whether it be labor or industry, or a racial or religious minority.

Be intolerant—of all that is evil, and, above all, be intolerant of intolerance!

ALL CAN HELP

In 1914, when the first World War started, annual fire losses in the United States were a little over 200 million dollars. They increased to over 300 million dollars by 1918, and rose to exceed 550 million in 1925.

When the second World War started in 1939, our annual fire losses had been reduced to about 276 million dollars, in spite of tremendously increased property values over 1914. From that date on, however, losses began a slow but steady rise, and now stand at lightly more than 325 million dollars. This is a great improvement over the sharp jump in losses during World War I, particularly with present enormously increased values.

"Although losses have been advancing," said J. M. Thomas, President of the National Board of Fire Underwriters. "fire prevention activities have been yielding results of importance to the war effort.

"Even before America was forced into the war, the National Board of Fire Underwriters had established advisory boards on fire prevention in both Army and Navy Departments. Its engineers are occupied full time and are now augmented by nearly 100 engineers from boards and bureaus maintained by the insurance companies. A similar group of experienced men survey Navy shore establishments and private shipyards. In addition, thouands of war plants have been surveyed and recommendations made for fire safety."

Now is the time to redouble efforts to curb fire losses and prevent such a rise in this controllable waste as took place during and after the first World War. We can all help win the fire prevention battle on the home front and save lives as well as money.

GOATS ARE USEFUL

By Wilbert N. Savage

Though the name of the useful goat has long been a symbol for evil, it is far from deserving its ill reputation, for no domestic animal is more widely distributed and none has been of greater service to man. It gives edible nutritious meat and wholesome milk; fine leather is made from its hide, and exceptionally strong durable cloth from its hair; and, most important of all, it is extremely hardy and can grow fat on coarse vegetation on which other animals would starve.

Wild goats are found only in Europe, northern Africa, and the Himalaya Mountains. The Rocky Mountain goat of North America is an antelope not a goat.

Domesticated goats, which are thought to be descended from the wild goat of Persia, have been raised in many parts of the world from the earliest times.

The Angora goat, native to Angora, in Asia Minor, has a history that may be traced back to the days of Abraham. It is this animal which supplies the long silky hair from which mohair, a valuable cloth, is made.

Milch goats are found in all parts of Europe and Asiatic countries, the Toggenburg and Saanen species of Switzerland being the best. One of the most expensive cheeses made in Switzerland is the product of goat's milk.

Cashmere, Tibet, is the home of the Cashmere goat, from whose beautifully soft silky undercoat are made the famous Cashmere shawls.

These shawls are exceedingly costly, for it takes the fleece of ten goats to make one shawl a yard and a half square, and the weaving, which is all done by hand, takes about a year! Some especially beautiful patterns have been sold for as much as $1,500!

THE UNKNOWN AND UNSUNG SUPPORT THEIR COUNTRY

Southern cities, towns and counties organized under local Negro leaders went out to reach the individual Negro worker in raising their quotas in the Third War Bond Drive. A few insurance companies, some business firms, and church and civic organizations made spectacular purchases but the bulk of the buying came from the unknown and unsung. When Memphis, Tennessee, Negroes underwrote the sale of $2,000,000 to themselves, they put on a show calculated to entice the small buyer into the market. They brought W. C. Handy, composer of the famous "Beale Street Blues," back to town. They sent for Jack Benny's "Rochester," himself a war contractor as well as radio and movie star. They were going to buy a Flying Fortress to add to their air force of a bomber. "The Spirit of Beale Street" bought out of their millon dollars' worth of bonds in the second Bond drive. Two immense rallies, on headed by "Rochester," the other by W. C. Handy, spaced at the opening and the closing of the drive, made war history on the home front for Memphis Negroes.

Both drives were directed by George W. Lee, district manager of the Atlanta Life Insurance Company and veteran of the last war.

Three hundred thousand dollars will buy a Flying Fortress, but to Birmingham Negroes not just any Flying Fortress—a special one with a name, "The Spirit of Ellsberry," in honor of the first Birmingham casualty of this war, Julius Ellsberry, killed at Pearl Harbor.

Negroes of Smith County, Texas, a week before the drive ended, had bought $19,227 in bonds. The county organization headed up in Tyler, the county seat, but workers covered the entire county. The largest sale, $5,000, was made to H. M. Morgan, owner of the Tyler Barber College.

Mound Bayou, Mississippi, an all-Negro town of 1,000, had bought $12,000 of its $15,000 quota by the end of the second week of the drive. This was the record even though the cotton crop upon which this Delta town depends, had not been marketed.

Bonds and Stamps sold in Galveston, Texas, to Negroes amounted to $28,488.05 according to the final check-up made by the Rev. S. L. Rugeley, chairman of the Negro Bond Committee. This amount was exclusive of bonds and stamps bought by employees through their employers. According to the report, the three city schools, Central High, Booker T. Washington, and George Washington sold the largest amount, $7,546.10. The American Women's Volunteer Service came second with sales amounting to $4,503; the professional group, Dr. M. J. Mosely, hairman, sold $4,350; the churches accounted for $2,879.

—Southern Frontier.

San Antonio, Texas, Negroes went out to sell $50,000 in bonds to their people. The City Bond Drive Committee staged a Hollywood Cavalcade with famous movie stars participating which was largely attended by Negroes. The price of admission was a $100 bond. When the final returns were in, the Negroes had exceeded the quota by $20,000.

Jacksonville, Florida, with a county of 23 millon dollars, looked to its Negro citizens to account for $250,000 of it. In the two previous drives, Jacksonville Negroes exceeded their quotas by $56,000 and $40,000.

Macon, Georgia, Negroes exceeded their $40,000 goal by $7,000. The sale of over a hundred $25 bonds convinced the chairman that "if colored people are given a fair chance to do their part, they will do it and then do some more."

Negroes of New Orleans set for themselves a quota of $500,000 and immediately set in motion an organization designed to reach all Negroes in the city.

Dallas, Texas, Negroes took a quota of $150,000 as their Bond goal and within thirty minutes after speeches were over the opening sales $81,550 of it had been accounted for.

Athens, Georgia, Negroes inspired by the Music of Chief Specialist Gramham Jackson, U. S. N. R., bought their quota of $50,000 at one huge rally. They immediately set out to see how much beyond their quota they could go.

The women of the Memphis Synod of the Presbyterian Church, comprising about one-third of the women members of the entire Synod, recently formed an Interracial Committee, which will sponsor serious study and action on general and local interracial conditions.

WHAT DO WE WANT?

"This country and our allies would be far safer if an army of wildcatters could venture forth tomorrow morning and drill their heads off to find the necessary fuel for the war effort," says the National Petroleum News. It points out that an advance of one dollar a barrel for crude oil is as nothing compared to the danger of an oil shortage which this nation faces as a result of arbitrarily holding the price for crude oil at a figure which discourages rather than encourages the fullest incentive to locating new sources of supply. Supposing such an advance meant two or three cents increase on a gallon of gasoline—what is that compared to no gasoline?

ALCORN AGRICULTURAL AND MECHANICAL COLLEGE

ALCORN, MISSISSIPPI

Service To Youth, The Farm And Home Since 1871

Courses offered leading to the Bachelor's degree in the following Divisions:

AGRICULTURE: Vocational and Technical Agriculture and Cooperative Extension Service Training (Farm Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

ARTS AND SCIENCES: Pre-Medical, Business Administration, Social Science, Music, Language and Literature.

HOME ECONOMICS: Vocational and Technical Home Economics and Cooperative Extension Service Training (Home Demonstration).

MECHANIC ARTS: Vocational Trade Education, Building Construction, Power Plant Engineering and Applied Electricity.

TEACHER-EDUCATION: Rural Elementary and Secondary Education, Health and Physical Education.

SUMMER STUDIES: Devoted to the problems and professional advancement of in-service teachers.

Accredited by the Southern Association of Colleges

NATIONAL DEFENSE COURSES: Welding, Blacksmithing, Marine Pipefitting, Auto Mechanics, Truck, and Tractor Service, Applied Electricity.

For further information write the Registrar

WM. H. BELL, President

BLIND PEANUT VENDOR BUYS FIRST BOND

John Henry Harris, a blind Negro peanut vendor of Greenville,, Mississippi, bought the first bond in the Washington County Third War Bond drive. Out of nickels and dimes saved up out of his sale of peanuts, Harris bought a bond in 1942. He still owns the bond. Though he supports a wife and four children by selling peanuts, when he heard there was going to be a Bond drive this fall, he went to Alfred Mitchell, Chairman of the County Committee, and told him that he would save enough money in time to buy the first bond. Mr. Mitchell kept the peanut vendor in mind and early on September 9 went to him and told him the drive had opened. Harris took 995 pennies out of one old sack, $8.75 in nickels and dimes from another, and the last nickel from his coat pocket. Then Harris was given the first bond sold in the county.

Negro employees of a hardwood lumber company of Tchula, Mississippi, population 861, have set some kind of bond-buying record in this last drive. All the employees buy regularly on the pay roll deduction plan to the amount of $1,000 a month, but the month of the drive the amount ran well over $3,000. Fifty of the employees signed up for an extra $50 bond above their normal purchases.

Rumors that many of the Negroes cashed their bonds soon after buying them was refuted in a check-up by J. C. Allen of the Company, which showed that 70 per cent of all bonds bought by Negro employees were still held by them.

G L. Archie, a Negro farmer of Waller County, Texas, says he believes in farming "on halves" with his "Uncle Sam." Archie is a successful raiser of watermelons—$3300 worth last year. He built himself a comfortable house with $16000 and then "shared" $1600 in War Bonds with Uncle Sam. He has made it a rule to bank one-half of his money from the sale of his melons and buy bonds and stamps with the other half. Last year three-fourths of his $5000 income was from the sale of watermelons.

One way to combine patriotism, thrift, and a little comfort was offered to San Antonio housewives during the Third War Bond drive by Minnie Edwards, Negro air warden. Mrs. Edwards made it known that she would give a half day's housework without charge to any woman who would buy a $100 War Bond in exchange for her services. She sold four of these bonds in two days and a $25 bond through straight salesmanship.

—Southern Frontier.

James A. Ragan, World War veteran, dug up his savings accumulated since the last war from wherever he stored them and took them down to the Perry, Georgia, Loan and Savings Company to buy War Bonds. The sackful of five dollars bills, most of which were of the old, large, size, bought Ragan two $500 bonds.

POST-WAR SHOCK, ABSORBER

Commenting on the farsighted policy the chain stores are adopting to help the country return to orderly peacetime production at the end of the war, the Watertown, New York, Times ran the following editorial: "They (the chains) wish to give manufacturers something to plan on and work on as soon as the pressure of war production eases. This is a wise and sensible course. By this farsighted attitude the chain stores will also be able to procure equipment and merchandise which they will need.

"More and more government and industrial officials are moving toward a policy of shifting easily from war to peace production. The devastating effect which the conclusion of the fighting in 1918 had on industry is vividly recalled. The period of abnormal prosperity and depressing unemployment is remembered. The government has already suggested that after Hitler is defeated and we are faced with a Pacific war alone we may be able to swing portions of our industry into peacetime channels. This does not mean that we are minimizing the Jap danger but that certain phases of war production will not be needed as acutley and thereby we can change over to peace output.

"The chain organizations are to be commended for pointing the way in this direction. They are acting in a forthright, farsighted manner."

If all business would follow suit, what a post-war shock absorber it would be.

NO ESCAPE

Consumers throughout the country who are currently not getting all the dairy products they want, can fully appreciate a recent observation of Business Week: "Increasingly, the question is how to escape from the dilemma of whether to make a sacrifice at the production line or at the anti-inflation line."

As far as dairy products are concerned, the sacrifice has been made at the production line. Until prices are adjusted in proportion to costs, the dairy industry will not be able to meet the needs of the nation. Subsidies will not take the place of a fair price.

"The American people respond better to a statement of the need under the word 'please' and 'serve' than they do under the word 'verboten.'"—Herbert Hoover.

OUT OF THREE TRIALS THE COURTS CONVICT ONCE

In this year Federal Courts have tried Southern county officers in three states for violation of constitutional rights of Negroes—Mississippi, Alabama, and Georgia. The Mississippi officers were indicted and tried for their alleged part in the lynching of Howard Wash at Laurel, October, 1942. Two Alabama officers of Macon County were charged with "the brutal killing of a Negro convict." Federal juries acquitted the officers in both cases.

At the time of these trials, Claude Screws, Sheriff of Baker County, and two other officers were under Federal indictment for beating a Negro to death with the trial set for October. This month these Georgia officers were convicted by a jury of Georgians and sentenced for first conviction of county officer duly elected by the people, the Atlanta **Journal** says of "Georgia Justice."

The sheriff of Baker County, a special deputy and a policeman of Newton, seat of the county, have been convicted of violating civil liberties statutes in the death of a Negro prisoner and have been sentenced to three years' imprisonment and fines of $1,000 each. The sentences were the maximum penalties under the indictments which had been brought against them.

The case was tried in Federal Court at Albany; the jurors were white residents of the jurisdiction. It is to be assumed their verdict was a just finding in the light of the evidence and testimony presented. On that assumption the **Journal** expresses its gratification at the outcome of the case.

Georgia justice must become a synonym for equal justice to all, colored or white, humble or mighty. This, we believe, is the opinion and the determination of all good citizens.

There is but one feeling such citizens can have about the Albany trial. The three officers of the law who brought about the death of the Negro within their keeping should be thankful they escaped the indictment and a punishment more in keeping with the gravity of the crime.—Atlanta **Journal.**

About 6,000 tons of steel and 300,000,000 board feet of lumber will be saved in a year by the reduction of types and the re-use of old wooden containers for shipping fresh fruits and vegetables.

"IF THEY NEED 'UM"

Last Spring a group of farmers were standing around the crossroads store at Duncanville in Tuscaloosa County. discussing farm plans and prospects for 1943.

"I'm not going to plant peanuts any more, that's one thing certain," said one, loudly.

"Me neither!" came as a general chorus from the group. "We lost money on them last year after the government had talked us into trying them and had promised us a fair price. No more of it for me!"

One after another, these agriculturists expressed their dissatisfaction with the 1942 experience and with the insistence of farm leaders that peanuts must again be planted in vast quantity.

A good Negro farmer, Turner McCoy, sat quietly by, listening to the discussion of his white neighbors but venturing no comment. Finally one of the men turned to him and called for his decision.

"Turner, are you going to plant peanuts?"

"Yassuh," he replied mildly.

"You are."

"Yassuh."

"What in the world for? Won't you lose money on them again?"

"I don't know, suh," McCoy answered quietly. "I ain't thought about that. I can raise peanuts, and they says they needs 'um for the boys. If they needs 'um, I'll give 'um to 'um. If they can't pay me, that's all right."

Turner McCoy has two boys in the military service. The white men, with sons or kinsmen absent on the same business, got the full impact of his simple statement. The effect was profound.—Montgomery, Ala., **Advertiser.**

FACT, NOT FICTION

One of the points stressed by the five senators who visited the world's battlefronts last summer was the fact that the United States furnishes most of the oil for the fighting machines of the United Nations. To fill these war requirements, oil for our own domestic needs has been sacrificed. Either we must discover and produce more oil in this country or our domestic or war needs will suffer dangerously.

The decision is not left to the oil industry. The increased cost of "wildcatting" runs headlong into the elaborate anti-inflation schemes of government agencies which decide whether inelastic price fixing rules are more precious than oil. But our motorized nation cannot run on low prices without gasoline.

The oil industry has asked for a very modest increase in the price of crude oil which would mean an increase in the price of a gallon of gasoline of about one penny. There is little question as to the choice which would be made by gasoline starved motorist and cold home owners if they were given the opportunity to choose. Of course even a penny increase in the price of gasoline would admittedly breach the line against inflation—if there is a line to breach.

PILING UP TAXES

If you own a home and pay taxes, or if you are a renter and pay taxes through the landlord, you have a tremendous interest today in the trend toward greater Federal and municipal ownership of property in every community. You are interested for the simple reason that every piece of such publicly-owned property is tax-exempt.

To illustrate: The Federal government and the San Francisco Housing Authority, by acquisition of almost 3½ million dollars' worth of previously taxable properties in San Francisco, have removed those properties from the assessment rolls of San Francisco and made them tax exempt. This means that remaining property in the city must carry an added tax burden of $155,000 formerly paid by the now exempt properties.

That is just a minor example of what is taking place throughout the country. In some states, the amounts total hundreds of millions of dollars, as is the case in many localities having Federal electric plants.

Every Federal and municipal venture into the field of business, cuts three ways: First, it destroys existing tax-paying industries and substitutes tax-subsidized properties; second, it prevents the expansion and development of new tax-paying properties in the field appropriated; and, third, it adds to the burden of the taxpayers by making them liable for tax obligations of the socialized properties.

Government comes high when it is extended beyond the function of governing.

They Will Produce Al l They Can Next Year

This thrifty couple fill out the work sheet for the maximum war production. All well-meaning farmers are producing everything possible to help feed the nation.

SAVE VITAL OIL CROP

(Continued from Page 1)

only being called on to meet wartime requirements, but they must meet these requirements in addition to making up for that the Japs got. For example, Department officials point out that before Pearl Harbor we got along with the peanuts that could be grown on two million acres. This year our farmers planted over five million acres in peanuts.

The 187 tons that the Georgia volunteers stacked in a single day will help reach the 38,000 tons of peanuts that must go into the manufacture of peanut butter for our fighting men, or the 375,000 pounds that will go into peanut butter which will be found at corner grocer stores all over the country. Or if used for crushing into oil, their contribution will make considerably more than a drop in our critical fats and oils bucket.

INDIA'S FOOD SITUATION

(Continued from Page 1.)

wheat, rice, sugar, oil crops, vegetables, and milk; all of which is consumed by his people. There are 360 million head of cattle in the country of which half are "lean and hungry," therefore unable to provide more than a fifth of India's milk needs. The production of fats and oils is less than half of the minimum requirement.

"For my people to be well fe' Sir Bajpai said, "they require a minimum of 2,300 calories a day; they are getting only 1,700 calories, or 600 fewer than they need. The population of India is 38' million and it is growing at th' rate of five million a year, and yet only 280 million of the country's nearly a billion acres are under cultivation." 'This means," he said "that India's 50 million farmers each cultivates only a mere five or six acre plot."

"Power machinery and better breeds of cattle would improve India's position," Sir Bajpai continued, "but heavy machinery is impractical on such small acreage unless some type of cooperative farming can be developed." As for improving the breed of the cattle, he pointed out that certain religious practices were involved.

In his closing statement, the Agent General called upon the American people to support the establishment of a world food organization not only as a means of gaining freedom from want and freedom from fear, but also as an important force for peace.

"HAVES" AND "HAVE NOTS"

(Continued from Page 1.)

cities revealed a wastage of 225 pounds of food per person a year. It's that slice of bread that molded in your bread-box last week, or that dab of butter you left on your plate, or that salad that you pushed aside after eating only two or three fork's full, or the good meat that found its way into the garbage can because, well, you thought it ill mannered to grapple with the bone until it had yielded the last morsel. Food conservation specialists in the Department of Agriculture are saying that it is no longer polite to leave perfectly good food on your plate.

Of course, there are two kinds of food waste; preventable and non-preventable. We cannot completely eliminate waste, but we can cut down on the amount of food that we are now throwing away. In this way we will be helping to make that needed extra food available for our fighting men who must be well fed.

MITCHELL DELEGATE TO USDA OUTLOOK MEET

John W. Mitchell, Federal Extension Service field agent, was the only Negro agricultural representative from outside Washington who attended the 21st annual Agricultural Outlook Conference which met here October 18-23. Mr. Mitchell, who has his headquarters at Hampton Institute, Hampton Va., attended all of the sessions and heard the nation's leaders discuss vital war and post-war agricultural issues. The speakers included Secretary Claude R. Wickard, Under Secretary Paul H. Appleby, Walter Lippmann, author and columnist, P. W. Tsou of the Chinese food ministry; and Sir Girja Shankar Bajpai, Agent General for India.

PLANTS ON "WRONG MOON"

J. Larkin Gentry of Person County, N. C., planted his corn this year at "the wrong time of the moon," according to some of his neighbors. But despite the dry spell, he made 50 bushels to the acre, a good bit more than most of his neighbors made who waited for "the right moon."

Here's how he did it: last fall he planted his corn land in Austrian winter peas which he turned under in the spring. At the planting time he applied 200 pounds per acre of 2-10-6 fertilizer under his corn and later top-dressed with 75 pounds of nitrate of soda per acre. The moral seems to be: pay more attention to the soil and less to the moon when you are trying to grow things.

B'nai B'rith Has Recreational Room For Soldiers

ST. LOUIS, Jan. 6 (ANP)--Of the six day rooms recently furnished through the efforts of the St. Louis B'nai B'rith councils, was one for the use of colored soldiers of Platoon "T" of the 964th Reg. QMC, located at Maldon army air base, Malden, Mo. A letter of appreciation from Lt. Fred J. Propp stated:

"In view of the fact that we are a recently formed organization and small in number, we were having great difficulty outfitting our day room, and previous to receiving day room furniture made possible by your organization, the space was barren and was a day room in name only. Now it is eautiful and the men in the unit are appreciative.

B'nai B'rith has furnished a great number of day rooms for military units throughout the nation.

JENKINS COUNTY FARMERS COOPERATE

By W. A. Hagins

Industrial College, Ga., October 17—Negro farm families in Jenkins county who didn't get their peanuts harvested last year until February won't cry the blues now as six farmers pooled their funds and efforts and recently purchased a peanut picker cooperatively to harvest their crops as well as their neighbors too.

This group of farmers became interested in buying a peanut picker and hay press last May and filed application with the AAA, County Agent R. T. Church points out. The application was approved on September 1st and the six men organized a cooperative enterprise and made a down payment of $40.-000 on a peanut picker and power hay press, costing them $1193.00.

The group elected Charlie Lane as the president of the Co-op. He is the youngest of the group a big planter and wide awake citizen of the county. Richard C. Reese was chosen as secretary of the organization and farmer Reese is also president of the neighborhood leaders. Calvine Lane, another outstanding farmer in the county, was elected treasurer. L. F. Clarke and Frank Roberson will serve as general managers and operate the machinery while Mack Odum will solicit business from farm families throughout the county.

These keen-sighted gentlemen foresaw a farm labor shortage approaching as many farmers were shifting to defense jobs and much of the young help being into the armed service. They immediately took steps to provide ways for harvesting this year's crops for themselves and their neighbors so that food items could be saved and more time devoted to war-time activities.

It might behoove other farmers throughout the state to pattern after this group in Jenkins, for more can be accomplished when it's done cooperatively.

F. S. A. BORROWER

(Continued from Page 1)

paid $18,500,605, or 98.4 per cent. These collections do not include an additional $5,995,431 in extra payments, including refunds on loans and payments made from other than normal farm income, such as sale of mineral rights, timber, etc.

"By getting ahead on their farm purchase payments, these families are building up future protection both for themselves and the Government," R. W. Hudgens, Acting Administrator of the Farm Security Administration pointed out. "As a result of their increased food production and greater marketings during 1942, these families had larger incomes than the average on which their loans were based. No one, however, can count on equally good incomes in all future years. These families have wisely and patriotically, therefore, invested their surplus funds in the future security of their farms and homes rather than spending it through inflationary channels. The families are in better position to withstand any future decline, and the money the Government is investing in these tenant purchase loans is being protected by an increasing margin of safety."

A breakdown of the loan repayments shows that the 77 per cent of the borrowers who use the variable payment plan had repaid a total of $14,191,819.94, which was $3,854,-389.25, or 37.2 per cent more than would have been due on a fixed payment basis. The 23 per cent making fixed schedule payments each year are just about even with their yearly payments. For the whole group, repayments have been 126 per cent of the amount that a fixed payment schedule would have called for.

Since July 1, 1941, all new tenant purchase loans have been made on the variable payment plan. In earlier years borrowers could elect to repay on either the variable or fixed payment basis. Fixed payment borrowers have the option of transferring to variable payments if they wish.

Since the beginning of the program in 1937, 33,559 loans to selected tenants and farm workers have been made for the purchase of their own farms. Only those, however, who have completed at least one crop year are included in the repayment figures, since the newer ones had no payments due as yet. A total of $191,487,749 had been loaned under the Act by June 30, 1943. Loans are made only to tenants, sharecroppers, and farm workers who cannot get adequate credit from any other source to buy economic family-sized farms of their own. The loans can run for 40 years and bear three per cent interest. Local citizen committees pass on the eligibility of applicants, and also certify as to the value of the farm to be purchased. During the 1942-3 fiscal year, when 5,144 tenant purchase loans were made, Farm Security supervisors reported an average of twenty-one applications on file for every loan that could be made.

Some of the borrowers have been able to pay off their 40-year loans in full in five years or less. A few have made these payments entirely out of income they earned on the farm, while others have received additional income from other sources. As of February 28, 1943. sixty-four purchase borrowers had repaid their loans in full.

LIFE INSURANCE COMPANIES INVEST HEAVILY IN BONDS

Negro Life Insurance Companies about which the existence of relatively few white Southerners know, entered into the Third War Bond Drive with enthusiasm and striking results. Reports from a partial list of the companies participating show that over $1,300,000 of the money of Negro policyholders went into putting the $15,000,000,000 Bond Drive over the top.

The largest single purchase in this drive $650,000 was made by the Atlanta Life Insurance Company through its agencies in 9 states. Of this sum, $300,000 went to the credit of the Atlanta drive.

E. M. Martin, secretary of the company, holds that the officers feel they are due no special credit for "investing the people's money in the best securities in the world," nor do they think that their total investment of $1,528,500 is their greatest contribution to winning the war. The more than 100 employees who are now in the armed forces and the several hundred more men and women who are engaged in war work far exceeds in value to the country the investment of capital in securities, "the best in the world." The President of the Atlanta Life Insurance Company is M. B. Herndon.

The next largest single purchase was made by the North Carolina Mutual Life Insurance Company at the home office of the company, Durham, North Carolina. C. C. Spaulding, president, wrote the check for $300,000 on the Mechanics and Farmers Bank, a Negro institution of which Mr. Spaulding is also president. It is claimed that this check is the largest ever to be written on a Negro bank anywhere in the country. With this latest purchase, the North Carolina Mutual has invested a total of $2,120,-300 in War Bonds.

Down the coast at Augusta, Georgia, the Pilgrim Life Insurance Company followed the other two companies by investing $105,000. This sum brought the company's total purchases to $350,000, according to W. S. Hornsby, president.

Hot on the heels of the record of the Pilgrim ran the Afro-American Life Insurance Company down in Jacksonville, Florida, with $100,-000 War Bond investment. President A. L. Lewis stated that the purchase was made "to equip and support the 37 Afro-American Life Insurance Company employees now in the armed services of the United States government." In previous drives this company had brought up to $115,000. An additional claim to patriotic support of the war by this company is the record of "every employee a Bond buyer."

—Southern Frontier.

Just how the New Orleans Executive Insurance Council divided its investment of $200,000 in the Third War Bond drive among its nine participating life insurance companies, the record does not show. The nine companies comprising the Council are the Louisiana People's, Victory, Douglas, St. John, Birchman, Keystone, Safety, and Standard Life Insurance Companies.

"For the first time in many years, Negro troops marched in a local street parade. Two detachments of colored men in battle dress paraded with their white officers. Within the memory of living citizens there have been colored militia companies, but this was the first occasion of contemporary times that Negro troops have been included in a public military review, and they were a source of pride to the members of their race who applauded from the sidewalks."—Charleston, S. C., **News and Courier.**

Unused farm, garden and flower seed can be saved for future use if reasonably dried and stored in tight tin boxes or glass jars where they will be protected against heat. insects and moisture absorption.

Back The Attack=They Give Their Lives, You Lend Your Money=Buy Bonds

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., FEBRUARY 15, 1944 No. 1.

Negro Farmers Among First Members Of Production Credit Association

2,182,000 LOANS TOTAL THREE BILLION DOLLARS

White and Colored Farmers According to Report Have Been Assisted

Washington, D. C.—Since their organization ten years ago, production credit associations have made 2,182,000 loans for a total of more than three billion dollars to white and colored farmers according to a report issued by the Farm Credit Administration.

Negro farmers have been members of production credit associations since their organization in 1933. During this ten-year period, individual Negro borrowers have obtained annual loans up to $11,000. Last year in one Farm Credit Administration district comprising four Southern States, the production credit associations made loans to colored farmers totaling $2,000,000.

In the Louisville district of the Farm Credit Administration, the first production credit association loan was made to a Negro farmer. This farmer, L. H. Langford of Putnam County, Tennessee, borrowed $100 through the Cookeville Production Credit Association. With it he bought seed oats and lespedeza, and some wire fencing.

Production credit association secretary-treasurer frequently comments on the good loan repayment of Negro borrowers throughout the past ten years of cooperative short-term credit service to farmers. They cite many examples showing the effort that Negro farmers will put forth to repay their loans.

An example from the Athens, Georgia Production Credit Association is a colored farmer who borrowed $100 last spring. Since that time his wife died, a daughter has died, lightning struck his cotton in

(Continued on Page 4, Col. 1)

JAMAICAN FARM WORKERS SEND $1,500,000 HOME

According to the Jamaican Gleaner a Kingston newspaper, Jamaican workers in the United States (engaged largely in farm work) sent home between June and November a total of 394,404 pounds, or more than a million and a half dollars.

In addition to funds which the Jamaicans themselves have sent home to their families and to the banks for saving, nearly $600,000 in deductions has been sent to the Government Savings' Bank in Jamaica by the U. S. Government in keeping with an agreement to be credited to the worker's savings account, or to be passed on to their dependents. To help the Jamaican workers save a part of their wages, one dollar per working day is deducted from their pay and sent back to the island.

About 2,000 of the 9,000 Jamaican workers recruited by the War Food Administration last spring are still in the country doing agricultural work. It is estimated that 1,700 are cutting sugar cane in Florida, and about 300 are working in Connecticut and New Jersy. The other 7,000 have returned to Jamaica.

MORE BEANS FOR U. S.

Negro Farmers Help Supply These Needs

Washington, D. C., Jan. 3, 1944—Although Negro farmers, like the other farmers of the South, grow dry beans and peas mainly for home consumption, the fact that they are not buying theirs off the grocers' shelves contributes substantially to the assurance that U. S. civilians will receive a larger share of the bean and pea supply this year.

Our civilians will receive 11,500,000 (100 lb.) bags or half of the supply of dry beans allocated for all needs in 1944, and two million bags, or 29 percent of the supply of dry peas, the War Food Administration said last week in announcing allocations for the new year.

Dry beans and peas are highly nutritious. They contain considerable quantities of proteins and also iron, thiamine, niacin and riboflavin, and are widely used as substitutes and extenders for meat dishes.

Although the 1943 harvest was the greatest in history, the demand for dry beans and peas was also great. A heavy reliance on beans and peas as a supplement to animal protein foods, plus the fact that they are a desirable food for rehabilitation purposes cause demands to exceed supplies.

Allocations represent the planned division of expected food supplies to take care of civilians needs, our armed forces, our allies and other friendly nations and liberated areas. Each group presents its requirements to the Food Requirements and Allocations Committee, which after careful consideration, sets up quotas.

Food is allocated for the year by quarters. For the first quarter, allocations are definite, but the last three quarters are tentative. This allows for sudden shifts in supply and demand in certain areas and places the government in a position to meet urgent wartime requirements.

In the first quarter of 1944, civilians will get 3,250,000 hundred pound bags of peas. Our allies, liberated areas and our territorial possessions will receive 1,264,000 bags of beans and 751,000 bags of peas. Into government and commercial reserves will go 250,000 bags of beans and 147,000 bags of peas for emergency purposes.

The per capita consumption of beans in 1944 will be slightly more than the 1943 and 1935-39 per capita levels, and about the same amount of peas will be available for 1944 as were available in 1943.

Our allies, liberated areas, and U. S. territories, have been allocated 7,085,000 bags of beans for 1944 compared with 11,500,000 bags alloted for U. S. civilians. They will also receive 3,512,000 bags of dry peas, compared with our two million.

Russia is by far the largest allied consumer of beans. Nearly all of the beans sent to Russia are used by the military forces.

Our own military services will receive 3,441,000 bags of beans and 300,000 bags of peas. The total 1944 reserves for war emergencies will be 800,000 bags of beans and 788,000 bags of peas. Should no emergency arise, they will gradually find their way into regular channels for civilian consumption.

Only one crop of beans is har-

(Continued on Page 8. Column 5.)

Some Land Marks of the Negro's Contribution

EGGS FOR OVER THREE HUNDRED

Lame Farmer Plans to Produce These

Washington, D. C., Dec. 13, 1943—Two infantry companies or over 300 fighting men eat a lot of eggs in a year, in fact they require about 9,000 dozen. But that doesn't faze Roy Eugene Proctor, Maryland farmer, who plans to produce enough eggs next year to supply their needs.

As much as Farmer Proctor would like to shoulder a gun and march off to the front, he can't. You see, a lame leg stands between him and military duty. But that doesn't stop him from helping on the farm front. Informed by a Department of Agriculture official that Uncle Sam not only needed the vegetable crops that he was growing, but also more eggs, Mr. Proctor braced himself on his riding plough, took a look around his yard and said, "Think I'll start raising a poultry flock for egg production."

That was a year ago. Now Mr. Proctor has a flock of nearly 800 pullets and he's building a 40 by 80 foot chicken house, getting everything in readiness for next year's production. Some of his pullets have already begun laying and by spring he expects production to reach a case of eggs a day. Two infantry companies will eat about a case or 360 eggs a day. So, Farmer Proctor has it all figured out how he is going to supply over 300 fighting men with eggs next year.

PRICE-FIXERS PLAY OSTRICH

Competent authorities agree that while there is plenty of oil left in the United States, it is getting tougher to reach. This is one of the main factors behind the request of the oil industry for a modest increase in the price of crude oil. Even if the question of inflation had never arisen, there would still be a need for price increases to cover increased costs, as the difficulties of wildcatting mount.

In normal times cost and competition would set the price, and the country would get all the oil it needed. Today the price of oil is mixed up in the anti-inflation program. The price-fixers have refused to recognize rising costs in the oil business. As a result, in the state of Texas alone, abandonment of wells so far this year exceeds competition of new wells by more than 800.

At its annual meeting, the American Petroleum Institute adopted a resolution declaring that: 'Whereas, the long delays in the Office of Price Administration and Economic Stabilization culminating in the decision . . . to deny a general price increase have permitted conditions to become progressively worse, these government agencies must assume the chief responsibility for the shortage in petroleum supplies and the consequent aggrevation of the rationing of gasoline and fuel oil."

This is one of the reasons for the growing oil shortage. The people should know about it.

DR. JAMES A. BAYTON

New Analyst in Department of Agriculture

Washington, D. C., Dec. 8, 1943—The appointment of Dr. James A. Bayton as associate social science analyst in the Bureau of Agricultural Economics was announced this week by the U. S. Department of Agriculture.

Dr. Bayton, who is on leave from Virginia State College where he heads the department of psychology, will serve as a study director in BAE's division of program surveys. In this capacity, Dr. Bayton will help to establish the basis for effective administrative planning in various Department agencies.

While occasionally Dr. Bayton's work will take him to the field for short periods, his principal duties will be performed here in the Washington office. A specialist in social science research, the analyst received his doctorate in this field from the University of Pennsylvania last June. He has served on the staff at Virginia State for four years.

4-H CLUBBERS GROW UP TO BE GOOD FARMERS

During National 4-H Achievement Week, the U. S. Department of Agriculture not only received reports on the accomplishments of the present crop of 4-H clubbers but it also received reports on wartime food production by former 4-H'ers who have grown into full-fledged farmers.

For example, Albon L. Holsey of the Agricultural Adjustment Agency tells of Otis Green, a former 4-H clubber who is now making several thousand dollars a year from his truck farm in Chatham County, Ga. After his 4-H club days, Green went to the city and began selling life insurance and although he was rapidly developing an excellent business, he could not resist the urge to return to the farm. Today, at 32, this farmer 4-H'er owns a 75-acre truck farm. When Holsey visited him he had just completed the sale of 275 dozen ears of corn at 40 cents a dozen. In addition to his truck crop, Farmer Green had 10 hogs, 12 cows, and more than 1,000 chickens.

Like the early bird which usually gets the worm, early truck farmers get the market, Says Mr. Green, "I always try to beat the market. Last spring I had sold $1,100 worth of vegetables before the market season opened."

Negro County Agent B. S. Adams has helped Farmer Green develop his truck farm. Says the latter, "Mr. Adams has shown me a method of planting potatoes which saves me about $75 in labor costs."

In Maryland William Queen, Jr., credits his present stock of five fine draft horses to a mare colt his father gave him several years ago when he was a 4-H clubber. Queen now has a 200-acre farm and is making an important contribution to wartime food production.

ADDRESS OF SECRETARY CLAUDE R. WICKARD

Washington 25, D. C.—It is inspiring to me to come to Tuskegee Institute where so many Negro leaders have devoted their lives to the cause of humanity. Not only is this a fertile ground for fruitful ideas but it also is a landmark of practicality in putting those ideas to use—in spreading them all along the line to the people who can profit by them.

I am pleased that numbered among the farmers of this historic Farmers Conference are the representatives of the South-Wide Negro Farm Leaders Conference.

The fact that both farmers and technical people are here permits a two-way exchange of ideas that makes this get-together doubly valuable. Those of you whose business it is to till the soil and present your ideas and experiences to the leaders. At the same time, you can take back home with you valuable lessons of research and improved methods there are available to you here through your leaders.

This, the fifty-third session of the Tuskegee Farmers Conference, is carrying on in the spirit and intent which its founder, Booker T. Washington, had in mind when he said that it was "designed for the rank and file of the people, with the view of finding out such troubles as are within our power to remedy." That day in 1895 at the Atlanta Exposition, when Dr. Washington made the famous speech he called "Cast Down Your Bucket Where You Are," was a significant one. That speech gave momentum to the start-where-you are formula carried on so well by his successor, Dr. Robert R. Moton, and continued today by Dr. Patterson. In my opinion, this practical approach to your problems accounts, in a large measure, for the very great progress you have made for the fine leadership that has

(Continued on Page 8, Column 1.)

LESS RED TAPE— MORE FOOD

To obatin maximum milk production the government should take steps to make more feed available to dairy farmers and to obtain a better distribution of such grain as is available. More farm machinery and supplies must be made available to dairy farmers. Farmers should also be assured enough gasoline and fuel oil for all needs. More gas should be made available to hired help on farms since social life is essential for farm help morale. Farmers should be relieved of needless restrictions and regulations. These include restrictions on repairs, on machinery, restrictions on purchases, restrictions on marketing that cause loss of product and all the other regulations that undermine the efforts and morale of farmers. Farmers are individualists and as such have become the greatest food producers per man in the world.

WOMAN'S PAGE

A GAY WAY TO FIX STAR SMOKED TONGUE!

For holiday entertaining plan a buffet supper around a colorful plate of Star Smoked Beef Tongue with Horseradish Molds. It'll cost you little more than 1 point per serving! And the delicious beef tongue and sharp, tangy molds create a flavor combination that can't be beat! What's more, the rich red of the meat and the cool green of the molds will give your buffet a nice holiday touch'

To serve about 12, get a 3-3 1-2 pound Armour's Star Smoked Beef Tongue. We suggest STAR tongue because it's flavorful and delicious, a real favorite with epicures!

Cover tongue with water and let simmer in covered container 3 to 4 hours, or until tender. After removing skin and roots from tongue, slice and serve on platter with horseradish molds made this way: Dissolve 1 package lime gelatin dessert in 1 cup hot water, add 1-4 cup prepared horseradish and chill in small molds. And here's a tip: The unsliceable meat makes a swell sandwich filling.

ESCALLOPED PEACHES

1 No. 2 1-2 jar sliced peaches
2 cups toasted bread crumbs
1 teaspoon cinnamon
1-4 cup melted butter or margarine
1-3 cup brown sugar
1-2 cup syrup from peaches

Drain peaches, reserving juice. Mix together the toasted bread crumbs and melted butter or margarine. Arrange crumbs and peaches in layers in a shallow casserole. Combine brown sugar and cinnamon, and sprinkle each layer of peaches with mixture, topping casserole with crumbs. Pour peach syrup over all. Bake in a hot oven (400 degrees F.) for about 25 minutes or until nicely browned.

Milk is the No. 1 wartime food.

EGG STUFFED CELERY

Mix two hard-cooked minced eggs, 1 tablespoon chopped pickles, 1 teaspoon chili sauce, 6 small stuffed olives and 2 tablespoons mayonnaise. Fill celery stalks with mixture.

Butter is the fat and the vitamin A of milk.

WHEN USING SOUR MILK IN BAKING

To use sour milk successfully in baking, put a few general rules to work, say home economists of the U. S. Department of Agriculture.

Rule One is: Substituting sour milk for sweet, use an equal quantity of the sour milk. Add just enough soda to neutralize the acid. One-half level teaspoon soda is enough for each cup of really sour milk, or one-quarter teaspoon if the milk is just turning. Too much soda gives bad flavor and odor and produces dark flecks in the baked product.

Rule Two is: Mix soda with dry ingredients. Don't add it directly to the milk or the gas needed for leavening will begin to escape as soda and sour milk combine.

For thin batters, the soda and sour milk usually furnish enough leavening, but thicker batters and doughs usually need some added baking power. So Rule Three is: Count on 1-2 teaspoon of soda, with 1 cup sour milk, as equal to 2 teaspoons of baking powder in a recipe. If more leavening power is needed, make it up with baking powder.

Agricultural economists in North Carolina are suggesting to farmers that it is a good idea not to wait until all debts are paid before buying bonds. They say that a nest egg in war bonds and some debt might be better after the war than to have no bonds and no debt.

EXAMINE FROZEN JARS CAREFULLY

"Is canned food safe to eat after it has frozen?" This question comes frequently to the U. S. Department of Agriculture in winter.

Canning specialists reply that freezing in itself does not spoil canned food, but that when food swells in freezing, it may break a jar or break the seal on a can or jar, so that spoilage organisms may enter. If a jar of frozen food breaks, there is danger that the food may contain broken glass and then the jar and contents should be discarded. All other canned foods that have frozen should be examined for leakage and bulges. Any that show leakage should be used promptly like any other opened canned food.

Those that have bulges but no leakage should also be used as soon as possible if they cannot be kept frozen, for they may have a break too small to let liquid out but large enough to let bacteria in. As a safeguard, if frozen canned food has stood after thawing, it is well to boil for at least 15 minutes before tasting. Any food that shows sign of spoilage should be destroyed.

VEGETABLES FOR VITAMINS

Make sure that your winter vegetable diet has plenty of vitamin A in it to help ward off colds, tired eyes and lack of pep. Eat plenty of green vegetables—spinach, kale, beet greens, lettuce, cabbage, and broccoli. Yellow vegetables are high in vitamin A so include carrots, sweet potatoes and squash in the diet.

An excellent place for leftovers is in the making of hot grilled sandwiches.

Try stuffing peppers with macaroni and cheese for a new flavor treat.

To keep oranges and grapefruit from drying out after they have been cut, lay cut side down on plate and keep in refrigerator.

MORE CANNED APPLES IN SIGHT FOR CIVILIANS

Approximately 230,000 cases of canned apples have been released from Government-owned stocks and may now be made available for civilian use through the manufacture of apple pie and similar products, the War Food Administration announced this week.

Probably none of the apples will be found on groceries' shelves because they are packed in No. 10 size cans which are not normally stocked for retail trade. Likely, these apples will be purchased by institutions, hotels, restaurants, and bakeries.

The War Food Administration has also announced the release of 1,200,00 pounds of seedless Muscat raisins from Government-owned stocks. Since the raisins are mostly suitable for making mincemeat and for use in bakery products, they are likely to reach civilians through these outlets.

Woman Said to Be 135 Dies in Memphis

MEMPHIS, Feb. 3 (ANP)—Mrs. Judy Berry, a Collierville woman, said by relatives to have been 135 years old, died at her home Friday. Aecording to Will Brittman, her nephew with whom she lived, his father who died in 1932 at the age of 85, said that "Aunt Judy" was 37 years old when he was born.

Mrs. Berry, born in Mt. Pleasant, Miss., claimed 1809 as her birth year.

HERE'S HOW OUR FOOD FIGHTS FOR FREEDOM

Washington, D. C., Dec. 13, 1943—Speaking at a recent food forum in Albany, N. Y., Roy F. Hendrickson, director of Food Distribution, War Food Administration, pointed out the military and allied food requirements. Having this background information helps us to understand more fully the role that food is playing in this war.

Said Mr. Hendrickson, "When a civilian joins the U. S. armed forces he gains from six to 10 pounds during his first few weeks. He eats about 5 1-4 pounds of food a day. This is about half again what he ate before, if he was an average civilian."

The soldier eats more, of course, because he works longer and harder. For men quartered in this country the Army requires a 90-day supply on hand. Multiply the 90 by the 5 1-4 pounds of food that a soldier eats every day and you have some idea of the amount of food that the Army must keep on hand for a single Yank. But there are approximately 4,500,000 soldiers quartered in this country. Therefore, when you multiply the amount of food required for one soldier by the total number of soldiers you arrive at the total of 2 1-8 billion pounds of food. Overseas troops require a 270 day supply on hand, or a total of nearly three billion pounds.

Through lend-lease, (since March 1941) we have shipped to England 971,000 long tons of eggs, 943,000 long tons of milk, 919,000 long tons of meat, 560,000 long tons of fats and oils, and 555,000 long tons of grain. Within the next 12 months we expect to send to the United Kingdom about 1,784,000 long tons of the same kinds of food that we have been sending.

Since December 1941 we have shipped Russia 1,265,000 long tons of meat, grain fats and oils, eggs and milk. Within the next year we expect to ship Russia approximately 2,126,000 long tons of food.

Mr. Hendrickson points out that although we have shipped fairly large quantities of food to our allies the civilian food picture in both Great Britain and Russia is very unattractive. In Britain, food is adequate nutritionally, but variety is out for the duration.

The civilian food supplies to Russia are very low especially in urban areas, according to the FDA director. Black bread is said to be the main food; meat is rare. Under rationing, even a worker in the heaviest war industry receives less than five pounds of meat a month.

Compared with that of our allies, our food picture looks very good Under the allocation procedure, as much food has been made available for civilians as was available in pre-war years. During the coming year U. S. civilians will get 75 percent of our total food supply. This means that the American diet in 1944, though differing somewhat in composition, will be about the same in quantity and nutritive value as that of 1943 and above the average pre-war diet if crops are favorable

ROOT HOG OR DIE

"It is true that we must all eat in order to live, but it is also true that 'man cannot live by bread alone.' The man who places 'freedom from want' above 'freedom' should sell himself to a totalitarian government. . . . .

"Stimulated by the New Deal idea—it cannot be called philosophy—the people are nudging and crowding each other trying to get something for nothing like hogs at a trough. What will happen to them when the few with brains enough to mix the swill refuse to carry it to them? It will then be up to them to 'root hog or die.'"—Manufacturers Record.

SHE DESERTED HER SHIP

Attracted by a saucer on the deck of H. M. S. Rothesay, Sally, H. M. S. Polruan's dog. changed ships for one thirsty moment. But in that moment the two fleet minesweepers steamed out. of the harbor.

Their work done, the ships were turning for home when H. M .S. Rothesay flashed a signal and on board H. M. S. Polruan they read: "We have one deserter from your ship on board. Please collect."

The Polruan's motor boat was lowered and an armed escort under Able Seaman D. Pye, complete with the necessary notes, crossed to the Rothesay and placed Sally under close arrest.

At a subsequent court-martial, the prisoner had fourteen days' leave stopped, "as she had nothing to say in her defense." But as Sally never has been ashore since she joined the ship months ago, she didn't care.

BURN GIFT PACKING FROM SOLDIERS OVERSEAS

With the discovery of many serious insect pests in the packing in Christmas and other parcels coming from service men abroad, the U. S. Department of Agriculture urges the immediate burning of all packing material in these packages.

If allowed to escape, the insects and insect eggs stowed away in this packing material may cause new flare-ups of pests, such as the Mediterranean fruit fly, that have been wiped out in continental United States at a cost of millions of dollars. They also may introduce new pests comparable to the Japanese Beetle and the white-fringed beetle that are now plaguing both city people and farmers in the East and South.

The danger in these packages is shown in the discovery of hundreds of living pink bollworms in packages coming through such widely scattered ports as Baltimore, New York, Philadelphia, and Houston. Many of the packages examined in the northern ports were on their way to families living in the Cotton Belt. The United States is the only big cotton country not generally infested with the pink bollworm, an insect capable of doing as much damage as the bool weevil, if not more. The pink bollworm has been cleaned up in some parts of the Cotton Belt and entirely kept out of other parts. Serious commercial damage so far has been confined to a few counties in the Southwest.

Liberia Invites Teachers Over for Research

By R. C. Fisher

ST. LOUIS, Mo., Jan. 27 (ANP)—Accepting an invitation from the Liberian Government, Miss Alice McGee, instructor at Vashon High school here, left by airplane Sunday evening for Liberia, to begin a six-month project of historical research.

Miss McGee, an instructor in St. Louis public schools for the past 16 years, is author of a book, "Black America Abroad," which relates the story of the colonization of Liberia by former American slaves. She has done extensive research on the American aspects of this movement, and will study it now from the Liberian viewpoint as the guest of that nation.

President W. V. S. Tubman, who as a private citizen, visited St. Louis years ago, extended his nation's invitation, and made arrangements for the trip with the American State Department.

THREAT OF RISING PRICES

In the opinion of auto manufacturers, the price of cars will be 40 per cent over 1941 when production is resumed. Measured by pre-war standards, there will be no such thing as a cheap car. This illustrates the change in values being brought about by the war.

Our country has achieved unprecedented progress because our manufacturers and distributors made boods and services available at prices everybody could pay. Mass production and mass distribution revolutionized the living standards of America. The present trend toward higher prices and become a threat to mass production and mass distribution, both of which rely for existence on low prices. After the war, unless manufacturers and retailers can offset rising costs with further improved operating techniques, living standards will decline.

However, manufacturers and retailers cannot attain the impossible. No matter how progressive managements may be, if every move toward greater efficiency or greater productive effort is continually countered with increased taxes or punitive political action, the result cannot be other than disastrous for the country.

In the past, the nation's chain stores were forced to progress against special taxes and legislative restrictions that would have destroyed many less energetic enterprises. They survived because they filled a basic consumer need in the field of retail distribution. Right now these same chains are planning to minimize the effects of inflation—to get goods to the people at prices the people can pay, after the war. Manufacturers are pursuing similar plans. They both know that competition will be keen. The only thing they really fear are unnecessary government restrictions and crippling taxation.

Mass production and mass distribution, as conceived and operated by private enterprise, are the sources of America's high standard of living in peacetime, and America's strength in wartime. The sooner people wake up to this fact, the sooner the country can look toward the future with confidence.

U. S. ATTITUDE ON RACES HURTS HOPE TO LEAD IN WORLD

ST. LOUIS. Jan. 27 (ANP)—"America's traditional attitude toward Negroes represented a blot on the national conscience which, unless changed, will make it impossible for this country to assume world leadership in post-war affairs," declared Rabbi Julius Gordon at a meeting observing the 25th anniversary of the Urban League at Bishop Tuttle Memorial, las Thursday night.

"Racial prejudice has worked havoc in the old world and must not be repeated here," he said. "There is only one way to cope with the discriminatory precedents of American life and that is to create new opportunities for the Negro in emloyment, education and social life."

The Urban league, founded in 1918, after the East St. Louis race-riots, was originally a department of the Provident association; but is now an independent organization. John T. Clark, its executive secretary, heads an all Negro staff.

In the last 24 years the league's employment service has placed more than 50,000 persons in jobs. The league has worked consistently to educate members of the race in labor relations to insure interracial cooperation in industry.

SECRETARY WICKARD GREETS NEGRO FARM PRIZE WINNERS

Immediately following his address at Tuskegee before farmers and farm leaders of the South in which he summed up the important contribution which Negro farmers are making toward winning the war, Secretary of Agriculture Claude R. Wickard walked out on the lawn where students exhibited especially for him a herd of prize Holstein cows, and a flock of turkeys. There he greeted M. W. Lawson, a farmer of Prattsville, Ala., and Mrs. Ethel Logan, a farm woman of Cypress, Ala. Farmer Lawson had won first prize among the men for judging livestock, and Mrs. Logan had won the first prize among the women for cooking and home-making.

Secretary Wickard shook their hands firmly and said, "You are doing a good job—good luck to you."

And they are doing a good job. Farmer Lawson, who is also a local minister in his community, has a truck farm, a couple of cows, a few pigs, and some chickens. During the spring and summer he collects about a case of eggs a week.

"I used to have a large farm," says Mr. Lawson, "but since my son went into the Army, there's no one to do the heavy plowing, so my daughter and I now operate a smaller plot, growing mostly vegetables, broilers and fryers."

Mr. Lawson is about 60, but he's spry for his age. His hands show the signs of work, hard work; his face looks tired, a little confused, but determined, and although he wears glasses, he has a keen eye for judging good livestock, poultry and field crops. Competing with many younger men, Mr. Lawson walked off with first prize in the Tuskegee annual judging contest this year.

When Secretary Wickard clasped his hand there was something between a blush and a dry smile on the farmer's face. Afterward he confided, "This has inspired me to grow a lot more food next year."

Mrs. Logan is proud of her chickens, her pigs, her milk cows, her farm and the 620 quarts of fruits, vegetables, meats and even butter that she canned this year. Aside from the important job of growing food for our fighting men Mrs. Logan also takes an active part in war bond rallies, in the Community War Fund, and in relief drives for China.

Adjusting her glasses, Mrs. Logan told Secretary Wickard that she is building a new brooder house for the extra chickens she plans to raise in 1944.

ASHES MAKE POOR GUNPOWDER

Under the stark title of "Ashes Make Poor Gunpowder," the fire insurance industry has released a booklet that cites a few of the activities the fire insurance companies are conducting in this war in addition to selling fire insurance. Heading those activities is fire prevention.

An army of fire prevention engineers maintained by the fire insurance industry and with years of training in scientific fire prevention, is now working to prevent fire destruction in vital war establishments. To protect the Army, an advisory fire protection bureau is maintained in the War Department at insurance company expense. A force of engineers is working full time on such projects as Army cantonment, training centers, hospitals, and supply depots. They are inspecting and preparing fire prevention standards for thousands of these projects—helping to save lives and speed the war effort. A similar bureau is serving the Navy. And with the Coast Guard at more than 100 ports throughout the country another group of engineers is helping to see that piers, wharves, and war material and equipment awaiting there for shipment are not damaged or destroyed by fire. Still another group is working to prevent fire in industrial plants. Back of all of them are vast research organizations supported by the insurance industry.

The full scope of the fire prevention work of insurance is as far flung as its value is immeasurable.

Virginius Dabney Attacks Crude Way Papers Gather News About Negro Americans

WASHINGTON, Jan. 27.—(ANP)—How the American press, in its handling of news of Negroes, may 'aid the nation toward victory, as well as toward a more harmonious and prosperous postwar world," is set forth by Virginius Dabney, liberal editor of the Richmond Times-Dispatch, in a recent issue of the Bulletin of the American Society of Newspaper Editors.

At the outset he suggests that editors put themselves in the place of the Negro reader of their paper and attempt to appreciate his reactions to handling of Negro news.

"The first point which seems worthy of emphasis is the necessity playing up the worthwhile achievements of the Negro citizens of the community and state, rather than their derelictions," Dabney says. 'Too many of us newspapermen think of our colored friends largely in terms of their police court performances, their crap-shooting proclivities and their virtuosity with the razor. We stress this side of the race and forget that there is another, and a more important side."

It is obviousy bad to "give a play to Negro crime, putting the race angle into the headlines, while completely ignoring, let us say, an exhibition of paintings by Negro artists." Dabney says.

"The intelligent Negro also likes to see some notice given in the press to the part his race is playing in the war," he continues.

" One of the prime headaches of many southern newspapers," Dabney points out, "and of northern ones as well, is to be found in the use of the titles, 'Mr.,' 'Mrs,' and 'Miss' where colored people are concerned. The simplest and best rule would seem to be that those titles ought to be accorded when the person referred to is of such standing in the community as to warrant it, the rule being much the same for white persons."

Capitalization of the word "Negro" is a fetish of Negro people, Dabney goes on. Many papers, both north and south, capitalize the word, but others do not, he says; it should be done. Frequent mention of the racial character of a criminal, the Richmond editor points out, is frowned upon, although he goes on to say that in some instances this feature may be an important part of a story.

"Attention to such details helps to lessen interracial hostility in these difficult times, and thus contributes to the winning of the war," he concludes. "It is also highly constructive when a paper, such as the Washington Star, scotches a whispering campaign which threatens to get out of hand and to cause violence and bloodshed. The Star's example can be studied to advantage by all of us.

"What the editors of America need to do primary in this crisis is to be fair, just and objective in their handling of Negro news, and at the same time to be bold, imaginative and forthright when misunderstanding and misrepresentation seem likely to bring a head-on clash. It has been demonstrated that this approach allays friction, quiets apprehension and helps to create cordial relations and a spirit of national unity."

Make a white cotton lining for wicker clothes-basket, attaching to the basket with a drawer-string. The lining keeps clothes from snagging on loose bits of wicker and saves them from dirt that may work its way up through the crevices.

ONLY THE WORTHY REMAIN FREE

As the calendar heralds 1944, grim predictions of allied political and military leaders rank foremost in the minds of all people. Nineteen-hundred-forty-four is the year of decision. It is the year of total war and destruction, death and suffering. It may well be the year of military victory—thanks to the courage of our fighting men and the American production miracle.

Armament production in the United States has reached staggering proportions. In November, every five minutes saw the birth of one new complete plane. The month's total was 8,789, of which, 1,000 were heavy bombers. More than 150,000 war planes have been built since the start of hostilities.

Nineteen million tons of merchant ships were launched in 1943, compared to 1,163,000 tons in 1941.

Naval and shipbuilding has outstripped the imaginations of the wildest dreamers. About a dozen aircraft carriers were turned out in November alone. Worship tonnage in 1941 was 2,132.000. Out of the ashes of Pearl Harbor it rose to 5,000,000 tons in 1943, a colossus bent on the destruction of Japanese aggression and Nazi tyranny.

Tanks, guns and supplies are being produced in unbelievable quantities.

These things were made possible by the productive genius of free enterprise. In the hands of 10,000,000 American men and their companions in arms, they are America's answer to the warped leaders of Europe and Japan who have challenged our freedom.

But we have no cause to rejoice. Tens of thousands of our men must die in 1944 to meet the challenge of the dictators. Usual year-end speechmaking and editorial phrasemaking are out of place. The people were told when the war started that they would have to make sacrifices. They were told that this was total war. And, yet, other than those who have given their men, no one has so far made an iota of real sacrifice. It is not in the cards for such a condition to continue.

Sometime in the not-too-distant future we, at home, are going to find out what total war means, even though we may never feel the impact of bombs on our cities.

A pretty good indication of how we are going to find out can be seen in the gusts of bitter controversy sweeping through the land over strikes, taxes. subsidies and inflation. They are the prelude to the storm. When it hits in full fury the test of our love of freedom will be upon us.

No person in this nation can ever shut from his mind the awful vision of the last days of 1943 in which, 1,000 marines lay dead on the beaches of one little South Pacific island. Those men died for the right to be free. We at home have yet to prove worthy of the freedom for which they died.

Elbows can be kept soft and smooth by applying hand lotion during the day and lemon juice and olive oil at night.

WORSE THAN INFLATION

There are worse things than inflation. One is government tyranny, which can occur when people fear inflation more than they love freedom. We have reached the point in this country where fear of inflation is tending to force us toward tyranny. We may not be able to avoid inflation. It is the price of war. But we can avoid tyranny. The present rebellion against subsidies is an encouraging indication that the American people prefer to take their inflation straight. Subsidies would open the door to total government control of the private citizen.

The general attitude toward subsidies was aptly expressed by Fred H. Sexauer, President of the Dairymen's League Cooperative Association when he said: "The last bulwark of freedom of our independent farmers may fall if the plan of subsidy in place of fair price now in process of application is put over as a permanent program.

. . . Subsidies are used to bring about compliance by individuals with bureaucratic demands. The broad powers placed in the hands of more or less irresponsible subordinates to write the conditions on which subsidy payment will be made leads to the temptation to include restrictions on individual activities and compel subservience in matters only distantly relating to subsidies themselves. Subsidies will not increase production to the extent that equivalent prices would."

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

2,182,000 LOANS TOTAL

(Continued from Page 1)
three different places, and he has lost one of his mules. In the face of all of these misfortunes, this farmer-member has paid his loan in full.

Farm Credit Administration record shows that ten years ago, farmers owned no part of the capital stock of their associations. But today, farmer-members own more than $26,000,000 of the capital stock of production credit association. In addition, their organizations have built up reserves in excess of $27,000,000.

"Production credit associations serve all types of farmers from the tenant borrowing $50 to the largest planter," stated an official of the Farm Credit Administration. He said further, that in spite of the fact that all classes of farmers engaged in all types of farming have been served by the associations, the actual losses over a period of ten years have amounted to less than eight one-hundredths of one percent.

GROUP THINKING

By Ruth Taylor

I know I seem to keep harping on the dangers of group thinking in this country, but everywhere I go I see evidences of the growth of this tendency. When I point it out, I am answered with the question "Well, you believe in (naming their own group) getting their rights, don't you?" I do—but I believe in something much more than that!

I believe in all people everywhere in the world getting their rights, improving their standards of living, and availing themselves of new and wider opportunities for advancement. I do not believe the way to accomplishment this, is by leveling off. I believe in leveling up. But group thinking tends to level off.

Whatever the group, whatever the circumstances, group demands for special privileges are disruptive. Dwight L. Moody used to tell a story which illustrated just this point. A small boy caught his hand in a valuable vase and it looked as though the vase would have to be broken in order to free him. The real trouble was he was clutching at a miserable penny he had dropped in the vase and he couldn't get his clenched fist out.

Too many groups are clutching at pennies today. They are seeking things for themselves, regardless of what they may endanger for that larger group of which they are a part. They want things for themselves and in their own way. They do not see ahead and recognize that to **seek** prosperity and freedom for **all**, is the only way to **achieve** prosperity and freedom for any. Freedom is universal. Only license is privileged.

There was a straw once that broke a camel's back, and if we're not careful, some thoughtless, selfish group is going to undo much of the good that has been done by conscientious, public spirited individuals, working throughout the years to put into practice the ideals of democracy.

We need above all understanding of our fellow men. We need to appreciate how allied are the desires of all of us. Nine out of ten times the difference of opinion between groups is just the same as between individuals, that is, we want our kind of work done in our way—our opponent wants his kind of work done his way. If we would once look at a problem from the other fellow's side, we would start our thinking from the points we have in common, not from our differences, and we would think as friendly individuals, not as opposing groups.

REACHING MATURITY

The aviation industry has been working to formulate a program which would provide a sound method for the development of both civil and commercial aviation when peace again allows men and women to turn their minds and hands to productive enterprise. Like every growing industry, aviation today finds itself faced with a maze of problems which involve intricate legislative questions. Already several measures have been before Congress seeking to chart a course for the future of the industry.

Out of the welter of conflicting opinion, basic facts now begin to stand out clearly: Peacetime aviation should be under an independent Civil Aeronautics Commission; there should be Federal safety rules for all air navigation and airports; commercial air transportation should be under sound Federal regulation; Federal regulation of ally flying of a private character other than commercial transportation, should be confined to safety measures. There must be unification of tax questions which affect aviation. There must be a painstaking and intelligent study of all transportation agencies to the end that this nation may have the greatest coordinated transportation system in the world.

It will take patience and understanding to perfect our country's aviation program. But a nation which excels all others in transportation development can certainly devise a model aviation policy.

SAVE JARS AND TOPS FOR 1944 CANNING

Looking ahead to a big season for canning Victory Garden stuff in 1944, the U. S. Department of Agriculture urges home canners to save all glass jars and tops suitable for re-use. Every re-usable jar and top will be needed to round out new supplies next summer. Every good jar and top used again saves scarce materials and manpower—for other jobs in the war.

Special attention is called to re-usable commercial jars and tops because these are not so familiar in home canning. Commercial jars are those in which housewives buy such products as coffee, pickles, peanut butter and mayonnaise. Many are now standardsized as to size and type of opening, so that a jar and its metal screw cap may be used for home canning by buying only a metal sealing disk with flowed-on rubber compound. Coffee jars with paper caps may be outfitted by using a metal screw cap from another jar plus a sealing disk.

To save metal, rubber, and glass, most of the re-usable commercial jars now have an opening 2 5-16 inches in diameter. This opening is known as size "63." Other jars have the larger, Mason-size opening—size "70." The War Production Board and War Food Administration are making every effort to have available in 1944 adequate supplies of metal sealing disks for both sizes.

Thrifty homemakers are occustomed to save canning jars when home-canned foods are opened, and this year it is especially important to save all good equipment for 1944. Before storing, glass jars and glass disks should be sealed, and any jars in which food spoiled should be boiled in strong washing soda. Metal screw bands and screw caps should be stored clean, and where they won't get bent or rusted. Wartime rubber jar rings once used are not reusable for home canning, but are worth keeping for such jobs as sealing home-dried foods packaged in glass.

MINISTER-FARMER GROWS FOOD CROPS

The Rev. D. A. Miles, an A. M. E. minister of Newberry, Fla., is aiming a double-barreled weapon at Hitler and Tojo, according to reports received from a field office this week by the Department of Agriculture. Not only is he pastoring a church in which he is praying for victory, and urging his membership to produce, conserve, share and play square on the food front, but he has also established his own "God's acre" in an effort to practice what he preaches.

This minister-farmer has 404 acres of improved farm land which he is devoting entirely to food crops: hogs, cattle, poultry, goats, peanuts and vegetable crops. In addition to growing enough food to feed his family and some indigent members of his church last year, the Rev. Mr. Miles also cleared $2,000 from the sale of products grown on his farm.

Pointing out that every man in our armed forces is eating about 5 1-2 pounds of food every day, the minister-farmer says he is glad to be able to contribute to America's wartime food needs.

MORE TEA IN SIGHT

Do you like a hot cup of tea these cold days to help keep you warm? And now about next summer when it's hot again, won't a glass of iced tea be refreshing? Well, according to an announcement made last week by the War Food Administration, U. S. civilians will have more tea this year (16 million pounds more) than they had in 1943.

Here's why: before the war our annual import of tea, then averaging between 95 and 100 million pounds, came from India, Ceylon, Java, Sumatra, China, and Japan. Now, of course, our entire supply of about 90 million pounds comes from India and Ceylon, but the big problem has been shipping. With the U-boat menace reduced, marine transportation has improved. And so, more tea will be available.

SECRETARY WICKARD'S STATEMENT ON POST-WAR ECONOMY POLICY

In a statement before the Senate Committee on Post-War Economic Policy last week, Secretary of Agriculture Claude R. Wickard made five points crystal clear. These are well worth noting by Negro Farmers, and Negro city folks who plan returning to the farm after the war.

(1) Secretary Wickard pointed out that farm people are anxious for prompt and effective industrial reconversion when the shooting stops. They are interested in the conversion of war plants for two reasons: (a) so that city folks can find work and continue eating well, and (b) so that the reconverted factories can turn out the things that farmers need.

(2) The Secretary suggested orderly disposition (not dumping) of surplus goods and shipment owned by the government at the end of the war assuming of course that immediate disposition will be made of scarce products, like gasoline, tin plate, tires, or trucks to relieve civilian shortages.

(3) Said the Secretary, "Farmers have a special interest in what disposition is made of certain government-owned plants, particularly chemical plants which produce ammonia, nitrates, sulphuric acid, and related products. Many of these plants can be used to help produce nitrogenous fertilizers or superphosphate, both greatly need to maintain or increase the fertility of many of our soils and to help soil conservation . . . I hope that before any decisions are made as to disposing of or dismantling these various types of plants, a careful study will be made of their best potential utilization to aid our agriculture."

(4) That such part of the 20 million acres of land which the Army, Navy and other war agencies have taken over during the war, and which will no longer be needed after hostilities cease, be returned to farm production. And that land acquired from individual farmers, and no longer needed for military uses, be returned to private ownership as promptly as possible through a government agency. This agency would see to it that the land goes directly to the ultimate users without permitting private speculators to split it up or profit on it during the process.

That the land should be disposed of in efficient family-sized farm units. Adequate arrangements should be made, where necessary, to re-equip these farm units with buildings, fences and other necessary permanent equipment.

(5) In concluding, the Secretary pointed out that farmers certainly are not willing for agriculture to be made the dumping ground for industrial unemployment. That is to say, agriculture is not to be an occupation from which farmers and farm workers are drained off for jobs in industry during boom times, and then be dumped again when the factory closes down. Either the city must provide continuous employment, or the industrial unemployed must be provided for through adequate social security programs, public work programs, or other relief measures.

Said Secretary Wickard, "Before the war period, more farm families were trying to get a living from the land than could be provided efficent family-sized farms. There just wasn't enough good land for all the farm people. Hundreds of thousands of those surplus farm families have now been drawn off into city work. Instead of pushing back into agriculture those people who are not needed there, farmers believe they should be afforded continued opportunities to do useful work in non-agricultural occupations.

"When people are forced on the land they not only have a low standard of living, but they are forced to overcrop their land and mine what little soil is left of its productivity."

A method of using tissue from cadavers to bridge several nerves and restore their functions was recently described.

THE PROOF OF HISTORY

Before presenting a bouquet to our government for seizing the coal mines, this country should study the record of government intervention in British coal mining. It is a record of failure.

After the first war, tinkering with the coal business became an established policy of the British government. Everything from subsidies down to virtual government ownership has been tried in an effort to raise coal production—that is, everything except turning the coal mines back to their owners with no strings attached. British coal mines are currently almost completely nationalized, and the mines are still beset with falling production, inefficiency and rising coal prices. England's coal industry has never been able to meet the demands of the war emergency.

In the United States, the history of coal has been different. After the first war, production was left in the hands of private enterprisers who went ahead and built a flexible, highly productive coal industry. When World Wad II came and demand for coal skyrocketed, American coal mines were equal to the task. They met production schedules.

But in spite of the production achievements in our coal mines, restrictions on management have been closing in from every side. The mines are now in the hands of government, just as in Britain. The old controversy of government versus private enterprise, has raised its head. And as usual, the idea is promoted by public officeholders that the government can run industry better than the private citizens who created it.

By the initiative of the free enterprise, with government in the traditional role of umpire, the United States has become a nation of production miracles. History proves there is no other way to achieve real progress. Are we to step backward now?

WAR REVEALS VALUE

The old maxim that it's an ill wind that blows no good, has certainly proven true with a vengeance as far as the chain store industry is concerned. Probably no other industry has faced more nerve-shattering business problems contingent upon the war than has retail distribution, and the chains have had more than their share of those problems. As one chain spokesman remarked: ". . . The war has had a terrific impact on the chain stores. It has brought vast and significant changes some of which are sure to have a profound effect on the future. It has forced many chains to revise their entire buying procedure and inventory policies . . . It has taught them to make decisions quickly and act faster than ever before . . ."

The chains have demonstrated that they are a typically American institution—they can take it and overcome adversity. They have also demonstrated the soundness of modern distribution. Price conscious consumers look with new respect upon the chain-inaugurated technique of volume sales at low unit cost.

By their magnificent performance under gravely adverse circumstances, the chains may have permanently escaped a nemesis which has hounded them for many years—the iniquitous habit of state legislatures of enacting anti-chain store tax laws. These laws, more properly termed anticonsumer laws, discourage competition and raise the cost of living. They have been bitterly assailed by far-sighted independent merchants as well as distinguished economists. But in spite of widespread opposition, more than 20 states adopted them.

It was not until last year that, under pressure of the rising cost of living, did the trend toward chain-baiting legislation decisively reverse itself. The citizens of Utah took a good look at the issue and thoroughly trounced by a two-to-one vote a drastic chain store tax proposal. The war has clearly revealed the value of low cost distribution to consumers.

RIVERS OF OIL—FROM WHERE?

Everyone has had the fact impressed upon them that rivers of oil are needed to keep our fighting machine running. But beyond general estimates in millions of barrels, figures are seldom published showing just how the oil is consumed. A heavy bomber uses 200 gallons of gasoline an hour at cruising speed, a fighting plane 100 gallons. The tanks alone in one armored division burn 10,000 gallons in an advance of little more than 100 miles, while thousands of gallons are also consumed by trucks, self-propelled guns, armored cars, and other wheeled units. A single destroyer on convoy duty burns something like 214 thousand gallons of fuel oil on a single round trip to North Africa.

Producing and refining petroleum, both for ourselves and our allies, is the responsibility of the American oil industry. No other nation is as well equipped to do the job as we are. That our petroleum industry has been able to measure up to the load imposed on it, is directly traceable to the fact that it was developed and has been maintained by private individuals working under the persistent stimulant of competition.

The nation is now being told repeatedly by various public authorities that the oil shortage is going to get far, far worse before it gets better. These warnings are nothing new to oil men any more than they are to the public. Oil men themselves warn that a serious shortage is impending and point out that the main cause is an inadequate price for crude.

Gloomy announcements from Washington on oil and gas rationing are getting tiresome. What the public and the oil industry wants to know is what plans, if any, are in the making to find and produce more oil. So far the regulators have been silent on this point.

POWER TO DESTROY

Federal income taxes have increased 700 per cent since Pearl Harbor, says Paul Mallon, with the brunt of the burden falling on already overtaxed sources of revenue. Taxes have now reached the point where it is no longer likely that extensive new industries will develop from accumulated savings. Neither the money nor the incentive is left for such purposes after the tax bills are paid.

The gravity of the tax situation brings the American people face to face with a serious choice. As Harley L. Lutz, eminent authority on tax matters, observes: "Concretely and interms of an historical parallel, it is the choice between the Ford fortune and the Ford automobile. If they (the people) should decide that there shall be no more fortunes, they will also thereby decide that there shall be no commodities of mass comfort and enjoyment other than those now known. A few large fortunes would appear to be a small price to pay to gain the full benefit for all of the creative and productive capacity which can be stimulated most effectively and most certainly by allowing those who succeed to keep the fruits of their success."

Fifteen state legislatures have resolved for a constitutional amendment limiting Federal income taxes in peace time to 25 per cent. The instinct of self preservation should stimulate other states to similar action. Unrestricted Federal taxing power in the hands of a strong central government has become a menace to the sovereignty of the states, as well as to the freedom of the individual.

"Government officials have admitted that farmers need more money and have provided subsidy payments as a sop, which farmers oppose in principle. They want fair prices for their products, not doles from the public treasury . . . "—Fred H. Sexauer, President, Dairymen's League Cooperative Association, Inc.

Full Employment, At End of War, Must Include Negro Workers, Leaders of Both Races Contend

NEW YORK, Jan. 27 (ANP)—Although Vice President Henry A. Wallace chairman of the "common man," had star billing on a card that carried labor's heavyweights, the two ranking Negroes in the Congress of Industrial Organizations, Willard S. Townsend and Ferdinand C. Smith, told nearly 400 listeners at the "Full Employment conference" sponsored by the CIO Political Action committee here Friday and Saturday that experience of the past dictates that no program based upon economy of abundance and full employment in the post-war period would be complete if it did not include America's Negro population.

"This committee extends the hand of fellowship in a campaign to unify the country behind a program of full employment and full democracy in America," Philip Murray, CIO president, said at the outset of his speech, made at the luncheon.

As if anticipating this statement of Murray's, Townsend, the president of the United Transport Service Employes of America, said at the morning session preceding that "you can't have unencumbered and prosperous white workers and unemployed black workers, for if you let that happen the white worker will have to carry the black worker on his back through relief."

In this view he was supported by Smith, secretary of the National Maritime union, both of whom are the Negro members of the CIO executive council; William H. Hastie, dean of the law school, Howard university; and Mrs. Jeanetta Welch Brown, executive secretary, National Council of Negro Women.

In opening the meeting on Friday Sidney Hillman, chairman of the political action committee, called it a "war conference," one which can make a "very substantial contribution to victory." He described "full emloyment" to mean jobs for workers, although such a realization, he said, would benefit "every other group and section of our population."

On Saturday a statement on behalf of Mr. Hillman was read by David J. McDonald, secretary-treasurer, United Steelworkers, which commits the action committee to "get out the vote" of Negroes "in the south as well as in the north, and with equal vigor." The committee intends to seek protection both for the registration and the casting of ballots where difficulties are expected to be encountered.

In his prepared address Wallace said he did not propose to say what the government ought to do with regard to post-war employment. "But inasmuch as the government had to take full responsibility for getting cooperation from all groups to convert our economy from peace to war," he added, "it will have to take equal responsibility in converting from war to peace."

Government planning, he said, will be necessary. In order to meet the interest payments on the mounting debt of "more than 200 billion dollars" will require the maximum productive use of labor, he believes. "We have to have full employment and an expanding economy to carry our debt load easily," he declared, which he thinks should produce a national income in excess of 130 billion dollars.

Leading the discussion of "Full Employment and the Negro," Townsend observed that "the tradition of white men's jobs and black men's jobs is being challenged and actually being broken down in score of tight labor markets outside the south." Continuing he said, "In the south itself there are unmistakable evidence of economic advances among Negroes and this fact has been dramatically and unpalatably brought to the attention of the white community by the scarcity of Negro domestics."

"Intelligent planning must recognize that the Negro in the United States has developed more rapidly than his opportunity for participation in American life," he asserted. Townsend rejected the nation that full employment is going to remove racial tension. It will, he believes, set the "economic stage" for effective educational programs designed to reduce the frequency and intensity of "one of the basic causes" for race conflict. In such an economy, he sees trade unions taking the lead in establishing cooperation between white and black workers, with various governmental and private agencies aiding in the program.

Smith assured that Negroes "do not place their special problems ahead of the major task of winning the war," nor do they seek an "immediate solution of their just needs," he said.

"What the Negro people want is what every decent American wants—full citizenship in a democracy," he declared. "If every trade union opened its doors to Negroes and removed the stigma of second-class membership and its attendant inequalities, you can be sure the time would not be far off when the second-class citizenship of Negroes in our democracy would be wiped out, the poll tax congressmen notwithstanding."

The maritime union officials ended his speech by saying that "labor can smash the shackles of discrimination only by achieving practical working unity between white and Negro workers. The splendid achievements already registered by the CIO show that this can be done."

Dean Hastie maintained that "economic democracy" is essential to the elimination of race conflict and to the "political effectiveness" of labor. He called democracy in unions a "practical education in the American way of life."

The former federal judge also viewed the advocacy in some quarters for legislation designed to penalize unions which discriminate in their policies and practices. "Sooner or later," he aserted, "labor must take a position on such legislation. Forward looking unions will, of course, prefer to eliminate discrimination themselves rather than to find themselves confronted with additional curbs."

"Like labor, Negro women have no assurance of adequate or stable income after the war," declared Mrs. Brown. "We must therefore depend upon some form of federal agency or legislation to begin now to plan for the transition period from war to peace. If left in the hands of the states, plans will get caught in a bottleneck of conflicting interests and unwholesome prejudices."

TOWARD GREATER UNDERSTANDING

The coal mining industry has been answering questions about coal mining, sent in by people in all walks of life, and from all sections of the country. In response to a query from a druggist in New Mexico who asked why miners are not given better working conditions, coal men say: "We are working on this problem all the time. Straight through the lean years of the 'thirties' we have been shifting the hard work to modern machines. Men formerly had to lie on the main floor and gnaw at the coal with picks and shovels in doing what is called 'undercutting.' Today, 90 percent of the undercutting is done by mechanical gophers, driven by electricity. About 40 per cent of all coal is now loaded into mine cars by mechanical loaders—more will be handled this way as machines become available. These machines also, by saving costs, have helped us to pay steadily better wages. As an official report of the National War Labor Board shows the wages of coal miners today are twice what they were in 1933."

Another questioner wondered why miners have to buy in company stores. The answer to that was simple. They don't. In most coal mining towns the miners can freely choose between chains, independents and company stores.

The best and surest solution to industrial problems is full public understanding of controversial issues. The coal industry is to be congratulated for adoption of a policy of providing authentic information about its operations.

ROOSEVELT IS NO LINCOLN, WE ARE TOLD BY MRS. LUCE

And She Raps Both Republican and Democratic Parties in Interview

LOS ANGELES, Jan. 20—(ANP)—In the usual frank, deliberate and dynamic manner of expressing her views, Congresswoman Clare Boothe Luce, Republican of Connecticut, in an exclusive interview in her Biltmore Hotel suite here Sunday told this correspondent that "neither the Democratic nor the Republican party has the interest of the Negro at heart, but of the two, the Republican party will do more to help his cause."

The statement was in answer to the posed question, "The Negro generally always pledged his political allegiance to the Republican party due to Abraham Lincoln. In recent years, he has shifted to the Democratic party because of the New Deal program. He is now between the devil and the deep blue sea in regards to the coming presidential elections, being somewhat dissatisfied with the Roosevelt administration. What reasons can you give why the Negro should vote the Republican ticket?"

In direct answer to the question, the congresswoman stated that there were no reasons why the Poles, Czechs, Jews, Italians, or Negro should vote for a certain party because of their racial origin. They should vote for a party, she said, because of its principles.

When pinned down to the point that the Negro has been kicked about by both groups and is now thinking in terms of sticking to the party which offers him better opportunities, Mrs. Luce stated that neither has the interest of the Negro at heart, but of the two, the Republicans will do more to help his cause.

In no uncertain terms she declared that the FEPC is "meaningless" due to the fact that it has no subpena and punitive power and cannot compel recalcitrant employers to carry out its edict.

Asked why she believes the President does not exercise his executive power and influence to see that the necessary power be granted the FEPC, the congresswoman replied "he has got to carry Texas and California." She further explained this by stating that the reactionary Democrats from such states are unwilling to see the Negro get his just deserts, and the President has to depend upon them for re-election.

In clarifying her statement Mrs. Luce called attention to the fact that in congress the Democrats have always voted against educational legislation for the Negro and the Republicans favored it.

She accused the President for not being a man to make a fight on a principle like Abraham Lincoln, Woodrow Wilson or George Washington. "Whatever we have in the White House today, it ain't Abraham Lincoln," she laughingly said.

Mrs. Luce, who is a member of the house military affairs committee, criticized President Roosevelt for not coming out and taking a stand on the Indian independence situation. Calling Nehru, 'the only great and good man I know", the congresswoman went on to say, "I have met Mr. Roosevelt, Mr. Churchill and all of them. and I think Nehru the greatest of them all.

"When I returned from India two years ago," she stated, "I was deeply moved to know that Mr. Roosevelt had done nothing to help the Indians obtain their independence. With Walter White, we agreed to write the President for a conference on the matter, feeling that it would give the Chinese and the Negroes a lift to know that he was in favor of the Indian cause."

After a slight pause, Mrs. Luce asserted, "He showed his indifference by not granting the interview. As a matter of fact, he did not even answer the letter."

Mrs. Eleanor Roosevelt, the President's wife, also came in for her share of castigation. She termed the First Lady's interest in the Negro, "an emotional orgy."

The 40-year-old editor, playwright and politician said that Mrs. Roosevelt puts the Negro question in the category of "an emotional orgy, just as though they were Hottentots or something else."

FAITH PRODUCES MIRACLES

It is rumored that the Germans are about to spring a miraculous secret weapon upon the world capable of obliterating cities at a single blow. Far fetched as the idea may sound Allied leaders long ago ceased underestimating German resourcefulness. They are driving to knock out the Nazis before they can come forth with any more death-dealing surprises. Our bombers are reaching with growing force into the industrial vitals of Europe. They are carrying loads of explosives that dwarf previous efforts of the Luftwafe.

The average layman has little conception of the miracles taking place right here in our own country which make possible two-thousand-ton air raids on Berlin. One of those miracles is 100 octane gasoline. Two years ago daily capacity for the manufacture of 100 octane was only about 40,000 barrels—enough to fuel a single five-hour raid engaging 1,000 4-motored bombers, similar to recent Berlin attacks. Now it is approximately 200,000 barrels daily, more than five times as much, and before many months it will double again. Without 100 octane gasoline, our bombers would be unable to carry out their missions.

A significant fact about the 100 octane miracle is that it has been financed principally by the oil industry. The oil companies have spent hundreds of millions of dollars perfecting this high test fuel and building production facilities. All of which means the oil industry has faith in the future of private enterprise. It is endeavoring to demonstrate in action rather than words that industry operated by private citizens, if given a fair chance, has the resourcefulness and flexibility to lick any problem confronting it.

NEGRO FARMERS MEASURE OUTPUT BY FIGHTERS THEY FEED

Negro farmers are measuring their production this year by comparing the quantity of food sold from their farms with the amount needed to feed a soldier. For example, one farmer in Texas sold 32 hogs weighing a total of a little over 7,300 pounds. Since a hog cuts out about three-fourths net meat, this farmer has supplied 5,475 pounds of meat to feed our fighting men.

Well, the average soldier eats about one pound of meat a day. So, if the 5,475 pounds of net meat are divided by 365 pounds (the amount one soldier eats a year) we find that this farmer has produced enough to furnish meat to 15 fighting men for 12 months.

Thousands of Negro farmers are believed to have produced enough meat each this year to feed from one to 30 fighting men.

Many of the farm women are checking their egg production against the annual egg needs of a soldier. One Virginia farm woman reports that she has sold a little over 2,000 dozen eggs. Since a fighting man eats 365 eggs a year, she produced enough eggs to meet the egg needs of 65 soldiers.

AWAKENING

From farmers to bankers, from workmen to business men, a majority of whom have heretofore been too prooccupied with making money to think about more fundamental matters, the people of the United States are awakening to a great danger. They are beginning to realize that freedom may be lost in this nation.

Evidence of the wakening is pouring in from every side. No one is more impressed with this new stirring of mass intelligence than are editors. Their desks are swamped with statements, opinions and warnings of a kind that in the past were uttered only by a handful of statesmen.

Numerous labor leaders have expressed growing fear of big government, and warn that labor's future depends on the maintenance of individual enterprise. Not far behind in similar expressions are the bankers, whose awakening is typically expressed in the remarks of Lee Wiggins, president of the American Bankers Association, who happens to be a small town banker and is proud of it. He recently declared: "An equitable tax system that will make new business possible will do more to preserve our system of private enterprise than soldiers' bonuses . . . "In his opinion, bankers are always sounding off about private enterprise, but haven't done much about it, and he added: "Meanwhile, the government has moved into private banking to an extent that the public doesn't suspect. The banker is just beginning to discover that this is the road to socializing the banking system."

The farmers are also discovering the danger inherent in an expanding government of men rather than laws. A special House agriculture committee has charged that farm families have been held as virtual serfs on government rehabilitation projects. In Michigan, members of the State Farm Bureau have suggested that a plan be worked out whereby farmers can insure their own crops and dispense with government crop insurance. And farmers all over the country are hotly opposed to the freedom-destroying principle of subsidies.

In the front ranks of the New Awakening are the business men. The editor of a group of leading business publications bluntly strikes at provinciality in front offices with the words: "Thinking straight about problems that are beyond our personal and immediate status and our pocketbooks, thinking about problems that involve nation-wide buying power— in other words, the operation of our entire economic system—involves real self discipline. Yet there is no other way to safeguard our freedoms."

And finally, to those who foolishly rail at bureaucracy and plead for favors from government in the same breath, Hatton Sumners of Texas, chairman of the House Judiciary Committee, has voiced a reminder that should be quoted from one end of the land to the other: "You people are the government. The government is not in Washington.

"In our system, the State provides the only machinery through which democracy can function. The Federal organization was never intended to do the job. It cannot do it, except as a bureaucracy. The people created the Federal organization to do a relatively small number of things: To be their agent, not their master."

Congressman Sumners is to be congratulated. He is hastening the Awakening.

. . . The time has come when all economic pressure groups within the country should recognize that they have no right to expect to be paid for winning this war, but that the country and American posterity has the right to expect them to start paying for winning this was by much greater financial sacrifices than any group has made to date. . . "Wayne L. Morse, member National War Labor Board.

Oysters obtain their food by filtering vast quantities of water for the minute organisms in it.

THE INQUISITIVE MARINE

Some months ago, a Marine Corps combat correspondent decided to find out for himself whether the medical care in the military services is as superb as it is cracked up to be. There was just one way to find out and that way by joining the ranks of the sick and wounded at an advance base.

With the consent of the commanding medical officer, but unknown to anyone else, this marine, while at the front in the South Pacific, pretended serious illness. Two days later he was in a hospital on the edge of Henderson Field, Guadalcanal. A tag on his shirt marked him as a severe case of peptic ulcer. He received no special treatment. He was handled exactly as other evacuees were handled in the plane ambulances out of the combat area.

He was loaded onto a transport plane with seventeen other sufferers and within a few hours was installed in a fully equipped base hospital with a staff of 400, each physician selected for preeminence in his field. After revealing his identity, this inquisitive marine received permission to stay a while and observe. In his own words, he saw "a number of delicate surgical operations, a wide variety of fracture treatments. Life-sized X-rays were taken, teeth extracted, dental plates made. A group of specialists prescribed and fitted glasses. Physical therapy experts restored the use of injured nerves and muscles." He also saw intensive treatment given to serious burns and skin infections, as well as skin and bone grafts. When he was through, he realized that centuries of medical learning and research have been concentrated in one vast, amazingly efficient effort to prevent the loss of American lives unnecessarily in this war through lack of medical attention.

The inquisitive marine returned from his self-appointed mission well atisfied.

TAXES AFTER THE WAR

The problem of postwar business taxation cannot longer be ignored safely. It involves the jobs, standard of living, even the freedom of the people. That it has been almost wholly ignored to date is attributed to the common assumption clearly stated by Harley L. Lutz, professor of finance, of Princeton University, "that business can and will continue to supply the goods and services upon which all schemes for the good life depend, regardless of the drag and drain of excessive taxation."

Such an asumption has been encouraged by the ability of industry to produce during the war, notwithstanding a confiscatory tax load. People are prone to forget that the business man is first and foremost a patriot. For the duration, the incentive of patriotism has, in most cases, replaced the incentive of profit as a production stimulant. After the war, business men cannot be expected to act any differently than other groups. The nation's productive talent will work best if it sees a hope of fair reward.

Vice President Wallace fully realized this when he was moved to remark recently that: "Our whole tax structure, including individual income, capital gains and corporate taxes, will need revamping to stimulate maximum production and employment."

More Glove Wear

Why not tint or dye your faded fabric gloves in one of the bright or pastel fashion colors? Try one of the easy-to-use dyes on the market for the purpose.

A plain glove can be made into a new accessory by sewing a large button on the cuff. Use a button that picks up one of the colors of your bag or hat.

Wear your own-beyond-wear gloves for grimy tasks. They'll protect your hands. Cut small notches at the knuckles for finger freedom while working.

Make your own novelty gloves from those you have. Sew a ruffle of eyelet embroidery at the cuff or applique a gay colored heart or diamond on the back.

A POLITICAL ANOMALY

The stock argument against taxing certain government activities has been that it would be like a man taking money out of one pocket and putting it in another. That argument may have been valid at one time—before the government went into business in competition with private citizens. At present the nation is losing gigantic tax revenues because of the tax-exempt business enterprises of the Federal government, which are carried on at the expense of the heavily taxed general taxpayer in order that special consumer groups may be rendered special service.

A glaring illustration of this fact is contained in the following comment of G. C. Neff, President of the Wisconsin Power and Light Company: "Under our present laws, the customer of a Federal, state, or municipally-owned electric utility pays nothing for Federal taxes in his electric bill. In other words, the Federal government has forced the privately owned companies to collect Federal taxes from their customers, but has exempted government owned utilities from collecting money for the payment of Federal taxes from the customers of such government owned utilities. The types of customers served by both groups are the same, the kind of property used to furnish the service is similar, and there is no . . . . reason why the customers of both groups should not be treated the same in this question of taxation. . . . . The difference between the taxes actually paid by privately owned companies and what they would pay if they were taxed like government owned utilities is more than their total payroll."

It is a political anomaly that such an evil should exist at a time when the nation is desperately in need of revenue to pay for the war.

NIGHTMARES PERMITTED

Mother Goose would never recognize the modern counterpart of her legendary baker. War and rationing have made the art of bread-baking a complicated procedure bristling with official directives and penalties.

According to the Associated Bakers of Southern California, these are a few of the current baking dicta: "No longer can a baker insert coupons redeemable for theatre tickets or premiums inside the wrapper. Nor is he allowed to give away bread as prizes in radio programs or to successful bidders for war bonds . . . . A baker is not permitted to accept return of moldy produce . . . He may pan more than one piece of dough to a load if the pieces are not twisted together or placed in the pan at right angles to the length of the pan. . . .

"Another restriction limits the number of varieties of machine-molded bread to six for wholesale bakers. . . Two loaves of bread made from the same formula and the same type, weight and shape, but sliced to different thickness, are considered as two varieties."

The bakers, like other merchandisers who handle the things we eat and wear, are trying to live through an orgie of regulation without complete disruption of the distribution system. So far no attempt has been made to ration nightmares.

Music of "Fats" Is U. S. Culture Says A. Hitler

WASHINGTON, Feb. 3.—(ANP)—The music of the late "Fats" Waller, boogie woogie king, was cited last week by the Berlin radio as American culture.

Music of the sort that Waller played and sang was the culture which the United States intended to enforce in Germany, according to DNB, the German official agency, in a broadcast heard by U. S. government listeners.

WHY WE ARE WINNING

Up to now the full story of the development and production of 100 octane aviation gasoline has been a military secret. But at last some breathtaking statistics are being released. Following are a few of them:

1. One thousand 4-engine bombers use 1,800,000 gallons of 100 octane gasoline on a 6-hour mission.

2. In January, 1942, only 22 refineries were producing 100 octane gasoline or components of 100 octane. There are now more than 100.

3. United States and Caribbean refiners are supplying today 88 per cent of the 100 octane gasoline used by the United Nations.

4. To train one pilot requires consumption of 12,500 gallons of aviation gasoline.

5. One thousand 4-engine bombers, flying to an objective 1,000 miles away, and using 100 octane gasoline, can carry 5,000,000 more pounds of bombs than could be carried it ordinary pre-war aviation gasoline was used.

6. 100 octane gasoline was specifically developed for combat use.

7. 100 octane gasoline was a laboratory curiosity as recently as 1933, at which time its cost would have been $16 a gallon. The first 100 octane sale, made to the Army in 1934, was at $2 a gallon. Today 100 octane gasoline is being bought by the government at less than 15 cents a gallon.

These are a few of the achievements of a single industry in wartime America. The cold figures describe better than glowing phrases the value of unrestricted individual initiative; the kind that built the oil industry and now brings victory within our grasp.

Ask Congress to Make February 1st Freedom Day

PHILADELPHIA, Jan. 20—(ANP) Dramatizing the universal cry for freedom today, the Negro is bringing it closer to the American home front by seeking the passage by congress of a proclamation declaring February 1 annual National Freedom Day to be observed all over the country, just as Independence Day, July 4, and Memorial Day, May 30, are duly recognized and fittingly set aside.

City-wide programs for school children, mass meetings and round-table discussions will mark the occasion this year, when distinguished leaders from local and far points will be present in Philadelphia. Gov. Martin of Pennsylvania has already issued a proclamation setting it aside in this state, explaining its full significance.

According to a release from Harrisburg last week the governor stated:

"This significant date in American history is worthy of commemoration as marking a new era in human progress toward freedom and enlightenment."

February 1 was selected by the promoter of this idea, Maj. R. R. Wright, because it marks the date in 1865 when the 13th Amendment for emancipating the slaves was signed by President Abraham Lincoln.

"Today, 79 years later, the observance takes on much broader aspects, for in freeing slave labor, the Emancipation proclamation at once dignified and made profitable free labor," Major Wright said.

"National Freedom day has in it the nucleus for a plan for new world organization to maintain and safeguard universal freedom."

"With these points in mind the program for the celebration is being anticipated by many ardent supporters of a national spirit of unity," a local minister observed.

On the program being held at Town hall in the evening will be J. Finley Wilson, grand exalted ruler of I. B. P. O. E. of W.; Dr. Charlotte Hawkins Brown, nationally known educator of North, Carolina; Dr. F. D. Patterson, Miss Florence Read of Spelman College and Tax Commissioner Hubert Delaney of New York City, and others.

RACE LINES FADE WHEN JOE LOUIS VISITS IN DURHAM

DURHAM, N. C., Feb. 3 (ANP)—Sgt. Joe Louis Barrow, heavyweight boxing champion, was a guest of the city last week during the 4th war loan bond rally at the armory, and was the special guest of the N. C. Mutual Life Insurance Company, receiving a photostatic copy of a check covering $500,000 worth of war bonds purchased by that firm.

Escorted by the city's finest guardians of the law, Sgt. Barrow's party moved down the main thoroughfares, blocking traffic in a manner that has never been honor at the USO by the Carolina Times.

Before going to the banquet, Sgt. Barrow toured the home office of the N. C. Mutual Life Insurance company and remarked that he was favorably impressed with Durham's colored business enterprises, a statement he repeated in his brief banquet speech.

When Joe came to town, the color line vanished. At the banquet given in his honor at the USO by Carolina Times, white and colored citizens fraternized without friction. All paid him homage. But there was scarcely anything one could say that had not been said about him. While Sgt. Joe is the army's number one morale builder, he is also the civilians' number one morale builder. He is still the idol of the nation.

Joe took with him a photostatic copy of a check, presented to him by C. C. Spaulding, president of the N. C. Mutual Life Insurance company, as evidence that the country's leading colored insurance company had purchased $500,000 worth of bonds during the 4th war loan bond drive.

METHODISTS TO ELECT TWO BISHOPS AT 1944 MEETING

By Lennis A. Bethea

HAMMOND, Ind., Jan. 27 (ANP)—There is much interest now being manifested by leaders of the Central jurisdiction in the coming quadrennial conference which meets in Greensboro, N. C., June 8. This is the sector of the United Methodist church composed of Negro members. There are to be two bishops chosen, one to take the place of Bishop W. A. C. Hughes, who died soon after his election four years ago, and the other to replace senior Bishop Robert E. Jones, who retires this year.

There are a dozen or more aspirants for these high offices. All are strong men and have a distinctively active following. Among those most often mentioned are the following: Dr. Willis J. King, president of Gammon seminary, Atlanta; Dr. Robert N. Brooks, editor of the Christian Advocate, New Orleans; Dr. J. W. Haywood, president of Morristown college, in Tennessee; Dr. J. W. Golden of Memphis; Dr. A. R. Howard, Sumter, S. C.; J. L. Farmer, of Howard university, and Edgar A Love, of the board of missions and extension, New York City.

Among the strong contenders among the pastors are Dr. Robert M. Williams, Washington, D. C.; Dr. David W Henry, Philadelphia; Dr. B. F. Smith, Chicago; Dr. E. W. Kelly, St. Louis; Dr. Samuel W. Sweeny, New York; Dr. J. W. E. Bowen, New Orleans; Dr. William H. Williams, Detroit; Dr. D. T. Hargis, Wilmington, Del.; Dr. D. H. Stanton of Atlanta; and Dr. J. B. F. Shaw of Memphis.

Sentiment seems to be growing for a unification of the C. M. E. church with the Methodist church. The white Methodists of the south as well as the Negro members seem to be in favor of the union. The laymen of the C. M. E. church seem to favor it, but it appears to be opposed by the high churchmen in the ministerial ranks.

ART EXHIBIT OF NEGRO SOLDIERS WINS HIGH PRAISE

ANNISTON, Ala., Feb. 3 (ANP)—The works of these service men stationed at Ft. McClellan, were displayed at an art exhibit held at the Anniston USO for colored soldiers, Jan. 15-19. The collection included oil and water color paintings, etchings, lithographs, cartoons and photographs.

The oil and water color paintings, etchings and lithographs were the works of Cpl. Lawrence Jones, graduate of the University of Chicago and Dillard university. Cpl. Jones, a Rosenwald fellow, studied in Mexico under the famous muralist, Diego Rivers. He was an instruetor in fine arts at Dillard and at Ft Valley college in civilian life.

The cartoons were the work of Cpl. William Alexander, former costume designer for Warner Bros. studio in Hollywood. Alexander named his work, "Harlem's Jive Creations."

The photographs consistion of portraits, action pictures, outdoor scenes and a number of army camp scenes, were by Pfc. Earl McBarnette, New York. While the exhibit was being displayed McBarnette received a telegram notifying him that one of his prints had won first prize in a photographic contest sponsored by Yank Magazine.

ATLANTA RESISTS EQUALIZATION OF TEACHERS' SALARIES

City Attorney Hints Rebellion Against Edict of Court If Parity Is Ordered

ATLANTA, Feb. 3 (ANP)—The Atlanta Board of Education Monday sought to have the case of Samuel L. Davis, instructor at the Booker T. Washington high school here, seeking salary parity with white teachers, thrown out of federal district court on the grounds that the "action was against the state, requiring its consent to be sued."

The counter petition was the first move in the Atlanta equal salary case which has been hanging fire in federal court here for more than eighteen months. Judge Marvin E. Underwood following brief arguments by opposing counsel, ordered both sides to file briefs on the question involved within two weeks, and with an additional two weeks being granted for each side to file reply briefs.

Thurgood Marshall and A. T. Waldon, appearing for the plaintiff, pleaded with the court for a declaratory judgment and an injunction for the "purpose of determining a question in actual controversy between the question of whether the praetice of the Atlanta Board of Education, in adopting, enforcing and maintaining a policy by which he and other Negro teachers in the public schools of the city are uniformly paid lower salaries than white teachers and prineipals, exercising the same duties, solely on account of their race and color is unconstitutional and void, same being a violation of the 14th amendment to the federal constitution."

Asst. City Atty. B. D. Murphy, who appeared for the board, at one point in his heated argument, hinted that even if the government rules that salaries paid Negro teachers were unequal and unjust as compared to those paid white teachers, nothing could be done about it.

"Granting that the federal court does hold that this case is within its jurisdiction, what could it do about correcting this situation?" Atty. Murphy rebelliously asked.

"Just a minute, counsel," Judge Underwood, asserted, halting Murphy's argument, "Do you mean to imply that the Atlanta board would not obey such an order if such were rendered?"

The assistant city attorney then apologized to the court, asserting that his argument had not been fully understood.

Atty. Walden, in a forceful plea, argued the validity of the jurisdiction of the federal court in the suit, while Thurgood Marshall, who came here from Washington representing the national office of the NAACP, cited instance after instance wherein precedent had been clearly established in previous suits of this nature, by federal courts.

Upon submission of briefs and reply briefs, Judge Underwood announced that he will then consider the case as submitted and render a decision in the jurisdictional tangle.

The Atlanta "equal pay" suit was first instituted in October, 1942, with William L. Reeves of the David T. Howard junior high school as plaintiff. On a technicality of health, the board succeeded in having the suit set aside on the grounds that Reeves had been dismissed from its employ because of health reasons.

Samuel L. Davis on July 9, 1943, filed suit against the board thus continuing the case in behalf of the city's Negro teachers. Davis, a graduate of Morris Brown college, has been teaching in the city system for 13 years.

FAMILY-SIZE FARMS BEST FOR NATION, SAYS PATTERSON

NEW YORK, Jan. 27 (ANP)—In a speech which drew ready response from his listeners, James G. Patton, president of the National Farmers union and sometimes called the "little farmer's man." laid out a 12 point program which would benefit America's farm population and contribute to their full employment in the post-war world. By indirection, he also slurred the Farm Bureau federation, of which Edward O'Neal is president who, he said, "actually anticipates post-war 'surpluses,' hard times and lower farm prices."

He was a speaker on the "Full Employment conference" sponsored by the CIO Politieal Action committee here over the week-end. Patton took the occasion to show that business men who look to the future speak in terms of "high employment" rather than "full employment" for it is their belief that—and he quoted Marion B. Felsom, treasurer, Eastman Kodak company—"A job for every person willing and able to work is absolutely incompatible with the free enterprise system. It seems as unpopular not to want full employment as it would be not to believe in mother love, but we have to be realistic."

The Baton program, in brief, sets forth these objectives:

1. Immediate action to insure full employment during reconversion and in the peaee, within the United States and throughout the world.
2. Recognition by the congress that "family type" farming is the basic pattern of American agriculture.
3. Maintenance of "separate books" by the government on family-type farming as distinguished from commercialized agriculture. that latter of which should pay costs "legitimately" chargeable, meaning social security.
4. Establishment of an RFC for family-farm operators that will supply credit and modern farm management supervision at cost.
5. Assistant in financing and in supervision of farm cooperatives for supplies, operation, breeding stock, marketing and distribution
6. Financing and assistant for the building of at least three and one half million new farm homes.
7. Electrification of four million farms not now electrified.
8. An integrated program of soil conservation, erosion control, irrigation and reforestation.
9. Construction of a net work of farm-to-market roads.
10. Building of a school system that will give "genuine and uncontaminated education" to rural populations.

COOPERATION BETTER THAN DICTATION

Commenting on plans proposed in Congress to socialize American medicine, the Connecticute State Medical Journal of December, 1943, says:

"In all the flood of confused and confusing opinion, a solid rock of clear thinking is found in the statement of the medical societies of New England. . . . With characteristic forthrightness, New England admits that medical care can and should be made more readily and economically available for all the people. . . .

"The statement holds no selfish fear about what may happen to the profession as a career if it comes under government control, but it does express alarm at what will become of the quality of medical care if it becomes a plaything of politics."

The New England medical societies say: "In the New England states, judging by the standards with which we are familiar, there is no need to revolutionize the habits of the people in their methods of obtaining medical care.

"Private enterprise in the field of voluntary, prepaid medical and hospital insurance is increasing rapidly. These facilities should be utilized by the states . . . so that each state can purchase medical care for those who cannot purchase it for themselves. . . .

"We shall be glad to work out plans with the representatives of the Federal and state governments to improve the health of all the people, but we should expect that any plans that might be devised would take full advantage of existing agencies and be developed within the social patterns that are well understood by our people."

How much better would be such cooperation than government dictation which limits or destroys basic freedoms.

INK OR IODINE FOR DOCTORS

Most doctors are heartily opposed to Federal compulsory health insuranee. They are opposed to it because experience in other nations has shown that it undermines medieal progress and the quality of medieal care, both of which have advanced rapidly in this country. For these reasons they are against the Wagner-Murray Bill now before Congress.

As Representative Miller of Nebraska points out, under this bill, "the resulting regimentation would first hamper the physician and then break down his morale, his initiative, and his effectiveness. The Director of the Public Health Service would be a czar over physicians. In him would be the power to direct where and when, and finally how to practice his art. Rules and directives would be promulgated in the central offiee that would progressively put the practice of medicine in a straitjacket. The patient could be told to what physician he must report. If you do not believe this, just pay a visit to any social security board and see how those who are compelled to come to it for help are herded around and made to fill out endless forms. The physicians' fingers would be stained with ink instead of iodine."

Doctors are often called reactionary for condemning socialistic medical schemes. The record of medical progress during the last 150 years certainly does not justify that charge. The medical profession is working constantly to broaden and improve medical care. Plans are in the making even now to reach the avowed objective of the Wagner Bill without destroying the independence of American medicine.

BRIEF TIPS

Department home economists say that too much food is still going into the garbage pail. They suggest that housewives serve less on the plates and allow for second helpings.

It is estimated that thousands of eggs will become inedible this year because of improper production, handling and storing.

Just a reminder on or before December 15, farmers are required to file a declaration as to their 1943 income with the U. S. Collector of Internal Revenue and pay the estimated tax.

A slip-cover made of colored material, plain or quilted, will dress up the metal or wooden head-board of a bed.

THE VICTORY SONG BOOK

contains spicy, tuneful, popular songs that can be used for solo work, chorus or congregational singing.

ADDRESS OF SECRETARY

(Continued from Page 1.)

been developed.

A review of the history of these conferences reveals that this annual get-together, as conceived and planned by Dr. Washington, was the first serious effort to provide a close-up and intimate study of the problems of the Negro farmers. It brought together less fortunate individuals under such circumstances as to place them at ease in telling their troubles and in seeking relief from them.

In his understanding of the psychology of the underprivileged colored farmer, who hitherto had been largely left to his own plight, Dr. Washington employed, in his approach, certain methods of the "country church" with which the Negro was familiar. Individuals were invited to tell of their struggles with earnestness and sincerity. As the Conference has continued down through the years, the teaching methods have remained simple but effective.

From the information we now have we know that in the early days of the Conference, farming in the South a swell as over much of the country was wasteful and haphazard. To meet this situation, Dr. Washington brought that eminent man of research, the late George Washington Carver, to Tuskegee in 1896 and asked him to employ every possible means to introduce scientific methods. One of Dr. Carver's earliest tasks was an effort to improve the farmer's diet, the inadequacy of which was a serious menace to rural health. He relied heavily on the Conference to spread his story of better nutrition; he lectured on the subject to farm groups, and he later wrote booklets on the better preparation and more varied use of such common products as the cowpea and sweet potato, and developed numerous products from peanuts.

The Carver Museum on this campus is a monument to the versatility and industry of a man whose life and works have influenced and benefitted the lives of untold millions. The value of that influence down through the years of history cannot be measured by any known yardstick.

The Conference also has been instrumental in spreading the doctrine of self-help among Negro farmers, and in promoting better living conditions. In the matter of health, Dr. Washington told them that "better diet does not come from cans but rather from the soil in their gardens and orchards."

When the Conference began, it was doing the main job of education among colored farmers all by itself. During the intervening years, many new agencies, including the Land-Grant Colleges, the Extension Service, private institutions having agricultural departments, and various Federal agencies, have been instituted to amplify the practical objectives of the Conference. This has resulted in a marked advance in farming knowledge relating to crop diversification, soil improvement and conservation, land-use planning, livestock development, and closer cooperation among farmers themselves in coping with their mutual problems.

The U. S. Department of Agriculture has developed services and aids for all farmers. At the same time, it has made special efforts to help the colored farmer. That we, in the U. S. Department of Agriculture, are better able to serve the Negro farmer is traceable to no small degree to the fact that we are following the policy of using Negro leadership more extensively. To help me in keeping colored farmers better informed concerning activities in the Department of Agriculture, and also in shaping the Department's program to the needs of the colored farmer, your Dr. Patterson and Claude A. Barnett, Director of the Associated Negro Press, serve as my Special Assistants.

Time does not permit me to dwell at length on all the outstanding Negro employees who are making valuable contributions within the Department to Agriculture. I do, however, want to mention T. M. Campbell, who has been with the Department since 1906. He is now Federal Field Extension Agent, but started as operator of Tuskegee's Agricultural School on Wheels, which was another product of Dr. Carver's fertile brain. This "movable school," with its trucks and trailers, sponsored by the U. S. Department of Agriculture, has come a long way since Dr. Carver in a second-hand buggy, drawn by a borrowed horse, made regular tours of the Alabama countryside. This mobile agricultural school idea now covers several States and spreads the kind of agricultural gospel that the small farmer operates by and lives better by.

The employment of Negroes in the Department of Agriculture has shown important gains within the last two years. On September 30, 1943, we had, both in Washington and the field, 1,070 full-time colored employees; an increase of about 20 percent in the last two years. This figure does not include 583 farm and home demonstration agents and approximately 200 committeemen and collaborators. In the last two years there has been an increase of more than 200 percent in the upper levels of employment of Negroes in the various bureaus and agencies of the central organization in Washington. By upper levels of employment, I mean jobs such as clerical, administrative sub-professional and professional grades.

The trained Negro leadership that has been functioning in recent years has been invaluable to the Nation in achieving its record, wartime agricultural production. The fact that we were able this year, for the seventh season in a row, to set a new food production record is ample testimony of the fine job that all farmers are doing. When we remember that this year's food output is one-third higher than during the pre-war period, 1935-39, and about 46 percent above what it was in 1918, then we have cause to be amazed and immensely gratified at the staggering job the farmers of this country are carrying out. The comparison becomes even more striking which we consider that the 1943 job was accomplished in the face of tremendous production difficulties. There was the problem of stretching the labor supply to try to make it go around. Farmers and members of their families worked harder, and they worked longer hours, too. On top of that, there were many other production handicaps, such as less machinery and farm equipment; less fertilizer. But the important thing is that you and the rest of the farmers around the nation got the job done. Farm fields really became battle-fields where you could and did strike a vital blow for victory.

Instead of there being widespread scarcity of food as some prophesied, we are able to provide adequate supplies for our fighting forces, our civilians, and our allies.

Now I should like to mention some of the many ways in which the Negro farmer is contributing to the war and refer to some of the U. S. Department of Agriculture's programs which are being used by the Negro farmer to step up production.

The size of the Negro farm plant, operated by nearly 100,000 farmers, exceeds 30 million acres. The land and buildings of this plant were valued at 836 million dollars in 1940, and the value of farm implements and machinery on these farms was over 40 million dollars.

Estimates based on the latest available figures show that more than 80 percent of the colored farmers of the country have poultry, 70 percent have horses or mules or both, 60 percent have hogs, nearly 50 percent have cattle, and more than 80 percent have gardens. It is further estimated that colored farmers have produced this year about two billion pounds of milk, 100 million dozen eggs and a sizable quantity of beef, pork, fruits, and vegetables.

These facts mean that your farm families will be better fed and therefore stronger and better able to do their full part in the war. They mean that our overburdened transportation facilities will be relieved of extra food hauls. They mean that the surpluses from these farms will find their way into marketing channels, for our armed forces, our war workers, and our allies, to supplement supplies from commercial food-crop areas.

The Department of Agriculture recognizes that, in order for the resources of farmers to be fully utilized, a thorough-going loan and supervision program is needed in many areas. Loans for feed, seed, fertilizer, brood sows, baby chicks, and heifer calves are now available; supervision is provided to help improve production methods, and programs have been introduced which make for better health and sanitary conditions and tend to reduce the year-to-year shifting of tenants from farm to farm. All of these contribute to the full utilization of farm manpower.

The two major agricultural agencies concerned with making credit available to farmers for wartime production are the Farm Credit Administration and the Farm Security Administration. There are upwards of 63 thousand Negroes, many of them small farmers, sharecroppers, or tenants, participating in the FSA program, making up over 13 percent of the total number of FSA clients. Of these, about 5 thousand are on the road to ownership of their land, and scores have already paid their loans in full. The main benefits from FCA are in financing food and fiber production, and financing the processing and marketing of farm products.

In this connection, I should like to point out that in view of the present rather rapid upward trend in rural land values, the Department of Agriculture is attempting to assist in heading off inflation by urging farmers to make proper use of their surplus funds to pay off debt and buy war bonds and stamps. I am very much concerned that farmers do everything they possibly can to stop this inflationary spiral. None of us wants to see farm people suffer the after-effects of run-away land prices following this war as happened in the last post-war period.

Another of our programs which is benefitting thousands of colored farmers is Rural Electrification. Electric lights and electric appliances in homes not only improve living conditions but serve to increase the efficiency of the farm plant and help to assure full production.

I have mentioned previously the important educational work being carried on among Negroes by the Extension Service. There are two Negro Federal field extension agents, 38 Negro State and district extension workers, and 537 Negro county agricultural and home-demonstration agents. These educational workers, of course, are armed with the findings of State experiment stations, and U. S. Department research bureaus. Then there are the colored 4-H club members of which there were 217,708 in 1942. The boys and girls who comprise this membership are producing vital war foods and fibers, doing farm chores to help relieve farm labor shortage, and performing many other useful wartime jobs.

Also, there is the Agricultural Adjustment Agency with its system of farmer committees for administering its own conservation and other programs in addition to handling various field administrative jobs for War Food Administration. It is estimated that 90 percent of all Negro farmers participate in the programs administered by the AAA.

The Soil Conservation Service is providing technicians to aid farmers in putting into operation erosion control and soil conservation practices.

The Food Distribution Administration also renders valuable assistance to Negro farmers in maintaining prices and better marketing conditions through its purchase programs. It also aids in protecting the health of over one million colored children through its school lunch program. This represents one-sixth of all children receiving school lunch aid through the FDA.

This is not intended to be an all-inclusive recital of the Department's activities in behalf of Negroes. Your farmers are already familiar with our programs as they reach down onto their farms and into their homes. I mention these programs merely to indicate the progress that is being made in bringing agricultural programs to Negro farmers.

Before I close, I should like to refer briefly to next year's production job. Production plans for 1944 call for the highest acreage of crops in history; and the output of livestock products is expected to approximately equal this year's record level. To achieve that production objective will require the hardest kind of work and the most careful planning for every farmer in the country. We need to use every acre, every hour, and every ounce of energy in the way that it will count most.

Back on the farms, those of you who are on the production front will be carrying a tremendous responsibility for the success of the food program next year. This is evidenced by the fact that Negro farmers make up one-fourth of the farm operators in the South and about half of the farm workers in that area. So I for one fully appreciate the tough job that lies ahead of you. Of course, no one can predict with certainty what our prospects are for next year because no one can predict the weather. But I am sure you'll do your best. And your best can be an important factor in helping to assure an early victory and a lasting peace.

Yes, and when peace comes again, it is my hope that we shall to able to turn again to a program of providing greater home comforts for those who till the soil: improved rural housing, a further extension of the facilities of the Rural Electrification Administration, and improved roads. These, like greater security and better living on the farm, will depend in a large measure on sound soil conservation practices and continuation of a balanced agriculture. To achieve these objectives will mean wider emloyment of the Conference idea and a greater responsibility upon leadership. The value and importance of leadership is brought more sharply into focus when we realize that the benefits which will acquire to your people in rural areas depend largely upon your planning and vision. Just as you are planning here to help win the war, this and other conferences will help plan post-war agriculture.

Our nation in this fierce struggle for freedom needs all the strength it can possibly muster. It needs the concerted effort of all farmers. Victory will mean that farmers everywhere can enjoy the rights of free men, rights which this country has been guarding and fighting for since the founding of this nation.

USDA RESEARCH PROTECTS SOLDIERS FROM PESTS

Wartime research has staged a brisk offensive against the mosquito, long a foe of all soldiers in most of the fighting areas from the Tropics to the Artic, says the Agricultural Research Administration of the U. S. Department of Agriculture.

In a review of recent work of the Bureau of Entomology and Plant Quarantine, its chief, Dr. P. N. Annand, gives a leading place to advances in control of these insects. Mosquitoes, he says, are the most unbearable insects in many areas where troops are concentrated, but far more important than the annoyance they cause, these insects are the only known carriers of such dreaded diseases as yellow fever and malaria. The use of an aerosol bomb containing insecticides under pressure, which when released atomizes the insect-killing-material as a fine mist, deadly to insects but harmless to man, promptly rids any room, tent, or screened area of these tormenting pests.

Three good mosquito repellents and a new material for killing the larvae of anopheles mosquitoes have been discovered and give promise of being more satisfactory than any previously known.

Mahogany, formerly used in fine furniture, is now used to build light, speedy submarine chasers.

MORE BEANS FOR U. S.

(Continued from Page 1.)

vested in a year, usually in September. After removal of dockage and foreign materials, the beans are sacked in 100-pound bags and stored for supply demands for the next 12 months.

Most of the dry peas marketed in the United States were used in split-pea soup. The term "split-pea" comes from splitting the peas and removing the seed coat. Like beans, peas are stored to supply demand for the 12 months following harvest.

NAME FIRST ASSISTANT TO NEGRO FARM AGENT

Washington, D. C., Jan. 17, 1944—The U. S. Department of Agriculture received a report from North Carolina State Extension Service last week which announced the appointment of an assistant Negro farm agent to work with F. D. Wharton, Negro farm agent of Edgecombe county, N. C. He is the first Negro farm agent in the country to have a regular full-time aid.

The need for this assistant arose last summer when Agent Wharton established curb markets in Tarboro and Rocky Mount to provide an outlet for the surplus products grown by the colored farmers of Edgecombe and Nash counties. So successful have these projects been that the county commissioners have voted to expand the effort. To this end, they have named an assistant to aid Mr. Wharton in his program.

The opening of these two curb markets (which up to a couple of months ago had sold more than $3,000 worth of vegetables, poultry, eggs, fruits, meats and butter) is the result of years of hard work by the farm agent and by the farm people. Mr. Wharton has taught and encouraged the farmers of Edgecombe to improve their production methods and farming practices. He has not only urged the farmers to grow vegetables, poultry, and livestock in a live-at-home program, but he has also encouraged them to produce quality vegetables, and improved breeds of poultry and livestock in quantities large enough to have ample supplies for home use and surpluses to sell to the townspeople. And significantly, the quality of the products offered for sale has been largely responsible for the success of the markets.

Money from these curb market sales has gone into war bonds, and into repair of brooder and poultry houses, canning equipment and home improvements. A complete story of Agent Wharton's curb market program written by F. H. Jeter, North Carolina Extension editor, appears in the February issue of Extension Service Review.

THE PIKA OR HAYMAKER

The farmer among the animals is the Pika, which lives in the Rocky Mountains and in the Himalaya Mountains, being found as high as fourteen thousand feet elevation. He is a small animal related to the rabbit and about the size of a guinea pig. He always lives high in the mountains where rocks have sloughed off to form a slide and it is underneath these rocks that he has his home. He is much like the guinea pig, having no outer tail, with gray-brown fur and in the Canadian Rockies has a white rim around each eye.

During the summer he cuts young plants and lays them out in the sun to dry like hay. He turns them several times each day to make sure they dry evenly and are well cured. He then stores them in his room under the rocks to make certain he has food for winter. When the cold winds blow and the bears den up, then he retires to his home and carefully stuffs all the crevices of his house with grass and hay. Then he lives on his food supply until he grows sleepy. If perchance he should wake from his long winter nap he eats some hay and goes back to sleep to await the spring. I wonder if he was the one who inspired the saying, "Make hay while the sun shines?"

—R. S. O'Connor

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., MARCH 15, 1944 No. 2.

Negro Farmers Help Keep The Home Front While Their Sons Fight Abroad

FAT-OIL SUPPLY UP TO PRESENT LEVEL

Washington, D. C., Feb. 28, 1944.—Civilians will get about 44 pounds of edible fats and oils each in 1944, according to figures recently released by the War Food Administration. This is about the same quantity civilians received during the last six months of 1943.

Negro farmers have helped substantially in keeping the amount of fats and oils available for civilians up to present levels. They have helped in two ways: some have planted extra acres in peanuts, and raised extra hogs to provide additional fats and oils for market, others have helped by raising their own supply of fats and oils at home, thereby, not having to draw on the limited supplies in the grocery stores.

Edible fats and oils, consisting of butter, lard, margarine, shortening and salad oils, are important in the diet.

The 1944 supply of fats and oils will be slightly more than 12 billion pounds. About 69 percent will be available to civilians, 21 percent for our Allies, 9 percent for military and war services and 1 percent set aside for reserve.

For the first quarter of the calendar year, civilians have been allocated 410 million pounds of creamery and farm produced butter; 455 million pounds of lard; 150 million pounds of margarine and 427 million pounds of shortening, cooking and salad oils.

The nation's normal consumption of fats and oils has been about 10 billion pounds, of which approximately 2 billion pounds have been imported from various parts of the world.

War however, brought an immediate additional need for fats and oils. It necessitated increased production for our expanding armies and those of our allies; for glycerine for explosives; for lubricants, greases, paints, varnishes to speed up our production lines; for pharmaceuticals for our wounded soldiers, and for scores of other wartime needs.

Inedible oils are used largely in the manufacture of soap; paint and varnish; coated fabrics; printing ink; lubricating oils; textiles and leather rubber; core; oils; vitamin carriers; pharmaceutical; putty and other caulking compounds and many other products.

Most fats and oils are interchangeable in their uses. Oils normally used only in the manufacture of edible products may be used—when in excess of edible requirements—to relieve tight situations in the industrial field.

INFLATION, THE BOGEY MAN

"The threat of inflation is being used as a bogey man to induce a nation to accept social reform, regimentation, limitation of opportunity and incentive. Before the war ends, it will be used to hide social economic mistakes and to conceal from the public the sad state of economic affairs into which the nation has been thrown.

"Inflation comes when there is too much money and too few things to buy. High prices result from inflation—they are not the cause. Inflation is avoided, or remedied by increased production—not by regulation. To date, our government has done much to promote inflation, including propagandizing it, and nothing to prevent it."—F. H. Sexauer, President, Dairymen's League Cooperative Association of New York.

SEEKS TO IMPROVE WELFARE

Claude A. Barnett Completes A Week's Tour

Washington, D. C.—Claude A. Barnett, director of the Associated Negro Press, and special assistant to the Secretary of Agriculture, has just completed a week's tour of farm labor camps in Florida in the interest of the welfare of Jamaican and Bahaman workers who are in this area helping to relieve the wartime farm labor shortage.

Information gathered on this tour will be used by War Food Administration both to help these island workers do a more effective job, and also in planning recruitment of additional Jamaican and Bahaman farm workers.

Anxious to study at close range the conditions under which these islanders are working so that he might make recommendations to WFA that would effectively reach their problems, Mr. Barnett went back into the Florida Everglades and ate and slept on the sugar plantations where 1,700 Jamaicans are cutting cane, and where several hundred Bahamans are helping with the cultivation and harvesting of vegetable crops.

There he talked with these workers in the fields, in their dining rooms, in their dormitories, recreation halls, and in the hospitals where those ill are treated. He also conferred with officials of the U. S. Sugar Corporation for whom the Jamaicans are working, held conferences with plantation managers, WFA labor officials, and with Jamaican and American area and field supervisors.

Having seen these workers in the fields, and having heard reports of the fine jobs they are doing, Mr. Barnett addressed 1,400 Jamaicans in three assemblies and praised them for the admirable contribution which they are making toward the winning of the war. When he pointed out to them that they would not be decorated as heroes, would wear no uniforms, and would not march to the sound of a band, yet they, too, were soldiers fighting on one of the most important fronts, they cheered wildly.

When he finished his address, a spokesman for the group arose and said, "Give this message to the American people and to our own folks back in Jamaica. Tell them that we came here to do a job and that we are determined despite the adverse conditions which we sometimes face to stay here until that job is completed." And with that the workers gave a rousing cheer.

Mr. Barnett reports that both the Jamaicans and Bahamans are doing highly satisfactory work, and that working conditions as to wages, hours, housing, and supervision have improved. However, he has made recommendations to WFA for further improvements. As for wages, they have increased 100 percent in the sugar-cane field.

So satisfactory have the Jamaicans proved in the cane fields that the U. S. Sugar Corporation is requesting WFA to bring in an additional 1,500 for year-round work. The present Jamaican workers will return north in the late spring to harvest vegetable crops.

Accompanying Mr. Barnett on the tour were Frank E. Pinder, acting labor relation specialist of WFA, and Sherman Briscoe of the USDA Office of Information.

WAR FOOD PLAY TO BE RENDERED

Two Colleges Plan Presenting "It's Up to You"

Washington, D. C.—Negro amateur theatrical groups, college drama departments and high schools, seeking a novel presentatoin which also offers an opportunity to participate in the war effort, may present the War Food Administration play, "It's Up To You," which has proved a Broadway sensation. This play is available on request, and already four Negro educational institutions, West Virginia State college; Tennessee A. & I. college; Utica Normal and Industrial Institute, and Shaw Junior High school of Washington, D. C., have interested themselves in it.

Written by an established Broadway playwright, with music by the composer of "Ballad for Americans" the play lends itself easily for small group production. Accompanying the script is a fine film, which is run as a part of the program. "It's Up To You" is a dramatic war play with musical interludes between the scenes. It is a living performance of "Food Fights for Freedom."

Besides giving an opportunity for dramatic expression, the play carries a vital message on the important topic of food and black market. Wherever it has been presented, audiences have been enthusiastic over what they saw, heard, and learned.

When first shown in New York, top flight critics praised the performance, which was by professionals. This "try-out" set a pattern followed in hundreds of amateur presentations throughout the country.

The play may be presented in school auditoriums, churches, halls and theatres, if the latter are available. Organizations interested should write the War Food Administration in Washington, D. C., for details. They will be sent promptly.

A FAMILY PROBLEM

As March 15th draws nearer, the average family will realize that next to winning the war, the most pressing public problem is taxation.

Published newspaper reports show that the national income for 1943 is estimated at $142,000,000,000, as compared with $70,900,000,00 in 1939. War taxes to absorb abnomal earnings from war production, are justified. But when peace comes, our nation should be prepared to immediately adopt a revised tax schedule, or progress will be stifled.

To meet this situation, a constitutional amendment limiting the power of Congress to impose taxes on incomes, inheritances, and gifts to a maximum rate of 25 per cent, has been proposed, except in case of war emergency. If the legislatures of two-thirds of the states adopt a resolution requesting Congress to call a convention for proposing an amendment to the Constitution, Congress must comply. Fifteen states have passed such a resolution.

Here is a definite program looking to the formulation of a practical peacetime tax structure. We should not wait until the momentum of industry has been slowed down before providing an incentive to keep it rolling.

NEGRO FARMERS BUY STOCK

1761 Milk Cows Purchased In 1943

Washington, D. C.—According to reports received by the Department of Agriculture this week from North Carolina Extension Service, Negro farmers in 36 counties of that state spent $101,516.27 last year for better livestock, principally dairy cows and heifers for family milk cows.

The purpose of this program launched by Extension Service was to provide milk cows for farmers who had none. Both landowners and tenants took advantage of the program. The record shows that 785 dairy cows and heifers were placed on the farms of owners, and 810 went to tenants. Among the farmers who bought them, 462 had not owned cows before.

In order to maintain improved livestock the farmers got together, formed 59 clubs and purchased 58 purebred dairy bulls for siring purposes. The purchases of the sires and the milk cows was financed through banks, county commissoners, the farmers themselves and through other ways.

HOW WE WILL EAT IN '44

In an address over the Mutual Broadcasting System last week, War Food Administrator Marvin Jones pointed out that despite the prophets who predicted that we'd go hungry this year, we'll have more food than during the pre-war years, and only slightly less than we had last year and the year before, our all-time peak years.

He declared that America has made good on the food front in this war. Among those who should get credit for this achievement, he listed the farmers who have produced 50 percent more in the last two years than they produced during 1917-18, in spite of the fact that there are 4,000,000 fewer people on farms now than during World War I.

He also gave full credit to the people of the towns and cities who helped with the cultivation and harvest of important crops; and the 20 million Victory Gardeners who produced eight million tons of food; and the processors, and handlers and the railroads. Finally, he listed the thousands of housewives who are helping to make Food Fight for Freedom by cutting down on waste. While praising these groups the War Food Administrator reminded them that they have a continued responsibility in the battle on the food front.

HOLD SWEET POTATO CLINIC

In response to the Nation's wartime demand for increased production of sweet potatoes, Florida farmers are attending demonstrations, learning how to construct flue-heated beds for commercial production of sweet potato plants.

A recent demonstration was conducted near Tallahassee which 200 white and colored farmers attended. Specialists from the State Plant Board, State Experiment Station, State Marketing Bureau and the Extension Service supervised demonstrations. The white and colored farm agents of Leon County, John G. Kelley, and R. E. Wyer planned the demonstration. There is a campaign on in Florida to perfect the distribution of the

(Continued on Page 8. Column 5.)

N. C. FARMERS' RECORD

Five Counties to Receive Achievement Reward

Washington, D. C.—The War Food Administration has selected five counties in North Carolina to receive Achievement "A" Awards for excellence in agriculture in 1943. The counties selected for the awards are Chatham, Haywood, Northampton, Pitt, and Wilson. Negro farmers make up a substantial number of the farmers in these counties.

In Chatham, according to the 1940 census, there are 2,375 white farmers, and 798 colored farmers, in Haywood there are 3,109 white farmers and only 10 colored; but in Northampton there are 1,280 white farmers and 1,661 colored; in Pitt there are 3,683 white farmers and 1,967 colored; and in Wilson, there are 2,978 white farmers and 1,140 colored.

These counties not only exceeded their production goals last year, but they also shifted from peacetime crops to meet wartime demands. And they made full use of their land and labor resources. Each of these counties will receive an "A" Banner from the War Food Administration to be presented by the Army in appropriate ceremonies in February. The awards not only honor the counties, but they also honor every farm family in these counties.

CAMPBELL APPLAUDED FOR SON'S WAR FEATS

When T. M. Campbell, Negro Federal Extension field agent, arose last week to make a few remarks at the annual meeting of Federal Extension workers held here in Washington, he was given a loud round of applause. This unusual demonstration was in recognition of the war feats of Mr. Campbell's son, William, a flyer in the 99th Pursuit Squadron, who was the first Negro to bomb an enemy target. He achieved this distinction last summer when he bombed Pantelleria, a Nazi held island in the Mediterranean.

Mr. Campbell has served the Department since 1906 and has accomplished a tremendous task in

(Continued on Page 8. Column 4.)

SOIL CONSERVATION FOR WAR PRODUCTION

The War Food Administration has announced details of a streamlined soil conservation practice program for 1944 which America's six million farm families can use in bringing their land up to its maximum production capacity.

The new program is divided into the following principal sections: Fertilizer and other materials, cover crops harvesting of legume and grass seeds; erosion control and water conservation measures; and range and pasture practices. Each state, according to his topography, soil, climate, and conservation needs, will adopt its own set of practices.

N. E. Dodd, chief of the Agricultural Adjustment Agency which administers the conservation practices program, points out that before each of the outlined practices was approved, it was subjected to two questions: (1) Will it increase food production in 1944 and '45? (2) Can it be administered with a minimum of red tape?

WOMAN'S PAGE

Recipes, Suggestions, Old and New With Hints from Here and There.

FISH PUFFS WITH TOMATO SAUCE

2 cups mashed seasoned potatoes
1 cup cooked fish (canned, fresh or frozen)
1 egg or 2 yolks
1-4 teaspoon salt
1-8 teaspoon celery salt
Speck pepper
4 tablespoons flour
4 tablespoons drippings or fat, melted

Mix potatoes with fish, egg and seasonings. Beat a minute. Drop portions from a spoon frequently dipped in warm water, (to prevent sticking to the spoon) onto well greased, shallow baking pan. Lightly sprinkle puffs with flour and brush with fat. Bake 10 minutes in moderately hot oven. Serve hot with tomato sauce.

TOMATO SAUCE

4 tablespoons bacon or other fat
1-4 cup minced onions
2 tablespoons diced celery
1 tablespoon chopped green peppers
1-4 teaspoon crushed bay leaf
4 tablespoon flour
1-2 teaspoon sugar
Speck powdered cloves
1-2 teaspoon salt
1-8 teaspoon pepper
1 cup tomatoes and pulp
1 cup boiling water, meat or chicken stock

Heat fat in frying pan, add and simmer 5 minutes, stirring frequently, onions, celery and peppers. Add flour and mix thoroughly. Add seasonings and tomatoes. Simmer 5 minutes, stirring frequently. Add water and cook slowly 5 minutes. Serve poured over the puffs or pass in a hot bowl.

SAVORY SCRAMBLE

4 tablespoons chicken or other fat
1-4 cup chopped onions
1-3 cup diced celery
2 cups cooked rice
1-2 cup cooked vegetables
1 cup tomatoes
1-4 teaspoon salt
Speck pepper
Speck sugar
Speck thyme or marjoram

Heat fat in frying pan, add and simmer 5 minutes onions, celery and rice. Add rest of ingredients. Cook slowly, covered, 20 minutes. Stir frequently with fork. Serve hot or poured over potato cakes, toasted rusks or reheated biscuits or cornbread squares.

Do not let spaghetti soak in cold water after cooking.

Two important points to remember in cooking with molasses are that it contains acid and that molasses mixtures scorch easily.

Cabbage rates along with citrus fruits and tomatoes for its vitamin C when served crisp and raw. In cooking it loses some vitamin C; but, if cooked only a few minutes until just tender, it is still a good food for this and other vitamins and mineral.

Nutrition-wise homemakers serve fish regularly. They realize its importance in the diet. All fish is high in food value, and rich in vitamins and minerals. It is one of the best sources of iodine, too.

FOR TENDER EGGS

In order to obtain a firm but very tender white and yolk in hard-boiled eggs, cover eggs with cold water and heat only to boiling. Remove from heat immediately and let stand in hot water 20 minutes. Remove from hot water to cold and let stand one hour before peeling.

If raisins are rinsed in warm or hot water, they will chop easily.

FOR ADDED FLAVOR

Dry out and grate citrus fruit rinds. Keep in covered jars to sprinkle over crumb cake or coffee cake batter before baking, cake frostings or icings, marshmallow or orange topping for gingerbread, whipped cream garnishes for fruit desserts, meringue for lemon or orange pie, and creamy rice or tapioca puddings.

STUFFED EGGPLANT

1 large eggplant
1 onion, minced
1 green pepper, chopped fine
2 tomatoes, quartered
2 tablespoons butter or margarine
1-2 teaspoon salt
1-8 teaspoon pepper
1 cup diced boiled ham

Wash eggplant and cut off a slice from top. Scoop out inside to within 1-2 inch of skin. Cover shell with salted water and set aside. Chop eggplant pulp and combine with onion, pepper and tomatoes. Cook in a small amount of boiling salted water until tender. Drain and mash. Add butter, salt pepper and ham. Drain shell well and fill with mixture. Sprinkle top with bread crumbs and bake in moderate oven (350 degrees) about 25 minutes.

CUCUMBER BOATS

Cut a slice from one side of small cucumbers, hollow out in boat shape. Marinate in French dressing and chill. Fill with fish or sea food salad, or other suitable mixtures.

Chicory and sliced hard-cooked eggs are a fitting garnish for any chicken, fish, or ham salad.

SIMPLE WAYS TO REMOVE MUD STAINS

In spite of the fact that mud stains are among the most frequent clothes cleaning problems in springtime, especially on children's garments, many a homemaker does not know the secrets of dealing with mud. Textile specialists of the United States Department of Agriculture advise letting the mud dry, then brushing off as much as possible. If the mud is on washable fabric, soak in clear cool water first, then wash with soap and warm water. If the fabric is not washable, sponge the stain like a hard grease spot. Rub first with a little petroleum jelly or lard to loosen the grease, then sponge with cleaning fluid. Red mud often contains iron and must be treated like a rust stain with lemon juice and salt or some other rust remover.

Mud often does more damage to leather than to fabric. If left to dry on shoes, it may make a permanent stain. Remove and immediately from shoes by washing with a wet cloth if necessary.

About 25,000,000 gallons of molasses are used annually in this country.

Elbows can be kept soft and smooth by applying hand lotion during the day and lemon juice and olive oil at night.

A method of using tissue from cadavers to bridge several nerves and restore their functions was recently described.

Oysters obtain their food by filtering vast quantities of water for the minute organisms in it.

HOUSEHOLD HINTS FOR HOUSEWIVES

FRESH MEAT—Cover fresh meat loosely. Wipe with damp cloth just before cooking. If ground, store in extra cool place and cook soon.

MEAT BROTH.— Cool meat broth rapidly, keep cold, use soon.

COOKED MEAT.—Keep cooked meat covered. Chopped and sliced cooked meats spoil more quickly than meat in the piece. Cut or chop just before using. Keep meat sandwiches and salads cold right up to serving time.

CURED MEAT.— Keep uncooked, well-cured meat in a dark, cool, dry, airy place. Leave wrapping on ham, bacon, and other cured meat until ready to cook. Keep mildly cured meats like fresh meats.

POULTRY.— Wash poultry thoroughly inside and out, not dry, and store very cold until time to cook.

SEA FOOD.—Fish and all other sea food spoils in a few hours at room temperature. Cook at once, or wrap in wax paper to keep odor from other food, and store very cold.

MILK.—Don't let milk stand out. Keep it in the colder part of the refrigerator. When cooking, take out only milk and cream needed and let the rest stay cold. Don't pour left-over milk back in the main supply. Put away milk the first thing after each meal. Keep odorous foods—fish, onions cabbage, melons—away from milk. Use suds and sun on all milk containers. Scald often.

MILK AND EGG DISHES—Milk and eggs are good combinations, but spoil easily. If custards, cream pies and puddings, and cream puffs are not to be eaten at once, cool them quickly, cover, and keep very cold.

CHEESE.— Cold and covered, are the watchwords for cheese too. Use cottage and other soft cheese quickly, for they soon spoil. Hard, cured cheese, well wrapped, may be kept longer.

EGGS.—Wipe off soiled spots on eggs with a dry, rough cloth. But don't wash eggs before storing. Water destroys the protective film that keeps out air and odors. Store eggs in open bowl or wire basket in a cool place.

VEGETABLES.— The fresher a vegetable when it is used. the better the taste, the less the waste, and the more vitamins retained.

"Wilt not, waste not," is a golden rule for garden stuff. For household storage of fresh vegetables, use refrigerator or other cold place.

SALAD GREENS.—To crisp up lettuce, radishes, celery—all raw vegetables headed for the salad bowl—wash, drain, store in covered vegetable pan. Keep cold.

COOKING GREENS.— Pile cooking greens loosely to prevent bruising. Store in covered vegetable pan, or waterproof bag, preferably after washing and draining. Keep them cold.

SNAP BEANS, LIMA BEANS, PEAS, CORN.—To hold the sweet in corn, peas, and lima beans and to keep snap beans fresh, keep them cold. Let them stay in the pod or husk unless you can store them tightly covered in refrigerator.

THE CABBAGE FAMILY.—Cauliflower, brussels sprouts, and broccoli lose freshness faster than cabbage. Leave them uncut; keep cold and not too dry.

ROOT VEGETABLES.— Put beet, turnips, rutabagas, carrots in a cool ventilated place. Cut tops to 2 inches to save space. (Don't throw away edible turnip and beet tops. Save as shown under "salad greens" above—or can, dry, brine, or freeze them.)

POTATOES, ONIONS.—A dry, cool blackout suits them both, but avoid freezing.

SWEETPOTATOES, SQUASH. For sweetpotatoes and squash, dry cool storage.

BERRIES, CHERRIES, GRAPES.—To keep berries, cherries, and grapes tip top, store in a shallow tray in a cold place. Wash just before using.

PEACHES, PEARS, PLUMS.—Spread to keep from bruising. Keep the ripe fruit cool. Let underripe fruits ripen at room temperature.

ORANGE, LEMONS.—Spread out to prevent loss from mold and rot. Keep in a cool place.

APPLES.—Apples soften as much in 1 day at 70 degrees F. as in 2 days at 50 degrees F.—So keep them at the cooler temperature.

Be gentle with the firm apple and orange as well as with the soft berry and the tender-skinned peach.

To pinch and bruise and break the skin will let the enemy, rot, come in.

BANANAS.—Bananas are best when kept at warmer temperatures than our native fruits. Let underripe bananas ripen at room temperature.

DRIED FRUITS.—The natural sugar in dried fruits keeps them from molding easily.

Store them in a tight bag or jar in a cool place. Watch in warm weather for worms or weevils.

Spoilage spreads as mold breeds mold, weevils breed weevils. This happens oftenest in the forgotten can or box. Frequently check-ups save food.

BREAD.—Cool home-baked bread before storing in ventilated box. In hot weather, to keep bread from molding, wrap in moistureproof paper and put in refrigerator.

CAKE.—Cool on rack before storing in its own covered box, ventilated if in humid climate.

COOKIES.— Crisp cookies and crackers soften if kept with bread and cake. Keep them in airtight tins or boxes all their own.

FLOUR, CEREAL, SUGAR, SPICE.—Don't try to store much flour and cereal over the hot months—buy less and oftener. Store such dry foods as flour, cereal, sugar, spices in tight containers to keep out dust, moisture, insects, and mice.

DRIED VEVGETABLES.—Mice and weevils are fond of dried vegetables, too. Keep dried vegetables in tight containers.

CANNED GOODS.— Tinned foods should be kept dry to prevent rust and spoilage. Foods canned in glass should be stored in a cool dark place.

QUICK-FROZEN FOODS.—Quick-frozen foods must be kept frozen solidly in the freezing compartment of a mechanical refrigerator until used. Don't hold too long even at freezing. Once thawed, frozen foods spoil rapidly. Do not refreeze.

Waste no fats. Store butter and other table fats in tightly covered dish in a cold dark place away from strong odors. To keep cooking fats well, strain fat drippings to remove food particles and store in clean covered jars in a cool, dark, dry place until used.

Don't drain away vegetable juices. Save them for soups and sauces.

Save fruit juices for cold drinks.

Save bread and cracker crumbs for poultry stuffing or to make a crumb blanket for scalloped dishes.

Use perishable foods promptly.

STOP EVERY SMALL LOSS OF GOOD FOOD. SAVE EVERY DROP AND CRUMB.

"Freedom of speech is the precious right of all persons. It is not lost because one becomes an employer of his fellowmen, nor should it be lost by an employe when he associates himself with a union."—St. Louis Post-Dispatch.

UNCLE SAM'S STAR SALESMEN

A few years ago no one would have thought it possible for this country to raise tens of billions of dollars voluntarily by public contribution within a space of days. It has not only been proven possible, but has been done more than once—we are now conducting the Fourth War Loan Drive with a minimum goal of $14,000,000,000.

Of course the demands of war are the driving force hehind bond sales, but those demands alone would not suffice. No small share of credit for raising the money must go to the magnificent promotional efforts of the most efficient salesman in the world—the American businessman. His ability is legendary. Before the war he roamed the world. He sold everything under the sun from washing machines to hat pins. His customers ranged from head hunters to Eskimos.

What is more natural than when faced with the biggest selling job in history, the American businessman should come through with colors flying? Perhaps nowhere are his energies and abilities more evident than in the bond selling efforts of the chain store industry. The chain stores are classic examples of American efficiency and progressiveness. Their distribution technique made necessities and luxuries available to more people than all the social reform programs ever devised.

The entire nation can be thankful that American salesmanship is offered unqualifidely in helping the government raise needed war revenue.

THE ROAD TO DESTRUCTION

One of the most pernicious beliefs that has come out of this war is the idea that since we have been able to achieve full employment and high wages producing armaments, there is no excuse for not achieving the same goals in peacetime by producing a flood of automobiles, refrigerators and luxury gadgets ad infinitum.

When asked the question, Why does it always seem easy to find money to prosecute a war, and so hard to find it to win the peace? Dr. Harley L. Lutz, Professor of Public Finance, Princeton University, replied: "The peace economy must remain solvent. A war economy doesn't have to remain solvent, and usually is not solvent. When we get into a war we give the government complete dictatorial powers over everybody. It can conscript labor; it can force men to work; it can set wages: it can confiscate income and property; can suspend all rights. The so-called war prosperity rests on this foundation of casual, although pernaps not nominal slavery."

We have consented to these things because the war must be won at any price. But tax spending for the mere sake of spending, as was done during pump-priming days, must end. Normal expenses of government must be cut to the bone and people must be taught to save. Either that, or we are on the road to destruction though we win the war.

Beautiful But—

In a civil service examination given in New York City, some time ago, one of the questions asked was the following:

"If a man buys an article for $12.25 and sells it for $9.75, does he gain or lose by the transaction?"

One of our modern young sweet things, after studying for awhile, is said to have given the following answer:

"He gains on the cents, but loses on the dollars."

TWO-THIRDS OF NATION'S MEAT TO GO TO CIVILIANS

Two-thirds, or 69 percent of all the meat supplies available will be allocated to U. S. civilians during 1944, the War Food Administration has announced. Negro farmers, now more extensively engaged in commercial production of beef and pork contributed substantially to the nation's total supply.

The meat allocated for civilians this year is equivalent to approximately 132 pounds per capita for the year on a dressed weight basis, compared with the pre-war 1935-39 average of about 126 pounds.

4-H MOBILIZATION WEEK

March 4-12 will be national Mobilization Week for 4-H boys and girls. They will enlist additional members in the "Feed-a-Fighter" program and will appear before various groups in the interest of 4-H work.

"44 FARM LABOR PROGRAM

In an address over the Mutual Broadcasting System last Thursday, War Food Administrator Marvin Jones outlined this year's farm labor program. Briefly that program is this:

First, to keep on the farms the experienced, skilled farm operators and essential full time workers.

Second, to return to the farm those with farm experience who can do more good on the farm than where they are now.

Third, to recruit workers, both for full time work and for seasonal and temporary work, and help experienced workers improve their skills.

Fifth, to encourage and bring about a more efficient exchange of labor and machinery among farmers.

Sixth, to continue to make available imported foreign workers from Mexico, Bahama and Jamaica, as well as prisoners of war when available, and even such use of our own armed forces as special local emergencies justify.

Seventh, to continue the U. S. Crop Corps which includes the Women's Land Army Workers and the Victory Farm Volunteers and even to increase the numbers of these workers because of their record last year.

Negro Americans, Bahamans and Jamaicans are expecting to continue playing an important role in the cultivation and harvest of vital war crops.

MAJ. R. R. WRIGHT'S BANK BUYS MILLION AND HALF IN BONDS

PHILADELPHIA, Mar. 9—(ANP) Maj. R. R. Wright, Sr., president of the Citizens Bank and Trust company, announced last week that since the Japanese pulled their "sneak" attack on Pearl Harbor, the bank has purchased a total of $1,500,000 worth of war bonds, and has sold through its private channels more that $1,000,000 worth of bonds to depositors and Negro and white citizens throughout the city.

"The bank is doing everything it possibly can to aid the war effort, and we feel that through our bond purchases we are helping to buy the planes, ships, tanks and guns needed to defeat Germany and Japan," the major said.

The venerable financier, who is president of the National Freedom Day association, also announced that two weeks ago, during the Fourth War Bond drive, the Citizens and Southern Bank and Trust company purchased $200,000 worth of bonds in Philadelphia, and $70,000 worth of bonds at a gigantic rally in Pittsburgh.

The Citizens and Southern bank, located at 19th and South streets, Philadelphia, is the only bank and trust company owned and operated by Negroes north of the Mason and Dixon line. It is the only one of four banks established by Negroes in Philadelphia which has survived, and has stock fully paid to the amount of $125,000.

Maj. Wright, who is president of the Negro Bankers association, is recognized as the leading Negro banker in the country. He has brought up the income of the Citizens and Southern Bank to a gross volume of $2,000,000 a year from a small beginning, many, many years ago.

He is mainly responsible for the National Freedom day, which was celebrated for the third year on February 1. National in scope, the Freedom Day association's membership includes leading Negro citizens in all sections of the country.

WHAT TO PLANT EARLY: BEANS AMONG WARM WEATHER PLANTS TO GO INTO SOIL EARLY

Third of a Series:
By Dr. Floyd Bralliar
Tennessee Garden Editor

Today we wish to talk about the warm weather plants, those whose seeds should not be put into the soil earlier than the first half of April. These vegetables are among one most important foods, but they are tender to frost and the seeds refuse to germinate until the soil is warm.

To plant them before this time means that most if not all of these seeds will rot and those that do not will probably lie in the soil until it gets warm. The few that might germinate and come up are sure to be killed.

FROST-PROOF DATES VARY

At the head of this list we put that most important vegetable, the bean. Beans of all kinds, and all types with the exception of the English Broad bean, and we do not grow it in this country, should not be planted more than three or four days before the frost-proof date in your community. In the immediate vicinity of Nashville this frost-proof date is April 10. In the extreme southern part of Tennessee it is April 1. It is usually safe to plant beans as much as five days before this date.

Corn, cucumbers, squash and pumpkins, of all kinds, okra and crowder peas all come under this list of warm weather vegetables that should not be planted until the danger of frost is over. Of course, the same is true of melons of all kinds. The soil for all of these crops should be thoroughly worked early in the spring, and should be cultivated several times if necessary in order to destroy all weeds and so as to readily absorb all rain.

It is possible to do the major part of the cultivation of our garden crops before they are planted, and we firmly believe that the yield is more dependent on the pre-planting care of the soil than on the cultivation we give it after the plants come up.

PLANTING ADVICE OFFERED

Most of the seeds of the vegetables mentioned in this list should not be planted before the middle of April. A few of them can be safely planted a few days before the frost-free date, but practically all of the vine crops and okra will do better if we will wait a week after the frost-free date before planting.

It is advisable however, to have our pepper, egg plant and tomato plants all ready to set in the open ground about from between the middle and the late of April. On the average nothing is gained by putting any of these crops in the open ground before the 20th of April.

In making these suggestions we recognize that we have said nothing about some kinds of vegetables, but these are the ones usually grown in our home gardens. For instance, Irish potatoes should be planted in February or the first half of March if possible. Sweet potatoes usually produce better if they are not set before the first of May. Corn, if we grow it in our gardens, should be planted about the same time we plant our first early beans. Soy beans may be planted any time between the frost-free date and the first of July. Pumpkins and winter squash usually produce better if not planted before the first of July.

LAUNCH BOND DRIVE TO ACCUMULATE BIG FUND OF CAPITAL

Post-War Organization of Business Enterprises Planned by Leaders

WASHINGTON, March 9—(ANP) Leaders of a number of important organizations active within the Negro group met at the headquarters of the U. S. treasury's bond division Tuesday morning and launched a program for the development of a network of nation-wide savings clubs based on acquirement of war bonds. The group, meeting under the sponsorship of the National Negro Business League, proposed an ambitious plan, simple in its basic structure but possessing the posibilities of bringing together an accumulation of money staggering to the imagination in volume and capable of providing a pool of financial resources. It is expected that at the end of the initial five-year period there will be in existence substantial nest eggs for individual investors or adequate capital for cooperative business endeavor on the part of members of individual clubs where they are so desirous.

The program, starting in its ease of operation, calls for the organization of clubs whose members agree to deposit a $25 bond each month as a minimum. This bond purchased at the regular $18.75 selling price is to be held, subject to the buyer's wishes for five years or until its maturity in ten years. The history of organized savings endeavor, Dr. J. E. Walker, president of the National Negro Business league, pointed out, is that people save with more regularity, plan with more definiteness and hold on to their accumulations more tenaciously when they save systematically.

Hundreds of thousands of Negroes are buying bonds through patriotic methods or pay roll deductions, Dr. Walker said, but many have given little thought to using them to help develop a financial bulwark which can be used to help improve the total position of the race.

The National Organization of War Bond Savings clubs among Negroes was set up. Dr. Walker was chosen chairman. A. L. Holsey, secretary of the business league, was named secretary.

Vice chairmen are Mrs. Mary McLeod Bethune, president, National Council of Negro women, Washington; Booker T. Bradshaw, president, National Negro Insurance association, Richmond, Va.; Bishop James A. Bray, president, Fraternal Council of Negro Churches in America, Chicago; T. M. Campbell, regional field agent, Agricultural extension service, Tuskegee; John D. Dobbs, president, International Conference of Grand Masters, Atlanta; Lester B. Granger, executive secretary, National Urban league, New York; Jesse Mitchell, president, National Negro Bankers' association, Washington; Miss Shellie Northcutt, supervising Jeanes teacher, Washington; Mrs. Fannie B. Peck, president National Negro Housewives league, Detroit; Dr. Frederick D. Patterson, president National Negro Land Grant College President's conference; P. L. Prattis, executive editor, Pittsburgh Courier; C. A. Scott, vice-president Negro Publishers association, Atlanta; Jesse O. Thomas, American Red Cross, Washington; J. Finley Wilson, grand exalted ruler, IBPOE, Washington. J. B. Blayton of Atlanta is treasurer.

Poem

BY MRS. LONA C. TAYLOR,
Primary Teacher in Pineville Junior High School Submits Composition

I'm thinking of the days of Noah
When people were full of sin
And God had Noah build an Ark
And would not let them in.

Its been many a year since Noah
And people thought they were doing well
Until the Bombing of Pearl Harbor
And Hitler started raising hell

So, let me say to America,
Don't take more than you give
Just dish out hell to Hitler,
As long as the rascal lives.

NATIONAL BAPTIST
HYMNAL
JUST OFF THE PRESS

Responsive Reading

and other valuable information never contained in the book before, are given in this Revised Edition for the use of those who know and appreciate the best in music. New Songs have been added to the well known and best loved familiar airs and songs. When you need new books for the choir, just think of the Revised National Baptist Hymnal, the best book you could buy anywhere for all occasions.

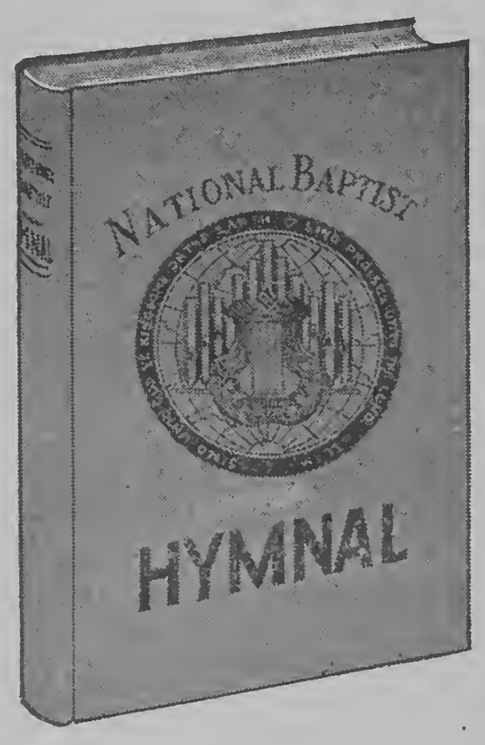
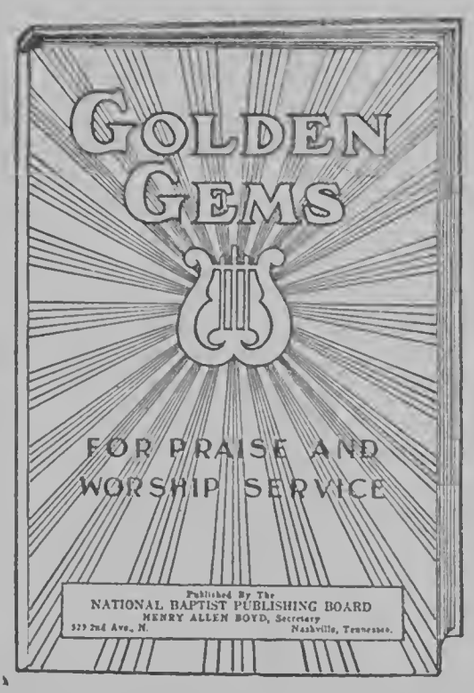
Nashville, Tennessee



PRICE $1.00



Our Newest and Most Popular
SONG BOOK

Contains Such Popular Songs As:

He Understands He'll say well Done
Gospel Waves
Is He Yours
The Unseen King
Singing as We Go
I'm Out on the Battlefield
He is Coming Soon
He's My Everything
Only Give Me Jesus
Over in the Glory Land

Besides these late songs, rich in spirituality there are many more familiar songs which have lifted and filled the hearts of religious followers for many years. You can't go wrong when you order this book.

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd ---------- Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

Deny Rehearing To "Lynching Sheriff"

NEW ORLEANS, Mar. 9—(ANP) Sheriff M. Claude Screws of Baker county, Ga., and two others convicted with him on charges of violating the civil liberties statutes in connection with the lynching of Robert Hall, a prisoner, have been denied a rehearing by the Fifth U. S. Circuit Court of Appeals.

Screws, Special Deputy Jim Ben Kelley and Frank Edward Jones, former Newton, Ga., policeman, were convicted in the Middle Georgia District court on charges of fatally beating Hall, Newton garage worker, who had been arrested in connection with theft of an automobile tire.

District Judge Bascom Deaver sentenced each man to serve three year's imprisonment and to pay fines of $1,000. The apellate court upheld the sentence.

Mahogany, formerly used in fine furniture, is now used to build light, speedy submarine chasers.

DRAW THE PURSE STRINGS

According to the National Industrial Conference Board, private debt was reduced by almost two billion dollars during 1942, with a further reduction likely in 1943. Meanwhile, public spending and public debt soared to dizzy heights. This is a continuance of a trend that has been in evidence for more than a decade. The initiative and productive capacities of private citizens have been increasingly displaced by government. War has greatly speeded the trend. If you happen to be a socialist, you will be cheered by the prospects. But if you believe in private enterprise and the superiority of individual opportunity, you will look upon expanding centralized government with a chill.

Shrinking private debts mean that fewer new enterprises are being launched by individuals. Opportunity and savings are not available to start anything new; old, established industries are not expanding with private capital. In short, it means if the trend continues there will be fewer jobs in private industry, which is the same as saying there will be more and more jobs on the government payroll.

After the war, the purse strings must be drawn on the public spenders or they will tax away our initiative and our freedom.

A movement has been started among the states to limit the taxing power of the Federal government. Fifteen state legislatures have passed resolutions for a Constitutional amendment to restrict Federal income and inheritance taxes in peacetime to twenty-five per cent. Such an amendment would not take away the power of the government to levy taxes for needed revenue. It would take away the power to destroy tax-paying industries.

GOLD BRICKS FROM WASHINGTON

Labor leaders who by strikes and strike threats in time of war have aroused the bitter resentment of millions of people, should heed the warning recently uttered in the editorial columns of LIFE: "American labor, like every other group in the country, has a right to government by law rather than government by extemporization. But is is not getting that. It is getting supposedly special favors which turn out to be gold bricks."

The Administration, in refusing to put legal restraint on labor excesses, has certainly been guilty of granting special favors. Labor racketeers have exploited those favors to the full, with the result that they are a thoroughly hated group of individuals. That the rank and file of American workmen are becoming skeptical of such vicious leadership, is evident from a late Fortune poll. It indicated that only 13 per cent of factory workers believed labor unions have done an excellent job and should be given more power; 29 per cent thought that labor unions have gone too far. Less than a majority were willing to say that labor leaders have been fair with management. Only about one-third believed that most labor leaders were honest with money.

It is still not too late for labor to clean house.

APPROACHING REALITY

In the words of TIME magazine: 'By year's end . . . new huge U. S. productive capacity stood as the best protection against inflation. . .' Business managed industry will be as vital to the peace as it has been to the winning of the war.

A smooth working, highly productive, taxpaying system of private enterprise, beginning in the soil and carrying through to the consumer, has become an absolute necessity. Anything which restricts the operation of such a system is a direct threat to living standards and stability of government. It is the responsibility of public officials to do all in their power to prevent further imposition of regulations and tax measures which obstruct production and clog distributive channels. Both of these evils have been rampant.

The distribution system both before and during the war has been the recipient restrictions and punitive tax laws that have seriously impaired consumer service. Before the war, distributive efficiency was hard hit by anti-chain store taxes. Since the war, mountains of regulations have been directed at retailers in the mistaken belief that inflation could be controlled by freezing retail prices without effectively putting a lid on wages and other costs. The result has been very nearly disastrous. Necessities are disappearing from store shelves because they are unobtainable within legal price ranges. The regulatory mania has affected every industry to some extent.

The country is face to face with the fact that these conditions cannot be continued if our industries are to do the job expected of them in the days to come. Producing for peace will be far more difficult than producing for war.

CIVILIANS TO GET SAME QUANTITY OF VITAMIN "A"

Allocation of Vitamin A for food and feed enrichment and pharmaceuticals has been announced by the War Food Administration. U. S. civilians will receive 88 trillion USF units, or 63 percent of the total production. This is about the same quantity that was available in 1943.

Vitamin "A" is especially valuable for babies. Deficiency of this nutrient has been found to cause night blindness and diseased conditions of the skin and hair.

The natural vitamin is found principally in fish liver oil, liver, butter, milk, eggs, fruits and vegetables.

It is extracted from fish liver oil for food enrichment and pharmaceutical uses, although carotene a pro-vitamin A extracted from plant sources, is also used to some extent.

Of the total Vitamin A allocation, 40 trillion USP units will go into pharmaceutial preparations, 8 and the remainder for feed enrichment.

Since the U. S. servicemen gets most of his vitamins through a nutritionally balanced diet, only about 5 trillion USF units or about 4 percent of the vitamin allocation will go to the U. S. military and war services.

Government Ready To Make Loans To Farmers

Mr. E. S. Beasley, State Supervisor for the Emergency Crop and Feed Loan Office, stated that farmers of Tennessee are now applying for loans to finance the production of their 1944 crops. Applications for loans are now being written in the county seats of each county, and anyone in need of financial assistance should contact the county agent for information as to where applications are being written and and the name of the field supervisor serving that district. He stated that, in addition to financing the production of regular crops such as cotton and corn, loans were also being made for and that special emphasis is being placed on the production of those crops declared essential and so vitally needed this year in the war effort. Plans for 1944 call for increased production of many food crops. The production goals of these crops, which can be successfully planted and grown in Tennessee should be met and the need for funds necessary for their production will be given special consideration with the view that credit will be extended, where needed, so that every farm family will have an opportunity to make its maximum contributions to the Food Production Program.

Emergency Crop and Feed Loans are available to farmers, either owners or tenants, who own or can make arrangements for land to farm, who own or have the use of necessary workstock and equipment with which to farm, and who can give as security a first lien on the crops to be financed. Loans are available for the purchase of production of feed for livestock to be fed for the market, or for breeding animals with the increase to be marked, and, as security, a first lien is required on such livestock. These loans will be made to farmers whose cash requirements are relatively small and who are unable to obtain from other sources, including local banks and Production Credit Associations, loans in an amount sufficient to meet their needs. Mr. Beasley emphasized that these loans are not restricted to select applicants but are available to all farmers who can establish eligibility, according to the terms of the loan regulations and authorizing act.

FORTY-TWO WAYS TO PREVENT FIRE

The National Board of Fire Underwriters, New York. has published a booklet entitled "42 Ways to Prevent Fire." Untold tragedy and destruction could be avoided if a copy of this booklet could be placed in every home, and the lessons it contains put into practice.

The booklet groups the most common hazards under general headings such as Heating Plant, Spontaneous Ignition, Misuse of Electricity, and Cleaning with Gasoline. Heating plants rank high as a source of fire destruction. The same is true of electricity. As the booklet observes: "With something over 70,000 electrical fires a year in our dwellings—over 90 per cent of them due to the abuse or misuse of equipment—it behooves us to remember that 'electricity is a good servant but a bad master." Sub-standard installations, worn extension cords, defective appliances, and lines over-fused and overloaded are old stories to firemen.

"Monkeying with fuses is another frequent cause of grief in the home. Too many people fail to realize that the fuse is the safety value of the electrical system, intentionally made weaker than the wire so that it will blow out first in case of an overload." Remember this if you start to tuck a penny behind that blown out fuse.

Spontaneous ignition is also a prime cause of fire distruction. A pound of flour dust can produce an explosion powerful enough to fling an automobile over the roof of a seven-story building. And when a couple of engineers undertook to run an automobile engine with cornstarch instead of gasoline, they got along fine——until one of the pistons was blown through the roof. Such is the power of dust!

Forces of death and destruction are latent in every home. The only way to protect your family against them is to know about them. The time to start learning is now.

MORE BAHAMIANS AND MEXICANS COMING TO U. S. FOR FARM WORK

The War Food Administration announced last week that its office of Labor would begin bringing in immediately 1,300 Bahamians, and 14,600 Mexican nationals to help relieve the farm labor shortage.

Some of the new Mexican recruits, representing the first of 38,000 additional Mexicans to come here for farm work have already arrived in Southern California. By March 31 the entire 14,600 are expected to have been brought in. During the year a total of 52,000 Mexicans will be needed. Approximately 14,000 have remained in the country since last year working chiefly in California and Arizona.

The 1,300 Bahamians are expected to begin arriving in Florida at the rate of about 325 a week. As the season progresses, WFA will recruit more Bahamians.

Last year, 4,698 Bahamians were brought in to do farm work. About 3,500 of those are still in the country working on Florida truck farms.

Both the Bahamians and the Mexicans are coming into the United States under an agreement between their governments and ours. They will be employed by farmers under the terms of these agreements.

Speaking at the Food Processors' conference in Chicago recently, Col. Philip G. Burton, WFA's director of labor, said that approximately 5000,000 more new workers may be recruited this year than in 1943 to meet increased food and fiber production goals. Colonel Patton estimated that 72 million more man days of farm work will be required this year than last. This additional work-load will require the equivalent of 288,000 additional men, each working 250 ten-hour days per year. About 500,000 new workers may have to be found to do this extra work.

Colonel Burton pointed out that since April 1940 about four million actual or potential farm workers have left farms, or have taken non-farm jobs while continuing to live on farms. About a million of these persons entered the Armed Forces. Although some farm labor replacements have been made, farmers are still short of skilled able-bodied workers. Yet despite this shortage, farmers tightened their belts and produced five percent more food in 1943 than the record crop of the year before. However, he emphasized that farmers face a bigger job this year.

As for the labor prospects, Colonel Burton said, "The outlook with respect to farm labor supply in 1944, is not very favorable," he said, explaining that with higher production goals and further demands for manpower by industry and the Armed Forces will make it more difficult than ever to meet seasonal agricultural labor peaks

"The 1944 farm labor supply program will be very similar to the 1943 program, but we hope to be able to do a better job. The bulk of the farm work must be done by farmers and their families with the aid of their village and city neighbors. The War Food Administration, including the State Extension Services, will help as they did last year.

"We are planning to establish a mobile task force of 126,000 able-bodied, experienced interstate workers and foreign workers. These workers will be shifted from area to area of critical need as required, to assist local labor forces in the production and harvesting of essential food and fiber. As emergency crop harvesters, they will not remain permanently in any community."

LOOKS TO SOUTH FOR HALF OF POST WAR WOOD SUPPLY

The South will be called on to supply about one-half of the nation's post war timber requirements, now estimated at 21 billion cubic feet, Lyle F. Watts, chief, Forest Service, U. S. Department of Agriculture, told the Southern Forestry Conference meeting in Atlanta, Ga. recently.

Mr. Watte said the nation appeared to be entering upon a new era of wood, with many new uses opening up in the field of chemistry and new engineering techniques enabling wood to hold its own in competition with other building materials. For the period immediately following the war, he said reconstruction requirements abroad hold promise of greatly increased export markets. If these needs were to be supplied, he told the conference, it would be necessary to double the annual growth in the southern states.

Many Negro farmers in the South are helping to meet our current wood needs by cutting both pulpwood and timber for the war effort. Frank Fhifer of Meeklenburg county, North Carolina, has just sold his first carload of pulpwood, and has begun cutting on his second car.

My outward speech should be the expression of the essence of my inner soul.

CONTINUE FARM PORK SALES

So that farmers may continue the sale of pork from home-slaughtered hogs for the next several weeks, the War Food Administration has extended the period in which farmers may slaughter hogs without a permit or license until March 17. Under this arrangement farmers are permitted to deliver any quantity of pork to persons not living on the farm without a license, however, the farmer must collect ration points for the pork delivered.

WHO'S ASLEEP?

Many critics, when approaching the question of medical care, immediately assume that the doctors are their "opponents." The truth is that doctors are as anxious as anyone else to alleviate human suffering. They have worked for years to develop sound health plans whereby more people could secure high quality medical service at minimum expense. Thousands of doctors contribute a large proportion of their time absolutely gratis to persons who either cannot or will not pay even moderate charges. Therefore, it is a rank dis-service to hold them up as indifferent to medical progress.

By its title, Paul de Kruif's book, "Kaiser Wakes the Doctors," raises a false impression which is maintained from the first page to the last. It paints the prepaid medical plan, developed in the Kaiser shipyards, as a revolutionary discovery that can be easily applied to other industries and finally to every urban and rural community in the nation. The plan is not new and, unfortunately, has handicaps—not the least of which is its compulsory aspect. The Journal of the California Medical Association describes it as follows: " . . . Fifty cents per week is deducted from wages of each employe (there being practically no acquisition costs in securing members to the plan, certainly a great administrative saving!) the wage deductions being taken from a group of about 100,000 workers (the families, however, are not included!); the plan being in operation in enterprises where all the workers reside within a small and limited geograpricral area. In essence, the discovery . . . . is nothing more than an application of the age-old principle of pre-payments on an insurance basis, designed to give protective coverage to a limited group of poor risks through acquisition of a large number of paying good risks."

The doctors have always welcomed practical plans to broaden medical service. Critics who accuse them of being asleep should first catch up with them.

SEPARATE CHAFF FROM WHEAT

It has been fun and highly patriotic to lambast the war profiteer and others who have sought to capitalize on the national emergency. They deserve lambasting. But when the lambasting begins to include most of the productive capacity of the country, it is time to call a halt to generalized name calling and begin to segregate the chaff from the wheat. Inflation cannot be licked by holding to prices that discourage production and cripple distribution. And that is precisely what is being done with respect to many of the nation's basic industries.

In the field of distribution, dry goods retailers have been forced to drop various lines of clothing because of excessive price restrictions. And food retailers face a critical year in which the most important need will be to maintain sales volume. In the latter half of 1943, that volume showed a tendency to fall off and net profits dropped to the near vanishing point. If volume continues to fall in 1944, companies will be writing their profit and loss in red ink unless the Office of Price Administration modifies ceiling price regulations. According to Chain Store Age, the net profits of seven representative food chains for the first nine months of 1943, were about one-half of one per cent of sales.

Mass distribution has always relied on a hairline relation between prices and volume for its existence. Ordinarily, private management is free to seek the most efficient balance between the two which automatically results in maximum consumer service. But currently prices are subject to Washington edicts and retailers have had to seek a living by a grim fight for volume sales.

The distribution industry is no different from scores of other industries. If costs rise, prices must rise. Name calling will never halt that vicious spiral.

THEY KEEP "E" BANNERS FLYING

Hardly a war plant flying the Army-Navy "E" Award could operate but for the unequaled performance of the private power companies. Yet, electric companies are not given that coveted award. The achievements of the private power industry in making electricity available in home and factory during the war, without rationing and without strikes, has been all encompassing. But most people take electricity for granted, while others think such socialistic monuments as Bonneville and TVA caused the phenomenon of abundant power.

According to reliable sources, generating capacity this year, as usual, will be adequate to meet all needs. Since war began in Europe, the privately owned electric companies have installed 7,500,000 kilowatts of additional capacity, while the Federal government is responsible for 3,000,000 kilowatts. The accomplishments of the private investor-owned companies are the fruit of foresight, technical planning, business development, and sound preparedness. The ample physical facilities and the experienced and loyal organizations required to man them are built on foundations laid decades ago.

The total generating capacity of the country is 63,000,000 kilowatts. Of this amount, the Federal government produces five million kilowatts, with most of the balance provided by private savings. Ironically, if a power shortage should occur, it may very likely appear in the territory served by the govenment hydoelectric plants, which in dry months could be crippled from lack of water. Even this eventuality is not too ominous inasmuch as the plants of the entire private electric industry stand well as keep our war industries going and our homes lighted—with or without "E" Banners.

PRESS RELEASE

Mr. E. S. Beasley, State Supervisor for the Emergency Crop and Feed Loan Office, stated that farmers of Tennessee are now applying for loans to finance the production of their 1944 crops. Applications for loans are now being written in the county seats of each county and anyone in need of financial assistance should contact the county agent for information as to where applications are being written and the name of the field supervisor serving that district. He stated that, in addition to financing the production of regular crops such as cotton and corn, loans were also being made for and that special emphasis is being placed on the production of those crops declared essential and so vitally needed this year in the war effort. Plans for 1944 call for increased production of many food crops. The production goals of these crops; which can be successfully planted and grown in Tennessee should be met and the need for funds necessary for their production will be given special consideration with the view that credit will be extended, where needed, so that every farm family will have an opportunity to make its maximum contributions to the Food Production Program. Emergency Crop and Feed Loans are available to farmers, either owners of tenants, who own or can make arrangements for land to farm, who own or have the use of necessary workstock and equipment with which to farm, and who can give as security a first lien on the crops to be financed. Loans are also available for the purchase or production of feed for livestock to be fed for the market, or for breeding animals with the increase to be marketed and, as security, a first lien is required on such livestock. These loans will be made to Farmers whose cash requirements are relatively small and who are unable to obtain from other sources, including local banks and Production Credit Associations, loans in an amount sufficient to meet their needs. Mr. Beasley emphasized that these loans are not restricted to selected applicants but are available to all farmers who can establish eligibility, according to the terms of the loan regulations and authorizing act.

HELPING HOLD THE LINE

Fire losses are soaring. The total for December, 1943, was 31 per cent higher than for December, 1942. December climaxed twelve months of rising fire destruction. The total fire bill for 1943 was $380,253,000—an eleven-year record.

Bad as this is, it would have been infinitely worse because of emergency war activities, had not the fire insurance industry fought an unremitting battle against fire. Since the war, it has redoubled its efforts. Billions upon billions of dollars worth of vital war plants have incorporated in their structures and operations the advice of experienced fire prevention engineers. These engineers, trained through years of work with the fire insurance companies, are now applying their training in every far-flung branch of the war effort. They are with the armed forces, safeguarding camps, arsenals, hospitals, and ordnance plants Their watchful eyes are on shipyards, airplane factories, office buildings, and housing projects. In short their activities reach from the research laboratory to wherever fire may strike. No one will ever know how much their labors have saved and contributed to shortening the war.

Some may wonder why, if the fire prevention experts are really on the job, should the country suffer hundreds of millions of dollars in fire losses annually? Actually the fire prevention authorities can never wholly bring fire under control until public cooperation becomes permanent and effective. So far we have been prodigally careless where fire is concerned. As long as we remain that way, the best the authorities can do is to hold the results of our carelessness to the absolute minimum.

U. S. SHIPS NEARLY MILLION TONS OF FOOD TO FOREIGN NEGRO AREAS

Among our allies and the friendly nations to whom U. S. food is being shipped are more than a score of locales where Negroes make up a large part of the population. Between March 1941 and December 1943 our government shipped into these areas 818,000 tons of food and other commodities, a quantity large enough to require 82 of our new 10,000 ton Liberty ships to transport it.

Reading the list of these areas at the Office of Distribution in the War Food Administration is like reviewing a geography lesson. Puerto Rico, the Virgin Islands, the Bahamas, Bermuda, Barbados, Dominica, Jamaica, Trinidad, Martinique, British Honduras in Central America, British Guiana, in South America, the Gold Coast of Africa, Nigeria, Sierra Leone, the Cameroons, former German territory, Tunisia, North Africa, West Africa, French Equatorial Africa, Northern Rhodesia, Southern Rhodesia, and Durban, a city of Natal in South Africa, are all listed.

The eating habits of these people are as diversified as their nationalities and the types of food desired by each differs according to their religious beliefs, political customs, and climate, all of which influences their diets. Yet, whatever their food habits, they must have food. And despite wartime conditions, they have received food, much of it from the United States.

North Africa, which was largely self-sufficient before the war, saw its fine crops and animals confiscated by the Axis. There was no incentive to produce for the invaders took all and gave nothing. Food for civilians of North Africa began arriving there in December 1942, one month after the landing of United States and British troops.

In Martinique, geographically nearer our country, the situation was desperate. Cut off from France, which owned the island, the people could not produce food necessary for self-support. The arrival of foods from the United States prevented serious outbreaks, riots and starvation.

Puerto Rico and the Virgin Islands were also acute sufferers, because submarines and diversion of shipping cut the islands off from the rest of the world. Food is substantial quantities began to arrive by October 1942 and since then stockpiles have been built up.

Thousands of tons of food were sent to West Africa in the Dakar region where much edible oil, important to the Allies, was produced.

In many distressed areas, the food was disposed of through regular channels, although in Tunisia, milk and food were distributed free to civilians. The French have paid for most of the food sent to North Africa. Some of the food has been sent to these countries under lend-lease arrangements, while other countries have paid cash for foodstuffs received. Foods have also been furnished under private arrangements where organizations undertook the task of securing the necessary supplies.

Among the commodities that have been shipped in large quantities are rice, flour, sugar, dried beans, meat and meat products, and milk and milk products. A partial list of the supplies shipped into these areas follows:

	Pounds
Rice	291,453,227
Flour	213,214,838
Dried Beans	52,405,710
Lard	41,334,930
Meat and Meat Products, Cured, Frozen, etc.	40,800,311
Milk, Evap., Condensed, Dry Skim and Whole	366,662,571
Soap	28,799,064
Fish, Canned and Dry	25,456,902
Corn	18,024,834
Potatoes	12,871,036
Dried Peas	12,564,491
Corn Meal	8,655,526
Tomatoes, Juice, Paste, Canned, etc.	6,336,725
Onions, Fresh	5,675,710
Oleomargarine	5,436,892
Rolled Oats	3,473,743
Cheese	3,481,181
Garlic	2,949,992
Barley	2,806,395
Canned Soups, Mixed	1,493,553
Eggs, Dried	584,753
Butter	575,592

Many other items, including canned fruits, canned vegetables, salad dressing vinegar,, chemicals for agricultural use also were shipped in large quantities to the islands, the entire shipments amounting to 898,620,787 pounds of food.

To the French owned island of Martinique we sent the following:

Flour	13,841,080
Meat and Meat Products	3,634,872
Macaroni	2,596,260
Oleomargarine	1,967,552
Shortening	1,100,961
Milk Products	563,047
Fish, Dried and Canned	360,064
Dried Beans	767,780
Dehydrated Onions	289,044
Cheese	232,274
Soap	69,920
Garlic	20,000
Dehydrated Carrots	284,242

All told, some 25,856,863 pounds of food were sent to Martinique, which has a population of less than 300 thousand inhabitants, compared with Puerto Rico's two million.

Other West Indian British owned islands received in part:

Flour	9,558,152
Corn Meal	3,374,283
Rice	2,024,177
Cottonseed Meal	1,000,000
Milk and Milk Products	1,881,641
Meat and Meat Products	1,437,876
Fish, Dried and Canned	767,174
Cheese	571,270
Dried Peas	400,000
Oleomargarine	259,900
Lard	138,500
Canned Soups	157,000
Glucose	125,852
Corn	356,000

Other products such as chocolate, baby food cereal, cornstarch, vegetable seeds, ovaltine, dessert powder, fish liver oil, malt extract and vitamins were shipped to the islands for a total of nearly 22 million pounds of foods.

To the Dakar area in West Africa were sent the following:

Semolina	19,977,976
Cracked Wheat	14,188,648
Sugar, Refined	12,005,809
Milk and Milk Products	2,018,080
Corn Grits	5,336,100
Whole Barley	4,173,900
Pearl Barley	3,150,100
Rice	3,143,900

Other foodstuffs sent to this region brought the total shipments up to 65,738,636 pounds.

North Africa had its problems in feeding which were met by:

Sugar, Refined	306,160,323
Flour	201,100,482
Milk and Milk Products	36,069,640
Wheat	25,539,700
Soap	21,585,250
Ammonium Nitrate	7,278,300
Malt	4,264,409
Tea	2,934,482

Total shipments of food sent to North African area totaled 609,637,399 pounds of various types of foods.

DR RAYFORD LOGAN MAKES NOTABLE ADDRESS AT 88TH ANNIVERSARY OF FAMED WILBERFORCE UNIVERSITY

WILBERFORCE, Ohio. — The eighty-eighth annual celebration of the Founders Day at Wilberforce University was highlighted by the address of Dr. Rayford Logan, professor of history and head of the department of history at Howard University, and active in making government surveys in Haiti, Cuba, and Santo Domingo. His address centered around the nucleus of "unfinished business," not only in the U. S., but also in the Carribean countries. He directed attention to the beginning of the degradation of Negroes when Europeans first started the slave trade nearly five hundred years ago and pointed out that although literal slavery had been abolished long ago, there still remained the "unfinished business" of correcting poverty, segregation, and exploitation of the colored peoples of the world.

Dr. Logan told the audience about the bill for the education of discharged soldiers which is now before the Congress. This bill specifies that every person who has served for not less than ninety days shall receive education at the expense of the government for one year and that each state shall determine whether or not this period of government education shall be extended to more than one year. He pointed out the fact that this latter part of the bill would be to the disadvantage of the Negro and urged each veteran to fight that clause and insist on a period of four years of government education. He concluded his speech with this ringing sentence, "Keep up the fight until every man shall walk the earth an equal of the other."

Bishop Reverdy C. Ransom, who has been associated with Wilberforce University as a student, alumnus, trustee, and chairman of the board of trustees for sixty-two years, spoke on the "Wilberforce Tradition," which he described as one of Negro leadership, cooperation, and self-help. Wilberforce University has kept its independence of teaching and instruction largely because its supporters come from the Negro people. Even when funds are appropriated by the State of Ohio they are handled and controlled through a Negro board of trustees. In all these respects, declared Bishop Ransom, Wilberforce University is unique and has a tradition to maintain—a tradition of continued confidence in the capacity of Negro leaders. Bishop Ransom cited with pride the progress which has been made under the administration of President Charles W. Wesley and prophecied more dynamic progress in the years to come.

President Charles H. Wesley of Wilberforce University reported that $5,000 had been raised from interested alumni, organizations, churches, and "Friends of Wilberforce" as Founders Day contribution and that this amount had been paid the same day on the mortgage, thus reducing it from $119,000 to $114,000. The University was seeking 10,000 contributors who would give ten dollars each and 100 contributors who would give one hundred dollars each. Unlike other campaigns, the funds are being paid immediately on the debt, and contributions may be sent directly to Mr. M. L. Wolf, president of the Citizens National Bank, Xenia, Ohio, who is serving as treasurer of this fund. President Wesley also announced that this campaign will continue throughout the year and workers would soon be in various localities all over the country seeking contributions for the liberation of this great institution from the burden of debt which has hampered its progress for the past twenty years.

A recital by Todd Duncan, the distinguished baritone and star of "Porgy and Bess," climaxed the day's celebration. This recital was attended by a capacity audience of both white and colored who greeted the star with enthusiasm and remained to demand encore after encore at the close of the recital. Miss Charlotte Wesley, youthful soprano and graduate student at Columbia University, sang duets with Mr. Duncan from the Gershwin's Porgy and Bess score. Her voice blended harmoniously with that of Duncan and their interpretation was superb.

POLITICAL MANAGEMENT FAILS AGAIN

Bituminous coal production during 1943 was a record breaking 589,000,000 tons— 9,000,000 tons over 1942. Notwithstanding this, authorities have informed the public that production was about 21,000,000 tons under total consumption. Stockpiled reserves, they say, (accumulated under private management), saved the country from disaster.

These figures and the official comment on them demonstrate the negative thinking and acting current in high public office, of which the public is heartily sick. Twenty million tons of coal is less than two weeks' output at current production rates. Responsible coalmen have pointed out that the shortage could be made up in brief time. But do they get an ounce of encouragement from the bureaucrats who have taken over the coal industry? They do not! Instead of encouragement, they get more restrictions, and the public gets glum publicity handouts from Washington.

What a laugh! This is a nation of abundant resources. Its people are abundant producers. Its coal industry in the past has met every need. Then suddenly the government takes over with a big noise and flourish, and after several months of socialistic tinkering, tells us that because coal production is a miserable two weeks behind annual demand, we are faced with a grave situation.

Plenty of industries have had to make up two weeks' production—and then some. It was taken for granted that they could do it. That was the way the country was built.

The coal industry is no exception. If given the opportunity, it can do the job. The point is that it has not been given a fair opportunity.

EXTENSION HELPS NEGRO FARMERS PRODUCE FOR NATION'S WAR EFFORT

Raising the living standards of rural Negro Americans so that they can make a larger contribution to the nation's wartime agricultural program was one of the main objectives of Cooperative Agricultural Extension work among colored farmers last year, according to Director M. L. Wilson's annual report to War Food Administrator Marvin Jones which has just been published.

Pointing out that $1,095,650 was allocated in the fiscal year of 1943 from all sources for cooperative extension work among Negro farmers, the director said that the expenditure was a sound investment. Going further, he said that the number of sharecroppers, tenants and landowners who are adopting the Extension self-help program is increasing and landlord-tenant relationships are improving.

In summing up the growth of the self-help program, Director Wilson said that 410,000 Negro farmers now have milk cows, 477,000 have hogs, 600,000 are raising chickens and 607,000 are growing gardens. Since Pearl Harbor, he said that Extension agents and volunteer community neighborhood leaders have encouraged thousands of Negro farmers to make a beginning in owning livestock and in growing gardens.

But the report wasn't all rosy, the director also pointed out that illiteracy and disease among colored farm people is a tremendous handicap. He said that a preliminary study of their food habits reveals that too few of them have balanced meals and much of the sickness among them is traceable directly to nutritional deficiences.

On the food production front, Director Wilson estimated that 271,000 colored farm families have no milk cows, 204,000 have on hogs, 81,000 are without a single chicken, and 74,000 are not growing gardens. However Negro farmers are not alone in the "have not" class. In the South as a whole 663,670 farm families had no cows when the 1940 census was taken; 919,532 had no hogs. 334,182 were without a single chicken, and about a half million were not growing gardens.

To further help in reducing the plight of these farm people, Director Wilson indicated that Extension Service will continue to gear its program toward increasing the production capacity of low-income farmers so that they may make a larger contribution to the war effort and at the same time have more earnings to invest in health, education and improved rural living.

FSA HEAD ACTS TO PROTECT BORROWERS

Farm Security Administrator Frank Hancock notified FSA county committees last week to turn back their money rather than make loans for the purchase of farms at boom prices. The step was taken to protect prospective borrowers, tenants, sharecroppers and day laborers, from acquiring land debts which would ruin them later on; and the action also insures that the tenant purchase program will continue to be anti-inflationary in its effect.

Mr. Hancock pointed out that FSA will continue to follow a conservative land-evaluation policy even though it becomes impossible to make loans in certain areas where wartime land booms are developing. Said he, "The land to be purchased with FSA loan funds will be appraised on the basis of its long-time earning capacity and long-range average prices for farm products

Going further, Mr. Hancock said, "We are not going to let the tenant purchase program become a get-rich-quick and get-poor-quicker program_____The farmer who goes into debt to buy a farm at an inflated price today is in danger of becoming the tenant of tomorrow."

Since the Bankhead-Jones Farm Tenant Act became effective in 1937 more than 5,000 Negro tenants, sharecroppers and day laborers have begun buying farms of their own under the program. Loans made to these borrowers have been based on the normal long-time earning value of the land. These loans may run up to 40 years so that the buyer has to figure on what he can afford to pay in installments 10 years from now, not just during the next few months.

Mr. Hancock has asked the FSA committees to continue to look for land that is offered for sale at reasonable prices in counties where the program has not been suspended. If such land is found, he assures that loan funds are still available.

Even Poll Tax Evil Not Considered Bar to More Progress By Interracial Group

ATLANTA, Ga., March 9—(ANP) While the fight for the removal of southern poll tax laws continue, many colored leaders in the south believe that full emancipation of the race will depend upon the degree of effort made by Negroes themselves, according to a survey by the Commission on Interracial Cooperation, Inc.

A charge that Negroes are apathetic came from Dr. Luther P. Jackson, professor at Virginia State college and columnist for the Norfolk Journal and Guide. Dr. Jackson knows the Virginia election laws and he knows how they are administered. He believes that even though the poll tax "retains its great strength as in the days of old" to block the Negro voter, nevertheless he is sure that Negroes could be more effective politically than they are in spite of this legal barrier.

"I must confess that much of the time I don't know whether to say the colored man is down because the white man is holding him down or because he is holding himself down," he wrote in his column of October 2. "I do know that in spite of oppression all races or groups of citizens in democratic America have been able to improve their condition and rise to higher planes of living. And whenever the Negro race, as one of the races, does not embrace the opportunities which beckon them, such a failure we must label 'the shame of the race.'"

Florida, Kentucky and North Carolina have no white primary ruling. Alabama poll tax fee is $1.50 annually, from 21 to 45 years of age, cumulative over entire period. Alabama has a state-wide white primary. Arkansas' poll tax amounts to $1 a year, non-cumulative, with no other registration or qualification for voting except residence. Georgia, $1 annually, cumulative over entire period. Mississippi, $2 annually. This tax must be paid for two years preceding election year. South Carolina, $1 annually. The law stipulates men only." This tax is required for general elections, non-cumulative, not required for voting in state-wide white primary. Tennessee, $1 annually, non-cumulative. The white primary is optional with the county committees. Texas, $1.50 annually, non-cumulative—payment of poll tax constitutes registration. Virginia, $1.50 annually—must be paid three years preceding election year. Louisiana has a white primary ruling and a complicated registration law but no poll tax. Arkansas, Georgia, Mississippi, South Carolina and Tennessee have white primaries.

A complete picture of voting law restrictions is given by Paul Lewison in his book, "Race, Class and Party," published by the Oxford Press, New York. Some of the methods set forth in the body of the book are still in use while others have been discontinued.

"Georgia law now permits its 'teen age boys and girls, 18 to 21, to vote without the payment of a poll tax," the race commission revealed. "In arguments against lowering the voting age, opponents in the assembly raised the point that hordes of Negro boys and girls would swamp the registrars' offices and threaten white supremacy. Ten months later, the Atlanta World, January, 1944, disturbed because only 12 Atlanta Negroes had registered under the new law, lays responsibility to indifference on the part of Negroes.

"'The plain truth of the matter is that they have not shown an interest or a disposition to take an active part in their government, despite the fact that no barriers, financial or legal, stand between them and the right to vote," the paper said. "It is all very easy to howl about the poll tax and white primaries barriers. Because it gives us something to hide behind. But we wonder if the same situation would not obtain were we privileged to vote without those handicaps.

"'The more we study the reaction of our citizens and the active interest they demonstrate in the real privileges which they may enjoy, the more we are convinced that we are standing in our shadow.'"

In Savannah and Chatham county out of a colored population of 52,883, only 500 voters are listed. "Within the race itself there is a psychological state which must be overcome if Negroes are to become effective in securing their basic rights as citizens," the interracial commission reports.

WHITES SUPERIOR IN ONE THING, AT LEAST, 'TIS SHOWN

Caucasian Scholar Gives Food for Thought In Sarcastic Article for Negro Press

(By Emmet Phillips for ANP)

Chicago, Ill.,—There is nothing like admitting it when you're wrong. Here I have been arguing for a long time that the superiority of the white man over the Negro was bunk. Why, I'd go to the mat with any white person, anytime, any place, and prove that the Negro was equal to the white man in any endeavor, given anything like an equal chance. In certain instances, such as in the field of science, I'd cause him to concede that no white man could match Dr. Carver.

The colored man's superiority in the field of athletics as exemplified by Jesse Owens, Joe Louis, Henry Armstrong and the Rennaisance basketball team was acknowledged by the average white man. The average pale face was hard put to name Paul Robeson's equal in the realm of acting and singing. As for Marian Anderson, he just couldn't name her equal in any color, of lack of it. Yes, I was riding high in my contention that there was no such thing as white superiorty. Then I looked into the domain of crime.

You'd think that with the lack of opportunity, bad housing and exhorbitant prices charged to Negroes that they would outdo their more fortunatt white competitors in criminal attainments. But no, here where the white man has less crime he has proven himself to be a real go-getter.

Even away back when Jesse James was the scourge of the land what colored man was outstanding in the crime of those days?

Later on, during the prewar days of World War No. 1, when Lefty Louis. Gyp the Blood and Lt. Becker made their lasting criminal impression on a shocked New York, I can find no record of any Negro approximating such misconduct.

Al Capone, king of the bootleg era, had no equal in the ranks of the Negro population. Dutch Schultz and Legs Diamond gave Al quite a run for the front page, with no competition from the darker side of America.

And who doesn't remember John Dillinger of bank robbing fame, to say nothing of Pretty Boy Floyd, Vincent Call, Baby Face Nelson, etc., all men who arose from the ranks via the sawed-off shot gun.

And now to bring this piece up-to-date. Can you name a Negro who has achieved the power to dictate political appointments as has one Mr. Costello. Here is a white man of foreign background who through activity in the slot machine racket has made himself indispensable, even to a man seeking such a high office as justice of the supreme court in New York. It seems that Costello is intimate with most of the top men. Even a friend of the President's seemed to value Mr. Costello's acquaintance You have to hand it to Costello; he is superior to any Negro in his chosen field.

Yes, I was wrong. all the way from Jesse James to Mr. Costello. For the first time I concede the superiorty of the white man, and and darned if I don't enjoy making this concession.

Here' Good News For Victory Gardeners

Are you making plans for your Victory Garden, well, here's good news: farmers and gardeners may anticipate an adequate seed supply this year as a result of the vegetable seed allocation recently announced by the War Food Administration.

It is estimated that about 2,000,000 Negro families, including the 607,000 farm families grew Victory Gardens last year. They grew for the most part, cabbage, beets, turnips, radishes, lettuce, carrots, onions, peppers, leaning chiefly toward the small or light seeds in place of the large or heavy seeds like peas, beans, and sweetcorn. A larger number of colored people are expected to grow gardens this year to help reach the Nation's goal of 22 million gardens. This represents an increase of two million gardens.

A total of 275 million pounds of seeds or 70.3 percent of the total available supply of vegetable seeds have been allocated to civilians for the fiscal year ending June 30, 1944.

The present allocation is the first one made for vegetable seeds. While they are not ncessarily the most important, the large or heavy seeds account for the largest part of the allocable supply of all vegetable seeds. Of the small or light seeds, civilians will receive over 11 1-2 million pounds of the total supply of approximately 25 million pounds.

Until 1939, continental Europe probably produced the larger part of the world's supply of small vegetable seeds. The outbreak of war cut off U. S. imports of cabbage and cauliflower seeds from Denmark, Holland, and other areas. Germany's invasion of the Ukraine deprived Russia of her best domestic seed source.

Great Britain, which had gone in for increased crop production, was also shut off from her seed supply. United States seedsmen attempted to supply the seed for world needs.

In 1943, farmers and no--farmers planted more vegetable seeds than ever before, and at the same time, broke all records for purchasing seeds.

Spurred by this enormous demand for vegetable seeds, U. S. seed growers in 1943 produced the largest crop of vegetable seeds in U. S. history.

There are two broad classes of vegetable seeds—annuals and biennials. The annuals mature seeds in one season. A Biennial however, requires the greater part of two growing season to produce mature seeds for planting.

Important annuals are the bean, pea, sweetcorn, radish, lettuce. Important biennials are cabbage, carrot, onion, beet and cauliflower.

While in the United States as a whole, there are very few farmers who grow vegetable seeds as their only cash crop, in some sections, particularly in the Pacific States, there are many farmers whose main crop is vegetable seeds.

WFA ANNOUNCES MINIMUM WAGES FOR PUERTO RICAN WORKERS

The War Food Administration has announced minimum wages to be paid sugarcane field laborers in Puerto Rico in 1944 by producers who apply for conditional payments under the Sugar Act of 1937. The rates are 17 percent higher than in 1942, the last full year for which specific rates were established, and are approximately at the level established for 1943. They are calculated to give laborers virtually the same purchasing power as in the prewar period.

The determination also provides for automatic wage increases should the price of sugar advance above **$3,865 per hundred pounds. The** laborer's share of such increased income from the sale of sugar would be the same as that enjoyed by him at the present price of sugar.

The Sugar Act of 1937 requires payment to growers____that all persons employed on farms in the production, cultivation, or harvesting of sugarcane be paid in full for all such work at rates not less than those determined to be fair and reasonable after public hearing and investigation.

SUGGEST USE OF AIRPLANE FOR SEED SOWING IN CHINA

Dr. Walter C. Lowdermilk, assistant chief of the Soil Conservation Service, has now returned to duty in the War Food Administration after a 6500-mile survey of Fret China's agricultural lands. Dr. Lowdermilk was in China a year, serving under the Department of State as adviser to the Chinese government in a program to conserve soil and water and increase food production as a part of the war effort.

Traveling chiefly by station wagon, cart, and horseback, sleeping in cave houses, and sometimes at the homes of missionaries, Dr. Lowdermilk, assisted by a field staff of eight highly trained Chinese agricultural specialists and hydraulic engineers, worked in the fitlos with native farmers. He evaluated farm practices in the regions covered by the suvey, and demonstrated scientific methods of conserving soil and soil moisture resources for increased crop yields.

One of Dr. Lowdermilk's most spectacular recommendations was that eroded areas be revegetated with seeds of grass, shrubs and trees sown by air plane in small clay pellets. The technique has already been tried in the United States. The pellets contain fertilizer as well as seed, and are dropped. in the manner of incendiary bombs, after a rainfall, when the soil is moist. A location has been selected for a nursery to produce seeds in quantity for airplane sowing after the war.

Dr. Lowdermilk suggested that demonstration projects be established to show farmers how rain can be stored in the soil for crop use, instead of being allowed to run off the land carrying away topsoil and fertilizer. Another recommendation was that after the war China's vast land resources be charted in aerial photographs.

Dr. Lowdermilk, who served as professor of agriculture at Nanking University from 1922 to 1927 says of Chinese farmers: "I find the Chinese farmers to be self-reliant, industrious, practical, intelligent and reverent. They know and need their land, and are receptive of anything that is good for it."

EXTEND PRICE SUPPORT ON HOGS TO 330 POUNDS

The War Food Administration last week announced a temporary emergency extension of the price support program to include Good and Choice butcher hogs weighing from 300 to 330 pounds. The action was taken, the WFA said, in order to protect hog growers who are unable to market at present, and have therefore been forced to feed to above 300 pounds, the previous upper weight limit in the price support program.

It is hoped that the temporary increase in the price support limits will encourage more orderly marketing and help relieve market congestion.

SAVE THE CHICKS

The loss of a baby chick a few hours old wouldn't seem to have any great bearing on our war effort, but the War Food Administration is concerned over the loss of baby chicks in shipping, as a result of suffocation, chilling, overheating, or mishandling. It is asking the cooperation of railroad, express and postal employes in more careful treatment of little chicks. Aside from the importance of giving all living things humane treatment, the practical necessity for doing so now is urgent.

If saving a baby chick is important in conserving the nation's resources, it is equally important to save all useful products and materials. Let others besides those handling baby chicks, take this lesson to heart and save time and material wherever possible—it all goes into the grand total of production which is necessary to assure victory.

Privately-Controlled Institutions Act to Raise More Than One Million Dollars

NEW YORK.—For the first time in the history of Negro education, twenty-seven of the leading privately-controlled Negro colleges and universities are pooling their resources and energies to raise $1,500,000 for their current maintenance, in a nation-wide fund drive through a newly created organization, the United Negro College Fund, it was announced this week.

Walter Hoving, a prominent New York merchant and chairman of the national board of the United Service Organizations, yesterday accepted the national chairmanship of the United Negro College Fund Campaign Committee. This fund campaign committee will be interracial in character. Mr. Hoving said that he would name the members of his national committee within a few weeks. The campaign for $1,500,000 will be conducted by local committees throughout the nation. The drive will terminate at the end of May,

In accepting the national chairmanship of the fund raising committee, Mr. Hoving, a graduate of Brown University, Providence, R. I., said, "In my opinion this is one of the most forward looking steps taken recently in America to help Negroes help themselves by making it possible for them through higher education to develop sound Negro leadership, which will go far toward creating a better understanding between the Negro and white races in America."

Organization headquarters for the United Negro College Fund campaign have been opened at 38 East 57th Street, New York City, and Winthrop W. Aldrich, chairman of the board of directors of the Chase National Bank, New York City, who also heads the National War Fund, has accepted the voluntary position of treasurer of the College Fund.

A number of prominent persons of both races have joined the sponsoring committee of the United Negro College fund, among whom are C. C. Spaulding, President of the North Carolina Mutual Life Insurance Company; Will W. Alexander, vice-president of the Rosenwald Fund; P. B. Young, Sr., Robert Ogden Purves, Bishop Lorenzo S. King, Dr. Mary McLeod Bethune, Dr. M. S. Davage, William J. Schieffelin.

Dr. F. D. Patterson, president of Tuskegee Institute, who has worked untiringly with the presidents of the affiliating colleges in the formation of the United Negro College Fund, expressed his enthusiasm for the project, by saying that the United Negro College Fund sponsoring committee was convinced that the step is one of the most important undertaken in the history of Negro education. It is in keeping with the latest methods of private financing in the country, he said, and will effect a huge saving in the finance and energy heretofore expended by the individual schools in their efforts to keep their institutions operating, thereby enabling them to spend more money on the actual and real needs of education, modern equipment, a well-trained teaching staff, student aid, and the making of education more accessible to the masses.

The participating institutions of the United Negro College Fund campaign are: Howard, Fisk, Atlanta, Dillard, Lincoln, Virginia Union and Shaw universities; Bennett, Bethune-Cookman, Clark Samuel Huston, Knoxville, Lane LeMoyne, Livingstone, Morehouse, Morris Brown, Philander Smith, Spelman, Texas, Tillotson, Wiley, and Tougaloo colleges; Atlanta University School of Social Work. Gammon Theological Seminary, Hampton Institute, and Tuskegee Institute.

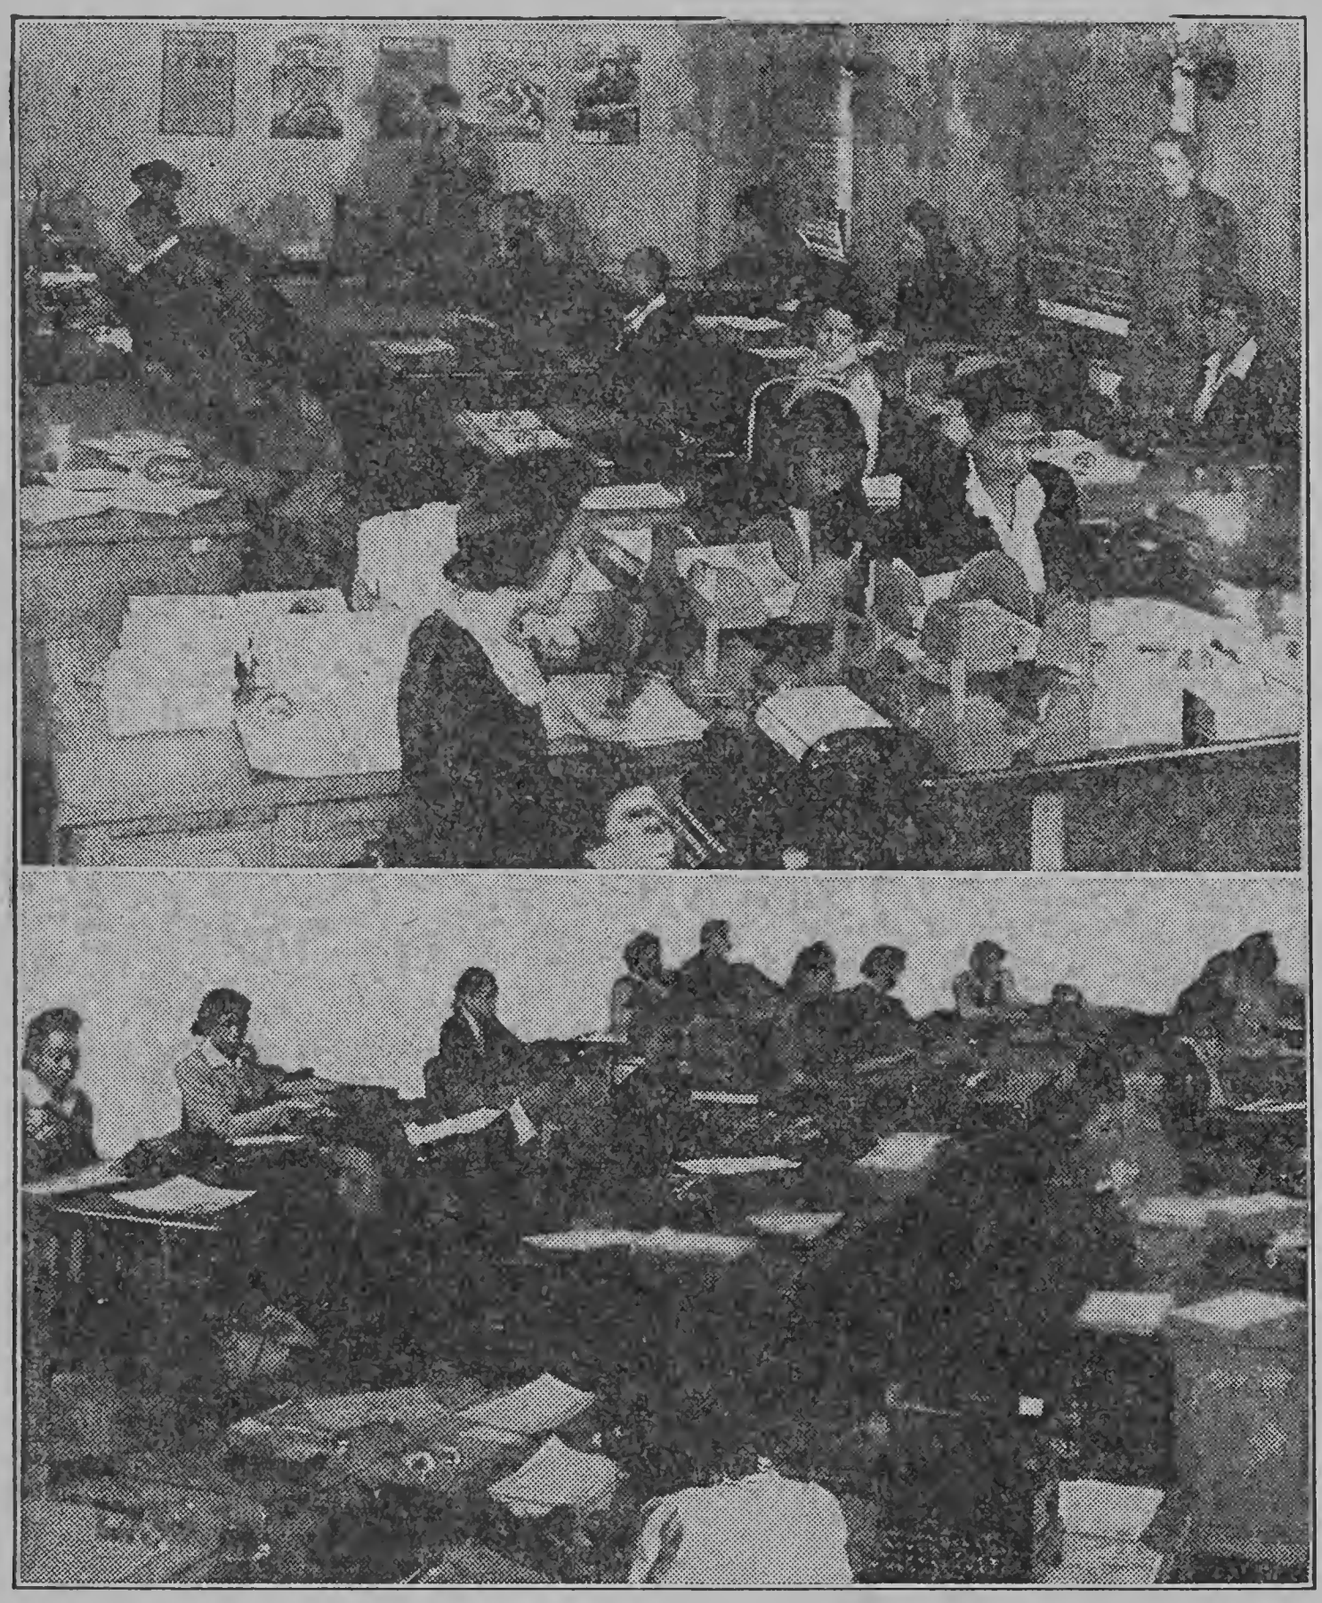
Help Speed Food To Our Allies



Part of the Transportation and Warehousing Branch, Office of Distribution, which handles work necessary to expediting food to our allies under the Lend-Lease Program. The work handled by this branch represents a total of over 18 billion pounds of food annually, with a monetary value running into millions of dollars. A high rate of efficiency is maintained in the office with a minimum of errors as errors here mean delay in delivery of food—food by carloads and shiploads, purchase tickets and bills of lading. It may well be called the heart of the "Lend-Lease" operation since all orders pass through the office for final disposition.— WAR FOOD ADMINISTRATION PHOTO BY PURDY.

WAS IT YOURS?

Youngsters get a thrill out of watching a paper box burn on a bonfire. They love to watch the thick curling smoke and the sudden burst of flame. Their parents could learn a lot from those boxes. Houses burn the same way—at the rate of one every other minute. Sixteen people a day are turned from living beings to corpses, in the ashes of these houses. Annual property loss from dwelling fires exceeds $100,000,000. Most of this loss in life and property is attributable to ignorance and carelessness in the home.

Not long ago in Detroit two boys sharing a second floor bedroom were found dead in the upper hall by firemen responding to an alarm. Their death was wholly unnecessary. Instead of going out the open window of their bedroom, they attempted to flee down the stairs. They were met by superheated gases of 1,000 degrees flooding the upper areas of the house. They died instantly. They had never been taught that in a burning house the stairway is usually converted into a flue. And they didn't know that when a bedroom door is hot to the touch it's a sure sign that it's fatal to open it.

The lesson from such a tragedy is obvious. Every family should be familiar with simple precautions that safeguard life in the event of fire, and of greater importance, prevent fire from starting. Most fires break out in defective chimneys or in faulty furnaces and heating pipes. Heating systems should be cleaned and checked periodically Basement, ceilings, and walls should be protected with a double coat of high grade cement plaster on metal instead of wood lath. There should be a clearance between furnace and ceiling of at least 30 inches, with proper insulation of have pipes which pass through wooden partitions.

While you read this article, somewhere a home was consumed by fire. Was it yours?

CONSUMERS STILL HOLD SACK

The Attorney General of Texas, in suing a number of oil companies to recover taxes under the Texas Chain Store Tax Act, has reminded consumers of the fact that such punitive price-boosting measures still exist and are still operative in many states. Reprehensible as these laws are, they serve one constructive purpose. They demonstrate the fallacy of using the power of taxation to retard industrial efficiency.

Some years ago, the chain stores introduced cost-saving merchandising methods in retail distribution. The consuming public, beleagured by depression received the innovations with open arms, and the chains prospered. Other forms of retailing adopted their methods, bringing a generally higher standard of living to everyone.

Strange as it may seem from political quarters these chains received brickbats instead of plaudits for their achievements in holding down the cost of living. Mass merchandisers were charged with being too efficient! It was claimed, in defiance of established fact, that they were monopolistic and that they were gradually squeezing the corner grocery out of business. In the heat of the controversy a number of state legislatures passed special tax laws against chain stores.

Finally, sanity returned and further measures of similar character were defeated. The issue was no longer popular, so it was dropped. But, as usual, consumers were left holding the sack. Punitive chain store tax laws continue to collect tribute from consumers through merchants whose only offense is that they serve efficiently at minimum prices.

SHORT-SIGHTED ATTACK

It would seem that the food production industry is faced with enough problems today so that men within the ranks of that industry would not seek to add to its burdens.

But now comes a spokesman for what he calls "the manufacturing food industry" (commercial canners and packers) and proposes the enactment of legislation to eliminate marketers of "private brands" (food canned or packaged by stores under their own brands)

After reading the argument advanced for such restriction of free competition, one becomes aware of the fact that this is just a left-handed attack to restrain retailers from canning, packaging or bottling products under their own names and brands, in competition with "the manufacturing food industry."

Well, why shouldn't a farmer's wife, an independent store or a chain store put out a private brand of food that complies with the food laws, and sell it to anyone who wants to buy it? That is good, healthy competition. In addition, it gives the public food at lower prices than otherwise would have been the case. Possibly this is the reason for the attack on private brands by "the manufacturing food industry." It could better employ its talent putting out a superior product, more widely advertised, thus creating public demand for it.

It is the height of folly for any branch of the food industry to seek to create business for itself by throttling a competitor through legislative restrictions.

N. C. FARMERS'

(Continued from Page 1.)

helping to extend the benefits of the Extension Service program to a large number of Negro farmers in seven Southern states. When he entered the work, he and the late John B. Pierce were the only colored agents in the field. Today Negro Extension agents, while still not adequate, number 587. Mr. Campbell and John V. Mitchell, successor to Mr. Pierce, represented the Negro work at the conference.

USDA IN 4TH WAR LOAN

Aboard the Liberty Ship, the American Mariner, in the Washington channel, Tuesday, Secretary of Agriculture Claude R. Wickard urged employees of the Department to do their full part in the Fourth War Loan Drive.

Agriculture employees were the first Government group to publicly inspect the ship in Washington. The Secretary said he hoped they would also be first in War Bond purchases. He pointed out that USDA personnel over-subscribed its quota by 25 percent in the Third War Loan Drive, and that 9.9 percent of the Department's total payroll is going into Bonds.

The Department's goal in the Fourth War Loan is $4,779,602. This includes both Washington and field personnel. In urging that the goal be met, Secretary Wickard said, "Since the beginning of the war over 14 thousand men and women from the Department of Agriculture have gone into the armed services and the merchant marines. Some of them have already made the supreme sacrifice. . . . We owe it to them and to their fellow fighters to do all within our power to speed the day of victory by backing, with our money and our hard work, this cause that is so worthy."

BUYS $1,000 WAR BOND WITH CASH FROM EGGS

If Albert Lee, Negro farmer of McCurtain County, Okla., is able to repeat his previous war loan performance in the Fourth War Loan Drive, he may step right up and buy another $1,000 Bond. From 270 White Leghorn layers, Farmer Lee sold enough eggs last year to buy a $1,000 Bond. Last fall he added 200 pullets to his laying flock with an eye toward doubling egg production in '44.

When Albon L. Holsey of the Agricultural Adjustment Agency visited Mr. Lee a few months ago he found two cases of eggs (60 dozen) on hand which the farmer had collected during a four-day period. Farmer Lee operates a 120-acre farm on which he has five milk cows, 20 head of beef cattle, 25 hogs, poultry and vegetable crops. County Agent James M. Watlinkton, and Extension poultryman H. G. Ware say that Mr. Lee is contributing a large share of wartime food production.

WHAT ABOUT BEVERAGES FOR '44

The outlook for beverages in 1944 seems to be somewhat encouraging. There'll be more coffee, tea, and chocolate, and about the same amount of beer as was available last year, providing the brewers can get new bottles to replace losses resulting from breakage and other causes.

The War Food Administration expects enough coffee to be available for each civilian to receive about 13.7 pounds, or 488 cups of brewed coffee this year, enough tea to provide each civilian with about 118 cups, and about a half pound more cocoa beans per civilian for chocolate and other purposes than was available last year.

NEGRO FARMERS BUY STOCK

(Continued from Page 1.)

copper-skin variety among low-income farmers.

More and more the sweet potato is coming into its own. It provides a highly nutritious food rich in sugar, and other carbohydrates, it supplies potato starch used to size parachute cloth, adding strength and reducing friction. Pulp left over from starch manufacture provides feed of high nutritional value for dairy cows. Last year's goal called for 898,000 acres this year's goal is 1,056,000.

TWO WOMEN CAN 700 QUARTS OF FOOD IN TRAINING CLASS

The Department of Agriculture received reports from Arkansas this week which revealed that two homemakers, Mrs. Leona Woods, and Mrs. Sylvia Hackett had canned more than 736 quarts of meat products in War Production Training classes at Pulaski County Training School, McAlmont, Ark.

Among the meat products canned were roast, steak, chili, stew, pork chops, sausage, ribs, and chickens. Mrs. Woods also canned 230 quarts of vegetables. The project was conducted under the direction of A. E. Woods, teacher trainer.

DOUBLE RICE PRODUCTION

Stimulated by shortages resulting from Japanese aggression in the Far East, Western Hemisphere farmers are producing almost twice as much rice now as they were producing 15 years ago. Last year the rice crop of the Western Hemisphere reached a record of more than 200 million bushels. About 55 percent of that total was grown in South America, 37 percent in North America, four percent in Central America and the Caribbean area.

BRIEFS

Bred sows and gilts should be kept on a good pasture or they should be fed green colored lespedeza, soybean, or alfalfa hay of good quality in racks, according to Extension swine specialists.

Treatment of peanut seed can play an important part in upping production. Last year untreated peanut seed produced 1,727 pounds per acre on a North Carolina farm while seed treated with two percent ceresan yielded 2,310 pounds per acre.

Do you know that a crop of Austrian winter peas boosted the yield of corn from almost nothing to 35 bushels per acre last year on Mack Ruffin's N. C. farm last year.

Segregation At Minnesota Uni. Is Explained

ST. PAUL, Minn., Feb. 24—(ANP)—Jim crowism on the campus of the University of Minnesota was blamed on Negro students themselves, by Miss Natalie Moorman, Washington, D. C., in an address at the regular monthly meeting of the St. Paul branch of the NAACP. The meeting was held Tuesday at the Hallie Q. Brown Community house.

Miss Moorman, a student in the school of nursing at the university, declared that Negro students fail to get their full and equal rights on the campus because they do not demand them. She charged that Negro students segregate themselves in the cafeteria and other places on the campus.

The speaker cited an incident of attempted discrimination against herself. She was at first denied an appointment to a campus beauty parlor because of her race and color. She later took the matter up with the dean of women at the university and reminded her of the State's recent civil liberties law. The conference, Miss Moorman stated, resulted in her getting the very best of cooperation in campus beauty parlors everafter. She is the first Negro co-ed to live in the cooperative dormitory on the campus.

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., APRIL 15, 1944 No. 3.

STATE COLLEGE LIBRARY MAY - 4 1944 OF AGRICULTURE

Two Hundred Seventy Two Negro Farm Aides Appointed

MR. M. L. WILSON, DIRECTOR, MADE THE ANNOUNCEMENT

$2,000,000.00 Allocated to State Extension Service

Washington, D. C., March 20, 1944—Two hundred and seventy-two Negro emergency agricultural aides are being added to the State Extension Service staffs throughout the South to help push wartime food production and conservation in rural and urban areas, according to an announcement made this week by M. L. Wilson, director of Extension work in the War Food Administration.

The appointment of these and the other emergency workers who are to be placed is being made possible through the allocation of $2,000,000 to State Extension Services by the War Food Administration to stimulate increased production and conservation of food and fiber. The new aides, who will serve war food production and preservation assistants, supervisors, and clarks, will augment Extension's present staff of 580 Negro agents.

Through the increased number of workers, a larger number of colored farmers will be reached and encouraged to grow more of the important wartime crops. In considering the most effective way that Extension Service might help Negro farmers make a larger contribution to the war effort, Director Wilson had the advice of Dr. F. D. Patterson, and Claude A. Barnett, special assistants to the Secretary of Agriculture, and also of T. M. Campbell and John W. Mitchell, Extension field agents.

Alert to the need for increased guidance among colored farmers, these men pointed out to the director that more adequate subject matter and supervisory aid would go a long way toward helping Negro farmers contribute a more substantial part to this year's all-

(Continued on Page 8. Column 2.)

MY SECRET GHOST

There' a ghost living at our house.
He's the ghost all folk dread.
For he's the ghost of the living
And not the ghost of the dead

He's been living there for ages.
It seems many, many years.
But he's always stayed in hiding
For fear he'ld cause some tears.

He's growing bolder by the hour
Though noises he doesn't make.
But silently slips into our bed
And keeps us both awake.

He's been seen out in the open.
As he flits from pillow to post
And laughs at all the teardrops.
He's a demon and a ghost.

He doesn't drag heavy chains about,
Nor make the blood run cold.
But injects a poison into the brain
Then trifles with the soul.

He's not the ghost that slaughters,
His prey he treats far worse
He rips the heart out by its roots
Then leaves them with curse.

A curse that cannot be over-come,
Many times has it been tired
To live in a house with a ghost,
The ghost of a love that died.

W. F. A. Allocates Enough Eggs For The Year 1944

4-H MOBILIZATION

President Roosevelt Urges An All-Out Response

Washington, D. C.,—In a letter to all 4-H club members, President Roosevelt urged an all-out response to the roll call of 4-H Mobilization Week, March 4-12. Said he: "Today our country relies on the determination and courage of its youth to see us through to victory. In the years to follow we shall look likewise to our youth for leadership in building a world of peace. Through 4-H Club work you have demonstrated that you are a powerful influence in this direction.

"In being ever mindful of your responsibilities as each of you pledge your head, heart, hands and health to the service of your club, community and country, you are furthering your own wholesome development and that of your own family and community. Moreover, through assuming such responsibilities you are helping materially in building a world of progress, justice and mutual understanding.

"I trust that rural boys and girls everywhere will respond to the roll call of 4-H Mobilization Week March 4 to 12. For this year more than ever, members of the 4-H Clubs will be among the shock troops on the food production front to give that extra impetus to war effort so essential to ultimate victory."

Negro 4-H clubbers number more than 200,000 and they played an important role in last year's record agricultural production. A drive is now on to get all farm boys and girls between the ages of 10 and 21, who are not members of the 4-H club, to join up during Mobilization Week and help produce food and fiber for victory.

MORE VICTORY GARDENS NEEDED IN 1944

Both Secretary of Agriculture Claude R. Wickard, and War Food Administrator Marvin Jones stressed the need for more and better Victory Gardens this year in addresses last week.

Speaking over the Mutual network on February 23, Secretary Wickard said, "A goal of 22 million gardens and 10 million tons of food has been set for 1944. I am confident that both of these goals can be reached. I say this because of the splendid cooperation of garden club members, Extension Service workers, Office of Civilian Defense garden committees, public schools, the American Women's Voluntary Services, service clubs, and numerous other organizations that are helping to assure the success of this program."

In an address before the National Victory Garden Institute at Detroit on February 23, WFA Chief Jones pointed out that the sale of seed to Victory Gardeners is running 30 percent ahead of last year's sales. However, he added, "We must not assume that the job is done merely because people are buying seed early____Part of the increase in seed sales in January and early February is due to early buying. We hope, though, that it also means more gardens will be planted."

In 1942 about 15 million Victory

RACE WOMAN APPOINTED

Wilberforce University Teacher Gets New Job

Washington, D. C.,—Mrs. Virginia A. Kelley, former teacher of sociology at Wilberforce university, has been appointed to a position on the staff of the Bureau of Agricultural Economics, the U. S. Department of Agriculture announced this week. She will serve as junior professional assistant in BAE's division of program surveys and will help to analyze data collected in the field.

Mrs. Kelley, a native of Jacksonville, Fla., holds degrees from Fisk and the University of Minnesota, and in addition to her work as teacher of sociology and social administration at Wilberforce she has also served as visiting teacher in the public school system of Nashville, Tenn.

With her appointment, there are three Negro professional workers in BAE's Washington office. The others are Dr. James A. Bayton, associate social science analyst, and Lee Nealy, Field representative.

ETHIOPIA AIDS U. S. AGRICULTURE

Ethiopia may play an important part in the improvement of sorgo cane for U. S. sugar production, according to Dr. Elmer W. Brandes, of the U. S. Department of Agriculture who has recently returned from a 10-week search for sugar plants in Ethiopia.

"Sorgo" is the name now commonly used for the sweeter plants of the group and "sorghum" for those used mostly for grain production. Dr. Brandes brought back from the highlands of Ethiopia near the Red Sea 78 double-handful samples of the tall-growing tropical varieties of sorgo. He hopes to use some of these varieties as they are, or for their value in breeding with varieties already growing in this country.

Dr. Brandes points out that the Ethiopians do not use these sorgos as a source of commercial sugar, or sirup. but grow then largely in small plots for chewing and grain. With this larger assortment of new plant material brought back by the scientist, and with the improved

(Continued on Page 8, Column 1.)

CO—OPS GO TO WAR

All over the country farmer-owned and operated organizations are using every device at their command to stimulate maximum farm production. Important among these organizations are the marketing cooperatives. They seek to establish stable markets for farm produce. They endeavor to keep prices fair from the standpoint of both consumer and producer.

Since the war, they have , without ballyhoo.. helped production by encouraging a farmer to add a few cows to his dairy stock, or suggesting other ways to boost output. They help translate to farmers the complicated regulations under which agriculture is currently living. More than ever before they are the farmer's business agent.

F. S. A. BORROWERS NOW

Georgia Ham and Egg Show Held in Ft. Valley

Washington, D. C.,—Fort Valley, Ga.,—Sharing honors with C. C. Spaulding, president of the North Carolina Mutual Life Insurance company, who was the principal speaker at the 29th annual Ham and Egg Show held here decently, Monroe Fluellen and Dudley Barnes, farmers on the Farm Security Administration program, took first and second prizes for their home-cured hams.

Sponsored by colored County Extension Agent O. S. O'Neal, and held in the Fort Valley State college auditorium, the Ham and Egg Show attracted nearly 2,000 farmers and students to witness the largest display of hams and eggs ever presented in the 29 year history of the show which has become an event of nation-wide interest.

Competing with more than 500 hams, Farmer Fluellen's 21 pound hickory-cured Georgia ham took first place by a close margin, according to U. S. Department of Agriculture meat specialists who judged the hams. In addition to hams, the farmers from 22 communities in Peach and Houston counties also placed on exhibit 250 shoulders and sides of meat, and 200 dozen eggs.

Following a challenging address by Mr. Spaulding, who urged the farmers to increase their wartime production, and develop community-wide goodwill, W. T. Anderson, editor of the Macon Telegraph and News, awarded the prizes consisting of $20 and $15 respectively. to the winning farmers, Mr. Fluellen and Mr. Barnes.

Other outstanding features on the program were addresses by Mayor A. C. Riley of Fort Valley, W. S. Brown, state director of Extension, T. M. Campbell, Federal Extension field agent, Kendall Weisiger of the Southern Bell Telephone company, Dr. Horace M. Bond, president of the institution, and a 4-H club pageant under the direction of Mrs. M. L. Toomer, home demonstration agent. The awarding of the prizes climaxed the show.

In presenting the awards Editor Anderson said, "County Agent O'Neal, father of the ham show in Georgia and the South, has done a signal service by encouraging increased production of quality meat."

Mr. Anderson has supported the Ham and Egg Show, and provided some of the prizes ever since it was started in 1916. Recognizing the possibility of widening the scope of the show, he organized the Georgia Banner Ham Association. Enlarging on Mr. O'Neal's idea, he urged the farmers throughout the state to cure their hams by a standard formula and develop a market for Georgia hams similar to that Virginia has developed. After the war he expects the association to supply a large market. Fort Valley's prize winning ham show is expected to be one of the important

(Continued on Page 8, Column 2.)

EACH CIVILIAN TO RECEIVE THREE HUNDRED FORTY-NINE

Announcement Made By War Food Administration

Washington, D. C.,—With a record breaking egg production anticipated for 1944, the War Food Administration announces that U. S. civilians will be allocated about 75 percent of the total production. Increased efforts in poultry raising by Negro farmers will contribute much to the anticipated supply of 61 billion eggs.

Since three out of every four eggs produced, or about 45 billion eggs, will go to civilians, there will be enough for each individual to get 349 eggs this year. This tops all previous per capita consumption figures; in 1943, civilians had 345 eggs each; in 1942, 316 eggs each and in the period, 1935-39, about 300 eggs each.

The 16 billion eggs remaining will be used to supply our military services, allies and friendly nations, chiefly in the form of dried egg powder. Since 1942, dried egg production in the U. S. has increased from a peace time quantity of 6 to 10 million pounds a year to more than 250 million pounds. The capacity for drying eggs now exceeds 400 million pounds, against a bare 40 million pounds in 1942.

(Continued on Page 8. Column 4.)

AMERICA'S MOST VALUED POSSESSION

The war effort would not get very far without coal. It is used in making practically 100 percent of all steel It supplies 65 percent of the mechanical energy required to run the machines that make the guns, tanks, planes, and other arms and war equipment. It supplies the power for 94 percent of the nation's locomotives. It provides in whole or in part, the basic materials for all high explosives, and the four most important war chemicals. Eighty-five per cent of all war plastics require processed bituminous coal as a base. In addition to this, 41 per cent of the homes in the United States depend on coal for heat. The annual value of bituminous coal mined in this country exceeds the value of all metallic minerals combined.

The coal industry represents one of the key natural resources of America. The men who built it and the men who are presently engaged in operating it have always believed in the superiority of individual enterprise. In spite of handicaps, they are producing more coal than ever before in the history of this or any nation.

By a record performance they are endeavoring to speed the day of victory and prove that a system of government which permits free enterprise to flourish and expand, is this country's most valued possession.

WOMAN'S PAGE

USE OF ABUNDANT FOODS URGED AS 'PLAY SQUARE' AID

By Mary Lyles Wilson

As our part in the "Food Fights For Freedom" campaign we are urgd to use as many of the abundant foods as possible.

The victory gardens of last year were helpful to everyone. Due to their success the point value of canned vegetables has dropped considerably.

Featured now are "no-point, low-point" foods. This campaign is indirectly a "play square with the family" program, too. We know there are not enough of the popular foods to go around. This is why they are rationed. In solving the scarcity problem it is feared that homemakers may continue to ask for the high point foods and purchase them in smaller amounts to keep within ration allotments.

LOW-POINT FOODS

The alternative is to plan meals that include more of the low point and unrationed foods. In this way our families will continue to get the necessary amount of food. Less demanded foods are often just as good for us, or more so, than the popular ones and can taste just as good when well prepared.

Welcome news indeed it was when pork was put on the bargain list. It might be a good idea to pick up a ham for dinner with those extra points. A combination hard to beat is pork and apples in one form or another. Their affinity is traditional. In salad sauce or slices they compliment each other in taste and texture.

Tasty and tempting are glazed pork chops.

GLAZED PORK CHOPS

Salt and roll in flour the desired number of pork chops (lean) and arrange in a greased baking pan. Sprinkle with 2 tablespoons minced parsley, 3 tablespoons of minced onion, pepper and 2-3 cup water. Cover and bake 1 hour in a slow oven. Unncover and add apple glaze, made as follows: 1-2 cup apple jelly, 1-4 cup boiling water 1-4 teaspoon cinnamon and 1-4 teaspoon cloves. Spread glaze well over chops. Bake another 20 minutes, uncovered.

MENUS

Menus make use of many plentiful foods, such as:

Baked cod, potatoes au gratin, green cabbage, sliced apple and orange salad, sponge cake and drink.

Cheese souffle, baked potatoes buttered peas and carrots, pickled beets, apple pie and drink.

Rice, tomato soup, scrambled eggs and waffles, baked apple and cream, drink.

Kippered salmon, lettuce and tomato, cabbage salad, fried potatoes, fresh fruit, cookies.

USE MORE CABBAGE

The government wants us to use more cabbage right now as there is a surplus of it. How about that New England dinner of ham hock and cabbage, plus apple turnovers with lemon sauce? Good? Simply perfect!

Potatoes are definitely on the victory food specials list. Potatoes have long ranked as America's most popular vegetable—and besides being good, they contribute many necessary food substances to the dietary. Potatoes supply some protein, iron, and are among the richest of the vegetables in vitamin C. They also provide food energy—so necessary for active bodies these wartime days.

Potatoes are versatile—starring in soup, salad, vegetables and main dishes. Here are a collection of recipes combining potatoes with rich milk. These potato recipes are mighty delicious and provide good nutrition at low point cost.

CREAM OF POTATO SOUP

4 large potatoes
1 medium onion
1 1-2 quarts water
2 teaspoons salt
1 2-3 cups evaporated milk or part fresh and part evaporated.

Pare and dice potatoes. Cut onions fine. Boil potatoes and onion until tender in the water to which salt has been added. There should be three cups liquid; if not add water. Scald potato water and milk. Mash potatoes. Add potatoes to scalded milk and blend thoroughly. Reheat when ready to serve. Grated cheese may be sprinkled over each serving of soup. Yield: 6 to 8 servings.

POTATO PUFF

Pile mashed potatoes lightly in a greased baking dish. Brown in a hot oven. Or drop mashed potatoes from a spoon onto a greased baking pan. Make a hollow in each mound. Set in hot oven or under broiler heat to brown. Serve with creamed fish, creamed eggs or any creamed food.

POTATO PANCAKES

1-2 cup rich or evaporated milk
1-2 cup fine dry bread crumbs
1 egg
1 teaspoon minced onion
2 cups grated raw potato
1 1-2 teaspoons salt
Bacon or other fat

Pour milk over bread crumbs. The crumbs should soak up all of the milk. Stir in the egg, onion, potato and salt. Put bacon fat on griddle or in frying pan. As soon as fat is hot, drop pancackes from tablespoon and press out rather thin. Cook slowly until well browned. Turn and brown other side. Yield: 5 to 6 servings.

NOTE: Leftover mashed potatoes may be used in place of the grated raw potatoes. If potatoes are well seasoned, omit all or part of the salt.

BUTTERSCOTCH SAUCE

2 1-2 cups dark brown sugar
1-4 teaspoon salt
4 tablespoons flour
2 cups milk
2 tablespoons butter

Combine dry ingredients, add milk, mix well and cook on low heat until thickened, add butter. Serve hot or cold on gingerbread, spice or yellow cake. If it becomes too thick, thin with hot water or milk.

Mrs. Turnley Rudolph of Springfield wants a recipe for chocolate ice box cookies. I am glad to give it today.

ICE BOX COOKIES

1-2 cup butter or fat
1 egg yolk
1 1-2 cups flour
1-8 teaspoon salt
1-2 teaspoon vanilla
1-2 cup sugar
3 tablespoons milk
1 1-2 teaspoons baking powder
1-2 square bitter chocolate

Cream butter or fat and sugar; add egg yolk, milk, flour, baking powder, salt and vanilla. Divide dough in two pieces. Add melted chocolate to one piece. Roll in oblong shape and press together. Put in ice box overnight. Slice thin and bake in hot oven. One whole square of chocolate may be used and added to all the batter if desired.

To take the place of soap shakers that are now unobtainable, fasten together two nonpriority tea strainers with a bit of picture wire or with cord.

OATMEAL SQUARES

1 cup raisins
2 tablespoons flour
1-2 teaspoon cinnamon
1-8 teaspoon salt
1-2 cup orange juice
1-2 cup nuts

Mix ingredients and cook slowly until thick. Cool. Spread on dough.

Dough

1-2 cup shortening
1 cup dark brown sugar
1 teaspoon soda
1-2 cup hot cream
2 1-2 cups rolled oats (breakfast cereal)
2 1-2 cups flour
2-3 teaspoon baking powder
1 teaspoon cinnamon
1-4 teaspoon cloves
1 teaspoon vanilla

Cream shortening and sugar. Add rest of ingredients and mix until blended. Chill dough. Roll out thin. Spread the filling on half. Use a spatula and wide knife and fold the remaining dough over too. Cut into squares. Bake 15 minutes on greased baking sheets in moderate oven.

JELLIED VEGETABLE SALAD

1 package lemon flavored gelatin
1 cup boiling water
1-2 cup grapefruit juice
1 tablespoon vinegar
1-2 cup chopped cabbage
1-3 cup diced celery
2 tablespoons chopped green peppers
1-3 cup grated raw carrots
1 tablespoon minced onion
1-3 teaspoon salt
1-4 teaspoon pepper or paprika
1 tablespoon sugar

Dissolve gelatin in water. Add grapefruit juice and vinegar. Chill until a little stiff. Add rest of ingredients and pour into mold. Chill until firm.

ORANGE COFFEE CAKE

1 1-2 cups sifted flour
1-2 cup sugar
2 teaspoons baking powder
1 teaspoon salt
1 egg
1-2 cup milk
3 tablespoons melted shortening
2 teaspoons grated orange peel

Sift together flour, sugar, baking powder and salt. Beat egg, add milk, shortening and orange peel. Stir into flour mixture, mixing only enough to moisten flour. Pour into greased cake pan. Sprinkle with 2 teaspoons grated orange peel and 1-4 cup sugar mixed. Bake in moderate hot oven (400 degrees) 25 minutes.

IDAHO RUSSET POTATO SALAD WITH SOUR CREAM DRESSING

4 cups diced cooked Idaho Russets
2 hard cooked eggs
1 small minced onion
1 cup diced cucumber (in season)
1-2 tsp. celery seed
1 tsp. salt
1 cup thick sour cream
1-2 c mayonnaise
2 tbsp. vinegar
1 tsp. prepared mustard

Combine potato, chopped egg white, onion, cucumber, celery seed and salt. Whip sour cream. Put egg yolks through sieve and add to cream with mayonnaise, vinegar, and mustard. Blend and combine with potato mixture. Chill and serve with lunch meat roll-ups. For these, take 3 or 4 stalks of green asparagus, lay diagonally on thin slices of lunch meat, fold corners over anad secure with colored toothpicks. (1-2 pound luncheon meat will serve four.)

LAMB KABOBS AND RED CABBAGE

Cut 1 pound lamb breast, neck, shank or under shoulder into 1-inch cubes. On metal or wooden skewers thread small cooked onion, bacon slice, onion, lamb and onion. Broil 3 inches from heat source for 15 minutes, turning skewers to brown lamb and bacon. Serve on hot vinegar-seasoned red cabbage.

Next time you prepare fish, put a little salt on your fingers and there will be no odor on your hands and the fish will not stick to them.

TO REMOVE FOOT MARKS

Black marks on waxed floors made by wartime rubber heels and soles may be removed with liquid wax, turpentine or cleaning fluid. home economists of the United States Department of Agriculture suggest. Rubbing with a cloth moistened in cleaning fluid like carbon tetrachloride or in turpentine is one way or taking off such marks. The grease solvent removes the wax along with the black, so wax should be applied to the floor after removal. Rubbing with liquid wax has also been found successful. Marks should be removed at least once a week, for if the black is allowed to remain too long on the floor, it becomes difficult to remove.

Poached eggs on rusks provide an appetizing picture at the breakfast table.

FRUIT PUNCH

1 qt. grapefruit juice
2 qts. chilled water
1 pt. gingerale
sugar syrup
6 oranges
6 lemons
1 pt. grated pineapple
1 pt. tea (optional)

Make sugar syrup with 3 1-2 cups sugar and 1 1-2 cups water. Cool, add other ingredients and let stand for one hour. Add chilled water and serve with chipped ice. Serves 25. Plain syrup may be used in punch instead of sugar syrup.

Several requests have been received for Salmon Croquettes. We gladly give it.

SALMON CROQUETTES

2 cups minced salmon
1 cup bread crumbs or 1-2 crumbs and 1-2 mashed potatoes
1 cup white sauce

Combine all ingredients, season well with salt, pepper and a little minced onion. Mold, chill. When ready to fry or bake, dip in beaten egg and crumbs. Serve with lemon or tartar sauce.

BAKED FISH

1 (3 to 4-pound) fish
2 teaspoons salt
Paprika
1 recipe Bran Fish stuffing
2 tablespoons melted butter or salad oil

Have fish cleaned and prepared for stuffing. Wash thoroughly and wipe with cloth. Rub cavity with salt. Stuff and sew edges together with heavy thread. Place on greased oven-proof platter or baking pan and brush with melted butter or salad oil. Sprinkle paprika lightly over top. Bake in hot oven (450 degrees F.) 30 to 40 minutes, until well-browned. Garnish with quartered lemon. Yield: 6 servings.

Insulate Your Home; Save Heat and Keep It Cool

SCRANTON, Pa., March — One day's work and some inexpensive insulating material can prevent as much as 25 per cent of the winter heat loss from the average house in the Northern states and also make the house cooler in summer, Charles A. Miller, associate director of the School of Architecture of the International Correspondence Schools said today.

Latest survey show that the most effective place to install insulation is directly under the roof; Mr. Miller continued, as insulating the attic provides the largest saving in heat and also prevents summer heat from penetrating into bedrooms.

If the house has an unfloored attic or other top storage space, Mr. Miller said, insulation bats can be placed directly on the laths which support the ceiling of the room below without the necessity of tacking them in place. If it is planned to use the attic as a spare room, however, insulation bats should be placed between the roof rafters and on the end and side walls of the space, tacked firmly to the joists and rafters.

Materials for insulation are now available without priority, Mr. Miller pointed out, and are light enough to be handled easily and quickly by one person. Government agencies are authorized to make loans to homeowners for insulating expenses that will reduce fuel consumption.

There are other advantages to insulation, Mr. Miller concluded. It reduces fire hazard in the attic by acting as a fire resistant and also serves as a sound deadner in areas plagued by street or industrial noises.

MRS. BETHUNE IS SLATED TO TAKE BOB WEAVER'S JOB

WASHINGTON, March 9—(ANP) Paul C. McNutt, War Manpower commission chairman, is going to pay off a political debt to a fellow Indianian by naming him to fill the post of chief of the minority group section, formerly held by Dr. Robert C. Weaver. And unless his plans miscarry, Dr. Mary McLeod Bethune will be named his "assistant" as a sop to Negroes who feel that a Negro ought to fill the top job.

McNutt admitted to the Associated Negro Press last Tuesday that while he has been checking "several people," the officer of "the second spot" had been made to Mrs. Bethune and that "she indicated she would accept." Asked about the possible appointment of a man from his own state McNutt said "it might be," and added "stranger things have happened." He declared flatly that he was not considering anybody in the organization now. The reference was taken to mean Clarence Johnson whose efforts on the west coast have been rated as one of the shining spots in the entire fight on discrimination in industry.

The manpower chairman acknowledged that Mrs. Bethune had told him once before that she was through with government. He commented that "apparently she has changed her mind."

Mrs. Bethune insists that she gave no such indication of acceptance to McNutt. She confirmed the offer of a job but said that McNutt was unable to tell her the name of the person under whom she would work, or the specific nature of the work to be done. All she says she was told is that the work had to do with race relations.

From reliable sources it is learned that considerable pressure is being put upon the president of the National Council of Negro Women who only two months ago terminated her government work when the National Youth administration folded. Since then she has been devoting her full time to the development of the council. In addition, she has not been well lately.

Friends close to Mrs. Bethune have been advising her against acceptance of the post, pointing out that WMC has no real intentions of doing a job in the employment field, and that her hands would be tied just as were those of Dr. Weaver.

A FRIENDSHIP VERSE

By Maxine Schneider

I thank you for my daddy, God;
He's the nicest fellow ever.
And thank you for the fun
We always have together.

And thank you for my mother dear,
For when I come a-crying—
She holds me on her nice soft lap,
And keeps me from just dying.

There's lots of friends I thank you for:
There's Fred and Jane and Beezer,
And my funny little puppy Rags,
But, God, I thank you most for Jesus.

—From Story Time.

TIRED OF BEING TEACHER'S PETS

Representatives of the six hundred thousand workers of the United Brotherhood of Carpenters and Joiners of the American Federation of Labor, have condemned the labor policies and the "overall paternalism" of the present Washington Administration as a "stealthy threat to the continued freedom of organized labor."

The union issued a statement demanding the following six-point program from both national political parties: The preservation of free enterprise, the abatement of bureaucracy, the halt of paternalism, the creation of postwar jobs through private industry, the maintenance of labor's social gains, the protection of our national interests.

The leaders of organized labor can be a powerful force in upholding faith in American institutions and in restoring the independence of American workmen, both of which have been dangerously weakened by attempts to use the Federal Government as a shield for union abuses. The unions have, in effect, been "teacher's pets." Some are beginning to realize the unpopularity of that role and are moving to get out of it.

WHITE SCHOLAR LOOKS AT NEGRO WORLD

By Emmet Phillips for ANP

THE SOUTH IS HELL

Whenever I hear or read of southerners extolling the south, bragging about how nice the weather is down there, and complaining about the cold weather here in the north, I am reminded of a short but pointed conversation between our late night watchman and a group of touring southerners who stopped one night in our town.

It was a rather chilly evening and after inquiring the way to the next town one of the southerners said, "It's awful cold up here, nothing like the south where the weather is nice and warm." Whereupon our night watchman replied, "That's because you're closer to Hell down there." The southerners drove away without further comment.

Our night watchman didn't know how nearly right he was when he said, "You're closer to Hell down there," or did he? While he had never been south he had met enough southerners to form an opinion of them, and he had heard about their Ku Klux Klan. Being an Irishman, that was enough for him.

I'd like to go our Irish night watchman one better and say, "You're in Hell when you're in the south." Hell has been described as a place of everlasting fire. And everlasting fire would naturally keep a region warm. Hell has also been described as a place of exterior darkness. And that is just where the south best fills the bill.

Many evils which could not stand the sunlight of truth and righteousness find their abode in the darkness of untruth and wrongdoing. Consider lynching. A bestial mob of ignorant whites will not wait for the truth to reveal the status of the accused Negro Why? Because the mob, being prejudiced and full of hate, might lose its chance to put the "nigger" in his place if it waited for the light of justice to appear. So lynching is usually done in the dark with the mob being in the dark in more ways than one.

Another old southern eustom is the burning of the cross by the Ku Kluxers. They like to do things such as this in the dark and as an added precaution against being identified cover their heads with hoods, whereas they should bow their heads in shame.

Ignorance also abounds in darkness. And where in America are there so many ignorant people as in the south? Although there are 20 million Catholics in the United States who work and fight for, and believe in our government, any loud mouthed southern bigot can easily convince them that Catholics are disloyal, and that the pope would move into the White House if a Catholic were elected President. Remember Al Smith in 1928? We find that southerners who claim to know the Bible so well are really ignorant of its meaning if not its content.

Their ignorance is not limited to the religious field either. If you're from New York State, no matter whether you're a farmer from upstate or a business man from Buffalo, or even a woodsman from the Adirondack mountains, the average southerner rates you as a New York City slicker and loses no time in showing his dislike for you. He doesn't know that New York City, although large in population, is but a small section in New York state's area, and that there are millions of people who live within the state, out side of New York City.

And so it goes. Lynchings, burning of crosses, prejudice, ignorance, etc. Surely those things are not indicative of heaven. Song writers and southern politicians to the contrary, the south is Hell.

WHEN THE GUNS CEASE FIRING

The railroads are not going to lose the peace if they can help it, insofar as transportation is concerned. They are contemplating future transport problems without a moment's let up in the hectic struggle to meet the abnormal transportation demands of war.

A railroad committee has been appointed to make careful study of every form of transportation including analysis of 42 separate major industries which among them produce the bulk of the freight moving in the United States. In addition the committee is studying such phases of railroad operation as engineering, mechanical operating methods and proeedures, labor and personnel, traffic, accounting and statistics, finnace, taxation, and many others. The membership of the committee includes men of hroad experience in all sorts of transportation and all aspects of railroading. As the Association of American Railroad says: "The approach of the committee is one of healthy inquiry and experienced skepticism, embraeing nothing as superior merely because it is new, but clinging to nothing old merely because it is established In that spirit the committee is undertaking to survey the whole field of transportation in America and to look and plan ahead for the future, to the end that there shall be more adequate, dependable and sericeable transportation, more economically and efficiently performed, by the means of carriage best suited to do each of the particular tasks of transportation that are to be done."

Railroad managements know that some day the guns will be silent. They plan to be ready for that day.

A GREAT COMPOSER

In the little town of Salzburg, Austria, a small boy was born more than one hundred and fifty years ago. His sister Marianne was four years older than he. When he was just tall enough to touch the keys of the piano, as Marianne took her music lesson, the little boy tried to run his tiny fingers over the keys.

"One day, as his father sat reading, he heard the piano. When he turned to see who was playing with so much feeling, he saw his three-year-old Wolfgang. The father was very happy and he began to teach Wolfgang at once. When Wolfgang was six and Marianne was ten. their father decided to take the children to the beautiful city of Vienna to give some concerts.

"They took a trip up the blue Danube River and the children were very happy to see the lovely mountains of their country.

The little boy loved his sister very much. He was sorry that Marianne did not have a new dress. He wanted to know if his father could not buy her one when they arrived in Vienna.

"No, my son, we shall have to pay customs duty on our harp and there will be very little money left," answered his father.

Wolfgang asked his father to loosen the cover of the harp. When the customs officer asked what he had the little boy began to play. As his tiny fingers swept across the strings, the officer brushed a tear from his eye. Soon many people had gathered around the boy, and for many minutes he played. Then his father told him to cover the harp, and he put his hand in his pocket to pay the customs officer.

"Take the money and buy the little boy a gift," said the officer. "He has brought so much happiness that he deserves it."

"We shall buy Marianne a new dress, Father," said Wolfgang.

The people were astonished to see such an unselfish little boy. Marianne got a lovely new dress and he received a gift, too.

While he was in Vienna, the empress became very fond of Wolfgang. He often played for her. She gave both of the children a lovely present. To Marianne she gave a white silk dress, and to Wolfgang she gave a lilac-colored suit with gold on it. He wore it when he played at other royal courts. He played at the Courts of England and Italy where he went to study. While he was in Rome, he transcribed some music of the Sistine Chapel and received a decoration.

Mozart was a lovely little boy and he became a gentle, handsome young man. Everyone loved him and his life was very happy. He became one of the greatest musicians of the world.

His music made people happy while he lived, and today we like to hear it. We marvel at the little boy who brought so much happiness to the world.

13TH LIBERTY SHIP TO HONOR HARRIET TUBMAN

Washington — (SNS) —The seleetion of a name for the thirteenth Liberty ship to honor an outstanding Negro of the western hemisphere was announced this week by the Maritime Commission. The SS HARRIET TUBMAN will be the first ship to be named in honor of a Negro woman. It has not yet been officially assigned to a shipyard, but efforts are being made to have it built at the Bethlehem-Fairfield ship yard in Baltimore, since she was a native of Maryland.

Harriet Tubman was born in slavery about 1815 and when she was 25 escaped from her master's plantation in Maryland to New England, where she joined with Garrison Brown and other abolitionists to become the "underground railway." She first reseued her parents and during two deeades before the Civil War made repeated journeys into the South, taking 400 or more of her race to the North and into Canada.

During the war she served with Massachusetts troops as a scout and guided Col. James Montgomery and his men in their memorable expedition into South Carolina. At the close of the war, through the help of Secretary of State William H. Seward, she was able to make her home in Auburn, N. Y., where she soon became engaged in philanthropic service in behalf of the poor and aged of her people. Her efforts led to the foundation of the Harriet Tubman Home for Indigent Aged Negroes, to which she gave personal attention until 1908. She died in Auburn in 1913.

Other Liberty ships named for Negroes include the SS BOOKER T. WASHINGTON, GEORGE WASHINGTON CARVER, PAUL LAURENCE DUNBAR, FREDERICK DOUGLASS, JOHN MERRICK, ROBERT L. VANN, JAMES WELDON JOHNSON, JOHN HOPE, JOHN H. MURPHY, ROBERT S. ABBOTT, EDWARD SAVOY and TOUSSAINT L'OVERTURE.

The Navy Department has named a naval vessel, the Destroyer Escort Leonard Hoy Harmon in honor of a Negro messman who received the Navy Cross posthumously for heroic conduct at Guadalcanal.

Teacher: Can you name some organ of the body, Bobby?

Bobby: Yes'um, the teeth.

Teacher: The teeth? What kind or organ would that be?

Bobby: I guess they would be a kind of grind organ.

Collection Plates, Collection Baskets, Arm Bands and Gavels

Wooden Collection Plates, well finished with Plush Bottom, 10 inch Plates $6.00 each

A Wicker Collection Basket, made of best reed obtainable. Size 9 inches. Price $3.00.

USHERS' ARM BANDS

A well made golden Oak finished Gavel

Price $1.00

Stenciled in white made of blue wool felt. 4 inches wide.

Price 50c each

Oval Shaped Usher Arm Band

These Ushers' Arm Bands are very attractive; made of high-grade felt material, in colors red, blue and green, each with white letters, and elastic band to fit around the arm. Size, 6½x4¾ inches. **25 cents** each; $3.00 a dozen.

Blue Felt Ushers Arm Band, with sewed white letters of white felt. Very durable and attractive.

Price $1.00 each

6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

Capital NAACP Offers Aid to Edgar Brown

WASHINGTON, April 6—(ANP) The local branch of the NAACP has called upon Atty Gen. Francis P. Biddle to intercede in the case involving the beating of Edgar G. Brown, lobbyist, by a capital guard two weeks ago on federal property.

Leon A. Ransom, chairman of the branch legal committee, declared last week that the incident reflects the "rapidly growing bigotry which is attempting to dominate our government," and urges that "something radical" be donc to check the "rising tide of hatred."

The letter to Biddle considered that since the assault occurred upon federal property and during the course of exercising constitutional rights by a citizen, the matter lies within the province of Mr. Biddle's office to investigate and to prosecute.

FLOWER SERVICE FOR PATIENTS IN SOLDIER HOSPITALS URGED

GROWING PLANTS THAT --- BLOOM, ALONG WITH VEGETABLES, PART OF VICTORY GARDEN PLAN

By Floyd Bralliar

There is no doubt in the mind of anyone who takes the trouble to think about it that it now is more important than it ever has been before in the history of our country to grow a good vegetable garden. We are trying to do our part in growing not only plenty of vegetables ourselves, but doing everything we can to aid others who are less experienced in doing this successfully.

But there is another thing we should do that is also more important than perhaps it has ever been before in the history of our country. We are at war and already hundreds, yes thousands, of wounded men are being sent to our hospitals for treatment. Many of these will never recover and many of these who recover in part will be invalids or cripples for the rest of their days. They were hale and hearty a few months ago when they were called to the front. They deserve something at our hands.

How About Flowers

In each of the cities to which my articles go there are large army hospitals, most of these are already full and are being enlarged as rapidly as possible. When the new front is opened in Europe, unfortunate as it will be nevertheless. thousands of men will be wounded and sent back home to our hospitals. What are we going to do about it? The government is feeding them and feeding them well so we do not need to prepare food particularly for them. They are receiving the very best medical attention, so there would be nothing gained if we could send our family physicians to see them. But at least 90 per cent of the young men and boys in the hospitals in our cities are not acquainted here. They have no friends to send them flowers, but we all know how great a blessing flowers are in a sick room.

Some may say that men, especially hardened soldiers, do not, care for flowers and would not appre ciate them if they had them.. But this is all, "bosh." There are a very few soldiers indeed who would not appreciate a beautiful bouquet sent to their rooms at least twice a week. It would at least give them the feeling that someone cares and that someone appreciates the sacrifice they have made.

Flower Clubs

We call on the presidents of every garden club to unite their efforts with the other clubs and civic organizations to organize flower service for these soldiers' hospitals. This does not mean that we should raise a fund to go to the florist every day and buy several thousand bouquets. It means that every member of every garden club and every woman who is not a member of any club but feels willing to volunteer for this service, should not only grow a vegetable garden so as to help produce the food necessary, but grow an abundance of flowers that will be suitable for cutting. These should be delivered to some central committee who will deal directly with the hospital and who will not only see to it that these flowers that come are properly arranged in bouquets, but that they are regularly delivered at the army hospitals. At certain seasons it may be possible to do the ideal thing,, to deliver flowers twice a week, but where this cannot be done we strongly urge that they be delivered the latter part of each week..

Lest our readers plead that they cannot afford to buy the necessary bulbs and plants to grow these flowers we wish to call attention to the fact that at least four of the best cut flowers grown can be raised from seed in a very short time and that they will continue to produce flowers for weeks. We would list four of the best and easiest grown flowers that anyone can grow anywhere. They are Zinnias in their many varieties and colors, and Marigold, of which nearly a hundred varieties are now offered by the American seedmen. Of course, we might add a dozen easily grown and very much worthwhile varieties to this list.

From 10 to 25 cents will buy a supply of seed of any one of these varieties sufficient for anyone's garden. In fact, we might safely say that 50 cents will buy enough seeds for all four varieties for the average woman to plant.

TOO MANY DREAMS

The small independent telephone companies are facing a serious problem as a result of the Federal government's policy of taking deferred maintenance funds. The companies have set these funds aside for future use because existing manpower and material shortages have prevented their expenditure at the present time for maintenance of plant and equipment. But the Federal tax collector claims most of such funds if they are not spent each year. Thus telephone companies may enter the postwar era with a drop in earnings, a worn out plant, and no money for unavoidably deferred maintenance.

The' foregoing situation but emphasizes the grave position of the railroads with respect to deferred maintenance reserves. The railroads in normal pre-war times spent a billion and a half dollars annually for maintenance of way and equipment. When war came, traffic on the roads increased to astronomical proportions. The life is being pounded out of rails and rolling stock at a greatly accelerated rate. while money actually spent for maintenance has fallen off drastically, because of men and material shortages. It will take years and billions of dollars to catch up on maintenance. Where can the railroads get the billions to spend for such work if the tax collector will not allow its accumulation, when it is impossible to spend it at the moment?

After the war, millions of men will need jobs. Those jobs are being threatened by failure to promptly correct tax inequities that undermine the future financial stability of basic industries. It is upon just such industries as transportation and communication which the country depends for steady jobs. Too many people in Washington with hopeful dreams for the future are forgetting this fact.

HEALTHY SKELETONS

Under the headline, "Food Independents Map War on Chains," the New York Times deseribes the competitive strategy which independent food merchants have announced they will use to hold and increase their present merchandising lead over the chains.

It wasn't so very many years ago that everyone was being told that the chains were rapidly turning independent merchants into rattling skeletons. Thus it may shock many to learn that the independents are not only very much alive, but have launched an all out offensive against their chain competitors. According to spokesmen for the independents, the independent retail establishment of the future will be generally a "two price" store with extra charges for credit and delivery, yet laid out on a self-service arrangement. Independent merchants are doing precisely what competent observers predicted would be done. They are combining the efficieney of the chains with the advantages of customer service inherent in independent merchandising.

In view of this, the logieal question is, What of the punitive price boosting legislation enacted against the chains? These anachronisms are still a blot on the statute books of many states—a needless charge against consumers and a constant drag on efficient retail distribution.

RACIAL TENSIONS THEME OF MEETING HELD IN CHICAGO

Seventy-five Leaders Hold Conference with Drs. Edwin Embree and Charles S. Johnson

CHICAGO, April 6—(A N P)—Meeting here Tuesday and Wednesday at the call of Marshall Field, Edwin R. Embree and Dr. Charles S. Johnson, 75 white and Negro leaders from various sections of the country studied the current phenomena of racial tensions as they are arising particularly in the north and west.

The group, which met at the Sherman hotel, exchanged views on techniques to be employed locally and regionally in grappling with the whole problem of racial minorities; laid plans for the establishment of a clearing house of information and methods to be located in Chicago, and the formation of a service staff to function in areas where race relations are strained or interested persons and organizations feel the need of strengthened programs, guidance or knowledge.

Explaining that the call for the conference had been signed by the three sponsors as individual citizens rather than because of their corporate or foundation connections, Mr. Embree said they were frankly asking for help. He pointed out that since the formation last summer of the mayor's committee on race relations in Chicago, of which he is chairman, 137 similar groups had been formed by cities, states, counties or interested citizens and that the committee here and the Rosenwald fund had been deluged with requests for data, suggestions and information regarding how other communities were meeting a variety of problems relating to housing, health, police and organizational structure, all looking toward a solution of the problem caused by recent heavy migration and of bringing minority groups into fuller participation in American democracy.

"This conference is called to consider a new Declaration of Independence—independence to build our human relations not on the basis of southern feudalism but of American democracy," Mr. Embree said. "All these years certain southernors have been saying, "Yankees, keep out. This is our problem. We will handle Negroes in our own way.' It is now time for the rest of the country to say to the south, "We are going to do our social engineering in our way!"

Embree outlined the purposes of the conference as being to "(1) explore the position of Negroes and of race relations, especially in the north and west (2) discuss definite procedures and methods that may be most effective in the years immediately ahead, (3) plan what instrumentalities can best meet the new demands and the fresh opportunities of this emergency."

Marshall Field said that the sponsors felt that certain questions should be answered. He inquired about tension areas in northern cities; barriers and conditions which affect four million Negroes in the north and west; building democracy from the grass roots to win national interracial cooperation and support of federal action on matters of race relations; ways and means to build democratic patterns in the north and west, independent of southern traditions, by the power of church, labor and industrial organizations; the possibility of introducing public educational programs for schools, gathering material for the same, as instrumental in building a democratic pattern in race relations and promoting local economic equality programs.

Ralph Buncho, of Howard university, read the declaration of principles which will seek the committee to be formed.

This committee will be guided by the principles of national integration and participation of all people on a basis of equality in employment opportunities, recognizing ability, training and experience; in educational and specialized training opportunities; in labor unions, public housing, health, welfare, recreational and community facilities and services; in full equality before the law and equal police treatment.

Proceeds of Singer's Concert in Boston Given to Memoralize Scientist

BOSTON, April 6—(ANP)—Another musical triumph was scored by Roland Hayes, internationally famous tenor, when he appeared at the Boston Symphony hall in a recital in behalf of the George Washington Carver foundation last week and gave the entire proceeds of the concert to the foundation, which is dedicated to continue the scientific work of the eminent scientist.

Accompanied by Reginald Beardman at the piano, Hayes rose to the height of his musical career as he sang his own arrangement of "Oh Gi Me Yo' Han'," "Way Up In Heaven," "Lit'l David" and "I Can Tell The World," an Afro-American folk song.

Recording new triumphs in one of the busiest periods of his career, Hayes has made tours of England, Scotland, Canada and the United States, from Baltimore to Seattle, from Boston to New Orleans and from Memphis to San Francisco, with some 25 cities in-between. An army bomber winged him across the Atlantic to appear in two historical concerts in London's Albert hall before audiences of 10,000 cach on last Sept. 28 and 29. On his return to the States, his recital in St. Paul, Minn., was prefaced by the exceptional incident of the entire audience rising to greet him.

"He delighted the audience and that included the cheering chorus," said the London Daily Express of his first Albert Hall concert. "His voice has a fine, spun silk quality."

The second Albert Hall concert was reserved for allied service men and women and military and diplomatic chiefs of international importance. "I felt there was inspiration in the famous Royal Albert tonight as there was last night," said Maj. Gen. John C. H. Lee, of the U. S. army, when he addressed the chorus and soloist from the platform. "This hall has seen many kings and queens and many great artists have performed here. But your performance will live long in its history and in the memories of all of us.

"Negro music did more last night than 100 pep talks ever will to cement the comradeship-in-arms of the serving men and women of the united nations," declared the Daily Express, a London daily. "It was a concert in a language of simple faith and fervour that is international."

The eminent tenor was welcomed by Lord and Lady Astor when he appeared in Plymouth. He also visited Manchester, Glasgow, Edinburgh, various service camps, and appeared on one of the famous morale concerts given in the National Art gallery of London, where Dame Myra Hess was his piano accompanist in his group of Schubert songs. His most cherished souvenirs of his visits to England and Scotland are said to be letters of appreciation from John G. Winant and General Jacob L. Devers.

By dedicating the proceeds of the concert to the George Washington Carver foundation, Roland Hayes honored the memory of the greatest scientist of his race, but also one of the world's most brilliant pioneers in agricultural chemistry, and contributor of enduring benefits to the American farmer.

The George Washington Carver foundation is dedicated to the progress of humanity through the application of science to the problem of the farm and toward the end of making available to mankind in general the opportunities and necessities that applied research can provide.

PAY LAST TRIBUTE TO MRS. E. D. ABBOTT, PUBLISHER'S WIFE

CHICAGO, April 6—(ANP)—Final rites for Mrs. Edna Denison Abbott, wife of the late Robert S. Abbott, publisher and founder of The Chicago Defender, were held Thursday at Grace Presbyterian church, after which the body was removed to Oakwood cemetery for burial.

Mrs. Abbott, well known as a business woman and civic leader, died last Sunday evening at Mercy hospital in Benton Harbor, Mich., after a prolonged illness which is said to have been instrumental in her virtual retirement to her home in that city.

An interesting group of citizens, representing a cross-section of the city's leaders, paid final homage to the woman whose life had been an inspiration to two great leaders of the race, Col. Franklin A. Dennison and Robert S. Abbott. She married the late Col. Dennison, a distinguished lawyer and commander of the 8th regiment, here in November, 1907. When he was called to the armed forces for overseas duty, she carried on his various business activities.

She was the mother of five children by the Dennison union. They are Franklin, Jr., Dorothy (deceased), Denise, George and Jacqueline. After the death of Col. Dennison, she married the late publisher and editor, Robert S. Abbott, on August 7, 1937.

Mrs. Edna Dennison Abott was brought here as a small child because of the death of her parents and was reared by her aunt and uncle, Harry and Ida Bowser, as Edna Rose Bowser. She received her education in the local public schools, later taking a business course in a secretarial school. She served as private secretary in the office of the attorney general of the state of Illinois and was later private secretary of Carl Eitol, owner of the Bismark hotel.

Mrs. Abbott is survived by four children and three grandchildren.

ANTI-POLL TAX BILL TO COME UP IN SENATE SOON

Senator Pat McCarran of Nevada Expected to Bring Measure to Vote

WASHINGTON, April 6—(ANP) Whereas the National Committee to Abolish the Poll Tax was preparing to announce that the bill would be called up in the senate on April 17, five days after congress will have reconvened following the Easter recess, Sen. McCarran of Nevada, who will make the move, was not that specific when a check was made with him.

He promised on Wednesday that the bill would be called up "very promptly" after the 17th. Explaining what he meant by "very promptly", the chairman of the senate judiciary committee said that it depends upon "the nature of business pending in the senate about the 17th." Appropriation bills and conference reports, he said, may have to take preference, "they have to have the right of way."

It was his guess that the house-approved anti-poll measure would come before the senate chamber between April 20 and the end of the month. "That, of course, is just my figuring," he added.

Meanwhile, Kathryn Shryer, secretary for the poll tax committee, was announcing the date with definiteness. During the week there had been conferences with Sen. Mead (D) of New York and Senate Majority Leader Alben Barkley all of whom agreed that the matter need not be delayed any longer.

On Tuesday President Roosevelt was questioned at his press conference whether he still adhered to the position he had taken two years ago in opposition to the poll tax. "I have always thought so," was his terse reply to the question as to whether he favored abolishing the tax. He showed no disposition to discuss the issue further.

MONEY MAKERS FOR POST OFFICE

In the transportation field, on sea, land and in the air, the government during pioneering stages, found it advantageous to extend some form ofaid to individuals courageous enough to enter such fields of endeavor, and it has profited tremendously through resulting development of the country and its transportation resources.

There is still an erroneous impression that the commercial air transport system is a government subsidized institution, because the government did subsidize the air lines with mail contracts in the early stages of their development. But in 1943, while the Post Office Department paid all domestic air carriers $22,500,000 for the carriage of air mail, it received in return at least $60,500,000 from the sale of air mail postage. There are ground expenses of the Post Office Department other than the direct mail payments to the air carriers, but even the most liberal allocation of ground expenses to air mail would still leave the Post Office Department with a huge profit.

Now the Revenue Bill passed by Congress will increase air mail postage rates from six to eight cents. Air mail postage may become not merely the means of recovering the cost of air mail, but also means of taxation for other purposes, thus causing air mail to become the subsidizer instead of the subsidee.

In 1931 mail revenue of the air transport industry was 82 per cent of total revenue whereas in 1943 it approximated only 17 per cent Mail rates in the last ten years have decreased from $8 a ton-mile to only 60 cents a ton-mile, or 92.5 per cent. Passenger rates have dropped from 12 cents a mile in 1929, to approximately 5 cents today.

REP CLARE LUCE ASKS PROBE OF EVILS IN ARMY

WASHINGTON, April 6—(ANP)—Rep. Clare Booth Luce (R) of Connecticut is the second sponsor of a Resolution (476) calling for a congressional investigation of alleged discrimination against Negroes in the armed forces. Only the week before Rep. William L. Dawson presented his bill.

Introduced at the behest of the AKA Non-Partisan Council on Public Affairs, the Luce bill would authorize a study with respect to "the status of the Negro and other minority groups in the armed services and in attached or affiliate auxiliary military organizations for women."

The measure would have as its objectives a determination of "the extent of compliance . . . with the Selective Training and Service act of 1940" regarding racial discrimination; "the nature and extent of any practices in the organization and placement of personnel which accomplish the exclusion of persons type of service on land, at sea, or in the air; extent of training restrictions and advancement to commissions or grades.

The Luce legislation would also seek to learn whether racial considerations are impeding the full utilization of professional and technical skills, and the relation of segregated units to the entire question under consideration.

Seven men would do the job with an appropriation of $25,000. The resolution was sent to the rules committee.

FAIR OPPORTUNITY FOR JOBS FOR ALL WAR PLANT POLICY

CHICAGO, April 6—(ANP) Abraham Rubin, vice-president of the National Smelting Co., of Cleveland, recently proved himself a real anti-fascist, pro-labor employer, in his fight against racial discrimination and by giving Negroes full equality in job opportunities and upgrading at his 100 per cent war plant.

At his war plant which employs 1,400 Negro and white workers, Negroes work as foremen supervising white workers; white and Negro workers take training courses in skilled trades side by side; the chairman of the executive shop committee is a Negro and the plant physician is a prominent Negro doctor. Negroes are active in all sports around the plant.

Declaring that he is eager to see mixed teams in the major leagues, and segregation abolished from the armed forces, Rubin believes that such changes would aid in bringing about an early end of the war. Rubin, a thorough pro-unionist, insists that a strong labor movement is a major bulwark against fascism.

His workers are 100 per cent organized by the Mine, Mill and Smelter Workers union, CIO. Union leaders and plant executives serve on a labor management committee, which actively promotes employe health and welfare, athletic programs, safety measures against industrial accidents.

Asserting that men are men "regardless of the color of their skins, their ancestry or their names," Rubin is emphatic in his idea that "men of different races, origins, religions, can work side by side in harmony and good will."

"We haven't built an inter-racial utopia at the plant," the executive explains, "We've still got a long way to go. White workers don't easily give up the prejudices inculcated in them from childhood. Negro workers don't lose quickly the resentments and suspicions built up by years of undemocratic discriminations and humiliations imposed upon them. We alone can't change the unfavorable off-the-plant environment of our Negro workers. But we can and must help abolish racial discrimination everywhere. It poses the greatest single challenge to American democracy."

Rubin, 52 years old, started as an errand boy in the smelting plant he now heads, 30 years ago. He strongly advocates "equal job opportunities for all."

REV. ADAM POWELL GIVEN TAMMANY'S BACKING IN RACE

Colorful Minister Seeks Democratic Nomination for Congress in New York

NEW YORK, March 29 (ANP)—It's no longer a military secret that Adam Clayton Powell Jr., pastor of Abyssinian Baptist church, editor of the tabloid Peoples Voice, former city councilman, is openly and determinedly a candidate for congress to represent the 21st congressional district of this city.

Powell first told residents of this city that he intended to go to congress at a mass meeting held in Madison Square Garden, several moons ago. Since then, he has kept himself quietly on the sidelines, waiting for the opportune time to jump into the fray.

Powell will run in November for the seat formerly held by Joseph Gavagan and currently in the possession of Tammany Hall Torrens, a Democrat who won the by-election held here last month, wherein Republican Bennett almost stole the show in a surprising show of strength for his party.

Powell will likely run on a coali tion ticket, comprised of Democrats, Republican and American Labor party tickets. The youthful pastor-editor-politician is a political hybrid so much so that half the time no one knows just what party he favors.

Lined up against young Rev. Powell will likely be Channing Tobias, running on the Republican ticket. Tobias is a national Y. M. C. A. executive.

Mass meetings are being held in Harlem these days, to boom Powell for the seat. As the battle looms now, Tobias will probably capture the conservative and older persons' vote; Powell will stampede the labor leit wing groups.

RUTHLESS POLITICS REVEALED

The struggle against expanding Federal authority has reached up into New England where the citizens of Vermont have rebelled against a proposed $29,000,000 government power dam that originated as a $6,000,000 flood control project. The Attorney General of Vermont has warned that the proposal is a direct violation of states' rights in that the states involved are opposed to it and have had no voice in the plans. He pointed out that flood control measures could readily be taken without Federal aid, and added. "I don't think Vermont would have ever come into the Union as the fourteenth state, if our forefathers had known we were going to become merely puppets whose strings were to be pulled from Washington . .Congress is the people's only hope to stem this tide toward centralized and administrative government."

Disguised in trappings of flood control and irrigation, with electric power production as a "sideline," a determined body of socialists has pushed ever harder for public ownership of the electric industry in this country. well knowing that if they could impose their alien political philosophy on electric power, the way would be open to socialize other industries and finally establish a national socialist form of government. In attempting to gain their objective. the Federal power politicians have prompted tax exempt government hydroelectric power projects deliberately designed to force out of existence heavily-taxed private power companies upon which the states depend for revenue. Projects such as that pending in Vermont have been planned, carried out and placed under the management of Washington bureaucrats in complete disregard of state and local authority.

The power socialists, by ignoring states' rights, clearly reveal the ruthless character of their schemes. Vermont's Attorney General was not exaggerating when he said that only Congress can stem the tide.

New York Times Columnist Deplores Democratic Attack On Texas Decision

NEW YORK, April 13—(ANP)—The south's devices for evading the recent supreme court decision which gives Texas Negroes the suffrage run thin, Arthur Krock of the New York Times, commented Wednesday.

Reflecting on the fiery outbursts which the decision provoked, Krock said that the unlimited voting by Negroes in Democratic primaries can amount to control of the choice of state officials and members of congress.

"In Mississippi," he said, "this could bring about the election of Negroes, and those aware of conditions in the state view such a prospect with alarm for the consequences. Divisions among the white voters of several other states could have a similar result.

"The decision accentuates a political problem for the Democratic national candidates in the forthcoming campaign. Already administration policies with respect to the Negro population have made the south anxious, evoked a new crop of southern politicians to preach the white supremacy doctrine, and stimulated Democratic disaffection from the President and his regime."

The Republicans, Krock stated, will applaud the decision; their party record and their effort to regain the Negro vote in the east and midwest make any other course unthinkable. "This renders illogical," he said, "the support of their national ticket by the dis-affected southern Democrats on that issue. But by staying away from the November polls those southern voters would permit the Republicans to carry several border states and some situated between these and the deep south, and win the election." He named Kentucky and Missouri as example of the first group and Tennessee and North Carolina of the second.

In searching for means to circumvent the measure, Krock goes back to American history and digs out the supreme court ruling during the time of Chief Justice John Marshall, when the state of Georgia declined to enforce a ruling by the court and was backed by President Andrew Jackson.

"But," the columnist stated, "few would expect President Roosevelt's administration to take the position of his predecessor."

The other method, he said, would be to hit upon some new exclusion device and hope the supreme court would find it technically legal and not concern itself with the intended effect.

Mention is made of a present day suggestion that any party in any state would be on sound legal ground if it based exclusion from primaries on geographical origins instead of race or color, since nothing in the constitution specifically bars a geographical requirement.

An example, Krock stated, the Democratic state convention of Texas would admit to its party primaries "all persons whose original continental ancestors came from any part of the world except that section of Africa which lies between the latitudes of 30 north and 25 south."

"This," he concluded, "may give a rough idea of the narrowness of the legal corner into which Justice Reed's text has driven the deep south Democrats."

"HEALTH" TIPS

Life and Health recently discussed one of the most difficult "health" problems in the country—how to keep from being burned alive in your home. It asked readers: "Will your home catch fire tomorrow? 'Certainly not!' you will say.

"But tomorrow a thousand totally unexpected fires will break out in American homes, destroying property valued at about a quarter of a million dollars and killing more than ten people, mostly women and children. This happens day after day, year after year, with the regularity of clockwork. Why should not your home be one of the next thousand to burn?

"Very likely, there is no good reason. The average American home is all set for a fire, and only a favorable combination of circumstances is required to start one.

"But, by taking intelligent care, you can make your home an exceptionally safe one, because, though some home fires are due to causes beyond the control of the occupants, the great majority are the direct result of careless or ignorant home management.

"Here are some of the principal steps that should be taken in order to safeguard the lives of your family and your property from fire: Put hot ashes in metal, not wooden containers, be sure electrical equipment is in good condition, keep available suitable fire extinguishers, keep matches out of reach of small children never let combustible rubbish accumulate in the home."

These are "health" tips that no one can afford to neglect.

EVERY TOWN A HARBOR

For centuries, commerce has followed the seaways and the waterways of the world. Hitler's grandiose scheme for world conquest had, as one of its objectives, the capture of Suez, water gateway to the fabulous ports of the East. The banks of the Don and the Dneiper have been bloody battlefields because these rivers carry supplies to the army that controls them, even as they once brought food and ores and manufactured articles to a people at peace. Stalingrad and Kiev are important Russian cities because they are ports for river traffic, as St. Louis and New Orleans are important cities in this country. Boston and New York, and Seattle and San Francisco also became important because of their fine harbors. But now the picture is changing as a new means of transportation surges boldly to the fore. In the dawning Age of Flight, business centers will bloom about airports just as surely as they once sprang up around the quay sides.

Nature provided harbors for ships, but inland "harbors" for airplanes can be built by man. Conservative authorities have estimated that the airports of this nation will have to handle three or four times the present amount of air traffic immediately after the war. Not only will airports become essential to a community's business life, but they will help provide jobs for many men now in the Air Forces who will return after the war with a desire to continue in the calling they know best.

Airport planning is not something that can be done overnight. It requires months, sometimes years of study, not only in determining the best possible location for a flying field, but in acquiring the land, arranging financing improving roads, expanding public utility services, and myriad other details. Progressive communities are preparing now to receive the miracle of air commerce which will begin to spread over the world when the war ends. It will keep them humping to be ready for that day.

MISSOURI SEEKS TO BAN JIM CROW IN SCHOOL SYSTEM

Education Committee of Constitution Convention Takes Advanced Step

Jefferson, City, Mo., Mar. 9 th (ANP)—The education committee of the Constitutional convention voted Wednesday night to abandon Missiouri's policy of requiring separate schools for Negroes and that no mention of Jim Crow schools be made in the new constitution.

Action on the part of the committee means that the State has eliminated a policy which has been rigidly adhered to since Civil War days. Prior to the Civil War, Missouri, as a slave state, gave no constitutional or statutory recognition to Negro education.

The committee's action, however, did not come about without great arguments and lengthy discussions. Delegate George W. Kirk of Sikeston said that elimination of the present policy would result in the defeat of the new Constitution by the voters. He said 95 per cent of the people in Southeast Missouri, which has a large Negro population, would vote against adopting the constitution because of this one issue.

When the subcommittee report was offered for approval, Kirk, introduced a substitute motion that a mandatory provision for separate schools be retained. After the committee defeated his motion and adopted the subcommittees recommendation, Kirk declared:

"I move we adjourn sine die. We might as well quit now and save part of the 1,500,000 this convention is going to cost, because the people will never adopt a constitution with the present section left out."

In urging the elimination of the present provision, Delegate Frank L. McCleur of Fulton, president of Westminister college, asserted that the matter should be left to the legislature in case conditions should arise necessitating use of same school by Negro and white children. He said that some counties are now required to maintain separate schools for only four or five Negro children, when their education could be handled more economically by permitting them to attend schools for white children..

David Grant, Negro lawyer of St. Louis, last November at a public hearing before the committee said that "colored clauses are repugnant" and their elimination from the constitution would increase the morale of the Negro race.

FEPC Will Give Congress Budget Of Its Expenses

WASHINGTON, March 9—(ANP) The first budget ever to be submitted to congress by the FEPC is expected to arrive in the offices of the house appropriations committee either late this week or early next, and hearings are anticipated to start late this month.

Neither the committee nor the bureau of the budget would offer any comment on the figures contained in it since that is a matter that is not revealed until the President has approved the estimates.

However, the knowledge that FEPC will submit a budget should set at ease, for the moment, the fears that rose when Sen. Russell of Georgia introduced his amendment to the Independent Offices bill requiring all executive agencies in existence for a year or more to come to congress for further funds rather than receive them through transfers from the President's special funds.

It is freely admitted here that while there is a large element in congress who are sharpening their knives for FEPC to eliminate the agency completely, the statement of Sen. Russell served only to arouse a defense for the committee that would have required other means.

The real threat lays in the restrictions which congress may impose upon the expenditure of the funds it finally appropriates rather than whether any money will be forthcoming at all.

The National Council for a Permanent FEPC was understood to be reviewing its strategy with an eye more to coping with the new situation than with pressing for immediate passage of legislation.

Probe Killing Of Negro Soldier

BIRMINGHAM, March (ANP)—A complete investigation into the fatal shooting of a soldier from nearby Camp Sibert, charged with alleged rape of a Gadsden white woman, was pledged Wednesday by officials of the camp in a telephonic communication with an Associated Negro Press correspondent.

The soldier was slain Saturday by an escort of Gadsden and Etowah county peace officers, who were transferring the suspect from Anniston to Birmingham for "safekeeping."

Lt. Jordan A. Hodgins, acting adjustant of the army service forces, Camp Sibert, explained that "I did not know about the shooting until this (Wednesday) morning." He added that he had a report of the shooting on his desk, but that he had not had time to study it and therefore could "issue no details." He referred the inquiry to the Sibert public relations department.

The soldier, later identified as Pfc. Raymond McMurray, 20, unarmed and handcuffed, was riddled with bullets as he rode in the custody of three police officers from the Calhoun county pail to the Jefferson county jail, Birmingham. The transfer was being made after rumors persisted that a mob planned to storm the jail.

First placed in the Etowah county jail, Pfc. McMurray was later transferred to the Calhoun jail, and when feeling became high was being moved to Birmingham when he was killed under circumstances which have led many to term his death a "legal lynching."

Sheriff O. P. Reagan of Etowah county, Gadsden Police Chief Fay Bowman and Gadsden Chief of Detective Jack Fisher, were absolved of the slaying by Coroner Jack DeGaris, who told newspapermen that his investigation disclosed "the Negro stuck his finger in the sheriff's eyes, breaking his glasses and causing the car to lurch sharply." Sheriff Reagan was driving.

U. S. JUSTICE DEP'T STUDIES SCOPE OF PRIMARY DECISION

WASHINGTON, April 13—(,ANP) In the wake of the supreme court decision of last week declaring that Negroes may participate in Texas primary elections, at least two agencies have gone to work on interpretations and applications of the ruling, it was learned this week.

Victor Rotnem, chief of the civil right section of the justice department, and Tom Clark, assistant attorney general, have been asked by Francis Biddle, attorney general, to prepare a memorandum interpreting the scope of the decision.

At the same time, although Leslie Perry, administrative assistant for the NAACP, it is understood that the legal committee of the association will "in all probability" take up the matter before any formal statement is issued by the organization.

Dean William Hastie is chairman of this committee, which is nationwide in its representation, and numbers about 30 legal lights. Attempts to reach Dean Hastie at Howard university were to no avail. Therefore it could not be determined just what procedure would be followed. A meeting of the full committee might be called, or it may be confined to a few in the area. On the other hand, views and interpretations might be solicited by mail and later collated.

Questions to be settled as a result of the 8 to 1 decision entail application in particular, that is, whether the ruling has validity in states other than Texas. Also, the issue may arise as to whether the right to pay poll taxes for participation in this vear's elections may be extended. In Texas the deadline was in January.

Already the decision has aroused a welter of comment from the south. Some have said point blank that other ways and means would be found to keep Negroes from voting in primaries. None took the position that it could not be done.

FACTS ABOUT COAL

People are wondering whether the coal industry can meet the goal of 620,000,000 tons in 1944, set for it by government officials. Coal men believe it can, provided: First, that there be no more strikes in the coal mines. Second, that the government fully recognize the mining of coal as a vitally essential war activity by exempting trained mine workers from duty in the armed forces. Those already in the services should be returned to their regular occupations, as it is today impossible to replace those trained and experienced men. Third, that an adequate amount of mechanical operating and safety equipment and supplies be made available to the coal industry.

The belief of the coal operators that they can get out the coal needed if given the men and equipment to do so, is strongly buttressed by statistics. An estimated 589 million tons were brought above ground in 1943. If the forty million tons lost to the nation through strikes in that year are added to the total actually produced, the result indicates that production for this year should exceed by nine million tons the official goal set for 1944.

Moreover, the coal industry had the foresight to launch a modernization program years before the war started. Ninety per cent of the bituminous coal produced today is mined mechanically—thanks to the investment of more than $400,000,000 in mechanical operating and safety equipment in the past twenty years.

These are the facts of the "coal crisis." They show that ther will be no serious coal shortage if the industry and hundreds of millions of dollars of private savings invested in it are allowed to produce to capacity.

REVEAL RESENTMENT OF NAVIGATORS TO JIM CROW POLICIES

WASHINGTON, March 9—(ANP) The story of how the first Navigator cadets coped with a Jim-crow policy instituted by an army air force ranking officer during the course of a field trip is going the rounds and is winning admiration for the class and those which followed. The men are now stationed at Selfridge Field, Mich., where they comprise the 447th Bombardment group.

Late last fall the war department authorized and activated a group for training preliminary to the establishment of a Negro bombing outfit. The first class was sent to Mather field where, according to the best knowledge, they were permitted to mingle and eat with their white comrades all with the approval of the white commanding officer of the post.

During the training period Maj. Gen. Couzzens of the army air force inspector-general's staff visited the base and observed the democratic practice. He immediately ordered that the Negro fliers be segregated from the white fliers. So the story goes, the commanding officer called the boys together and broke the news.

The leader of the group, representing some 20 men, inquired whether they were being "ordered" to eat in a segregated mess to which the reply was no. Told this, the group through their spokesman informed the commander that rather than submit to this practice they would eat elsewhere. Further, he explained, so determined were he and his comrades to fly the B-25s for which they were in training that if they were compelled to sleep in tents pitched in the middle of a dust road they would stick to it.

The men began taking their meals at the post exchange. Hearing of the incident, the management of the exchange congratulated them for their courage, and the white girl attendants themselves told the boys that whereas the exchange did not open unil an hour after they were required to report for duty, that they would gladly see that they got warm meals before going to class.

On Christmas day the girls agreed among themselves to see that the Negro cadets got a real meal even though the exchange was officially closed. Again the leader of the group spoke up and is reported to have said: "We're appreciative more than you know, but if we have got to go without eating, Christmas day is as good a time as any to do it."

The fourth class of navigator cadets is now at Mather field. The policy is still the same, but not yet have any of these Negro cadets broken the precedent set by the first class.

POLITICS IN MEDICINE

Portland, Oregon has become one of the most congested war production centers in the United States It is the heart of the Kaiser shipbuilding empire. Long ago, in preparation for the inevitable influx of hundreds of thousands of workers, the government authorized extensive housing construction.

Warned by these preparations members of the medical profession in the area took steps to provide adequate medical care. It was a tough assignment. Many doctors had been called into military service. By hard work Portland's remaining physicians have carried the load. But in Portland as elsewhere throughout the country, a storm of controversy over socialized medicine shakes the foundations of the medical system. In the din, the cry of Portland doctors for more hospital space went unheeded, Government agencies denied repeated requests for necessary materials to build additional facilities. So, as Portland's population increased by the hundreds of thousands, hospitals in the metropolis became increasingly over burdened

A few weeks ago in Portland a young boy was critically burned He was taken to five hospitals before one was found with an extra bed. He died. The attending physician said he might have lived had he received hospital treatment at once. The government regulators of our daily lives have granted materials lavishly for thousands of "essential" homes in Portland. And yet Portland hospitals were denied urgently needed equipment and construction materials. Similar conditions must prevail in other communities. Thus the country while witnessing a political campaign of interference with the American medical political ineptitude that threatens the health of whole cities.

Is this a sample of what could be expected under socialized medicine? If it is, the social planners had better take their crocodile tears to another land --far away.

WHITE CHURCH WOMAN HITS HER SISTERS' RACE BIGOTRY

NEW YORK, March 29 (ANP)—Of a lasting peace is dependent upon the acceptance of Negro Americans as full citizens intitled to the same rights and privileges as white citizens, white church women act as though the price of peace is too high, declared Mrs. Jessie Daniel Ames, white, recently.

Mrs. Ames, director of field work for the Commission of Interracial Cooperation, Inc., declared in an article written in "The Church Woman," January issue, that white church women seem ready to make every conceivable sacrifice to win a lasting world peace as long as it does not mean that the Negro will be given complete economic, political and social equality to enjoy the fruits of a peace based on brotherhood.

What's the Answer

By W. Douglas Brown for ANP

(Q) What was the first Negro newspaper to be published in the south?

(Q) For what purpose was the 13th amendment passed?

(Q) How does the 14th and 15th amendments effect Negroes?

(Q) What state has sent the most number of Negroes to congress to represent their state?

(Q) What Negro served the longest in the United States congress?

(Q) When was the National Association for the Advancement of Colored People founded?

(Q) Where is the national headquarters of the NAACP and who is the present secretary?

(Answers on Page 7 Col., 5)

LECTURE SERIES ON RACE RELATIONS TO BEGIN IN CHICAGO

CHICAGO, April 13—(ANP)—The Chicago Civil Liberties committee has arranged a popular lecture series on the problems of anti-Semitism and racial tensions, beginning April 24 with Carey McWilliams of Los Angeles, the author of "Brothers Under the Skin," at Kimball Hall.

On following Monday evenings the lectures will be heard at Curtis hall in the Fine Arts Building. Other speakers in the series include Earl Brown of Life magazine staff on "Why Race Riots?" Prof. Alfred M. Lee of Detroit on "Subversive Groups and Race Riots," Miss Frances Sweeney, executive secretary of the American Irish Defense association of Boston on "The Techniques of Combatting Anti-Semitism," Dr. Robert C. Weaver of the mayor's committee on race relations on "Racial Tensions in the United States," and Rabbi Trachtenberg of Easton, Pa., on "The Role of the Jews and Anti-Semitism in the Modern World."

Ira Latimer, executive secretary of the Civil Liberties committee, stated that the purpose of the lectures is to provide expert counsel and adequate information to Chicago community leaders to develop and carry out a program of popular education and constructive action through local organizations. "In this wartime presidential election year the stirring up of racial tensions has become the most important civil libertics problem according to the department of justice," Latimer said.

DESTROYING CONFIDENCE

Bituminous coal mine operators and coal miners have endeavored for fifty years to evolve the most practicable form of working agreement in the mines. A fundamental principles of all negotiations carly agreed upon by both parties, was that the miner should be paid for time worked at the face of the mine—that is, actually gettting out coal. Early in 1940 an investigation was held by the Office of Wage and Hour Administration to determine whether or not the method of paying miners should be changed to a portal to portal basis in order to conform with the Fair Labor Standards Act, thus automatically including travel time within the mine as part the traditional "face to face" method best expressed customs and desires of the miners, and in no way conflicted with the act.

At the time of the investigation, officials of Mr. Lewis' United Mine Workers stated that: "This method of measuring the working time at the place of work has been the standard provision in the basic wage agreements for almost fifty years, and is the result of collective bargaining in its complete sense.

"The uniform high rates of pay that have always been included in the wage agreement of the mining industry contemplate the employe's working day beginning when he arrives at his usual place. Hence, travel time was never considered as part of the agreement or obligation of the employer to pay for in this industry, nor as hours worked by the employes, and this has been the case since the eight-hour day was established in the industry—April 1, 1898.

"It is urged that any ruling requiring. . . .a change. . . .to any new standard of measurements of time worked____would create so much confusion in the bituminous industry as to result in complete chaos, and would probably result in a complete stoppage of work at practically all of the coal mines in the United States."

Three years later the same labor leaders who made this statement did tie up the coal mines by arbitrarily reversing their long established positions and demanding portal to portal pay. And they did it while the nation was in the midst of a bitter war for survival and completely dependent upon maximum coal production. It is just this kind of irresponsible action that is destroying public confidence in present labor leadership.

NEGRO DEMOCRATS ENDORSE ROOSEVELT FOR ANOTHER TERM

By Ernest E. Johnson

WASHINGTON, March 9—(ANP) Some 50 odd Democratic leaders, "the guys who hold the vote back in the district," representing 12 states convened here a week ago in harmony, drafted a set of challenging resolutions for the benefit of their party's leadership, and went away from here determined to work hard for the re-elcction of President Franklin D. Roosevelt for a fourth term.

"We believe we've done a job," Emmett Cunningham, president of the Michigan Federation of Democratic clubs and one of the individuals sending out the call, declared Saturday afternoon. "We've got a few things to say to the 'people' upstairs, and when we do, we are confident that our people will continue to support the Democratic party this year." He was talking about the presentation of the group's viewpoint to Robert Hannagan, chairman of the Democratic National committee.

This was substantially the opinion of Rep. William L. Dawson of Chicago, Robert S. Hartgrove of Jersey City, Herbert L. Bruce of New York, Frank K. Summers of East St. Louis, Ill., and Silas F. "Shag" Taylor of Boston.

Contrasting with the meeting held two weeks ago by the Republicans in Chicago, this body was devoid of rancor or factionalism, and refused to establish any permanent organization which would set itself apart from the main organization of Democrats. It agreed, however, for its own purposes, that a temporary steering committee should continue to function under Cunningham's direction until the party's convention in July.

There was no lack of awareness among the leaders gathered here as to the main line of argument that the opposition is expected to lay down in order to woo Negro voters, namely, the mistreatment of Negroes in the armed forces. The discussion of the resolution regarding this matter was perhaps the hottest issue debated.

Congressman Dawson, a Kelly-Nash machine committeeman in Chicago, considered that responsibility should be placed upon "a reactionary and prejudiced clique" within the military establishment. Others, however, stoutly contended that this was an obvious evasion of the issue. Both Bruce and Joseph F. Albright of St. Paul, Minn., minced no words in declaring that the party workers would have to be unequivocal in their own statement of position, and that the leadership ought to be appraised that concrete measures should be taken to eradicate the situation. They considered this the only satisfactory way of meeting the argument.

This is the resolution ultimately adopted after it had been re-written in a special meeting of the resolutions committee: "Under our commander-in-chief, Franklin D. Roosevelt, the Negro soldier, sailor and marine have achieved a greater degree of participation in the armed forces than at any other period in the history of our country. At the same time, we condemn without reservation the mistreatment, discrimination and segregation of Negro men and women in the armed forces of the United States. As citizens sharing in the sacrifices necessary for the defensc of democracy, we demand that all men and women be granted full opportunity to fight for the preservation of our democracy without regard to race, creed or color."

ATLANTA COLORED CITIZENS PREPARE TO VOTE THIS YEAR

Followers of Roosevelt Say They Will Take Part in Democratic Primary on July 4.

ATLANTA, April 13—(ANP)—Intention to participate in the Georgia Democratic primary scheduled to be held significantly on Independence Day, July 4, was voiced Tuesday by several Atlantans in light of the United States Supreme Court decision in the Texas white primary case.

"I believe the decision of the Supreme Court gives me a right to vote in our primary on July 4," asserted C. A. Scott, general manager of the Atlanta Daily World, "and I intend to vote on July 4. I believe in the leadership of President Roosevelt and as a man I desire to vote in his party."

"Now that the Supreme Court has decided that every man including the Negro has a right to vote in a primary in a state when office holders are chosen through the primary, I intend to excrcise my franchisc by voting in the primary July 4," was the comment of Dr. Forrester B. Washington, director, Atlanta University School of Social Work.

"As a Southern Negro who has voted the Democratic ticket in three different southern states and voted in the Democratic primaries of two of these states, I am gratified at the recent decision of the United States Supreme Court," said Dr. Rufus E. Clement, president of Atlanta University. "I must confess, however, that the decision was not at all surprising to me. It appears to me every clear-thinking, fair citizen of a democracy which has an opportunity for world leadership and which at the same time professes to be a great Christian nation will agree that that nation could not do other than to give every qualified citizen regardless of race, color, creed, or sex, the right to determine his leaders in government. It is to be sincerely hoped that the decision will be fully accepted by all honest people."

"I shall be one of the first to exercise my constitutional rights by voting in the next Georgia Democratic primary on July 4," tersely commented J. A. Batts, insurance executive.

"The Supreme Court decision giving Negroes the right to vote in the Democratic primaries in the south amounts to a second emancipation," contended Dr. Willis J. King, president of Gammon Theological seminary. "It means that Negroes are on the way to complete citizenship. This is as it should be; the democracy we fight for in Europe and Asia ought to be available in America."

"The NAACP comes forward again to do away with an injustice—the white primary—which not only is unfair to Negroes, but a hindrance to white as well," asserted C. L. Harper, president of the Atlanta branch, who added, "The conscience of our white neighbors will be greatly eased when they grant the minority group in their midst the same rights our soldiers are fighting to maintain in distant lands."

Here's the Answer

(A) The Colored American, which began publication in 1863. L. T. Shuffle was the editor.

(A) The 13th amendment to the constitution adopted Dec. 18, 1865, made slavery unconstitutional in the United States, or any place subject to its jurisdiction.

(A) It gave them the right of citizenship, and the right to vote.

(A) South Carolina has sent eight representatives to congress. They were Robert B. Elliot, Robert C. DeLarge, Joseph H. Rainey, Richard H. Cain, Alonzo J. Ransier, Thomas E. Miller, George W. Murray and Robert Smalls.

..(A) Joseph H. Rainey, of South Carolina who served in five congresses, for a total of 10 years.

(A) The National Association for the Advancement of Colored People was founded in 1909.

(A) The headquarters of the NAACP is located at 69 Fifth Avenue, New York City, New York. The present secretary is Walter F. White.

RACE WOMAN APPOINTED

(Continued from Page 1)

plant-breeding techniques developed in recent years the Department feels there is a strong likelihood of success in getting the desired high-yielding varieties.

If plans work out as Dr. Brandes and his assistants think possible, high-yielding varieties of sorgo may well become an imporant crop in various sections of the United States. None of the sorgo seed brought back by Dr. Brandes is available for distribution.

GROW MORE IN '44

The first week in April is to be observed as "Grow More in '44 Week." Those who have, or who can get suitable plots for Victory Gardens can join in this observance by getting out their garden tools, going to work, preparing the garden plot for a number one Victory Garden to help lick the Nazis and the Japs.

You know, instead of 20 million gardens we need 22 million this year, and instead of these gardens producing eight million tons of food, they are expected to produce 10 million tons. This not only means more gardens, but it also means better gardens. It means that the 671,790 Negro farmers in the country right down to the last man will will need to grow a garden this year, and it means that the 2 1-2 million Negro farm families in villages, towns and cities where land is available can also help by growing a garden, because we'll need every ounce of food that can be produced.

MORE SPICES IN SIGHT

More spices for food seasoning will be available this year, according to the War Food Administration, which says that the improvement in shipping facilities makes this increased importation possible.

With the exception of a shortage of black and white pepper, which were imported before the war almost exclusively from the now Japreld Dutch East Indies, other spices will be more plentiful than last year.

Importation of allspice and pimento from Jamaica, cloves from Zanzibar and Madagascar, with Zanzibar supplying most of our supply, cinnamon and cassia from China and Ceylon, with China out of the picture at present, ginger from Jamaica and India and mace and nutmeg from Grenada in the West Indies, have improved greatly.

Although some pepper is grown in India, shipping difficulties make its use difficult for the general trade. Sufficient supplies of pepper are on hand to cover our needs until 1946, under present methods of distribution.

WFA SUPPORT PRICES

The War Food Administration has announced the 1944 schedule of support prices for farm products. The support price program will be carried out through loans, purchases of commodities for military, Lend-Lease, and other Governmental uses. For some commodities, direct payments will be made to farmers, or processors.

The support prices cover hogs, corn, cotton, rice, tobacco, soybeans, peanuts, wheat, sugarcane, potatoes, eggs, and some other commodities.

THE SUNFLOWER

In some sections the sunflower is just a flower that nobody seems to care much about, but in Florida and Argentina and many other areas, the sunflower is an important plant.

Strong winds often blow across the Florida peninsula. Sometimes these winds ruin the bean and other crops of the truck growers, so wind-breaks are needed. Of course, pines skirt the outer reachs of the farms, forming the first line of defense, but it s the sunflowers that stand like sentinels close by in the fields guarding these crops against the wind.

In Argentina, the sunflower is becoming an important source for edible oils. Within a few weeks, Argentine farmers will begin harvesting a record sunflowerseed crop estimated at between 1,100,000 and 1,300,000 short tons. Sunflowerseed also provides an excellent feed for poultry.

MR. M. L. WILSON

(Continued from Page 1.)

time high production goals.

Among the appointments, according to an incomplete report, will be 65 war food production assistants, 99 war food preservation assistants, 90 clerical workers, and 15 urban war food production and preservation assistants. Others are to be added. The urban workers will serve victory gardeners and home canners in the larger cities of North Carolina, Virginia, and Texas.

In the various states where the emergency workers are being placed, special programs have been developed whereby these new aides will be fully utilized in helping farm families produce more, preserve more, market their surpluses systematically, make the best use of available labor, conserve the soil so that production can be kept at maximum levels, and grow the "basic seven" foods at home so that the farm family can keep itself in top fighting trim.

The war food production and preservation assistants will generally be placed in counties which heretofore have not had full-time Extension workers. Their work will be quite similar to that of the regular county farm and home domenstration agents who have now geared their program to a war tempo. The clerks are being employed to provide essential clerical help to farm and home agents whose increased wartime responsibilities, together with curtailed travel make it necessary for them to do a considerable part of their educational work through letters, and leaflets.

According to available figures, North Carolina will employ the largest number of emergency workers, placing eight production assistants, eight preservation assistants, seven urban workers, 46 clerks and two state supervisors, or a total of 71 new workers. Arkansas is second with a total of 36 new workers, South Carolina, third with 22, Oklahoma, fourth with 21, and Mississippi, fifth with 20. Appointments in the other states are as follows: Alabama, 10, Florida, 19, Georgia, 16, Kentucky, 2, Louisiana, 10, Maryland, 2, Tennessee, 12, Texas, 15, Virginia, 4, West Virginia, 10, and Missouri, 2.

F. S. A. BORROWERS WIN

(Continued from Page 1.)

sources of hams for the Association.

Both first and second prize winners in this year's show are Farm Security Administration borrowers. Farmer Fluellen, first prize winner, is buying a 120-acre farm under the Bankhead-Jones Farm Tenant Act which is administered by FSA. This marked the 15th year that he has exhibited hams at the show, but it was the first in which he had been a winner. Said he, "I have a wife and 11 children and it takes a lot of meat for us. This year I raised 40 hogs; killed 16 for home use, and sold nine."

Mrs. Fluellen is in the Food for Freedom fight, too. She looks after the garden, the chickens, and the canning. Last year she canned 350 quarts of fruits and vegetables, and 125 quarts of meat.

The second place winner, Mr. Barnes, is renting a 60 acre farm. FSA made him a loan last year to buy workstock land some baby chicks. Said he, "I am glad to be winner again this year (he won once before in 1938) but it s been kinda tough keeping my farm going with both of my boys in the Army."

Talking about prospects for this year, both winners pointed out that they plan growing more food crops. Farmer Barnes is increasing his peanut acreage from 12 to 15 acres, and Farmer Fluellen is going to try to raise 50 instead of 40 hogs so that there'll be more extra meat for our fighting men. "I had 15 hams in the show this year," says Mr. Fluellen, "but next year I'm aiming to have 20."

The Ham and Egg Show was concluded with a folk festival in two parts presented Friday evening, and Sunday afternoon.

4-H MOBILIZATION

(Continued from Page 1.)

Gardens were planted; last year the Department asked for 18 million and got 20 million which accounted for about eight million tons of food, or nearly 40 per cent of all vegetables grown in the United States for fresh consumption. This year the goal is 22 million gardens. And more important still, WFA expects 10 million tons of food or a 25 percent increase in production through this 10 percent increase in the number of gardens. That means that each garden is expected to produce more.

Well, gardeners have two things to bank on: more experience, and more supplies such as seed, fertilizer, insecticides, and garden tools. The extra gardens and the extra food which will be grown in them is needed to supplement production by commercial growers who have just about reached the limit of their productive capacity. This extra food will help assure adequate supplies for our fighting men, our allies, and our war workers here at home.

Says Secretary Wickard. "Food is one of the strongest weapons fighting on the side of the United Nations. As you plan your Victory Garden program for 1944, you do so with the knowledge that you are engaged in one of the most vital of all home-front war jobs.

NEGRO FARMERS GROW EXTRA FOOD SUPPLIES

Whether it's in Arkansas or Florida, Negro farmers are increasing their production of vital food crops. For a time it was thought that at best Negro farmers could only grow enough food to meet their own home needs, but recent reports reaching the U. S. Department of Agriculture show that thousands of Negro farmers, anxious to help the war effort, are growing considerably more than enough to meet their home needs.

For example, in Arkansas Negro farm families marketed nearly $40,000 worth of milk, vegetables, beef, eggs, chickens, hogs and miscellaneous products. And in Florida Negro farmers raised 98,000 chickens, produced 375,000 eggs, and sold $32,000 worth of produce. With the extra money from eggs, chickens and other food crops, the farmers in Arkansas and Florida purchased $18,0000 worth of war bonds and stamps.

As a result of this increased production by Negro farmers, and by the other farmers of the nation, the War Food Administration shipped 11 billion pounds of lend-lease food and other agricultural products to our allies, the British Empire, Russia. North Africa, Greece, West Africa and the Netherlands.

BRIEFS

The War Food Administration has announced that packers have been authorized to release over 3 1-2 million pounds of dried apples, and nearly a million pounds of currants for sale to civilians.

Here's good news for the bumper baby crop: to meet the increased need for milkbase infant foods, manufacturers may produce twice as much in 1944 as they did in 1941. providing certain scarce materials such as fats, oils, and milk sugar can be made available.

Civilian supplies of sugar will be lower this year than last due to the increased demands for sugarcane molasses for industrial alcohol which is used in the manufacture of synthetic rubber and other vitally needed war materials. Total sugar allocated for civilian use this year is 5,074,906 short tons, raw basis. This is a reduction of six percent below the amount civilians consumed in 1943.

Perhaps the sugar supply would be even shorter were it not for the 1,7000 Jamaicans who are saving a 33,000 acre cane crop in Florida.

Our lives must be patterned after the Great Example in order that we may be fit to be followed by others.

EACH CIVILIAN TO RECEIVE

(Continued from Page 1.)

England was the first nation to recognize the importance of dried eggs during this war. They use dried eggs for military forces as well as for civilians. For them, the produce has meant the difference between a diet deficient in proteins and one which is considered adequate. One five-once package of dried egg powder is equivalent to one dozen eggs.

Russia is another of our allies which is using American dried whole eggs to supply military needs.

Dried eggs are being used exclusively on every battlefront by U. S. armed forces and allies. This year, direct military use of the product is expected to be greater than it was in 1943, consequently a large portion of the total quantity of eggs allocated for U. S. military and war services, for our allies and liberated arcas, will be in the form of dried eggs.

The equivalent of slightly more than 134 million dozen shell eggs will be used for U. S. military and war services during the first quarter of 1944. The equivalent of about 161 million dozen shell eggs are allocated to the Allies, liberated areas, and territorial possession for the same period. Civilians have been allocated 966.7 million dozen eggs for the first quarter.

Poultry and egg industry will require approximately 28 million tons of feed for 1944 and producers are being asked to keep production within the goal limits in order to conserve the feed supply.

It has been repeatedly pointed out that poultry raising among Negro farmers has shown a steady increase in the past few years. Last year their flock produced nearly 100 million dozen eggs.

500 Colored Women Have Jobs In P. O. Of Chicago

CHICAGO, March 23 (ANP)—Negro women here have entered the United States postal service of the city in large numbers, filling the places of men for the duration. A recent survey by the local branch of the National Alliance of Postal employes indicates that there are approximately 500 now in temporary assignments, including details to most of the clerical units of the mail functions.

While Negrose hold about 15 per cent of the 14,000 jobs in the Chicago post office, colored workers occupy only 13 of the more than 600 supervisory, executive and administrative positions, or only about two per cent of the advanced jobs, the alliance officials reported. A majority of the Negroes in the service hold clerical positions, while many are letter carriers, motor vehicle servicemen, laborers, custodial workers and special delivery messengers.

YOUR SECURITY THEIR BUSINESS

When the day's work is done millions of people seek the sanctuary of their homes. Home is the one place where the strife and turmoil of war can be temporarily shut out each evening. It is a haven of security.

The public may not generally realize it, bnt the protection of homes as well as factories against fire, is an important phase of the fire insuranee business. Fire prevention enginarrs, trained and maintained by the fire insurance companies, inspect cities and towns map fire hazards, cheek water supply, fire fighting equipment, and help local authorities in many other ways. In the Underwriters' Laboratories scientists test building materials, wiring, radios, irons vacuum cleaners; literally thousands of items, any one of which may carry a potential threat of fire or explosion.

Fire prevention activities of the fire insuranee companies have saved hundreds of millions of dollars of property and thousands of lives, and have drastieally reduced the eost of insuranee. In the last 30 years, both the rate of fire loss and the average cost of fire msuranee have been eut more than 40 per eent.

While government planners talk in astronomical terms of greater security for the human race, it is interesting to note the progress of a single industry toward making security a reality. One would not have to look very hard to find plenty of other enterprises which, in the course of their existenee, have made this country a better placee in whieh to live. Those who would destroy private industry should be reminded of this faet..

MODERN BEN FRANKLIN

In the days of Benjamin Franklin a bucket of water was the principal antidote for aecidental fire. Since Franklin's day, the industrial revolution has greatly complicated the problem of fire. Fire in the twentieth century strikes in varied and deadly forms. Fire prevention has beeome a lethal raee between the fire prevention authorities and industrial growth. As industry developed, so new fire hazards in unexpected forms developed.

It has been the task of the prevention experts to keep a jump ahead of fire. They have had to devise modern fire hazards. They have had to edueate the general public to the fact that the eommon enemy, fire, has grown terrifyingly in stature in the last eentury. During the last few decades methods of applying water or other agents to extinguish fire have improved rapidly, especially in industry. Automatic extinguishing systems have assumed three general forms: First, automatic sprinklers which produce a rain of water, wetting down the ceiling and all material within a radius of ten feet of each head. Such systems are examined by experts maintained by state fire insurance bureaus. Insurance companies have a speeial sprinkler risk underwriting department

The second form of automatic extinguishing device makes use of carbon dioxide to dilute the oxygen content of the air.. Its use is still in the pioneer stage

The third form of extinguishment is the exclusion of oxygen—smothering—and may be accomplished by several methods. This form is valuable in connection with oil fats and greases and alcohol, all of which burn violently reaet unfavorably to water.

The seience of fire prevention has more than kept pace with the growth in fire hazards. But public education has lagged, and therein lies the secret of the staggering fire losses that ravage the nation annually. Many people know no more about modern fire prevention than did Ben Franklin.

Rockefeller To Back Drive Of Negro Colleges

NEW YORK, March 16 (ANP)—The United Negro College Fund campaign completed its organization Thursday with the addition of another outstanding name to its list of executives. John D. Rockefeller, Jr., accepted the chairmanship of the national campaign advisory committee this week. Other officers are Walter Hoving, president of Lord and Taylor and chairman of the board of USO who serves as chairman of the United College drive; and Winthrop W. Aldrich, head of the Chase National Bank, the largest bank in the United States, who is serving as treasurer.

Presidents of the 27 Negro colleges which are conducting the campaign to provide funds for current needs will visit the various cities in which solicitation of funds will be started on May 1 and actively participate in the endeavor, President F. D. Patterson, head of the group announced. Plans point to Pittsburgh where Ira W. Lewis has accepted the leadership of the local committee, as the first focal point.

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., MAY 15, 1944 No. 4.

Over Two Million Negro Families In '44 Victory Garden Effort

1944 GOAL IS SET FOR THE ENTIRE NATION

Washington, D. C.—To help the Nation attain its 1944 goal of 22 million Victory Gardens more than two million rural and urban Negro residents will grow gardens this year, according to estimate made in U. S. Department of Agriculture.

Conscious of the increased wartime needs for food to feed our fighting men, our allies, the people who are being freed from Axis aggression, as well as the folks here at home, Negro Americans have indicated that they will grow more and better Victory Gardens this year. It is estimated that 620,000 colored farmers and approximately 1,300,000 colored residents of towns and cities grew gardens last year. Since there are only 681,790 Negro farmers in the country according to the 1940 census, the 10 percent increase or 200,000 extra gardens which colored families are expected to grow this year must come largely from urban residents, garden specialists point out.

In many of the larger cities where small garden plots are difficult to find, several families are forming community projects with garden space allotted to each family. Sometimes these projects are on vacant lots, and occasionally, one or two acres are rented from nearby farmers.

Through the community garden projects new and inexperienced gardeners are able to get help from garden leaders and experienced neighbors. This kind of help may be doubly important this year because the gardens are expected to be more productive. With only a 10 percent increase in the number of gardens, the wartime goals are calling for a 25 percent increase in vegetable production. This means that there must not only be more Victory Gardens, but also that they must be bigger and better.

In addition to aid which may be received from experienced neighbors, other sources of garden information are the vocational agriculture teacher, the county and state Extension office. The latter is situated at the state agricultural college. Each state Extension office has prepared a special garden bul-

(Continued on Page 8. Column 1.)

FAMINES FOLLOW WARS

The Department of Agriculture's tabulations on what farmers intend to plant in 1944, indicates that the so-called guaranteed support prices failed to coax them into seeding more oil crops such as soya beans, peanuts, flaxseed or dietary standbys such as peas, beans and potatoes. Flax plantings for linseed oil are down sharply. Apparently increased acreage will go into feed grains because of shortage of livestock feed last year.

"Failure of farmers to go along on some of the War Food's programs," says Business Week, "is due to fear that there will be too few hands and new machines. Dairy product needs cannot be met; milk output for months has consistently been behind year-ago levels."

Farming has long been the professional "fixer's" plaything. Let us hope that it is not thrown too far off center by the theories of the parlor cowhands.

37 COUNTIES EARN "A"; AWARD THIS YEAR

Tillers of the Soil to Win War Production Goal

Washington, D. C.—Negro farmers helped 37 counties earn "A" Achievement awards for outstanding wartime food production in 1943, according to figures released this week by the War Food Administration.

Reports compiled by the WFA show that out of 38 counties in the entire South which received "A" banners, Negroes operate farms in all but one of them.

The WFA banner awards were presented recently to county officials in the various states by the Army in appropriate ceremonies followed by county-wide celebrations in which not only were the counties honored, but also every farm family in these victory counties. Working through the USDA War Boards, all of the agricultural agencies in the various states cooperated in the production work, and also helped to plan the presentation celebration.

Counties selected by WFA for special awards not only met, but often exceeded their production goals. They shifted from peacetime to war time production, made full use of their land and labor resources, conserved extra food supplies, contributed to scrap collections, fat drives, and gave full support to war bond campaigns.

Among the victory counties which have a large number of Negro farmers are Laurens and Early counties Ga., St. Landry parish, La.; Simpson, Hinds, Claiborne, and Holmes, counties, Miss.; Shelby county, Tennessee; and Cherokee county, Tex.

(Continued on Page 8, Col. 4)

FOUR NEGRO SPECIALISTS NAMED

Seek to Assure Achievement for All-Time High

Washington, D. C.—Seeking to assure the achievement of this year's all-time high farm production goals, four state Agricultural Adjustment Agency offices each appointed a Negro contact representative last week to help Negro farmers further increase their output of vital war crops, C. D. Walker, director of the southern division of War Food Administration's AAA, announced Monday.

The states in which the appointments were made are Arkansas, Georgia, Louisiana and Texas. This makes a total of six states that now have full-time Negro AAA farm specialists. The other states are Mississippi and Oklahoma.

The new appointees are Henry W. Espy for Arkansas, J. O. Williams for Georgia, Joshua A. M. Lloyd, Louisiana, and Colquit D. Yancy, Texas. W. E. Ammons, and A. H. Fuhr for Mississippi and Oklahoma respectively were appointed last year. Other state offices may make similar appointments.

Dr. F. D. Patterson and Claude A. Barnett, special assistants to the Secretary of Agriculture, who have discussed with AAA officials of all Southern states how the appointment of Negro contact representatives could increase Negro farm production, said this week that these appointments are a major step toward reaching this year's food goals. They pointed out that these new AAA representatives will help Negro farmers in the four states to make greater use of conservation practices as a means of upping production.

(Continued on Page 8, Col. 4)

JAMAICANS AND BAHAMIANS ENGAGED

Twenty-five Thousand Employed in U. States

Washington, D. C.—War Food Administration's Office of Labor has announced plans to have about 25,000 Jamaicans and Bahamians in the United States this year for farm work. Last pear 13,700 Jamaicans and Bahamians were employed in this country as agricultural workers under international agreements. They worked principally as harvest hands on a variety of specialty crops in 20 states along the Eastern Seaboard and in the Middle West.

NEGRO NAMED TO POST IN OFFICE OF LABOR

C. J. A. Paddyfote, commandant of cadets at Florida A. and M. College, has been appointed assistant labor supply specialist for the Atlanta division of the War Food Administration's Office of Labor. Mr. Paddyfote will assist in the recruitment, placement, and supervision of Bahamian and Jamaican farm workers in Florida and other areas. He is a native of the West Indies and has a broad understanding of the customs and traditions of the islanders.

Mr. Paddyfote came to the United States several years ago and received his training at Florida A. and M., Tuskegee, and the University of Iowa.

FOOD OUTLOOK FOR APRIL, MAY, JUNE

The War Food Administration has allocated slightly less meat, but more dairy products for civilians during April, May, and June, it was announced last week.

For this period, civilians have

(Continued on Page 8, Column 1.)

TEXAS EXTENSION AGENTS ACTIVE

Lone Star Farmers Helping in Production

Washington, D. C.— According to field reports received by the U. S. Department of Agriculture, Negro Agricultural Extension workers in Texas did a great deal in 1943 to help colored farmers get into wartime food production.

The regular Extension staff, assisted by 2,230 volunteer leaders, helped farmers in 50 counties to increase their production of war crops, Dr. E. B. Evans, state leader for Negro Extension work reports. Among other things, 8,269 families were assisted in the use of commercial fertilizer, 10,580 farmers were assisted in a program of improved methods of feeding livestock and poultry, 1,006 farmers were helped in obtaining purebred livestock, terraces were run on 810 farms, and 3,036 farmers were assisted in their land use problems.

Extension agents also helped farmers produce 1,331,547 pounds of meat, increase their poultry production by 186,000 birds, and were instrumental in getting 18,684 families to enlarge their gardens. In war bond rallies sponsored by county agents, farmers bought $202,019.77 worth of war bonds and stamps. With the Extension staff, temporarily enlarged by wartime emergency workers, more Texas farm families will be helped with their food production effort this year.

FEEDING PEOPLE TOUGH JOB

A food authority recently made the observation that: "The farmers of America are winning the battle of production on the food front, and the nation's consumers may reasonably expect that the 1944 food supply will equal or exceed the near record total of 1943." food "in the raw" on the farm is not food on the table ready to eat.

Food is usually produced many miles from the point of consumption. No matter how much is produced, it is of no benefit to consumers until it is distributed. The food distribution industry has been operating so efficiently during the emergency that few people recognize the vital link which it provides between the producer and consumer. Nor is there outward indication of the struggle of food distribution to keep retail channels functioning smoothly in the face of a dismaying manpower shortage and other operating problems.

A short time ago, one representative of a large food chain told of the exhausting effort of a handful of butchers to supply retail outlets with cut meat where women serve as clerks in the meat departments. These butchers have so far kept pace with demand. The counters and cases display the same expert touch as when each shop was staffed by an expert butcher. Consumers live in blissful ignorance of this particular shortage in experienced personnel. Similar problems are encountered in practically every phase of distribution. They have been overcome by ingenuity, resourcefulness and hard work.

No one knows better than the retailer the difficulties of moving food from the farm to the table under wartime conditions.

Enlarged AAA Staff to Push Food Production

Four new Agricultural Adjustment Agency contact representatives have been appointed in four states to encourage increased wartime farm production through sound soil conservation practices. They are pictured above with regional AAA field officers, and other contact men who were appointed last year. In the front row, left to right, are J. O. Williams, newly appointed contact representative for Georgia; James P. Davis, Albon L. Holsey, AAA regional field officers; second row: left to right, are A. H. Fuhr, contact man for Oklahoma; Wm. E. Ammons, contact man for Mississippi; Joshua A. M. Lloyd, Henry V. Espy, and Colquit D. Yancy, newly appointed contact representatives for Louisiana, Arkansas and Texas respectively.

WOMAN'S PAGE

Mmmm What Flavor! And Takes so Little Meat

The next time you are swapping "meat extender" recipes with your best friend, pass this new one from Armour Kitchens along to her. And be sure to use it at your house right away. Armour's Star Ham Balls taste so good, they'll be a household favorite meal!

To serve four persons, crush enough corn flakes to fill 1 cup. Mix with 1 tablespoon brown sugar and 1-4 teaspoon cloves. Add 1-2 cup evaporated milk. 1 Cloverbloom egg, 1-4 lb ground lean pork and 1 lb ground Star Ham shank meat. (For the greatest taste enjoyment, specify Armour's Star when getting the ham. Star Ham is mellowed in fragrant hickory smoke and is always deliciously tender.)

Shape this mixture into 8 balls. Place balls in flat open baking pan and bake in the oven set at 350 degrees F. for 40 minutes. Serve with any broiled fruit, such as peaches, oranges or pears.

Watch for another Star meat recipe from Armour Kitchens next week. These recipes are developed by food economists who specialize in meat.

*ARMOUR AND COMPANY

BRAN FISH STUFFING

1-4 cup fat (drippings)
1 tablespoon scraped onion
1 1-2 cups stale bread crumbs
1-2 cup shredded bran cereal
1 tablespoon chopped parsley
1 1-2 tablespoon lemon juice
1-2 teaspoon salt
1-8 teaspoon pepper

Heat fat, add onion, bread crumbs and shredded bran; stir over low heat until crumbs are slightly brown. Add lemon juice, parsley, salt and pepper. Yield: Sufficient stuffing for 3-4 pound fish. Note: One to two tablespoons water may be added if moist dressing is desired.

Fish contains flavor possibilities that challenge your most particular preparation and remember, cook your fish at low temperature not too long. Both flavor and digestibility will be your reward.

Many are the variations possible, especially in the stuffing for fish. The bran stuffing is a crunchy, well seasoned dressing which adds new interest to baked fish. However, many still like a plain bread stuffing.

DRESSING FOR FISH

1 cup enriched bread crumbs
1 slice of onion, minced
1 egg
2 tablespoons butter
1-2 teaspoon salt
Bit of cayenne

Mix above ingredients. Stuff fish with this and cook until done. When done, take up on a hot dish and make a sauce by adding in the pan one cup of sweet milk, one-half cup water, a pinch of salt, and thicken with flour. Garnish with sliced eggs or lemon and parsley.

Menu suggested:

Baked Fish
Steamed Potatoes Parsley
Spinach Ring Buttered Beets
Pineapple Grapefruit Salad
Corn Meal Muffins
Lemon Chiffon Pie Coffee

Endless are the ways to prepare fish. Fish left from baking may be used in many ways. One of my favorites is in:

Fish Loaf with Egg Sauce

Temperature 375 degrees—Time 1 1-4 hours.

2 cups flaked fish or
1 can salmon
1 cup bread crumbs
1 cup milk
2 eggs
3 tbsp. butter
1 tbsp. minced onion
1 tbsp. minced green pepper
1 tsp. salt
1-2 tsp. pepper

Egg Sauce

1 cup hot stock
1-2 cup hot water
juice 1 lemon
3 tbsp. flour
2 tbsp. oil, butter or drippings
3 hard-cooked eggs
Paprika for color
Salt and red pepper

Stir flour in fat, add hot water, stock and lemon juice, season, add hard cooked eggs, sliced or chopped. Serve with fish. Chopped parsley may be added.

Fish croquettes offer another delightful way of using leftover or canned fish. This recipe is given in request section.

On meatless days serve a loaf using soy beans and rice. Attractive and appetizing, abounds in nutritional goodness, too.

SOY, RICE LOAF

3-4 cup rice
3 tablespoons fat
3 tablespoons flour
3-4 teaspoon salt
1 1-2 cup evaporated milk
1 1-2 cups cooked soy beans

Pour rice into fine sieve. Rinse with cold water. Drop into 1 quart briskly boiling water to which 1 teaspoon salt has been added. Boil until tender, about 15 minutes. Drain—cooking water may be saved for soup or gravy. Rinse rice with hot water. Melt fat. Blend in flour and salt. Add milk and cook over boiling water until thick, stirring constantly. Add rice and soy beans. Pour into greased loaf pan Bake in a moderate oven (350 degrees)

HOT CROSS BUNS

2 cups milk, scalded
2 teasp. salt
1 cup sugar
1-4 cup shortening
1 cake yeast
6 cups flour (about)
3 eggs, separated
1-2 cup seeded raisins
1-2 cup currants
1-4 cup shredded citron
1-2 cup coarsely chopped nuts
1-2 cup confectioner's sugar

To hot milk, add salt, sugar, and shortening. When lukewarm, add crumbled yeast; stir until dissolved. Add 3 cups flour; set, covered with cloth in warm place until double in bulk (about 2 to 3 hrs.) Beat 2 eggs; add with raisins, currants, citron and nuts to yeast mixture. Beat until well mixed; add flour slowly, adding only enough to make soft dough. Kneed lightly 5 to 8 mins. on lightly floured board until dough is smooth and elastic. Shape in 2-in, round biscuits; place in greased pan 1-in. apart. Cover; let rise in warm place until double in bulk. Make deep cross on each. Brush with 1 egg yolk beaten with 1 tbsp. water. Bake in moderately hot oven (375 degrees Fahrenheit) about 20 minutes.

CHOCOLATE POTATO CAKE

2-3 cup butter or fat
2 cups sugar
4 eggs (whole)
1 cup hot mashed potatoes
1-2 cup sweet milk
2 cups flour
4 teaspoons baking powder
2 squares melted chocolate

Cream fat with half the sugar, beat egg yolks with remaining half of sugar. Combine the two mixtures, add potatoes and melted chocolate. Alternately add flour (sifted several times with baking powder) with the milk. Fold in egg whites and bake in two greased layer pans, 350-degree oven, 45 minutes.

SPICE CAKE

1 cup butter or other shortening
1 cup sugar
3 cups flour
1 scant cup molasses
1 teaspoon soda
2 eggs beaten together
1 teaspoon cinnamon
1 scant teaspoon nutmeg
1 cup buttermilk

Cream shortening and sugar until fluffy. Add eggs, molasses, then alternately add dry ingredients sifted together and milk. Bake in loaf or layer pan 325 or 350 degrees, 40 or 45 minutes.

EGG SHORTCAKE

2 cups sifted enriched flour.
3 teaspoons baking powder.
3-4 teaspoon salt.
3 to 4 tablespoons shortening.
2-3 to 3-4 milk

Sift together flour, salt and baking powder. Cut or rub in shortening. Add milk to make a soft dough, stirring just enough to make ingredients hold together. Turn out on lightly floured board, knead gently for a half minute. Roll out in 1-2 inch thickness. Cut and bake in hot oven (450 degrees F.) 10 to 12 minutes. Yield: 18 2-inch biscuits.

FILLING

3 tbsp. butter, margarine or oil
3 tbsp. flour
1-2 tsp. salt
1 1-2 cups milk
6 hard cooked eggs, sliced
1 cup cooked peas
Paprika

Heat fat, stir in flour to form a smooth paste. Add salt and milk and cook over low heat until slightly thickened, stirring constantly. Add sliced eggs and peas. Split hot biscuits and add filling.

Add bright ruffles to your kitchen window sash curtains and repeat them across the bottom of the window and along the edges of your kitchen shelves, to add interest to this busy room.

VEGETABLE SALAD

1 package lemon gelatin
2 cups hot water
2 tablespoons vinegar
1 teaspoon salt
1 cup chopped celery
1 cup shredded cabbage
1-2 cup shredded carrots
1 shredded green pepper

Dissolve gelatin in hot water. Add vinegar and salt. Place in refrigerator cabinet until mixture begins to thicken, then fold in celery, cabbage, carrot and green pepper. Turn into mold and return to cabinet until ready to serve. Unmold on crisp lettuce.

Something typical of this season. serve stuffed eggs in gelatin mayonnaise.

STUFFED EGGS IN GELATIN MAYONNAISE

1 teaspoon gelatin
1 tablespoon cold water
1 cup mayonnaise
1-8 teaspoon salt
6 hard cooked eggs
2 tablespoons chopped ham
1 teaspoon pickle relish
Stuffed olives (sliced)

Soak gelatin in water five minutes, dissolve over boiling water and mix with mayonnaise dressing. Cut eggs in halves lengthwise and remove yolks. Mash the yolks, mix with the ham, pickle and salt, and with enough plain mayonnaise dressing to moisten. Fill egg whites with this mixture. Cover top of each egg smoothly with the dressing. Garnish with rings of stuffed olives. Chill thoroughly. Place on a bed of crisp lettuce leaves and serve with asparagus tips.

Dessert Ideas

Desserts, light and springlike, are perfect for dinner. Serve them graciously on your best china or in crystal dishes. Easter season dinners means spring, hope and gladness. Let your table reflect that spirit.

QUICK FRUIT ICE CREAM

1-2 cup fresh stewed fruit or leftover canned fruit
3 egg whites
1-2 cup sugar
1-2 teaspoon almond extract
1 cup undiluted chilled evaporated milk
1 tablespoon lemon juice
3 yolks of eggs, beaten well
Put fruit through strainer

DRAPERY TRICK

If you are really desperate for new draperies and are unable to find them at a price you can afford, or consider reasonable, try one interior decorator's trick. Buy a matching pair of really inexpensive rayon demask tablecloths and dye them the color you want. All purpose dye will give you a rich depth of color without destroying any of the beautiful sheen the rayon fibers give to the material. If you cannot find tablecloths that are the right length, add a four-inch wide border of plain material that is about the same weight—Indian head or cotton taffeta or plain linen or rayon butcher linen—dyed in a contrasting color.

To prevent jelly or jam from soaking the bread in sandwiches combine with butter, margarine, or cream cheese.

SIMPLE EXERCISE WILL REDUCE BULGING HIPS

By Betty Clarke
AP Beauty Editor

Spring is just around the corner. If you're all set to climb into that spring suit, better take an inventory of that body of yours.

Bulges have to be whittled down. This is the time to stretch and exercise before you wake up some morning and find out that last year's favorite dress just doesn't f-i-t.

It's always that last-minute hurry-up reducing program that hurts. A few well thought-out exercises started now and done faithfully should have you sleek and trim in short order.

Though your home made keeping-fit program doesn't have to be on the commando tactics basis don't be shy about whipping that body into shape.

There is the good old "thumps and bumps" technique, and excellent thigh reducer that will start you off on the road to a slim silhouette.

Lie flat on your back, waist pressed against the floor, knees bent, feet flat on the floor, Swing thighs first left, then, right, and really bounce them on the floor.

In preparing bread crumbs for stuffing, put the bread through a food grinder.

TIPS ON KEEPING CHEESE

Since cheese for civilians will be less plentiful this year, the U. S. Department of Agriculture offers some tips on keeping it in best condition and avoiding waste from molding, melting, or drying. Most of the cheese on the market this year will be American cheddar. Rules for keeping it are much like those for keeping ham in the home.

Cheese keeps best when cold and closely covered from moist air that encourages mold and dry air that hardens it. The home refrigerator is the best place to keep cheese. Waxed paper pressed closely against the moist cut surface helps protect it from molding and drying. A little salad oil rubbed on also helps. If left out in the warm kitchen some of the fat in cheese is likely to melt and run out. If cheese becomes dry and hard, it may be grated and sprinkled over spaghetti or other favorite cheese-flavored dishes.

Add honey to cinnamon toast or to pecan toast for extra goodness.

SYNTHETIC STRAWS

Hats and bags of new materials offer variety and distinction in both style and texture effects. The shortage of natural straws has brought about the manufacture of novelty braids simulating lacy effects as well as smooth leghorn. Many new hats will be made of synthetic straw.

WEAK WHEN WET

Three familiar clothing materials —wool, rayon and leather—all lose strength and need careful handling while they are wet, according to the United States Department of Agriculture. Wool and rayon require gentle treatment in the washtub and during drying. Wet wool can be pulled out of shape and the fibers broken by rubbing, wringing or pulling on the clothes line. Breaks in rayon fabric, hose included, often result from rough rubbing or twisting during laundering. Leather is also easily stretched, torn or broken when wet. Leather shoes and gloves as well as garments of rayon or wool should always be thoroughly dried before they are worn. Cotton fabric, on the other hand, is stronger wet than dry.

Rubber jar rings for 1944 will be made of reclaimed rubber and synthetics. No crude rubber will go into jar rings this year.

Tells Students Of Cadet Nurse Corps

WASHINGTON, D. C.—(SNS)—Miss Rita Miller, consultant on Negro nurse education for the U. S. Cadet Nurse Corps, is now touring twenty colleges and universities in southern and border states to inform Negro women students of the advantages of services in the corps, the Federal Security Agency announced this week.

Miss Miller, chairman of the Division of Nursing at Dillard University, New Orleans, will visit institutions in Georgia, North and South Carolina, West Virginia, Ohio, Kentucky, and Tennessee. The U. S. Cadet Nurse Corps is administered by the U. S. Public Health Service, Federal Security Agency, through its Division of Nurse Education.

"It is vital that college women realize the need for nurses with administrative ability for supervisory and teaching positions," Miss Miller said, "All expense scholarships offered by the corps have opened tremendous opportunities to qualified young women interested in the nursing profession."

Miss Miller reported that great gains have been made in the Negro nursing program through participation in the U. S. Cadet Nurse Corps, both for the student nurse and the school of nursing.

In Georgia, Miss Miller will visit Spelman College, Clark College, Morris Brown College in Atlanta and Paine College at Augusta; in South Carolina, Claflin College, and South Carolina State Agricultural and Mechanical College at Orangeburg and Benedict College and Allen University at Columbia; in North Carolina, Johnson C. Smith University at Charlotte, Barber-Scotta Junior College at Concord, Livingston College at Salisbury, Bennett College and Agricultural and Technical College of North Carolina College for Negroes at Durham, and Shaw University and St. Augustine's College at Raleigh in West Virginia, West Virginia State College at Institute; in Ohio, Wilberforce University at Wilberforce; in Kentucky, Kentucky State College for Negroes at Frankfort; and in Tennessee, the Tennessee Agricultural and Industrial State Teachers College at Nashville.

What's the Answer

By W. Douglass Brown for ANP

(Q) What is the name of the training center for Negroes at Great Lakes Naval Training Station?

(Q) What Negro had a horse entered in the 1943 Kentucky derby?

(Q) Who is believed to be the first Negro to have been admitted to a trade union in the United States?

(Q) What union was Mr. Grandison attempted to?

(Q) Congress recently appropriated $30,000 to erect a monument to the memory of what great Negro?

(Q) Who is president of the National Negro Business League?

(Q) Who was the first Negro girl to be starred in a, major ice show?

(Answers on Page 7 Col., 5)

Robeson's Wife Urges More Action On Racial Problem

ENFIELD, Conn.—(ANP)—Hitting at postponement of efforts to solve the problem of racial discrimination and segregation. Mrs. Paul Robeson, wife of the famous actor, told business and professional leaders here recently that home teaching is the determining factor in race relations.

Mrs. Robeson declared that education has failed to solve the problem. "What happens to us isn't in the schools," she said. "It is outside. The important thing is what children are taught at home."

Mrs. Robeson warned her listeners against procrastination on the problem of Negro discrimination.

KEEP BREAD WAGON ROLLING

Our legislators can pass laws providing subsidies, farm relief, price ceilings, production control, etc., etc., to hold down food costs. They can provide rationing, red, white and blue food stamps, and plastic tokens. But what makes them all work? The grocery store.

Only so long as the grocery store can make enough profit to stay in business, will the farmers and the food processors be able to keep their wheels turning smoothly. When some bright boy in the Washington law factory cracks down on the grocer, he cracks down hardest on the producer and the consumer.

Retail distribution has been brought to a high state of perfection under the mass distribution technique of the chain stores, and that technique has been adopted almost bodily by the independents. The result is that before the war the consumer could get virtually anything in the food line in practically every town and village in the United States.

Modern mass retailers of food might well be called the ball bearings in the nation's bread wagon. Regulators can easily ruin the bearings with faulty lubricants (rules and regulations), thereby causing a wastage of food on farms and in warehouses, by preventing retail distribution to consumers.

BURNING HEARTS

"And they said one to another, Did not our heart burn within us, while he talked with us by the way, and while he opened to us the Scriptures?" (Luke 24:32).

Church members with burning hearts that respond to "the opening of the Scriptures" will prevent our churches from becoming "drifting sepulchers manned by frozen crews." In work for God in the fields "white already unto harvest" is not a radical zeal better than irresponsible wisdom? Someone said: "I would rather see a fool on fire than a wise man on ice." In this world's broad field of battle, where we are to "endure hardness, as a good soldier of Jesus Christ," fire is better than ice—and conflagration better than refrigeration. We need to burn inwardly with righteous indignation against evils instead of outwardly freezing with the chill winds of indifference. The work of God and the gospel is furthered more by those who do not know so much, but are enthusiastic for what they know, than it is by those who do know more but are unmoved to enthusiasm for it. Is it not better to be a fool and a firebrand for Christ than to be an iceberg? Is it not better to have a high fever than a low pulse? Is it not better to be "as a simple child" and behold things revealed than to be a wise one and have Christ concealed? Just one torch ablaze will kindle more fires than a million icebergs or any number of torches unlighted, no matter how tinseled they may be.

SMOKING

Judging by the destruction resulting from careless smoking habits, one questions whether the public is interested in the safety of life and property.

Smoking. in those who have the habit, is a process somewhat akin to breathing. Many smokers will strike a match in a powder magazine ,or an oil refinery. It is an unthinking act, and discarding the match, the dottle, or the cigarette butt is often done without mental action of any kind. For these habit-formed acts, there is no cure except that which lies within the willpower of the individual.

Conceding that millions of people will smoke, regardless of the time, place or danger involved, the National Board of Fire Underwriters concludes that mere signs of warning are practicaly useless, and affirmative measures should be adopted to reduce the hazard. For example, signs in stores, factories, forests and other places must not be only eye catching—near each sign should be a place to discard the "weed" in whatever form the person is using it. In homes, ash trays and other receptacles should be placed in every room, hallway, porch and kitchen, even though residents may not smoke.

If it is necessary to prohibit smoking "on the job" due to dangers involved, places should be made available where workers can smoke without doing it secretly. It is probable that the catastrophe of the Triangle Shirtwaist fire, in which 145 girls lost their lives, would not have occurred if provisions had been made for the employes to smoke.

LEARNING THE HARD WAY

The American worker and the American taxpayer, who in the majority of cases are one and the same person but perform two separate and distinct functions, are learning by dear experience that government ownership of industry does not produce the millenium.

Taxpayers find that the minute government goes into business, it puts taxpaying enterprise out of business, to the detriment of remaining taxpayers.

The worker finds that the "heartless corporation" is a sob sister compared to a stony-hearted government enterprise which recognizes no local regulatory measures that are applied to private corporations for the protection of workmen and the public.

Labor is finding that public officials in charge of public plants, which are exempt from public regulation applying to private industry, grow accustomed to being a law unto themselves, and deem it their right to fix wages and salaries to suit themselves. Officials appointed for political reasons generally know little or nothing about the businesses they operate at public expense. Hence, they are unfamiliar with labor's problems.

Labor organizations are having their eyes opened to the retsrictions on liberty that immediately follow public ownership of any industry. All citizens are becoming aware of the lost taxes and increased debts that follow destruction of private business.

The good has the fewest fears for God is their leader.

WHY LILLIAN CHANGED HER MIND

By Mary L. Kempfer

"I am going to have a lovely, white satin dress for our Children's Day services," Lillian Lee announced to her best friend, Ethel Arnold. The two girls were playing together beneath a big, spreading maple in the Lee's back yard.

To Lillian's surprise, Ethel ansered never a word.

"What kind of dress are you going to get?" Lillian asked presently.

"I can't have a new dress for Children's Day," replied Ethel, "for you know Daddy has been sick all the winter. Now he is able to work. Mother says we must do without new things this year, because there are so many back bills to pay. That is why I can't get a new dress."

"But, Ethel," protested Lillian, "you and I are on the program to sing a duet," she said slowly.

Lillian saw a big tear roll down Ethel's pink cheeks, and instantly she knew she had spoken too hastily. However, she made no apology.

"I—I—guess I won't take any part in the Children's Day services this year," stammered Ethel, blinking hard to keep back the tears.

"Not take your part?" exclaimed Lillian. "Why, Ethel, you are the sweetest singer in our whole department."

"But you'll have to sing alone this year," relied Ethel soberly, "or get someone else in my place. White satin and an old dress wouldn't show up well side by side." And then before Lillian could make reply, Ethel picked up her doll and made a dash for home.

It was a very serious faced Lillian who went about her play the remainder of the day. Lillian Lee had always been used to having everything her heart desired, and she had grown to be rather selfish. She loved Ethel dearly, and for the first time, in the eight years of her life, she was thinking of someone besides herself. However, it was not until the next day that she confided her thoughts to her mother.

"Mother," she began thoughtfully, "would the price of a satin dress pay for two pretty lawn dresses for a girl my size? I want two lawn dresses trimmed with blue ribbon."

"Certainly, my dear," answered Mother, "but what do you want with two lawn dresses? I thought you said nothing but satin would do for you this year."

"I've changed my mind, Mother," laughed Lillian. She put her face close to Mother's, and whispered something into her ear that caused Mother's face to beam with happiness. Mother kissed her tenderly, and then Lillian went in search of her friend Ethel Arnold.

Two weeks later, two smiling faced girls, dressed in lovely lawn frocks, made exactly alike, stood before the large audience in the church auditorium. They sang a sweet song that came from two joyous hearts. Only Lillian knew that her own happiness came from having learned the true meaning of the word, "It is more blessed to give than to receive."

ATLANTA BISHOP PARLEY LEADER

By David Norris

Philadelphia, Pa., May 5—More than 5,000 ministers and laymen attended the opening of the thirty-second session of the general conference of the African Methodist Epicopal church at St. Matthews church here today.

Bishop W. A. Fountain, of Atlanta, vice senior bishop, presided during the opening exercises.

Fifteen bishops, 18 general officers, 12 college presidents and more than 2,000 delegates took part in the opening program.

Bishop D. H. Sims, Philadelphia, host bishop to the conference, is in charge of the local program.

The conference held special prayer for the success of the men in the armed forces. It was led by Bishop J. A. Gregg, of Kansas City, who made a special tour of the battlefronts as a goodwill messenger to Negro soldiers.

The conference guest speakers for the first day's session included Governor Edward Martin, of Pennsylvania; Mayor Bernard Samuel, of Philadelphia; President Charles H. Wesley, of Ohio. Mrs. Eleanor Roosevelt was expected to address the meeting here Friday night.

The conference business session convened with Bishop W. H. Fountain presiding during the organization.

Collection Plates, Collection Baskets, Arm Bands and Gavels

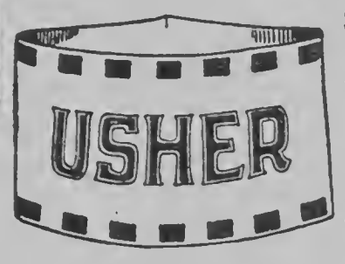
Wooden Collection Plates, well finished with Plush Bottom, 10 inch Plates $6.00 each

A Wicker. Collection Basket, made of best reed obtainable. Size 9 inches. Price $3.00.

A well made golden Oak finished Gavel

Price $1.00

USHERS' ARM BANDS



Stenciled in white made of blue wool felt. 4 inches wide.

Price 50c each

Oval Shaped Usher Arm Band

These Ushers' Arm Bands are very attractive; made of high-grade felt material, in colors red, blue and green, each with white letters, and elastic band to fit around the arm. Size, 6½x4¾ inches. **25 cents** each; $3.00 a dozen.

Blue Felt Ushers Arm Band, with sewed white letters of white felt. Very durable and attractive.

Price $1.00 each

The Modern Farmer

Published monthly by the Modern Farmer at Nashville, (3) Tennessee.

Henry Allen Boyd _____ Owner
Office, 403 Charlotte Avenue.

Devoted to the interests of the Farmer, Truck Gardner, Livestock and Poultry, Breeder, the Home and the People.

Entered as Second Class Matter. April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 403 Charlotte Ave., Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, 75c for six months, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

OUR PLATFORM

1. **A Unit of the National Federation of Colored Farmers in every community of colored farmers.**
2. **Co-operative buying, producing and marketing.**
3. **Every colored farmer a farm owner.**
4. **Abolition of debt-slavery, injustice and persecution.**
5. **A written contract for every colored farm tenant and sharecropper.**
6. **Better rural churches, schools and homes.**

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

PULLING TOGETHER

No industry is proceeding more scientifically to readjust from a war to a peace basis than is aviation. Level heads are seeking to coordinate its activities so that it can render the greatest possible service in its field of transportation.

While the public generally thinks of passengers and mail as the principal airline load, the Railway Express Agency has been conducting exhaustive customer surveys in order to keep ahead of the demands for increased air express service. The Agency became interested in the possibilities of commercial air transport as early as 1919. In 1927, it inaugurated its Air Express Division, giving scheduled air servise across the nation. From 1933 to 1943, inclusive, the weight of its air express shipments increased from 404-640 pounds to 31,066,414 pounds.

Thus again do we see American enterprise increasing its field of activity and preparing in advance to meet service demands that arise almost overnight.

WHAT IS THE OBJECTIVE?

To give the devil his due, everybody knows the OPA has a tough job, and every fairminded citizen is willing to make plenty of allowance for unavoidable errors. On the other hand, the public will not calmly accept so-called price regulation which, in reality, is arbitrary and unjustified profit control.

To illustrate how price regulation is twisted to effect profit control, Mr. C. F. Hughes, in the New York Times, says: "Some 40,000 medium trucks were manufactured for a civilian pool at a cost which reflected higher labor and material charges. The OPA agreed to let the producers charge the extra costs, but is insisting that dealers exclude this additional amount from their make-up. Financing, insurance, overhead and other expenses are therefore ignored. Profit, rather than price control, is obviously the objective."

Similar demoralizing regulation has been perpetuated in the "highest price line limitation" order which OPA applied to various lines of women's and children's clothes.

At a session of retailers in Washington, one small town merchant told of a whole village having to go 13 miles to buy apparel which was eliminated from his store because he could not purchase the cheap lines any longer (manufacture had been discontinued) and the OPA regulation forbade him stocking anything at a higher price.

Such regulation shakes public confidence in the sincerity of purpose of the regulators.

HERE'S A SURE WAY TO HAVE FRESH VEGETABLES THIS YEAR

There is one way to help make sure that your family will have an ample supply of fresh vegetables this year, the U. S. Department of Agriculture points out, and that is by growing a Victory Garden. Those who take care of their gardens need not be worried about fresh corn, tomatoes, string beans, carrots, beets, mustard and spinach, onions, lettuce and other garden vegetables. All they'll have to do is go to the garden. And surpluses can be canned, dried, brined, or stored for scarce seasons.

To meet the Nation's wartime requirements for food, the Government is asking 22 million, or two out of every three families in the United States to grow gardens this year. And the Government is further asking that these gardens be large enough, and productive enough to produce 10 million tons of vegetables.

The need for this increased food production is obvious: our Army, Navy and Marines fighting on 60 battle fronts must be fed, our civilian population must be kept strong to produce the sinews of war, our allies, our friendly neighbors, and the starving peoples whom we liberate from Axis aggression all must be supplied. The extra food grown in Victory Gardens makes just that much more of the commercially grown food available for our wartime requirements.

Indirectly then, the Victory Gardener is handing baskets of vegetables right over his back fence to a soldier in New Guinea, a flyer in Russia, or a hungry child and its mother in Southern Italy.

In planting your Victory Garden, be sure to select a plot that is fairly level, of reasonably good soil, and that has at least six hours of sunshine a day, and good drainage. If you are sharing a community garden, try to select one that is close to home, or near public transportation so that you can get to it often, and give it good care.

If the plot was not plowed or spaded last fall, then get to work with your plow or spade as soon as the ground is dry enough. You can test for dryness by scooping up a handful of soil, squeezing it. If it crumbles when you open your hand then get busy putting the ground in shape for planting. If it doesn't crumble, but is sticky, you had better wait a while longer.

If you have compost or stable manure spread it on and spade it under. Add lime if needed, and then work the soil until it is loose and fine.

With the garden established and growing, the important thing is to keep down the weeds and grass, and keep the garden properly watered. Don't sprinkle a little water every day, but during dry periods soak the ground thoroughly as if by a heavy rain every week or 10 days. And be sure to guard against insects and plant diesases. It is a good idea to plant disease-resistant varieties.

New gardeners can get information from experienced neighbors, or they contact the local vocational agriculture teacher, or write the state Extension Service at the state agriculture college.

War Bond Facts and Figures

The Fifth War Loan will begin June 12th, closing July 8th.

The goal will be $16,000,000,000, of which 6 billions will be sought from individual investors.

A strong patriotic appeal, tempered with a self-interest feature, will be found in all Treasury copy. It will seek to impress upon EVERYBODY the need for EVERYBODY'S cooperation over and above any other buying he is doing or has done in this war.

More than 55,000,000 Americans own at least one War Bond. That's an average of better than 1 1-2 Bond owners for every U. S. family.

Total sales in the four War Loan drives, plus the sales of savings bonds, aggregate more than 87 billion dollars. Three weeks after Pearl Harbor it was only 2 1-2 billions.

Individual investors purchased 32 1-2 billions of the total—13 times more than their holdings in December, 1941.

Single "E" Bonds sold—separate pieces of paper—total more than 500,000,000. That's a 38-time increase since Pearl Harbor. A half-billion "E" Bonds laid side by side would girdle the globe 2 1-2 times. Placed one on top of the other, they would make a pile 39 1-2 miles high.

Sales of $25 Bonds alone have jumped to 346 million pieces. That's 69 times the number of dollar bills now in circulation.

27,000,000 Americans are now putting almost ten cents of every dollar they make into War Bonds every pay day. They're plowing back into the war effort 475 million dollars a month.

During the War Loan drives more than 5,000,000 unpaid volunteers ring doorbells and pound pavements to get their sales.

You can buy War Bonds or War Stamps in any one of one million places during the Fifth War Loan drive.

More "E" Bonds—the smaller ones for the small investors—were sold in the Fourth War Loan than ever before—69,900,000 individual transactions that brought in $3,187,000,000.

To reach this total sales of "E" Bonds averaged $63,740,000 every working day, $7,967,550 per working hour.

Putting it another way, sales of "E" Bonds during the Fourth War Loan averaged $24.56 for every man, woman and child in the nation. This was $5.35 more than the average for the Third War Loan.

Bonds are the best advertised product in history but it hasn't cost the government a cent. Private business and publications contributed the space, the time and the manpower—more than 240 million dollars worth.

Because so many people contribute their time, office space and other assistance, War Bond sales' cost to the government is only one cent for every thirty-three dollars raised

Of every $100 Americans saved in 1943, they loaned forty-four to the government to help pay for the war.

MISS LILLIAN SMITH, WHITE AUTHOR, SAYS COMPLACENCY EVIL

Urges Her Race to Oppose Browbeating of American Negroes

CHICAGO.— Attacking the complacency with which most "good" white persons accept without protesting the browbeating of Negroes from day to day, Lillian Smith, author of **Strange Fruit**, advises a drastic change in their attitude if barriers between the races are to be broken down.

Writing in the May issue of NEGRO DIGEST on the topic, "Plain Talk for U. S. Whites," Miss Smith accuses even liberal whites of "tightening the bonds of fear and of deep prejudice in all people" by their refusal to speak plainly for a Christian way of life.

Miss Smith suggests that "the most important thing any of us can do is to change our own feelings about people who are superficially different from ourselves, whether in the color of their skin, in religion, or in political ideologies."

The noted liberal writer, educator and editor advises U. S. whites to read books which will arouse their desire for change and give the strength to make it. Other suggestions which she makes to her fellow Americans are: "Meet and form friendships with individuals and other racial groups. Visit Negro churches; insist that Negro characters in movies be more intelligent and attractive.

"Get rid of segregation in our churches and our pulpits," Miss Smith says. "We must preach for brotherhood and against white pride. We must destroy racial superstitions and take our stand against discrimination. We must insist that anyone, of whatever race, be welcomed.

SHAW UNIVERSITY, RALEIGH, N. C.

Noble Y. Beall, field secretary for Negro education of the Southern Baptist board of education and field secretary for Negro theological training of the Southern Baptist Home Mission Board will deliver the main address at the seventy-ninth annual commencement of Shaw University which will take place at 3:30 p. m., Monday, May 29, in the Shaw University Greenleaf Memorial Hall. Approximately sixty persons are expected to receive Shaw University degrees at the exercises.

Other events of the commencement program will include the baccalaureate services at three o'clock May 28, with the Reverend W. H. Hester, pastor of the Twelfth Baptist Church, Boston, Mass., preaching the sermon; the annual meeting of the Shaw alumni association at ten o'clock Monday morning in the Greenleaf Memorial Hall; and the reception given in honor of the graduating class given by President and Mrs. Robert P. Daniel at five o'clock, Sunday, May 28, 1944, in the President's home.

Duties of the "worthwhile college student of these times" were outlined by Dr. R. A. Young, professor of biology at Shaw University, in the main address of an Alpha Omicron Honors Day celebration held Wednesday, May 3, in the Shaw University Greenleaf Memorial Hall. The ceremonies included also the presentation of membership certificates to three Shaw students whose outstanding scholarship records and other qualifications entitled them to memberships in the Alpha Omicron Chapter of the Alpha Kappa Honor Society.

Music was furnished by Miss Ruth Wimberly, Raleigh, a member of the honor society, who played a piano solo; and the Alpha Omicron chapter of the Alpha Kappa Mu honor society.

Miss Bernice Byrd, Charlotte, a member of the society, paid special tribute to Shaw students whose names have been included on the University honor roll during the year and to prize and scholarship winners of 1943.

James Thomas, Wilmington, president of the honor group, was master of ceremonies. Miss Rosalyn C. Richardson, Tarboro, is secretary.

C. Joseph Barfield of Kinston was named president of the Shaw University student body for the 1944-45 school year in elections held Friday, April 28, 1944, on the Shaw campus.

Barfield is at present a member of the Shaw Junior class. He has served as editor of the **Shaw Journal** student publication, and has been active in student affairs.

Other officers elected included Miss Marie V. Wood, New York City, vice-president; Miss Dorothy Cheek, Henderson, secretary; Miss Minnie Gaines, Atlantic City, N. J., treasurer; Peter Brown, Handson, Va., chaplain; Eugene Turner, Goldston, and Thomas Entzminger, Jamestown, N. Y., sergeants-at-arms; Miss Grace Payne, Swedesboro, N. J., business manager; Dorman Avery, Wilmington, parliamentarian; Charlotin St. Fort, St. Marc, Haiti, assistant parliamentarian; James Everett, Jamesville, editor of the **Shaw Journal**, and Australia Mason, Rocky Mount, business manager of the **Shaw Journal**.

GETTING RESULTS

One man who went into government war service and isn't afraid to tell the public his department got results, is William M. Jeffers, president of the Union Pacific Railroad, and former director of the synthetic rubber program.

In a recent statement, Mr. Jeffers said synthetic rubber is now about on schedule; absolutely essential civilian needs are being met; by early autumn more rubber should be going into tires; we can produce enough synthetic rubber for any needs, and will be in the position in the future to dictate to producers of natural rubber what the price shall be.

This is good news for Americans who have become used to a prediction of "shortage" the moment bureaucratic planners take control of any of our basic industries. But that is the bureaucrats' way—they want to keep the people under their thumbs. Jeffers is not a bureaucrat—he is a plain American business man who is used to getting results. He says: "We don't want the government in business. We want business in government."

And that is the only spirit that will get this nation tires or any other commodity that the people have always enjoyed and which built up the American standard of living.

FARMER'S ACE

A wholesome change is taking place on the farm. Farmers are growing wary of centralized government control. After a decade of trying to fit their existence to the dictates of politics rather than natural laws, the farmers are fed up. Their attitude is best exemplified in their battle against subsidies.

Farmers in the future are going to have to depend upon themselves to an increasing extent in reaching sound solutions on agricultural problems. This does not mean that each farmer will have to fight his battle alone. That day is long past. He can now turn to such farmer-owned business organizations as the marketing cooperatives. The co-ops help him sell his produce at a fair price. They strive to stabilize supply and demand, while leaving the farmer free to concentrate on the job of production.

The marketing cooperatives will prove to be the farmer's ace in the hole when disillusionment with "super" government becomes complete.

In all the planning, far too little has been said and done to stimulate and encourage initiative, self reliance and the sense of individual responsibility.

BUDGET YOUR TIME TO INCLUDE YOUR VICTORY GARDEN

It's a good idea to include time for working your Victory Garden in your regular weekly schedule, because haphazard gardening often results in neglecting the growing vegetables just at the time they need it most, and this leads to failure, the U. S. Department of Agriculture cautions.

Neglecting your Victory Garden means a waste of the seed you plant or plants you set out and a waste of tools, valuable fertilizer, and man hours which the nation needs so badly. Caring for your garden is a simple, easy task which offers relaxation and recreation, but it must be performed regularly, and with some degree of skill.

In watering your garden, don't sprinkle a few buckets-full, or turn on the hose for a couple of mniutes every day. In so doing you are only watering the shallow-growing weeds while the deeper roots of your vegetables go thirsty. Your garden should be thoroughly and deeply soaked as by a fairly heavy rain, and watered again only when the soil shows signs of becoming dry.

Here are five suggestions which inexperienced gardners may keep in mind as a guide in caring for their Victory Gardens: (1) Keep weeds under control by shallow but thorough cultivation or hoeing. Vegetable crops should not be cultivated deeply because of danger to the roots that grow near the curface. Weeds that take root again readily after hoeing or pulling, should be carried out of the garden as soon as the soil is dry enough after each rain and as often in addition as is necessary to keep weeds down. (4) Care should be taken to avoid trampling and packing the soil so far as practicable. (5) Mulching between the rows with straw, dry lawn clippings, leaves, or similar material will help conserve moisture and keep down weeds. (6) Don't sprinkle or irrigate your garden too often. If water is to be supplied, the garden should be thoroughly and deeply soaked as by a fairly heavy rain and watered again only when the soil shows signs of becoming dry.

For additional information on caring for your garden consult an experienced neighbor, your County Extension Agent, the State Extension Service at the state agricultural college, or write the U. S. Department of Agriculture, Washington 25, D. C. Perhaps you'll especially want the bulletin "Growing Vegetables in Town and City."

NEGRO RIGHTS

They Will Come When the White South's Fear Is Divided Into Rational Parts.

The Senate reconvenes, and near the top of its agenda is a problem left over from the Civil War. It is a bill to abolish poll taxes, one of the last remaining legal devices by which most southern states prevent Negroes and poor whites from voting. Even if the Senate passes it, this bill will not give southern Negroes the vote. Neither will the recent Supreme Court decision which declared the Texas anti-Negro primary law unconstitutional. The federal government can chivvy the white South from one extra legal dodge to another, but the southern Negro will never really vote until the southern white man is no longer afraid of him.

The white South neither dissembles nor divides on this point. It is simply aroused to a pitch of frenzied and unanimous resistance to change. In the midst of a war for freedom abroad, we are therefore treated to the threat of a filibuster in the Senate, obscene cries of "nigger-lover!" in the Florida and Alabama primary campaigns, and increasing racial tension throughout the country. In Harlem, which will probably send its first Negro to Congress this year as a result of redistricting, the leading candidate, A. Clayton Powell, is taking a leaf from the southern white's book and is running on a Negro-first platform. ("I will represent the Negro people first; I will represent after all the other American people.") Never before have Negroes been so outspokenly bitter about America's refusal to give them equal status in the Army, the Navy and industry, and never before have Negro leaders been so active on behalf of Negro rights. America's No. 1 problem, its great, uncured, self-inflicted wound, is aching violently, perhaps reaching a crisis.

His Vote and Your Daughter

The Negro problem is so complex and so intertwined with all our national vices and virtues that it is almost incurable in its own terms. It is possible, however, to distinguish between rational and irrational approaches to it, and also to decide what parts of it are primarily of federal concern, and what are primarily a community or personal responsibility.

In this job Americans are lucky to have some very timely expert advice. The Carnegie Corporation seven years ago asked Dr. Gunnar Myrdal, a distinguished Swedish sociologist, to undertake a comprehensive survey of the American Negro, and his study has just been published under the name of **The American Dilemma.** The dilemma, of course, is this: the basic tenets of the American creed make all men free and equal in rights. Yet in fact we deny equal rights to our largest minority, and observe a caste system which we not only criticize in other nations but refuse to defend in ourselves. This makes us living liars—a psychotic case among the nations.

The South has more Negroes and therefore more of the psychosis than the country as a whole. What exactly, is the South afraid of?

Myrdal finds that the chief white fear is the fear of intermarriage. Other fears he ranks as follows, in order of their descending importance to the whites: fear of personal and social equality, of joint use of schools and other public places, of equal voting, of equality in law courts, and of equal economic opportunity. In other words, if the South has to change, it will prove least willing to give the Negro an equal right to work; next, to give him legal justice; next, the vote, etc.; but it treasures the Jim Crow laws and it will never, never permit intermarriage. However, Myrdal found the Negro ranks his grievances in exactly the reverse order. He wants fair breadwinning opportunities most of all, legal justice and the vote next; but he does not make a major point of segregation, and his ambition to marry whites exists only in the whites' minds.

There would therefore seem to be a basis for progress. But not when all phases of the problem are woven together into a single flag emblazoned "white supremacy." In effect, the North asks the South: "Why won't you let the Negro vote?" The South replies, "How would you like your daughter to marry a Negro?"

Even a moderate, gentlemanly Southerner like Senator Maybank of South Carolina slips this cog of logic. In the Senate last week, he accused "agitators" of trying "to upset our election laws and our customs of segregation." There are agitators who have both these objectives, but the poll tax bill before the Senate does not aim at them. The franchise and segregation are not the same thing. They can be made to seem the same only when the flag of white supremacy wraps them together. That flag conceals the only rational method by which the Negro problem can be ameliorated: the method of dividing it into manageable parts.

The Federal Role

There are only two aspects of the Negro problem which primarily concern the federal government. These are the Negro's political and economic rights. Consider first job and pay discrimination, the thing the Negro hates most and the white treasures least. The federal government's chief way of ameliorating this form of injustice is powerful though negative: refusal to use federal funds, as in war contracts, to perpetuate the caste system. The principle seems rather obvious. But as a practical matter, it is worth remembering that Roosevelt never would have set up the Fair Employment Practice committee if astute Negro politicians had not threatened him with a national Negro march on Washington. And even the FEPC cannot change a nationwide industrial prejudice. It is up to the individuals, corporations and unions who compose our economy, North and South. War industries seem to have a better record on this score in Texas than in Michigan.

The Personal Problem

Political and economic justice for the Negro lie at the end of a long, rough road. And if we get there, the Negro problem will still be with us. The rest of the solution, however, cannot rightly be considered a federal concern.

There are several theoretical solutions to the Negro problem which involve neither intermarriage nor an outrage to the American creed. There is, for example, the theory of "parallel civilizations" — complete equality of opportunity for Negro and white, but complete segregation too. As an over-all solution this may or may not work. It is beginning to work in North Carolina, where Negroes vote. It might never work in South Carolina or Mississippi, where the Negro population is much bigger. But nobody knows what will work until they try, and the more experiments, the more discoveries.

Negroes are not uniformly distributed over the U. S. This being so, the problem of their social relations with whites does not call for a federal solution. The problem is both too various and too personal. And anyway, as Lord Bryce said, "good manners cannot be imposed by statute."

If this limitation on federal responsibility were more clearly recognized in the North, the South might be less given to blind fears, and might even start using words like "our institutions" with more precision. The other three-quarters of the country cannot permit the South to disfranchise its Negroes forever. And neither can the South; for all men want to be rational.

Three generations ago the South had a consistent and respectable theory to defend its behavior. The Negro was a lower species of man and his caste was fixed by his Creator. But this theory is no longer respectable; educated Southerners no longer believe it; the white man, says Myrdal, is "losing confidence in the theory which gave reason and meaning to his way of life," that is why Myrdal thinks the southern way of life must and will change. And he adds:

"The Negroes are a minority, and they are poor and suppressed, but they have the advantage that they can fight wholeheartedly. The whites have all the power but they are split in their moral personality. Their better selves are with the insurgents. The Negroes do not need any other allies."

—Exchange.

ROSCOE SIMMONS' PROTEGE WINS IN RACE FOR SENATOR

Gary, Ind., May 11—(ANP)—In a heated and historic campaign for nomination for State Senator on the Republican ticket from Lake Co., Indiana, Wilbur J. Hardaway, well-known Gary political figure, rode to a smashing victory, winning one of two places.

Hardaway, a former president of the Gary City Council, is a political protege of Col. Roscoe C. Simmons. His overwhelming victory is said to have been due largely to the solicitude on the part of Col. Simmons who made three visits to Lake County in the interest of Hardaway's candidacy.

The newly elected senator enjoyed the loyal support of both regular colored Republicans and his own people without regard to political ties. His victory is significant in the fact that Negroes comprise less than 10 per cent of the 300,000 inhabitants of Lake County.

UNITED CAMPAIGN FOR COLLEGE FUNDS BEGUN IN NEW YORK

By Florence Murray

New York, May 11—(ANP)—The United Negro College Fund's Campaign to raise $1,500,000 got off with an enthusiastic start at the Waldorf Astoria hotel, Wednesday, when officials of the fund held a Pep Meeting with workers and interested persons. The month of May is expected to decide the fate of the first venture of this cooperative movement on the part of 27 private Negro colleges to meet their maintenance costs.

Walter Hoving, president of the exclusive Lord and Taylor's Department store here and the national chairman of the campaign, was the keynote of the meeting. He called for a "hard-boiled, realistic attitude" in supporting the drive because any "economically inferior, untrained and unskilled group, of whatever race or color, are a liability to the nation and a burden to each one of us." Of the 22,000 men rejected by the army in Mississippi for illiteracy, 21,000 were colored, he reminded the audience.

Dr. Benjamin E. Mays, president of Morehouse college, was roundly applauded when he pointed out that the most outstanding Negroes in the country were graduates of one of the participating schools and he named such persons as Booker T Washington, R. R. Moton, W. E. B. DuBois, Walter White, James Weldon Johnson, Mordecai W. Johnson, Justice Hubert T. Delaney and Myles A. Paige, Dr. Louis T. Wright and others.

"It is not an accident," Dr. Mays continued, "that approximately 90 per cent of the presidents of the state and land-grant colleges graduated from one of the 27 colleges listed in this campaign and that 80 per cent of the presidents of these participating colleges are also graduates of these very schools."

Dr. William J. Trent, Sr., president of Livingstone college, declared that the Negro population of America, "born in misery and sucked on the bitter dregs of servitude is nonetheless remarkably loyal." The challenge of the "very existence of our form of government, and the destiny of our nation," he said, finds a portion of its thrilling answer in the articulate response to the Negro colleges."

Other speakers were Dr. Thomas E. Jones, president of Fisk University, and Dr. Norman Vincent Peale, minister of the Marble Collegiate church of New York.

William J. Trent, Jr., is executive secretary of the fund, offices of which are located at 38 East 57th Street. Contributions of new amounts are welcome and may be mailed to the offices of the fund, officials states.

Gov. Dewey Lauds United Drive of Negro Colleges

NEW YORK—Endorsing the current nation-wide drive of the United Negro College Fund to raise at least $1,500,000 to aid in the maintenance of 27 leading private Negro colleges Governor Dewey of New York commended Negroes for their contributions to the nation and for the work of their colleges.

In a statement this week to Walter Hoving, national chairman of the campaign, the governor said that it is important for the Negro colleges to be kept going during "these trying times so that when peace returns, they may again go forward in a leading role."

Mentioning the accomplishments of graduates of the participating schools "against almost insurmountable odds," the governor added: "For every one who has distinguished himself, there have been thousands of others who have suffered obscurity because of a lack of adequate opportunity."

"The struggle against racial discrimination is a long and challenging one," he wrote. "It must and shall be won. The Negro institutions of higher education are doing a splendid job. They are proving that it is through education that men achieve the greatest enjoyment of freedom."

CALL FOR MORE NEGRO POLICE IN NEW YORK CITY

New York, May 11—(ANP)—"We need more colored men in the department," Police Commissioner Louis J. Valentine said last week when he spoke at the seventh annual communion breakfast of the police department St. George Association, attended by 1,700 at the Hotel St. George, Brooklyn.

Valentine's efforts to recruit Negroes for the police department, which he said were "not generally known," were here renewed. He said he had been trying to urge colored to take civil service examinations for posts as patrolmen for more than nine years.

"We welcome them," he said. "I have had to dismiss only one Negro from the department in more than nine and a half years on disciplinary charges."

Explaining that there are more than 200 Negroes in the police department at present, the commissioner said there had been a continual turnover in personnel for them the same as others.

A NECESSARY EVIL

The essential level-headedness of retail distributors on the question of wartime controls is clearly revealed in the prevalent expressions from merchants in favor of extending the life of OPA, whose powers are due to expire June 30, unless renewed by Congress. Speaking for food distributors, Chain Store Age declares: "Grocers don't like price control or rationing any more than our boys at the front like fighting for their lives. But they know these things are necessary if we are to lick inflation on the home front, as well as our enemies on the fighting fronts."

When a nation is faced with spending hundreds of billions of dollars to meet military demands, or suffer extinction, the people are left with no alternative. Money has no value compared to national survival. We are spending today for the sake of survival, at a rate that would have been thought impossible before the war. Borrowed money is flooding the country. Retail distributors know the awful potential of too much money. Consequently, they would be the last to wish for removal of regulations designed to maintain stability. They raise their voices in criticism, not against the basic purpose of price and rationing measures, but against defects in those measures. They likewise vehemently protest the use of these necessary controls as an excuse to impose social changes upon the nation—such as the destructive production-for-use theory. They oppose these things because they undermine the legitimate aim of price fixing and rationing—inflation control.

It does not require an economic expert to realize that laws which stop merchants from selling low-cost wearing apparel are a threat to orderly distribution and the living standards of consumers. Nor does it take an expert to figure out that price fixing which eliminates all profit, drives retailers out of business and thus promotes inflation.

Yes, retail merchants know why we have the OPA as well as they understand its shortcomings. Therefore, they will continue to support it while seeking correction of its inexplicable rulings.

NEGRO FARMERS PASS THEIR WAR BOND QUOTA

Not only are Negroes farmers sharpening their plows and preparing for another record crop production this year, but they are also in the fight on the war bond front. During the recent 4th War Loan, the Negro farmers and urban people in some Alabama counties passed their quota, according to T. M. Campbell, Federal Extension field agent.

For example the colored people of Montgomery county had a quota of $100,000 but a final check showed that they bought $140,000 worth of bonds; Dallas county pledged $100,000 and purchased $111,668 worth of bonds; Jefferson county had a goal of a million dollars, but bought a million and a half dollars worth of shares in America. The youngsters, 4-H clubbers and city youths, are buying bonds, too. The record shows that the Negro boys and girls of Alabama bought $53,238 worth of stamps and bonds, and sold $40,000 worth to their neighbors during the 4th War Loan.

CHEMICAL DUST FOR YOUR VICTORY GARDEN SEEDS

One way to help make sure that your Victory Garden will be a success is to treat the seeds with one of the common chemical-dust treatments, say garden specialists of the U. S. Department of Agriculture. Of course, some kinds of seed cannot safely be treated with the dust, but a considerable number can be.

The chemical dusts are used by gardeners to prevent decay of the seed and damping-off of seedlings caused by fungi present in the soil. The dusts are sold in small packages under various trade names. For the usual small packet of seeds, such as a 10-cent or a 15 cent packet of tomato or beet seed, enough of the chemical dust can be held on the flat side of a toothpick, or on the tip of a small knife to dust them thoroughly. Dump the powder off the toothpick into the packet with the seed, close it and shake it up well. Complete directions will be found on the packages of chemical dust.

There is a considerable group of vegetables for which the Department does not recommend the dust treatment. Among such vegetables are snap beans, chervil, chives, chicory, upland cress, dandelion, endive, mustard, radish, asparagus, horseradish, onion sets, or garlic and shallots bulbs.

Detailed information on seed treatment can be obtained from your State Experiment stations, your State Extension Service at the state agricultural college, or from the U. S. Department of Agriculture, Washington 25, D. C.

14½ MILLION WORKED ON FARMS N 1943

It took an army of 14 1-2 million workers to handle last years record war time crops, according to a United States Department of Agriculture report. While 14 1-2 million different persons worked on farms last year, because of the nature of farm work, and the large turnover of persons doing, small amount of work, the total figure is naturally greater than the number engaged at any given time.

Farmers, members of their families and hired workers who live on the farms made up more than 78 percent of the working force, and contributed 88 percent of the total time put into agricultural work during the year. Town and city folks accounted for 12 percent of the total hours worked during the May-October period. About 1,800,000 youths between 14-17 years of age did some farm work during the year. A substantial part of the 500,000 non-farm youth in this group was recruited through the Victory Farm Volunteer program.

While the report gives no racial breakdown, it is understood that a large number of the farm folks, hired hands, as well as the town and city folks who volunteered to help save important crops were Negroes.

NEGRO 4-H CLUBBER HEARD IN CUBA

The Texas Extensioner reports that Earnest Cooper, Negro 4-H club youth who took part on the Texas Farm and Home Hour radio program recently, has received a letter of congratulation from a listener in Cuba.

Said the listener, H. R. Snider of Havana, "I am writing merely to let you know I heard you very distinctly early this morning on the broadcast from WBAP telling of your efforts and success in raising beef cattle. Your voice reached here very clearly, some 2,000 miles away, which is just a yardstick measurement of good which can come from worthy and intelligent efforts."

FARM SLAUGHTER LIMITATIONS SUSPENDED INDEFINITELY

The War Food Administration has extended indefinitely the period in which farmers can slaughter their hogs and deliver the pork to others without a license or permit.

WFA restrictions on farm slaughter were first suspended for three months, November 17 to February 17. The period was extended to March 17, and now it is being extended indefinitely.

Although the slaughter restrictions continue suspended, WFA is terminating its emergency hog support program. Beginning April 15 support prices on live hogs again applied only to Good and Choice bar rows and gilts from 200 to 270 pounds. The temporary emergency support program for hogs weighing from 270 to 330 was terminated on April 15.

GET A RAILROAD JOB—NOW

The railroads are confronted with a manpower shortage that must be overcome. The crisis is so serious that the Office of Defense Transportation, the War Manpower Commission, and representatives of railroad management and labor have agreed to launch an intensive recruiting drive for 100,000 additional employes. Both men and women are needed. Those without required skills will be trained.

According to the Association of American Railroads, "The Manpower problem of the railroads is threefold: First, more workers must be recruited immediately to fill existing vacancies. Second, workers must be recruited to replace those who will be called to the armed forces or who leave for other reasons. Third, labor turnover on the railroads must be slowed down by convincing the men and women who work for the railroads that their jobs are indispensable to the war effort."

It is difficult for the public to realize the paralyzing effect on the war effort accruing from a shortage of railroad workers. On the average day in February, 1944, 34 freight trains throughout the country were delayed two hours or more due to a shortage of train crews; 65 switch engines could not operate for lack of one or more yardmen. Recently a shortage of only 24 machinists and five boilermakers at Richmond, Virginia, held up repairs to locomotives necessary to move trains in and out of the yards, which caused congestions, backing up freight for hundreds of miles, on at least three major railroads.

Railroading is vital, colorful work in war or in peace Now is the time to get a job on the railroads —and stick with it.

Famed Christian Missionary Makes Stirring Appeal For Treating Negroes As Human Beings

NEW YORK, May 4 (ANP)—Open criticism of the decision of the state of Texas to circumvent the recent ruling of the United States Supreme court that Negroes must be allowed to vote in Dixie primaries, has been made by E. Stanley Jones, white missionary to foreign lands, in this country on a lecture tour.

Dr. Jones, who is now in Texas, has fearlessly spoken out to residents of that state, deploring their decision to get around the supreme court ruling. He has addressed an open letter to the editor of a Texas paper, and the Associated Negro Press was given a copy of it as well.

Dr. Jones served three and a half years as a missionary in India, and once before, in this country, made public his distaste for restrictive regulations against Negroes. When a previous supreme court ruling on Negro voting in South Carolina was handed down, Dr. Jones, speaking before a large audience in Columbia, asked permission from the master of ceremonies to announce an obituary from the platform. Bewildered, the MC gave assent. Dr. Jones began, "Today, democracy was killed in South Carolina. The refusal of the right to vote for Negroes means the death of democratic procedure in this state. . . ." Following that dramatic obituary, an association which pledged itself to fight racial discrimination was formed and is still functioning. Dr. Jones is also an author and is interested in international affairs. Excerpts from his Texas open letter follows:

"This letter will have to express first of all my deep gratitude for your large-hearted kindness to me while in your midst. My admiration for Texas and Texans is sincere and deep. Texas gets me!

"Because of my deep appreciation of you, I would share with you a concern. I have been deeply concerned over the reaction to the supreme court decision regarding Negroes voting in primary elections. Initial anger and opposition was to be expected, for deep-rooted attitudes change with reluctance. This did not trouble me so much as something else.

"To my astonishment, I found public officials, dedicated to the upholding of law and court decisions, publicly announcing that they were thinking out ways to annul the Supreme Court decision. Do these public officials realize the effect of these official statements upon the public mind? As I see it, the effect is something like this: laws and court decisions can be annulled if you can get away with it. But if you do this in this particular case, then why not in other cases? Respect for law and court decisions is undermined. This loosens the whole fabric of public confidence, and it is upon confidence that a democracy rests. This kind of an attitude is far more dangerous to democracy than Hitler could ever be. And this happens when we say we are fighting for freedom and democracy.

"If the impatient reply is made that this is a private affair of Texas alone, the answer must be that this is about as private as would be the case of one going into a cabin of a steamer and finds the occupant sawing a hole in the side of the ship near the water line, and when remonstrated with, the man replies: 'This is my cabin, isn't it? I can do what I please with it.' This official attitude is endangering the whole ship of democracy. It must become the affair of every American. As a lover of this democracy, I am deeply concerned, and as a free American I speak out that concern.

"There is a side of this matter often overlooked. I know the fear that is in many minds, if we allow the Negroes to vote they will be able to by their numbers swing an election. This is based upon a misconception. If you treat the Negroes as racial beings, they will respond racially and will vote as a race. If you treat them as human beings they will respond as human beings and not as racial beings. In India, where we have all races living together on the basis of complete equality in our Ashrams, in 12 years I have never known the discussion to divide up with the white people on one side and the colored people on the other. Not once. The division is invariably at this point: the colored and white radicals will be on one side and the colored and white conservatives on the other. That division between radical and conservative is a division that runs through all races on all questions. And it is a good division—some would conserve values and some would push ahead and apply them to larger areas. The human mind is made that way.

"If the Negro is treated as a human being instead of a racial being then in elections the white and colored radicals will be on one side and the white and colored conservatives on the other. That would be healthy. For if we were all conservatives we would dry up, and if we were all radicals we would bust up. Between the pull back of the conservatives and the pull ahead of the radicals we make progress in a middle direction.

"I hope that Texas will assert her good sense and accept the fact that in a democracy every law-abiding, decent citizen has a right to vote regardless of religion, sex, or the color of his skin. If we can not accept that fact, then the only thing to do is to end the hypocrisy and cease to call our country a democracy."

"SPURIOUS ISSUES" BEING RAISED IN DIXIE, CONTESTS SAY

Regional Council Denounces Talk About White Supremacy and Social Equality

ATLANTA, May 4—(ANP)— Included in the several resolutions adopted at a meeting of the board of directors of the Southern Regional Council, Inc., was one which condemned those persons who raise the "spurious issues" of "white supremacy" and "social equality" in current political campaigns. The resolutions were released here Friday by Dr. Howard W. Odum, president of the council and chairman of the board.

The resolution, which suggested that persons who use such tactics are unworthy of trust, was the following:

"In the heat of current political campaigns in various parts of the south the race issue has been raised by certain candidates or their promoters. Vicious rumors have been circulated and the spurious issues of 'white supremacy,' 'social equality' and the like have been dragged forth in an attempt to arouse the passions and prejudices of voters.

"We condemn all such tactics as unfair and destructive of the spirit of unity and cooperation which we need now as never before, and we appeal to all good citizens to consider carefully whether these persons who use such tactics are worthy of public trust."

Another resolution of importance called on all fair-minded citizens of the south to respect the supreme court ruling on the franchise. The resolution stated:

"The supreme court of the United States has ruled that the exclusion of Negroes from the Texas Democratic primaries is a violation of the 15th amendment to the constitution, and the exclusion of the Negro voters from Democratic primaries in some of the southern states is equivalent to denying them the right to vote on account of race."

Twenty-nine directors, including representatives from six southern states, were present and voted unanimously for the approval of the resolutions.

NO HIGHER TRIBUTE

No higher tribute could be paid to an industry than that received by the airlines of the United States from the Truman committee in the course of its investigation of the national defense program. In a detailed report on the present status of United States air power, the committee had the following to say of the worldwide air cargo service which the airlines were instrumental in developing: "Hundreds of thousands of tons of supplies have been moved by air to sustain military operations, which would otherwise have been absolutely impossible. Without these planes, we could not have taken or held Guadalcanal; we could not have sent thousands of American and Australian troops over the Owen-Stanley Mountains—In short, we could not have prosecuted the campaigns which constituted our first great offensives against the Japanese.

"Similarly, cargo and transport planes were of tremendous value in supplying military operations in Burma, China, Russia and North Africa, and indeed everywhere that combat has taken place. Some high Chinese officials have stated that without the aid of cargo and transport planes, China could not have continued an effective resistance of the enemy.

"Thousands of wounded men have been evacuated by air to points of safety where they could obtain adequate medical attention. Many of them owe their lives to these planes.

"These are contributions to the winning of the war of the very highest order and all who have participated in building and operating these planes and providing the necessary airfields and equipment to maintain them may well be proud.

"This was accomplished, and could have been accomplished, only through the splendid cooperation of the private airlines, which possessed the necessary nucleus of skill and experience."

A SURPRISE FOR ADOLPH AND TOJO

"On hundred octane" is the commonly accepted name for an aviation super-fuel now available in large quantities only to the United Nations. The production of "100 octane" gasoline on the enormous scale demanded for today's air war, is possible only because the scientists, engineers, construction men and process workers of the oil industry and the contractors serving it have labored mightily in the last three years.

To gain some idea of how the American oil industry has done the "impossible" in fueling tens of thousands of Allied planes, facts recently released by a single United States oil company, the Standard of Indiana, are enlightening. Since Pearl Harbor, this one company, with its thousands of workers, has turned blue prints into operating units which today are bringing its production up to a point where its plants alone will soon be making enough 100 octane gasoline to fuel a thousand-plane raid on Berlin every other day.

That is an example of how American initiative and enterprise throughout our country have set a speed and production record that Adolph and Tojo will never be able to match.

FAITH DEFEATS OPPRESSION

"Faith in human nature, in the integrity and worthwhileness of individual men and women, is the necessary basis for free government. Where it is absent, fear rules the hearts of those who have become strong enough to impose their wills on others and fear fashions for itself instruments of oppression. It seeks to justify itself on the plea that people cannot be trusted, that they are stupid and incapable of self-government. Such fear, such distrust of people, found no entry into the hearts and minds of our Founding Fathers.—Commission on American Citizenship of The Catholic University.

OPA PROCRASTINATION PENALIZES CONSUMERS

A group of retailers, representing establishments as small as a general store in a community of 900 persons to a chain of 1,609 outlets, recently protested against continuance of the OPA's highest price line limitation. This ruling has adversely affected the distribution of certain low cost wearing apparel. Many stores have been forced to drop necessary items of clothing simply because their prices were frozen below replacement costs, while other stores, due to technicalities in the rules, were free to raise prices.

Lew Hahn, general manager of the National Retail Dry Goods Association, in describing the practical working of the highest price line limitation, says: "By limiting many so-called popular-price stores to the highest price line sold by them in March, 1942, these stores are immediately eliminated from competition in higher brackets, and since the majority of popular-price stores are low mark-up stores, the tendency is not to keep prices down because of competition, but to permit them to rise because of restricted competition."

Consumers pay the bill whenever OPA procrastinates in correcting its errors.

WOMAN TO DIRECT BOND SALE DRIVE

NEW ORLEANS—(ANP)—Geo Longe, Orleans parish chairman of the Negro Division's Bond Sale for New Orleans, announced this week the appointment of a woman, Mrs. Naomi Richard Berikins, as director of the fifth war loan drive in New Orleans which is scheduled to start June 12. Mrs. Berikins is the head of the local Negro Business League, is public relations representative and outside saleslady for the Jackson Brewing company of New Orleans and has served as chairman of the Business Committee for the third and forth war loan and as secretary for the fourth war loan.

Race Women Get Opportunity As Street Car Operators, Conductors; Win Praise

San Francisco— Gas rationing, speed up in ship production and the manufacture of other war essentials make transportation one of this city's pressing problems, which have caused the employment of a large number of Negro women on the transportation system here.

With three differently owned street car systems, the cars are packed with shipyard workers who must travel to the suburban areas of this city or to the outlying towns Holding companies furnish buses which ply along the water front on the outskirts of town. Another means of transportation is the cable car which was occasioned by the city's hilly, irregular landscape. Beside their usefulness, the cables are somewhat of a landmark or a counter part of romantic old San Francisco.

SHORTAGE OF MEN

The manpower shortage caused the employment of women operators and conductorettes. A number of Negro women are now manning the street cars and cable cars. One of the companies which employs a large number of Negro women is municipally owned and was the first of the two to throw open its doors of employment to Negroes.

The alertness and sincerity of the Negro conductorettes have been praised. They are said to regard their job with more alertness and sincerity of duty than the men employed in the same capacity. Attired in natty new uniforms that are smartly tailored, their appearance is very complimentary. Mannish caps are worn at a jaunty angle to afford a view of their immaculate well-groomed sepia hair.

Many of these women are said to be the lonely sweethearts and wives of servicemen who came here to say their "last goodbyes." Negro women are also employed at the two car barns in varied lines of work, principally in serving and maintenance work.

COMPANIES MAKE EXCUSES

The difficulties encountered by the street car union to get Negro workers placed was cited by a white street car employe. He told how a movement had been sponsored to employ Negroes in the service of the larger bus companies (transcontinental). The excuse made by the companies was the extra expense of constructing extra toilet facilities for white and colored employes.

One of the outstanding champions of unionism and of civil liberties for the Negro is Harry Bridges, an Australian by birth and head of the powerful west coast longshoremen's union. They make it possible for Negro stevedores to play an important part in all union activities.—(ANP—E. TENN. NEWS).

Mongrel Saves Eight From Death In Fire

A little nondescript mongrel brought in off the streets six years ago was credited with saving the life of his mistress, Mrs. Lucy Mascarella, and her seven children, in New York City.

The dog, Jiggs, aroused Mrs. Mascarella with furious barking in the night. Investigating, Mrs. Mascaella found the lower house filled with smoke. She removed six children to safety only to discover 12-year-old Lucy and Jiggs were still in the house.

"Didn't Even Want Him"

Lucy finally appeared at the first floor window and leaped to the street. Jiggs was found dead near Lucy's bed.

Mrs. Mascarella could only murmur:

"Poor little fellow, and I didn't even want him at first."

Honest confession that of Mrs. Mascarella that her first attitude toward the dog that saved her life and the lives of her seven children was one of dislike.

That feeling is understandable when it is recalled that the dog was but a mongrel—without specially appealing qualities—and she had no way of knowing how valuable he would prove himself to be to her.

Confession of All

"I didn't even want Him at first" is the honest confession of every believer upon reflecting on his first attitude toward the Lamb of God—Who in Himself is the Chief among myriads and the altogether lovely One.

This was inexcusable on our part, for everything about Him was appealing, and we had every reason to believe He would prove Himself of supreme worth to us.

We wanted the pleasures and treasures of the world, but not the Christ of God.

Humbling But Healthful

It would be humbling, but healthful, for all believers to stand in spirit at Calvary and see afresh the Lamb of God in death for our sins, and then in the consciousness of His having saved us from a doom infinitely worse than that of a burning house, honestly murmur: "I didn't even want Him at first."

Then meditate on the preciousness of all His present ministrations from "the right hand of the throne of the Majesty in the heaven"—His love, His joy, His peace—and again confess: "I didn't even want Him at first."

Then anticipate a glorious enternity in His presence and in His likeness, and say, "And to think I didn't even want Him at first!"

But now:

"If I could only tell Him as I know Him,
My Redeemer Who has brightened all my way;
If I could tell how precious is His presence,
I am sure that you would make Him yours today."

FIND THE BUTTON IN YOUR CELLAR

Button, button, who's got the button, might well be the theme of every inspector, whether fire, health, building or plumbing. The button in these cases is the peril or the hazard which must be found and proper corrective means applied.

Knowledge of fire causes, and especially of those conditions which permit a small fire to become serious, is very essential to good fire prevention. Without such knowledge inspections become mere routines, and are a waste of good effort.

A simple report that a cellar contained rubbish or a store was selling cotton batting in the basement area, means little, but if this rubbish is beneath the stairs or the cotton batting is open on a table at the foot of the main stairway, any experienced fireman can easily visualize the inferno he must go through to reach the fire.

A study of fires, made by the fire prevention bureau of a fire department, indicated that a large percentage of serious fires, both from life and property standpoint, were those which originated in basements and cellars. An important fact brought out by the study was the inaccessibility of fires in cellars, and the need of additional entrances affording means of fighting a fire from other than an interior stairway.

Basements will remain a serious fire menace unless every precautionary measure is taken to eliminate hazards, provide exits, and see that water supplies are available in case of fire. In such fire prevention activity every home owner and every building owner, in conjunction with the local fire department, can render invaluable service and help prevent the loss of countless lives and millions of dollars worth of property.

"THE NEGRO'S PLACE"

Statistics can be vital things. When the average person sees a field surveyed arithmetically, the progress made in an attempted project is readily apparent. Actual figures usually tell a concrete story of work done and work still to be accomplished.

We feel that the statistics published by the board of directors of the Commission for Catholic Missions Among Colored People and the Indians are worthy of recording. They tell a story of Catholic achievement and zeal, of ground gained and a goal still to be attained. The Commission reported that the Negro Catholic population in this country now numbers 312,259, an increase of 6,428 over the figure for 1942. Among the Negro missions, 256 schools are operated, an increase of ten over the previous year, while the student enrollment totaled 53,350, or 1,982 more students than in 1942.

Encouraging facts, these—but statistics, in order to present a true story must be two-sided. Approximately one out of every ten Americans is a Negro, yet only one of every forty Negroes is Catholic. Rough figures would place seven million American Negroes as still unchurched.

The statistical scale doesn't balance as well as the first figures would leave us to believe. But progress is not measured solely in statistics. The program of interracial justice and cooperation is measured as well in the hearts and minds of all Catholics who believe "the Negro's place" is in the Catholic Church. Perhaps it is measured most of all by the actions of such Catholics.

Here's the Answer

(A) Camp Robert Smalls; Camp Lawrence and Camp Moffett.

(A) Eddie "Rochester" Anderson, the screen and radio star. The horse was named "Burnt Cork."

(A) William Grandison of Boston in 1872.

(A) The typographical union.

(A) The late Dr. George Washington Carver.

(A) Dr. J. E. Walker.

(A) Mabel Fairbanks, 17-year-old figure skating star of New York.

"I et six aigs for breakfast this morning," proudly boasted a workman to his fellows during their lunch hour. (Of course this was before Pearl Harbor!)

"You mean ate," replied one of the men.

"Well, maybe you are right. I guess it was eight!"

JAMAICANS AND BAHAMIANS

(Continued from Page 1.)

been allocated 432 million pounds of butter, marking an increase of 22 million pounds over the allocations for the past three months. This is possible because the government still has sufficient butter acquired from last year's production to meet lend-lease needs at least during April. Therefore, the government, will need to purchase only a small quantity—10 percent of the butter produced this month for the Armed forces. April normally is one of the high butter production months and therefore the quantity available for civilians is expected to be relatively large—much larger than last April when 30 percent of the month's butter supply was required for war uses.

More cheddar cheese has been allocated to civilians for this quarter. The 120 million pound allocation is 30 million pounds larger than the January-March figure. The monthly supply for the next three months therefore, will be 10 million pounds greater than has been available since last September. Civilian allocation of other cheeses, such as Swiss, Italian, and limburger, will be slightly less for the second quarter.

As much evaporated milk and condensed milk have been allocated to civilians for the April-June quarter as for the past quarter, or a total of 436 million pounds of evaporated milk and 47 1-2 million pounds of condensed milk.

Slightly less meat, 4,485.2 million pounds, has been allocated to civilians for the April through the June quarter, than the allocation of 5,091.3 million pounds for the January through March Period. However, approximately the same proportion of beef, pork, veal and lamb will be available. The initial January supply was later supplemented by 547 million pounds—all pork—when actual supply for the period exceeded the estimate. The slightly lower allocation for the second quarter, representing a small decrease from a fairly high level of consumption reflects the seasonal decline in livestock marketing during the spring months.

Among the foods expected to be in good supply throughout most of the country during the next quarter are potatoes, cabbage, spinach, lettuce and other leafy greens, carrots, beets, citrus fruits, canned green and wax beans, tomatoes and a number of other fresh vegetables; frozen vegetables, shell eggs and fluid milk. In addition to these seasonally abundant foods, cereals and cereal products, such as bread, flour, noodles, and spaghetti are expected to be plentiful throughout the year.

1944 GOAL IS SET

(Continued from Page 1)

letin for gardners in that state. Persons wishing to obtain a copy of this bulletin, and other Vietory Garden materials should write the state Extension Service.

However, here are the ABC's of Victory Gardening: (1) Plan your garden. (2) Select a sunny plot, 30 by 50 feet if possible or larger, and one that is not too poor to grow a good crop of weeds or grass. (3) Break the soil thoroughly before planting. This should be done with spade or fork and rake, or with plow tools as soon as the ground it dry enough to work. (4) Use a good fertilizer. (5) Plant the seed, or set the plants aecording to direetions, making sure that they are properly spaced. (6) See that the garden is properly watered and cared for throughout the season; grow a year-round garden if you live in a warmer climate. (7) Guard against insects and plant diseases. (8) Eat your vegetables fresh out of the garden; save surpluses for eanning, drying, brining, or storing; and (9) don't let any vegetables go to waste.

Our lives must be patterned after the Great Example in order that we may be fit to be followed by others.

"DREAM AUDACITY" WAS FAR REACHING ARTICLE

Dr. M. C. Allen's Recent Editorial Claims Attention

Baltimore, Md.—(Special)—There appeared in the April Issue of "The Expected" an editorial headed "Dream Audacity", written by the Rev. M. C. Allen, D. D.. the pastor of the Leadenhall Baptist Church of this city. In the editorial Dr. Allen said:

"The Virginia Seminary is a racial **dream.** A **dream of** "SEIF-HELP" bristling with SPIRITUAL INDEPENDENCE. The **dreamer** was a slave, but free and independent in **mind, soul,** and **spirit.**

That the **dreamer** saw opportunity in inopportunity; sensed hope in hopelessness; and was conscious of the **Infinite** in the weakness of death is reflected in the **dreamer's** ability to set to music the **troubles trials, tribulations,** and the **wickedness** of those who despitefully used his race:

"My God's going to **move this wicked race** and raise up a nation that will obey."

The unfolding of this dream of "SELF-HELP, SELF-RELIANCE and SELF- DETERMINATION **in religious education reflects the** CHALLENGING AUDACITY **of the Negro people.**

The idea was set-up in the Zion Baptist Church of Portsmouth, Virginia in the organization of the Virginia Baptist State Convention just two years after General Lee surrendered at Appomattox Court House Virginia.

That the **dreamer** was conscious of the presence and direction of the **Infinite** in his **dream** is made clear in the spiritual emphasis and Scriptural background of the message that laid the foundation for the building of Virginia Seminary:

"__The Lord shall have them in derision__ Thou shalt **break** them with a rod of iron; thou shalt **dash** them in pieces like a potter's vessel." (Psalms 2:4, 9)

The magnitude of the **dream** and the stern realities of the unrealized vision of the **dreamer** present **Dramatic Audacity.** The **dreamers** race was a people without **economic opportunity, political hope, illiterate,** and in a **strange land.**

Aside from the **Dreamer's Spiritual Acumen,** it is utterly impossible to account for the **Audacity** of the **Dream** and the masterful influence the **Dream** has exerted over millions at home and abroad. The most skeptieal of the opposite race and those deceived by **Counterfeit Charity** within the group, who dared not attempt to stand alone with the **Dreamer** seventy-five years ago are now convinced that not only the future of the Negro race depends upon **Self-Help** and the **Spiritual Independence** of this **Dream,** but that the world must release **This Joseph Race** from the prison cells of economie and political bondage that he might come to its reseue, by conserving for the human race the **"milk of human kindness,"** or dark waters are ahead for civilization.

Africa, that has been the auction block for the slave markets of the world, must now through religious education and **Spiritual Insight,** make itself known to the embittered races of the world:

"____I am Joseph your brother, whom ye sold into Egypt. Now therefore be not grieved, nor angry with yourselves, that ye sold me hither: for God did send me before you to **Preserve Life."**

In the spiritual development of the underprivileged and oppressed people, the **Dreames** is indispensable.

Great **Dreams** are but the budding genius of a dynamic people.

Great **Dreams** are involving things.

"And Joseph **dreamed a dream__"** There are individuals who are so engrossed in the needs of others that they literally become hypnotized by the magnitude of their ideals.

The ability to free one's self of personal interest for the good of others is itself an achievement.

Those Who Sense The Vastness of the Great Unknown Disregard personal Danger.

Those who become **God-conscious** in the development of a project to meet major human needs glory in tribulation.

For Such a Person to Die Is Gain.

Great **Dreams** are masterful things! **When they Appear. Nothing Else Matters.**

Great Dreams never appear to hesitant, timid, fearful souls.

Great Dreams Only Appear to Those Who Trust God and Then Care Not For What Happens.

Joseph's **Dream brought Resentment** from his **parents, hatred** from his **brothers,** and **Embarrassment** from the **governor's wife. But Did It Matter!**

Joseph's **Dream** Got him a **coat** of **Distinction,** in a **pit** of **Despair,** in **Slavery,** and in **Jail. But did it Matter!**

Joseph's **dream Lifted** him out of the **Pit, Released** him from **Jail, Freed Him From Slavery,** and **Made** him the **Economic Master** and prime minister of Egypt. And all the regions round and about had to depend upon his **Dream** for economic security.

The Dream of Virginia Semi- is an **Involving Thing.**

To those who do not believe implicitly in the **Spiritual Resources** of the **Negro People,** it is a **"Dream that Troubles."**

No one can interpret this **Dream** into living reality who is not willing to east aside every known source of educational support, that is not **Genuinely Christian,** and depend upon God and the **Spiritual Resources** of the race for its development. There is great need for a **system of religious education that respects the Sacredness of Personality Wherever Found.**

No One Can Interpret This Dream of "Self-Help" and Spiritual Independence who is Afraid of Getting Hurt or Hungry.

The future of the Virginia Seminary was never brighter. Those who believe in her principles stand in a thousand pulpits. They have the ears of millions.

It is sheer stupidity to complain or despair about what others are not **doing for, or against the race.** The would-be leaders either **beg or complain.** Great **dreams** are not realized that way. **A Leader is One Who Does Things.**

It can not be too often said, that **Virginia Seminary Was Built by the Negro Church and Saved by Negro Business.**

The Negro business man has **Dreamed a Dream.**

The Negro business man by rigid honesty and sacrificial service has not only Built Sound Insurance Companies that pay off at death, but enterprises that have become a "Blessed Assurance" to Negro Churches, Negro church schools, and Negro homes, and other Negro business enterprises.

The Negroes Who Carry Insurance With the Southern Aid Society, The Richmond Beneficial Life Insurance Company, The Independent Order of St. Luke, and Deposited Their Money in the vaults of the Consolidated Bank and Trust Company of Richmond Virginia, **The North Carolina Mutual Life Insurance Company, and The Bankers Fire Insurance Company** of Durham, N. C., **Have Saved This Institution for the Race and the World.**

Preachers everywhere are urged to remain on **spiritual reservations.**

Preach Christ and not "Race **Hatred.**

Teach Negroes to solve the race problems by **Creations** in **Preference** to **Agitations.**

Teach Negroes to buy insurance where their children can equally share in the profits of the business.

Teach youth to support **Negro Business** in order that they might have a more equitable distribution of the economic resources of the world than the present economie system has provided.

Is this dreaming!

Is This Audacity

Are You Interested! ! !

37 COUNTIES EARN

(Continued from Page 1.)

In most of the winning counties Farm Security Administration's loan and supervision program, the soil conservation program of Agricultural Adjustment Agency and Soil Conservation Service, Extension Service's guidance and aid from other agricultural agencies, have been important factors in upping production.

FOUR NEGRO SPECIALISTS

(Continued from Page 1.)

Selected for their training and experience, these new contact representatives will organize instructional materials on the AAA program, andd will also develop wide contacts with Negro county agents, vocational agriculture teachers, ministers and other community leaders. Through this established leadership, these contact men hope to encourage a large number of Negro farmers to more effectively join in AAA's program for conserving and building the soil, which in turn makes for increased production. These contact men will also help to assure the full participation of Negro farmers in all phases of the AAA program.

All of the appointees hold degrees in agriculture, and have had wide experiences either as teachers of vocational agriculture or county agents. Mr. Espy, who will serve on the AAA staff in Arkansas, was graduated from Tuskegee in 1936, and did graduate work at Prairie View state college in 1941. He has served as vocational agriculture teacher and county agent.

Mr. Lloyd, also a county agent at the time of his appointment to the AAA post, was graduated from Southern university in 1932. Before beeoming a county agent in Louisiana, he was a vocational agriculture teacher.

Both Mr. Williams and Mr. Yaney, AAA contact men for Georgia and Texas respectively, were vocational agrieulture teachers when named to their new positions. Mr. Williams is a graduate of Hampton institute and was teaching at H. A. Hunt high school, Fort Valley, Ga. Mr. Yaney is a graduate of Prairie View state college, and has done graduate work at Colorado state college. At the time of his appointment, Mr. Yancy was vocational agriculture teacher at New Summerfield, Texas.

NAACP Drive For 500,000 Members Launched On May 1

New York—In all areas from coast to coast, the NAACP drive for 500,000 new members got off to a flying start May 1, for a two-months intensive eampaign. Already field secretaries Noma Jensen, Irvena Ming, Noah Griffin and Donald Jones have reached their respective territories and are busy guiding hundreds of new captains, workers and volunteers, anxious to do their part in the Association's effort to sustain the advances made during 35 years of growth, marking 21 Supreme Court victories out of 22 cases before the Supreme Tribunal of the land.

Territories in which executive officials will spend weeks during the campaign inelude Ohio, Minnesota, Michigan, Iowa, Illinois, Pennsylvania, South Carolina, Georgia, Florida, Alabama, Massachusetts, Oklahoma, Kentucky, Missonri, Kansas, Louisiana, Virginia, Tennessee, Texas.

YOUR INTEREST IN COAL

Few industries so closely affect the lives of all our people, and are less understood, than coal. The average person just takes coal for granted like water and air.

It has remained for the Bituminous Coal Institute to show that since 1920, increasing efficiency in the use of a ton of bituminous coal has stepped up the generation of electricity from 590 k. w. h. to 1,492 k. w. h. It has increased the number of railroad passengers carried one mile, from 106 to 134; tons of freight from 11,627 to 18,348, and pounds of pig iron made, from 1,268 to 1;584.

Contrary to the general understanding of most people, bituminous coal produces 55 per cent of the electricity used in the United States, whereas water power produces only 30.5 per cent, the balance being produced principally by gas and oil.

Eighteen tons of bituminous coal are required for steel to make one 4-ton army truck; 25 tons for one 3-inch anti-aircraft gun; 32 tons for one light tank; 50 tons for one medium tank; 32,000 tons for one super-dreadnaught.

Coal produces the power for 94 per cent of all United States railroad locomotives.

And, last but not least, the United States has a bituminous coal reserve for 3,000 years, even though in 1942 we produced almost as much coal as did Germany (including occupied countries) in 1939, and Great Britain in 1941, combined.

It is important for the people to know facts about their basie industries.

THE SPIRIT THAT WINS

"Farmers know that the greatest catastrophe which can befall our war-torn nation is a shortage of food. To this end we pledge ourselves to the utmost of our ability to produce food. We shall not hesitate to work 80 hours a week. Our wives and children will help us to plant and harvest our crops, to feed and milk our eows. The nation at war need fear no strike by farmers."—Statement of the Northeastern Dairy Conference.

Whilo dreams are not always fully realized, where one seeks the impossiblo, such dreams do mean that you think a lot about your hair. If you eravo hair that behaves, a normally, hoalthy scalp, why worry? Why fret and have nightmares? If your hair is dull and drab and needs special care, do something. Dreaming is wishing, plus care. Enjoy giving yourself this treatment. Costs you less than 8c a week. Your pleasure is worth it. Enjoy seeing improvement right hefore your own eyes. Do what hundreds of women now do every day. Start now. Do this. See what Medalo ean do for your hair.

Try it! If it doesn't help, you lose nothing. Write your name and address on a penny postal card and send it to mo. Don't mail any money now. Pay when you get all the goods. In a few days, you will get a six-month size supply of Medalogro Scalp Formula, Medalo Hot Oil, Cream Oil, Shampoo, Medalo Pressing Oli, full directions plus free samples of Medalo Face Powder and Perfume and the Medalo Booklet. Pay the postman only $1.98, plus few cents postage. Use as directed and if not absolutely delighted, your money back. Written Guarantee comes with all your goods. Write now.

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., JUNE 15, 1944 No. 5.

COMMUNIST COUNCIL MEMBER

First Negro to be Elected By Party

New York, N. Y.—Benjamin J. Davis, Jr., Communist member of the New York City Council, will act as co-chairman of the Public Session of the 1944 National Convention of the Communist Party of the United States at Madison Square Garden, New York, Tuesday night, April 23. Mr. Davis is the first Negro Communist to be elected to public office. His father, Benjamin J. Davis, Sr., of Atlanta, was formerly a National Republican committeeman from Georgia.

Principal speaker at the gathering will be Earl Browder, General Secretary of the Communist Party, who will report on the deliberations of the convention sessions and announce plans for changing the name and structure of the organization. Mr. Davis' colleague in the New York City Council, Peter V. Cacchione of Brooklyn, will act as co-chairman at the meeting.

Mr. Davis was recently among 12 Negroes and six white individuals honored for outstanding contributions to the improvement of race relations "in terms of real democracy made during the past year." The awards were made by Dr. Lawrence R. Reddick of the New York Public Library as a feature of Negro History Week.

Councilman Davis, 41, is a graduate of Amherst College, where he played football, and the Law School of Harvard University. In the New York City Council Mr. Davis has led the fight against discrimination, demanding fair play for his people in the interests of unity behind the war against the Axis.

AAA IN PUERTO RICO AND OTHER AREAS

The 1944 agricultural conservation program for the Insular Region including Puerto Rico, Alaska, and Hawaii has been approved by the War Food Administrator. The program, as announced by N. E. Dodd, chief of the Agricultural Adjustment Agency, is designed to obtain maximum performance of soil conserving practices as a means of contributing to wartime production in these areas.

For Alaska and Hawaii the programs are substantially the same as last year.

For Puerto Rico, where the production of food crops has been intensified and the acreage devoted to such crops has been greatly expanded during the last two years, payments will be made for adopting soil conserving and erosion preventing practices on these intensively cultivated areas. These practices are planting legumes, interplanting leguminous crops with other crops, contour cultivation, and establishing proper ditching systems on land where the slope is such as to make the adoption of these practises the most effective conservation measures.

As in the continental United States, payments for certain commodities on the basis of acreage allotments, rice in Hawaii and tobacco in Puerto Rico, will not be made under the 1944 agricultural conservation program.

It is estimated that conservation payments in the two territories and Puerto Rico under the program will be approximately $1,000,000, divided: Alaska, $8,999; Hawaii, $120,000; and Puerto Rico, $872,000. This is nearly the same as was available for conservation practices under the 1943 program for the Insular Region. Payments under the program are contingent upon appropriations by Congress.

BENJAMIN J. DAVIS, JR., Member of the N. Y. City Council, who will preside at Public Session of 1944 Convention of Communist Party of U. S. at Madison Square Garden, May 23.

VICTORY GARDENS URGED FOR ALL

Don't Share-Crop It With Insects and Weeds

Washington, D. C.—Unless Victory Gardeners want to sharecrop with insects and plant diseases, they should begin planning now to battle with these enemies, the U. S. Department of Agriculture warned this week.

Although insects and plant diseases are serious enemies which gardners face, control measures have been developed which reduce the hazard, and usually make it possible to grow vegetable gardens with comparatively little loss from attack by these foes.

There are several ways of protecting gardens against diseases: (1) crop rotation, (2) the use of disease-free seed and plants, (3) use of disease-resistant varieties of seed and plants, (4) seed treatment and (5) spraying and dusting with fungicides. Garden experts have found the planting of disease-resistant varieties to be the most effective control measure.

In buying plants, make sure that the roots are clean, thickly branched and free from knots or swellings. This is a wise precaution against plant diseases.

Garden insects are in two general classes. Cutworms, beetles, caterpillars and grubs feed on the plants by eating the leaves and stems or cutting the plants off. Plant bugs, leafhoppers, thrips, and aphids feed by sticking their needle-like mouth parts into the plant tissue and sucking the plant juices. They feed usually on the undersides of the leaves or in the terminal shoots or flower buds.

The remedies used against these pests differ. A poisoned bait is used for cutworms. The beetles and caterpillars can be controlled by applying rotenone or cryolite to the plants. For the plant bugs in the absence of pyrethrum handpicking is the remedy. Sulfur and Bordeaux mixture is useful against the leafhoppers.

The remedy for plant lice and thrips is spraying with a nicotine-soap solution or a nicotone dust. To kill this latter type of pest the nicotine must come in contact with their bodies. Rotenone is a very satisfactory insecticide for the control of the bean beetle, cabbage worms and flea beetles, but because

(Continued on Page 8, Column 2.)

NEGRO FARMER GETS BANKERS AWARD

Eddie Marshall of Porter, Okla., Recipient

Washington, D. C.—Because of the excellent program of soil and water conservation carried out on his own farm, through which he is increasing his wartime production, Eddie Marshall, Negro conservation farmer of Porter, Oklahoma has been given a certificate award by the Oklahoma Bankers Association.

The importance of soil and water conservation was emphasized last week by Secretary of Agriculture Claude R. Wickard in an address before the Rotary district conference. He pointed out that erosion has damaged 300 million acres, or two-fifths of all the cropland in the United States. Said he, "Each year erosion costs the United States in the neighborhood of $3,844,000,000 in wasted soil, railroad and highway damage, flood damage, abandonmbent of farms, reduced reservoir capacity and other losses."

Joining in to help conserve the Nation's soil resources, Farmer Marshall asked the U. S. Department of Agriculture's Soil Conservation Service in 1936 to provide him with technicians to help him plan a soil and water conservation program on his 160-acre upland farm. This was the beginning of his conservation farming. After the plan was developed, youths from the Wagoner CCC camp helped him build two farm ponds, set black locust trees on two acres, plant Bermuda roots in pastures, and terrace outlets.

In 1938 when the Arkansas-Verdigris Soil Conservation District was organized, Mr. Marshall was one of the first applicants for a district cooperative agreement. Although most of the conservation measures planned for his farm had been established, he wanted to have a cooperative agreement with the district.

Now 61 acres of cultivated land is protected by a system of terraces built by Farmer Marshall. All farming operations are on the con-

(Continued on Page 8, Column 2.)

THE GREAT PHYSICIAN

Flossie Hughes Bobards

The Great Physician stood at my door
And I did not let him in.
My soul was sick and my heart was sore
With its heavy load of sin.
I needed the healing touch of his hand
And his merciful love divine,
But he stood at my door and I knew it not
That his healing power was mine.

The Greatest Healer stood at my door
'Mid the tumult of wind and rain,
And I knew it not what he had in store
Of relief from my bitter pain.
So he waited the passing of the storm
Outside my window there,
While I needed his healing divine
My heart too sore for prayer.

So the Great Physician went his way
When the fury of storm was past,
And left me there but I found a prayer
Deep in my heart at last,
For I felt his wonderful healing love
And his nearness eased the pain.
But I'll look for his presence in every storm
That rolls o'er my soul again.

CARVER PORTRAIT PRESENTED TO INSTITUTION

Distinguished Scientist's Likeness in Smithsonian Institute

Washington, D. C.—A portrait of the distinguished scientist, George Washington Carver, was presented to the Smithsonian Institute here in Washington last Tuesday by Vice President Henry A. Wallace. Mrs. Eleanor Roosevelt witnessed the presentation.

Painted by Mrs. Betsy Grave Reyneau, a British woman, the portrait shows the renowned agricultural chemist and peanut wizard standing in an open field tenderly touching the petals of a pink narcissus. The Carver portrait is the first of a Negro American to be placed in the Smithsonian Gallery.

FARMERS BACK PRICE CONTROL

Statement adopted by Farm Representatives at Emergency Conference to Save the Price Control Act, April 20, 1944.

Washington, D. C.—Representatives of leading farm and rural groups throughout the country attending the conference to SAVE THE PRICE CONTROL ACT, now being held in the Caucus Room of the Old House Building, announced that farmers want prompt re-enactment of the Price Control Law with no weakening amendments.

"We as representatives of farm people in all parts of the country welcome this opportunity to join with representatives of organized labor, white collar, veterans, and consumers to assist our Congress in 'holding the line.' From our experience we know that farmers and their wives overwhelmingly want a continuation of strong price controls which can only be secured by re-enacting the Price Control Law without any jokers or welching."

Among those attending the conference and issuing the joint statement were: Dr. M. F. Dickerson, Member of Board of Directors, National Farmers' Union, Little Rock, Arkansas; Ralph O. Brown, chairman, National Agricultural Mobilization Committee, Hoytville, Ohio; Rev. George Higgins, National Catholic Rural Life Conference, Washington, D. C.; Robert Handschin, Farmers Union Grain Terminal Association, St. Paul, Minnesota; Meyer Parodneck, President, Consumer-Farmer Milk Cooperative, New York City; Charles J. Coe, Editor, Facts for Farmers.

"We know what inflation means as no other group in our country," they stated, "and we don't want to see another round of price rises now. The ceilings on farm commodities are now generally satisfactory and the most important thing that can be done to help farmers is to make more secure the floors under products of which we have succeeded in producing temporary surpluses, such as eggs.

"In this emergency there is no other way to keep price control than by using subsidies judiciously applied, and our experience leads us to the firm belief that authority and funds for such subsidies must be continued and directed to increase production.

"The commotion which was led by the so-called "Farm Bloc" in the past two years over this issue did not and today does not in our opinion represent the farmers. Now that experience has proven the worth of the stabilization program, and people have had time to learn the facts, farmers hope there will be no more playing with the dynamite of inflation."

NEARLY 400 NEW NEGRO APPOINTEES

Important Posts Given to Extension Workers

Washington, D. C.—With the appointment of 104 additional new emergency war food production and conservation aides, there will be nearly 400 new colored workers on the staffs of State Extension Services to perform the important job of helping Negro farmers increase their output of vital war crops, according to an announcement made this week by M. L. Wilson, director of Extension work in the War Food Administration.

Among the additional appointees are 27 emergency war food production assistants, 49 preservation assistants, including 18 part-time workers, three state supervisors, and 25 clerks, including 13 part-time clerks. This brings the wartime Extension staff up to a total of 956 colored workers.

The emergency agricultural aides, together with the regular Extension force will bring effective guidance to a larger number of Negro farmers than have ever been reached heretofore. The results are expected to be reflected in increased production and conservation of important wartime food crops. It is also believed that the long range effect will be improved living conditions, and better diet for thousands of Negro tenants and sharecroppers.

Appointment of these and other emergency workers who may be added is made possible through the allocation of $2,000,000 to State Extension Services by the War Food Administration to stimulate increased production and conservation of food and fiber.

The recent additions were made principally in Mississippi, Lousiana, Texas, West Virginia and South Carolina. Mississippi which has more than twice as many Negro farmers as any other state has increased the number of its emergency workers from 20 to 66; Louisiana has added 31 part-time workers; Texas has aded 11 full-time workers; West Virginia six, and South Carolina, four.

MORE "V" GARDENS NEEDED

If you haven't decided to plant that Victory Garden yet, and get in the fight to help assure adequate supplies for home front workers who must not fail, for lack of vitamins, to pass the ammunition, then listen to this statement made by Secretary Wickard over VBS last Tuesday:

"When point values were reduced not long ago on canned vegetables, many assumed that the battle of food was already won, and that they could take things easy this summer. The truth is, of course, that this is the season to clear the warehouses of last year's canned goods to make room for the new crop. But the very favorable situation for the consumer is only temporary.

Chester Bowles, OPA Administrator, made this clear last week when he said that higher point values will have to be restored to spread new supplies evenly throughout next winter. Although farmers are counted on to turn out a record supply of food again this year, the supply of canned fruits and vegetables for civilians is likely to be short, because increased military needs will more than offset expected production gains.

"Every family that possibly can should have a Victory Garden this year and take good care of it. That's one way we can let the boys at the battle front know that we, at home, are doing our part to back them up."

WOMAN'S PAGE

NEGRO WOMEN IN WAR EFFORT

Mrs. Rosalie Ivy, an energetic young Negro woman, works in mud, but she's neither a pottery worker nor a maker of mud pies. She's a "Pan Man" in a giant Gary (Indiana, steel mill, and mixes a special mud used to seal the casting hole through which molten iron flows from a blast furnace. In the entire steel industry few women, or men either, are "Pan Men," for this is a rare job.

Mrs. Ivy belongs to that growing list of Negro women war warkers who have replaced men in jobs for the first time. The Women's Bureau of the U. S. Department of Labor recently compiled a list of some of the odd jobs held by such women.

Among those listed in this group is Evelyn Samuels, who went to work at the Brooklyn Navy Yard last year when they hired women mechanics for the first time in 141 years. In the Civil Service examinations given for Navy Yard jobs, Miss Samuels received 99, the highest rating of any of the 6,000 women tested. Doris Wilson, Hunter College student and Brooklyn resident, was another high-ranking applicant in the same examination. Both Miss Samuels and Miss Wilson were assigned to the instrument division where binoculars, telescopes and range finders are reconditioned.

Mrs. Susie T. Glover of Georgia holds a unique job for a woman. She was probably the first woman train announcer in the United States. Mrs. Glover started her railroad career 25 years ago doing odd jobs, icing and watering the train, cleaning up the station's carpenter shop, etc. Her job as caller started accidentally when the stationmaster asked her not to let anybody miss a train. She got copies of all schedules and began memorizing them. Today her voice is part of the essential station noises.

At the Bartlett-Hayward plant in Baltimore, Maryland, a Negro woman runs a steel-burning machine. It is an intricate machine, 25 feet long and 6 feet high, which cuts huge plates of steel for use in six different kinds of anti-aircraft guns. The acetylene torches which cut two parts at a time must be set and guided with precision. The operation must have a dozen or more controls set exactly right.

One of the most unusual jobs held by a colored woman in war industries is that assigned to Ethel Maxwell Williams of St. Paul, Minnesota. Mrs. Williams is assistant to Cecil E. Newman, director of Negro personnel for the Twin Cities Ordnance Plant at New Brighton, Minnesota. Her work includes labor relations, personnel adjustment, race relations, and related spheres of administratively activity. Last spring this plant was employing more than 17,000 workers, 700 of whom were colored. They work at a variety of jobs and include supervisors, stenographers, machine operators, nurses, photograph technicians, draftsmen, machine adjusters, movement, janitors and matrons.

The pre-war theme song of the aircraft industry was "Men Only." Shortly before Pearl Harbor some 4,000 women were employed in the entire aircraft industry—and most of them were in sewing jobs. By September of 1943, however, the tune had changed, more than 340,000 women were at work in the industry in airframe, engine, and propeller plants. Another 4,000 were employed on gliders. Not only are women making the intricate parts that go into huge bombers, but among other things they're working on the assembly and wiring of electrical systems; at the so-called spaghetti work behind the instrument board, assembling the wires of the bombers and fighters; burning, drilling holes, riveting parts together; sheet-metal work, and inspection. In short, women are helping to make every type of plane from the Thunderbolt to the giant Flying Fortress.

The cannon and small arms plants also were considered men's domain before our entry into the war. A study of the Women's Bureau in the summer of 1942, of four government arsenals and four private firms showed, however, 11,000 women among the 75,000 employees. This number has been greatly increased within the past year.

Negro women are now to be found in every one of the key war industries. They are sharing, if sometimes in small measure, the wartime advances being made by all women. Today, because of the critical lack of manpower, age-old prejudices are beginning to crumble. Into the entering wedge have gone women of many nationalities.

The need for women war workers is still acute, and there is still a need and opportunity for women in civilian jobs to transfer to war work.

—Service Magazine

TO THE LADIES

More than seventeen million women in the United States are now employed, according to the Bureau of Census—most of them in industry.

By and large, women are carrying this great part of the load of wartime production out of patriotism. They were needed, and they answered the call. Many of them have husbands, or brothers or sweethearts, in the armed forces. They want to back their men in the fight, and they want to have some money saved when their men come home. They're buying War Bands.

Many of these "soldiers in slacks" are in industry to stay. They like it, and American industry likes them. They're proud of their work. They're careful and painstaking. Last, but not least, they are good industrial housekeepers, keeping their machines and work benches as clean and orderly as they keep their homes.

So far as the chemical industry is concerned, twice as many women are working for the DuPont Company as there were a year ago. Thirty-six per cent of the employment of Du Pont and its associates are now women. That's more than one in three.

Women are making tests and analyses in DuPont laboratories.

They're operating lathes and punch presses—even 2-ton cranes in DuPont machine shops. There are women doctors, inspectors, janitors, blueprint file clerks, production-line workers, still operators, truckers and textile operators. Fitting the job to women makes it unnecessary in many cases to fit women to the job. Platforms are raised. Chairs are adjusted. Overhead electric hoists do the heavy lifting.

These women in wartime jobs wear safety goggles and safety shoes like men. They lay aside the frilly dress or piece of costume jewelry that might catch in a machine . . . But they want industry to treat them as women, and industry does.

It took World War I to liberate women and gain recognition for them in the world of business. It has taken World War II to demonstrate that they have an important place in American industry as well. And, despite the great number now at work, industry can use many more. The DuPont Company welcomes women workers.

For their patriotism, their determination, and the splendid record they have achieved, we salute these millions of new recruits to industry, including those who have come to Du Pont.

"In my opinion the most difficult problam that you have got to face, that I have got to face, is in some manner to so articulate the education of the colored youth into the life of the community in which that youth lives that the southern white people will feel and see, day by day, the benefit of Negro Education.—ibid

"Just in the degree that we can take hold of this book knowledge and weave it into our civilization, into practical measures, in the same degree will both races be helped and both made more happy and more prosperous."

—Booker T. Washington, Nashville, 1907.

HELPFUL HINTS FOR WOMEN ON NUTRITION

Here's a recipe for those who ordinarily won't eat liver. Parboil the liver first, then grind it up with breadcrumbs and onion, and season with chili sauce, salt, Worcestershire sauce, pepper and chopped parsley. Mix with one egg and form into patties. Wrap these in a strip of bacon and broil.

There is a plentiful supply of yellow turnips on the market now. They are a good source of vitamins and minerals, but remember that, like eggs, they absorb odors, so store them away from strong-smelling foods and keep them dry.

Here's a new way to serve beets. Try them hot and spiced, like this: lift the beets out of their liquor, mix the liquid with cornstarch. sugar, all spice and vinegar, and cook slowly until it thickens. Then add the beets and butter or margarine and heat.

The best way to keep molasses, once the can is opened, is to store in a cold place or in a refrigerator. This keeps it from molding or fermenting.

Onions are scarce, but there are other things to take the place of them in seasoning. A pot of chives, leeks or wild garlic can be depended upon to deliver up a lot of delicious flavor.

Low cost, low-point lamb cuts are as tasty as lamb chops, and can be cooked much the same way. Broil the shank or flank, or grind up the meat on them and make it into patties, or a lamb loaf.

Broccoli as a vegetable high in flavor. Try it in a souffle for a change.

Rabbit makes a meat dish that's really all right. Broil or fry the younger ones, cook the older ones longer.

French toast is a fine food for breakfast. Serve it now while there are plenty of eggs to go into the making, but remember to serve a fruit and beverage in the same meal so that your family will get a well-rounded breakfast.

FSA BORROWERS PRODUCE FOR VICTORY

Farm Security Administration borrowers, of whom 63,000 are colored, sold 49 percent more meat (liveweight) last year than in 1942, and made increases ranging from 14 to 65 percent in their production of five war-essential food and oil crops, the War Food Administration announced last week.

Families on the FSA program sold enough milk to provide a year's supply for 8,739,000 active men; enough eggs for 7,517,200 men; pork for 4,437,400; mutton and lamb for 3,153,200; and beef and veal for 2,694,000. These sales were in addition to production for their own home needs.

FSA Administrator Frank Hancock points out that the high percentage increases in war food production by Farm Security families, particularly their expanded production for the commercial market, are of great value not only to the Nation, but also to the families themselves.

Said he, "The extra margin toward victory which these small, family-type farmers have contributed is of primary importance to the Nation at this moment. Also, these families, who received credit and practical guidance from Farm Security when they could not qualify for adequate credit from other sources, have strengthened their own security for the years to come.

"Like all farmers, they have done more with less, for thousands of their sons and daughters have gone into the armed services and war industries. Many of these borrowers already have paid off their Government loans in full and have become independent and debt-free, while most of the others have made rapid advances toward that goal. As far as our resources permit, we are continuing to help additional small farmers help themselves and at the same time aid the country and our allies toward victory."

FOOD FOR PUERTO RICO

The War Food Administration has just released a report which shows that 60,380,200 pounds of food were delivered to Puerto Rico and the Virgin Islands during the month of February. This was 10 million pounds larger than January deliveries, and represented six percent of the 865,884,856 pounds delivered to all claimants during the month.

Call For Prayer As Invasion Is Launched In Europe

IN EUROPE INVASION DAY IS HERE.

A most critical day in the world's history.

Europe is in the grip of a Fuehrer whose special fury is against Christianity and Judaism.

The president has assured us that the Enemy's ambition is the destruction of Christianity.

He would substitute **Mein Kampf** for the Bible.

He would remove the Sword of the Spirit and install a sword of steel. His vitriolic words and murderous deeds against the Jews bespeak his desire for their utter annihilation.

About 1900 years ago there was a peaceful invasion of Europe by a man who was "an Hebrew of the Hebrews" (Philippians 3:5).

Paul and his fellow—laborers brought the Gospel of Christ into Europe for the first time (Acts 16-.

That Gospel is still "the power of God unto salvation to everyone that believeth" (Romans 1:16).

Certainly the Gospel suffered in the hands of its friends.

And there is much to be regretted about some methods of its presentation; but who, save one suffering from spiritual insanity, could possibly object to the Gospel itself?

That Gospel is the good news of Christ's death for our sins, His burial and His resurrection for our justification. (1 Cor. 15:3-5).

Since the day of that peaceful invation, Europe has seen millions of genuine Christians—the "salt" and "light" of the earth (Matt. 5:13-16).

To record their exploits would mean the rewriting of the pages of history.

Is Europe now to have her spiritual "Bread" taken from her and be given a "stone"?

And will she be given a "serpent" for a "fish"? (Matt. 7:9-10).

We are on the eve of the greatest and the most daring military—and can we not add, spiritual—adventure in all history, the liberation of a continent!

On a certain day—unknown to us—our sons, our brothers, our fathers our friends will, in the air, by the sea, and by land, invade Europe to free her!

On that day all Christians should pray as they have never prayed before.

Let us not wait until that day. Start now and "pray without ceasing" (1 Thess. 5:17).

News comes that Col. Elmer J. Bowling, commanding officer of Maxwell Field (Alabama) has stated that prayer will be the order of the day when the Invasion of Europe is announced.

Col. Bowling said officers and men will be called together for three minutes of silence and then a three-hour period of special devotion by all faiths will follow.

Spiritual and secular papers are urging special prayer for that day.

Says one editor: "Whatever our business, let us abandon that business for one to five minutes and transport our very souls by an act of prayer into the souls of our men over there."

Invasion day over there—a protective canopy of American and Allied planes darkening the sky: massed shipping converging on Hitler's Fortress Europe; doughboys swarming onto thundering beachheads, braving mines and barbed wire and concrete pillboxes.

Invasion day here—millions of men, women and children, kneeling, standing, lying in churches, homes, stores, offices, public conveyances, on the streets, everywhere praying for loved ones.

Let us pray that our loved ones shall be spared injury and death as much as possible while throwing the maximum of their efforts into the fight against tyranny.

By all means let every believer in our Lord Jesus Christ say to General Eisenhower and all associated with him, as the prophet Samuel said to Israel: **"As for me, God forbid that I should sin against the Lord in ceasing to pray for you"** (1 Sam. 12:23). Prayerlessness is sin.

SARA P. SPEAKS IN RACE AGAINST ADAM C. POWELL

G. O. P. Backs Brilliant Woman Lawyer Against Tammany's Choice for Congress

New York, May 18—(ANP)— It is definite that Harlem will send a Negro to congress, for the first time in the history of this crowded sector.

Because that fact is definite, hats are being tossed into the ring with reckless abandon. Many would-be candidates will die a-borning; some will linger on. Filing petitions are now ready to be issued. Only a few names are necessary to put a candidate's name into the running. Most anyone here can snag that many names on anything, so most of the present candidates will stay in the race.

Close on the heels of the naming of the newest contender—Sara Pelham Speaks—put up by the Republicans, Wednesday, both Mrs. Speaks (wife of the former big shot musician Douglas Speaks of Springfield, Ohio) and Adam Clayton Powell are announcing to Harlemites in general that this weekend will see both of them meeting with their "constituents,' 'in the opening guns of the campaign.

Mrs. Speaks sent telegrams to the press, inviting them to her press conference this Friday afternoon at the Hotel Theresa. The Powell affair will be held Sunday afternoon at Powell's Abyssinian Baptist church. This one will be open to the public.

Pointers for Visiting the Sick and Shut-Ins

That may be the way you feel, yet you may really have an enjoyable visit with some sick friend, even though your conscience requires it.

Perhaps there are reasons you don't want to go. You really do not like the invalid, but feel a visit would be a kind deed. This one may be the complaining type who fills the atmosphere with groans and wails. It takes a high degree of patience and charity to be agreeable under a steady downpour of complaints. The patient might even be physically repellent. Generally, though, you have no objection—you just do not go.

The cares and pleasures of the world are so insistent. They push themselves obtrusively, demand attention so loudly, that the "some day" things which do not crowd are pushed away. A visit to the sick is not like the date which can be met only today—the meeting which cannot be held any other time, the appointment which demands fulfilment; but if it is hard to pack our many interests into 60 minutes, 24 hours, 365 days, it may be harder still to have nothing to pack. A minute, a day, a year—are only symbols. What you are doing, how you feel, where you are, determines the actual length.

The people who are suddenly, interestingly ill arouse the greatest concern. Days of intense anxiety, gradual easing of the strain, encouraging reports, then convalescence. There is that air of subdued activity, ordered care. The room banked with flowers, the patient interestingly pale. Days or perhaps weeks, and then their return to normal life. Of course, these patients want company, and generally get it. Our sympathies are easily aroused, but like hothouse flowers, they languish under prolonged strain, the trying strain of the chronic patient—those patients who have learned to think in terms of months or years, instead of days; the chronic who seldom has an exciting onset, who is even less apt to have a dramatic recovery; the chronic whose improvement is so tiresomely slow, who looks uninterestingly well.

There might be guide-posts for visitors who care. Dos and don'ts, which to a certain extent, apply to any patient, but more particularly to the chronic.

1. **Be regular.** If you can only go once a month, don't let the months slip by. If possible to make a weekly visit, and always on a certain day, the pleasure given will be multiplied. To be able to count positively on a visit for a certain day adds the joy of anticipation to the pleasure of the visit.

2. **Don't stay too long.** Even if the patient looks **strong,** the fact of being in bed over a long period of time makes any one weak. The mere being flat makes conversation wearying. Don't say, "I'm afraid I'm staying too long," but get up, say goodbye, and **leave.** If you take another hour to bid farewell, your friend may be as delighted at your departure as he was at your arrival.

3. **Do not make promises easily.** When four walls include all contacts, even a small matter is of great importance. You forget the promised books or plant or picture, in your **many** other demands, but the patient remembers and wonders. Don't promise aloud; just resolve inwards, then do it.

4. **Dress attractively.** If you are a woman, wear pretty clothes, different each time as far as possible. When the patient is reduced to gowns or pajamas, it is interesting to see variety in the clothes of others.

5. **Bring a new or interesting thought.** Unless the shut-ins air their own woes, there may be a lack in topics of conversation. Often they are sympathetic. Do not take advantage, and use them as clothes-trees to drape all your troubles upon. A grievance shared is lessened—to you, but to the supine person who cannot seek diversion your complaints may hang like annoying black robes. A patient wants new ideas to remember you by, not your cast-off woes.

6. **If you can't visit, write.** Perhaps write even if you can visit. Like everything regular, the chronic looks for the postman's visit. Letters can be read and re-read, taken out, and then dismissed when the patient is weary. The test of true friendship is the ability to continue indefinitely a one-sided correspondence. Don't wait until you have time for a long letter. Stick in a few news clippings, a puzzle, or a couple of jokes, even a clever party favor. The patient who is not disappointed day after day when the mail comes, can call her friends blessed.

7. **Supply with foolish things.** Mechanical toys which amuse, his favorite cartoons, or perhaps, gay balloons to make room restive. A prolonged stay in bed has a tendency to make even the most staid person interested in childish affairs, those little amusing objects which help to tick off another hour and day. Get them often for a variety show is the most distracting.

8. **Don't tell the chronic that she looks perfectly well;** that you do not believe there is a thing wrong with her. It's nice to think you are not abhorrent, but no one likes to be accused of maligning. No one, except a hypochondriac, would stay in bed from choice. It isn't pleasant when obeying doctors' orders to be made to feel in the wrong. It's no fun to be jeered at when on the line of march.

9. **And, never, never, unasked, offer advice as to change of doctors.** If a visitor would only realize that every other friend is probably advising a different doctor, he would realize the utter confusion of the patient. No matter how conscientious your suggestion, if you are only a visitor swallow the words. To you, your suggestion is the only possible one, but there may have been fifty others who thought the same. Often the most stable thing in a chronic's life is his faith in the doctors; certainly, it is the most necessary. It is a serious thing to weaken that faith for, without faith and confidence, the chronic loses all.

So, when your conscience drives you to visit your chronically sick friend, don't lose your sense of perspective. Sometimes we feel so righteous over accomplishing a long-delayed good deed, that we forget the patient's side. We lose sight of the fact that our presence can bring annoyance and weariness of spirit, as well as joy. Let us see the patient's angle, so they will greet our appearance, not our departure, with a shout of joy.

When Hard Times Came

By Bethann F. Van Ness

"The times will be hard, my brothers. The sun will shine, and the rains will not fall. There will be no good, green leaves to eat, my brothers, no fat bananas, no purple berries." Lil, the monkey, reached to the bunch of fat, ripe bananas in the tree above him and began to eat.

"He's joking," laughed Ran, the camel, and Mid, the elephant. Gar, the fat brown bear, only snorted and went on nibbling bright, purple berries.

"It's no joke at all. The wise ones who live in houses have said it. They tell by the sun, by the moon, and by the birds that fly away. They tell it by their books. I have heard them talking in their houses." The monkey picked another banana.

"What do the wise ones do?" asked Mid, the elephant.

"They build tall houses, very tall, to store away the food they do not eat today. They work like this." Lil tugged and panted as he pulled away a third banana. "They look so funny."

"It may be true," mumbled Gar, his mouth full of juicy berries.

"Then what shall we do?" asked Mid, as his long trunk gathered in a clump of tender grass and tucked it up into his mouth.

"I shall eat and eat and eat," said Gar. Faster and faster the berries tumbled into his mouth. Purple juice stained his brown whiskers, his black nose, and his shaggy feet.

"I shall eat and eat," All that day he ate, and all the next, until there was not a bush left with a single berry anywhere.

"I shall eat and eat," he mumbled. Then he spied a cool, dark hole beyond the bushes.

"Then I shall sleep," he decided as he waddled into the black hole. Farther and farther he waddled into the cool, dark hole. He turned around three times and flopped heavily on the ground.

"I shall sleep and sleep and sleep." And so he did.

"I shall eat, too," said Ran, the camel. "I shall eat, and I shall drink all the water in the clear pool. And then I shall go far beyond the blue mountains where the hard times will not come, and I shall be safe."

So he ate and ate, not as the bear ate, for camels have better manners. But he drank from the clear pool until nothing at all was left but a mud puddle.

"Now I shall go far beyond the blue mountains." And so he did.

"Where will you go?" asked Lil, the monkey, as the elephant walked through the forest.

"To the wise ones."

"Ho-ho! Then you must steal from them as I do. They will give you nothing at all," warned Lil.

Mid snorted angrily. "I do not steal. They will need help to build their tall houses. My back is strong. My trunk can lift heavy loads. I go to help them." And so he did.

"How silly!" laughed Lil to himself. "I can always steal from the wise ones when the bananas are gone. I shall do nothing at all."

While the hot sun shone, Mid gave his great strength to the wise ones, and the tall houses grew. They were safe and strong to store food for the hungry days.

The bad times came when the leaves dropped to the hard, dry ground, and the pools all dried up like the clear pool. But there was food for all in the storehouses. And the wise ones gladly gave food to Mid.

"He is our friend," they said.

In the shadows Lil, the thief, crept near. A banana a child had left, a bowl of pudding a mother had set to cool, would disappear. Sitting high on a housetop he would laugh because he thought no one knew.

If he had been nearer he might have heard them say: "The thief is about. Let us leave our scraps for him lest he take our food. But Mid is our friend. We will share with him." And so they did.

Then the wise ones, sitting in their houses, talked of other things, of the days when the good times would come again.

"Gar the bear, has run away. He feared to share with us, and so he shall never be our friend. He will always run from us, and we will not share with him.

"Ran, the camel, has sought other masters. So let it be. He shall be bought and sold and never be a friend of man.

"And Lil, the thief, will always be a thief. We will laugh at his tricks, but we will never trust him.

"But Mid will be our friend. He will work with us and share with us." They turned a page in their books. "One day men will make things to lift their heavy loads, but the elephant will still be their friend. He will have a place in every circus. In every zoo where children come he will be the most admired.

"The world and all could do without Lil, the thief, without Ran, the selfish, without Gar, the stupid, but Mid is our friend."

Outside, Mid snorted long and loud. A drop of rain had tickled his right ear. The hard times were over.

—Story Time.

F. C. Garvey Is Called 100 Per Cent American

"A 100 Per Cent" American

Nominating F. C. Garvey, operator for the L. & N. Railroad at HK Tower, Anchorage, Ky., as one of America's Champion War Bond purchasers, the L. & N. Magazine for May 1944 states that Mr. Garvey is currently allotting 100 per cent of his salary, less taxes, for their purchase. In all, Mr. Garvey has purchased $3,100 in Bonds through the L. & N. alone and has been so allotting 100 per cent of his salary since July 1943. The article quotes Mr. Garvey as saying he hasn't cashed any of his Bonds and that he definitely doesn't intend to.

Caustic Critic: You have a lot of bum jokes in this issue.

Editor: Oh, I dont know, I put a bunch of them in the stove and the fire just roared.

Collection Plates, Collection Baskets, Arm Bands and Gavels

Wooden Collection Plates, well finished with Plush Bottom, 10 inch Plates $6.00 each

A Wicker Collection Basket, made of best reed obtainable. Size 9 inches. Price $3.00.

USHERS' ARM BANDS

A well made golden Oak finished Gavel

Price $1.00

Stenciled in white made of blue wool felt. 4 inches wide.

Price 50c each

Oval Shaped Usher Arm Band

These Ushers' Arm Bands are very attractive; made of high-grade felt material, in colors red, blue and green, each with white letters, and elastic band to fit around the arm. Size, 6½x4¾ inches. **25 cents** each; $3.00 a dozen.

Blue Felt Ushers Arm Band, with sewed white letters of white felt. Very durable and attractive.

Price $1.00 each

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT.

BOLL WEEVIL DAMAGE

Weather conditions during the next few months will determine the amount of damage that boll weevils will cause to cotton in the South this year, say entomologists of the U. S. Department of Agriculture. Enough weevils have survived to cause serious damage if rainy weather prevails during June and July.

In many sections of the Cotton Belt, cotton planting is later than usual. Past experience shows that late planting increases the danger of boll weevil damage. When boll weevils are causing heavy damage the cotton should be dusted with calcium arsenate. Addition of one or two percent of nicotine to the dust prevents plant lice or aphids from becoming abundant.

Some sections of the Cotton Belt are encouraging cotton production by offering prizes. Johnson county, N. C. has already announced that prizes amounting to $2,200 will be awarded this year for the most cotton grown on five acres with a staple of one inch or better.

Sharecroppers and tenants as well as owners may participate in the contest. If a tenant grows cotton on a share basis, he will receive the full amount of the prize. The first award will be $500.

FARMS CONSERVATION WAY: INCREASES YIELD 100 POUNDS PER ACRE

Longview, Texas—Two hundred pounds of lint cotton per acre was Thomas Moore's production when he ran up and down hill and used just straight fertilizer on his fields. But by making the change to farming the "Conservation Way," he raised his cotton production to 300 pounds lint cotton per acre.

Mr. Moore is a Negro farmer living in the DeBerry community who became a farm-cooperator in the Shelby Panola Soil Conservation District of East Texas, March 1942. In joining forces with the district supervisors to control erosion and conserve moisture on his farm, Farmer Moore, with the assistance of the Soil Conservation Service technicians attached to the local district, made plans to terrace his cropland, change the rows to run with the terraces, and to seed part of his land to a winter legume each year.

Work started on his place that spring and he got his terraces built and the rows changed before he put in his crops. In the fall of 1942, he seeded hairy vetch on land that had been farmed to corn and peas that summer.

Cotton was planted after the vetch had been turned under in the spring of 1943. Under the new system of farming, Mr. Moore's cotton production was 300 pounds of lint cotton per acre last year. This increase in production was not due to the use of a winter legume alone, but due to the combined effects of the three practices that he put into operation, namely: terracing and contour farming to conserve moisture, and planting a winter legume to provide a green manure and put nitrogen in the soil.

One striking piece of evidence really brought home the value of conversation farming to Mr. Moore. Some of his farm had been what he considered his best land and actually had been producing better crops. Naturally, in wanting to build up his land, he seeded the vetch on the so-called poor land. The result? On the land that had been seeded to vetch, the cotton actually out-grew and produced more cotton than that raised on what had been his best land.

Mr. Moore had this to say about conservation farming in general, and seeding winter legumes in particular: "There is some added cost in farming this way and in seeding, fertilizer, and turning under a green manure crop, but the added cost is much more than taken care of by the increased yield. I'm putting out more of the vetch this year."

MORE ICE CREAM IN MAY AND JUNE

More and richer ice cream—roughly 15 million gallons more—may be available during May and June to those who relish this delicacy because of a recent War Food Administration order which permits manufacturers to produce more ice cream during these two months than during the same period last year. Ice cream will be richer than at any time since February, 1943.

An increase has been made in the amount of milk solids used for ice cream in expectation of a heavier-than-usual milk production during May and June. The increased quotas will make it easier to handle the flush production which comes at a time when a shortage of manpower in many processing plants makes it difficult for processors to make full use of the milk supply.

WFA also announced that quotas limiting the sales of cream and such milk by-products as cottage cheese, buttermilk, and chocolate milk drinks have been raised for May and June.

Although of a temporary nature, these two steps will help assure full utilization of all milk produced during the peak period of milk output.

ARE WE CIVILIZED?

By Ruth Taylor

Did you see the very fine statement issued recently by a group of representative citizens? They came from both sides of the fence, but in it they spoke just as Americans, calling upon their fellow-American, their friends and their neighbors, to concentrate their efforts upon the war and upon the war alone. In the course of the statement they made this fine appeal: "We ask you to do your utmost to temper any dispute that may divide your fellow Americans."

Notice what they said, not do away with differences of opinion, not stop all arguments, but temper them, moderate them, be fair and give the other fellow as much right to his own ideas as you claim for yours, in short, restrain your utterances.

The savage, and here I include those mass savages whom we fight today, succeeds by looking after himself alone. He grabs what he wants and fights to get things for himself alone. If he succeeds in getting away without being killed, he calls it success.

When savages first grouped themselves into tribes, they but enlarged this process. They were utterly callous about the fate of anyone but themselves. They went from the battlefields without a backward look at their slain. (Of course one could easily draw a comparison between their actions and the conduct of the Japanese.)

Civilization, from which our enemies have turned, is a way of doing things, a method of life which is ever expanding, rather than merely a static formula. Civilization implies responsibility, for it succeeds only when there is an able organization of free men willing to work for the good of all, that each may have a better way of life. A man's success should be but his way of rendering service to other people.

Man is but the instrument of civilization, one of the tools with which the Deity works. How a man succeeds depends upon his ability to be useful to the scheme of which he is but a part.

When each of us realizes that the nation is essential to the individual, and that the individual must not put his goal beyond the best interest of the nation, we can all live satisfactorily and successfully together. That is civilization.

NEGROES BUILDING SHIPS IN ALABAMA

National Defense Training School, Tuskegee, Institute

At the outbreak of World War II, among the many shipbuilding companies to offer their services to the nation was the Alabama Dry Docks and Shipbuilding Company at Mobile, Alabama. The major work of this company was that of bringing into the Dry Docks both wood and steel ships for major and minor repairs. For this type of work, several hundred Negroes were employed in the yards. Most of them were employed as laborers, cleaning and scraping of barnacles and rust. As soon as the Alabama Dry Docks Company was accepted by the Maritime Commission as a company to build ships, the local unions in Mobile and nearby sections offered the services of welders, cutters and burners of all races.

An out-of-the-yard training program for welders, cutters and burners was set up at Tuskegee Institute. Upwards to thirty trainees from the Mobile area alone completed their training and were sent to the Alabama Dry Docks Company for employment. These men were refused employment and many walked the streets for several weeks trying to get work. Following this episode, upwards to one hundred trainees completed their work and secured employment in the eastern and far western shipyards. Excellent reports of their work and advancement constantly reach Tuskegee Institute.

A hearing was requested by the Fair Employment Practices Committee, which finally caused a great change in events. However, a great deal of publicity of a negative nature became wide-spread. With all this, there was still a continued refusal on the part of the Alabama Dry Docks Company to employ Negroes, other than in the Inland Yards as cutters and burners; no arc welders were being employed.

With the weekly increase in the production of ships by competing shipyards, it became necessary for the Maritime Commission to seek measures for increasing production at the Alabama Dry Docks. This was done by order of the Alabama Dry Docks to sub-let all new ship construction to outside contractors. The writer feels certain that most readers have knowledge of the wonderful work being done by the Sun Shipbuilding Company of Chester, Pennsylvania. A partner of the general manager of the Sun Shipbuilding Company applied for and received a contract for the new shipbuilding at the Alabama Dry Docks. At this point, there was much new light thrown on the picture of Negro employment in the Alabama Shipyards.

The new management at once set aside four ways for the Negroes. However, recruiting has been and still is very slow due to some of the reasons herein mentioned. As the sub-contractors started their work and mentioned their desire for using the largest unemployed element in the Mobile area, that being Negroes, a small riot was incited. This occurrence was added, of course, to the already highly publicized negative reports. Negro workers were slow in reporting, due to fear of previous abuses. The draft boards in the Mobile area were busy picking up all unemployed. The housing situation also caused much delay in Negro recruiting.

In an effort to increase recruiting and training, the Alabama Dry Docks Company set up out-of-the-yard training schools for Negroes at the Alabama A. & M. College and Tuskegee Institute. A six-day pay training program was also set up and approved by the Maritime Commission. By this method the trainee receives 63 cents per hour for his work during the day at the school, and 68 cents per hour for his work at night. The trainee receives this pay the first Friday he reports to the pay-window at the Alabama Dry Docks Company. This trainee is also tested by approved authorities from the Alabama Dry Docks Company. After passing the test, he enters the yards at the rate of 97 cents per hour or better.

In this effort, the Alabama A. & M. College and Tuskegee Institute have played an important part in supplying workers for the Alabama Dry Docks and Shipbuilding Company. The major portion of Negro workers are employed in the hull erection sections. However, all areas of shipbuilding are open and will be held by trained Negro workers as the program progresses. At this writing, there are two ways practically manned by Negroes, and it is felt that in a very short time other areas will be opened.

The Alabama Vocational Rehabilitation Services are paying for the maintenance of veterans of World War II who might be interested in welding training.

A group of pictures may be found on this page or elsewhere showing the types of work in which Negroes are engaged in the Alabama Dry Docks and Shipbuilding Company at Mobile, Alabama.

COMMUNITY CANNING

Better trained supervisors, more plentiful equipment, profit from lessons learned the hard way last summer—all these point to a larger, more successful pack of food in community canneries in 1944. Work shops for training canning center supervisors, who will, in turn, train patrons, are being held in practically every State. Predictions are that the approximately 5,000 canning centers of 1943 will operate again this year with increased output. Most community centers can only in tins, and all are equipped with steam pressure outfit for processing corn, peas, beans and other low-acid vegetables—source of largest amount and most serious spoilage in home-processed foods.

FIFTY YEARS OF SERVICE

The greatest life and property saving organization in the world is celebrating the completion of fifty years of service. This organization is the non-profit Underwriters' Laboratories, Inc., whose chief occupation is fire prevention. For fifty years it has been inspecting materials and gadgets that go into the construction and equipping of every home and factory. Some idea of the extent of the Laboratories' work may be gained from the fact that it has approved the enormous number of 375,000 products. This result, moreover, represents far more than 375,000 investigations, for over 50 percent of the products fail of approval the first time they are tested, and many require more than a second trial. The wide scope of the organization's activities is further revealed by its record of half a billion individual safeguarded articles approved in a single normal year, this number constituting the production of 5,000 manufacturers operating 5,500 factories. The articles include fire-detectors and alarms; fire retarders and resisters (fire-resistive walls, windows, doors, roofing, etc.); and products which may cause fire or accident through failure or faulty design, such as electrical wiring, domestic, commercial and industrial electrically operated equipment, gasoline, gas and oil using products, and lightning protection.

Every man, woman, and child in the United States and Canada comes into contact with many of these hundreds of thousands of safeguarded articles, and relies on them for safety.

No one can say how much property or how many lives have been saved as a result of the Underwriters' Laboratories' tests and research. Records show how many fires there were, the number of people who died of burns and from accident. The records do not show how many potential losses of such kinds did not occur.

USDA OFFICIALS ATTEND BUSINESS LEAGUE CLINICS

The close relationship between agriculture and business was explained at the wartime business clinics held recently in St. Louis, Mo., and New Orleans, La., under the joint sponsorship of the U. S. Department of Commerce, and the National Negro Business League. In both cities a session was devoted to food production and food distribution in which the importance of food in wartime was pointed out.

Local farmers gave practical demonstrations of how they were able to improve their farms, and increase their production of important livestock and vegetable crops. Things they were able to do through the assistance of the Agricultural Adjustment Agency were pointed out by C. F. Clark, senior educational specialist of the Southern division of the AAA. Other Agriculture officials who appeared on the program were Albon L. Holsey, and J. A. M. Lloyd of the AAA, Alvin E. White, and Mrs. Constance E. H. Daniel of the Office of Distribution.

Several other government agencies were represented at the clinics including the Office of Price Administration, the War Production Board, and the War Manpower Commission.

DDT KILLS HOUSEFLIES

Once the war is over a new and powerful insecticide with an almost unpronounceable chemical name but known as DDT will be available for use against man's age-old enemy, the common housefly.

DDT is as deadly against flies as is the bazooka against tanks—it stops them cold, according to the Department of Agriculture Bureau of Entomology and Plant Quarantine. It is no likely to become available for ordinary civilian uses until after the war. When peace comes, however, it should greatly reduce the nuisance and menace to health created by the presence of houseflies on farms and dairies and other establishments where they are a nuisance.

BUY NOW

Pointing out that it is of the utmost importance to prevent the destruction by fire of lives and industries vital to winning the war, the National Board of Fire Underwriters has urged public administrators to make provisions for obtaining new fire fighting apparatus to replace that which has been worn out or become obsolete.

The Board warns that: It is the fire apparatus of the regularly organized fire departments which must be depended upon to prevent destruction to the industries vital to the winning of the war. It is this apparatus which must be used to save the lives of people crowded into hotels, apartments, tenements and houses, and those industries vital working under less than the normal safe conditions.

Even before the present emergency it was well recognized that much of the fire apparatus—the pumpers and ladder trucks—was becoming obsolete. It was built before experience could eliminate undesirable features of design or material. It was becoming more difficult and more expensive to maintain it. And, of even greater importance, few cities had the desirable amount of reserve apparatus.

Restrictions on the manufacture and sale of modern fire apparatus have been materially reduced. Today is the time to take action to properly protect lives and property. This year's budget should include a liberal allowance of pumpers and aerial ladder trucks, for hose, for gas masks, salvage covers, modern spray nozzles, and the many other pieces of equipment which a modern department needs. Thought should be given to adding to and modernizing the fire alarm system.

USING WHAT OTHERS WASTE

By Constance E. H. Daniel

What do you do with your left-over onion ends, carrot tops and green stalks?

In the experience of Charles Francis, ingenious young chef at Slowe Hall, in Washington, these humble castoffs are money-savers and food savers—plugs that help to stop the little leaks leading to an annual American food waste of 14 billion tons.

Mr. Francis is highly quotable on the matter of practical food thrift, having to his first year's credit at Slowe, a record of 1500 middle-income daily patrons who leave plates clean behind them and bring friends back with them—patrons who have eaten more than 100,000 Slowe Hall meals in the past six months.

While Francis' customers were acquiring the clean plate habit, food services elsewhere in the National Capital were reporting "tremendous" plate waste.

"Behind-the-scenes" methods at Slowe Hall supply many answers to differences between the usual and unusual in cafeteria management.

Entering the kitchen of this cafeteria after lunch was a pleasant experience. The usual after-meal confusion common to most commercial kitchens was conspicuously absent. Luncheon plates, piled on the counter as they were removed from the tables, held little or no food. Garbage containers were nearly empty.

Most of the outer leaves and stalks of greens, too often discarded, were neatly stacked in baskets in the well-ventilated storeroom. There, also, were the bones from roasts and poultry, awaiting their turn in the soup pot, together with the trimmings from raw meat.

Fresh fats of all kinds—lambs, beef and pork—were stored in the refrigerator for use as shortening in all kinds of cookery. In another section were neat bundles of parsley stems—the source of the original flavor of Slowe Hall greens. Odds and ends of fruit juice, with bits of fresh and canned fruit and plain gelatin—dessert for dinner— quivered appetizingly in a tray.

The tablespoonful of salmon salad, the half tomato and lone radish, all had their places in the salad box. "We can always turn out an attractive salad for the late-comer," said Chef Francis.

Back to those clean plates from satisfied customers, here are tricks of the trade worth remembering—"Watch your weather—don't serve dull-colored foods on cloudy days when people need cheering up. Watch your counters—the eye picks up bright colors first—put high color foods at the back, lighter ones in front." And—"One touc. of garnish makes the whole world kin"—a bit of lemon, a sprig of parsley, transparent wafers of crisp, white, purple-edged turnip and—presto the job is done!

Chef Francis' handling of poultry provides another instance of the unusual management of a usual situation. Not generally regarded as a revenue-producing item, his careful use of every edible scrap reduces waste and produces a reasonable profit. Soups, salads, "mock oxtail" with rice, liver spreads, fried livers with onion rings, creamed livers on toast with pimiento, celery and onions, gizzards chopped in chili with red beans, and the more familiar giblet stew—these produce the profits—the main cuts covering the initial cost. Much of the profits from all foods served at Slowe Hall result from ingenuity in building inviting dishes from parts of food usually thrown out as useless in both family and commercial kitchens.

Charles Francis' enthusiasm for handling food skillfully and thriftily carries over to the workers in the kitchen and is shared by Spurgeon Burke, manager of Slowe and Carver Halls, World War II dormitories for Government war workers.

In his brief year at the helm of Slowe Hall's cafeteria, this young craftsman in foods has imbued his associates with the Tuskegee ideal of producing a superior product by superior methods.

EAT MORE EGGS

Farmers, colored and white, have done an outstanding job of producing eggs, one of our most important wartime foods. But unless families eat more eggs now, there may be a shortage of them later on. Well, that may sound strange, but here's the situation:

Storage facilities are short, egg cases are scarce, and our transportation system is already overcrowded, therefore it is difficult for the Government to buy up more eggs and store them away, and yet if the eggs are not purchased, farmers may suffer heavy losses and become discouraged. With no market for their eggs they may reduce their laying flocks, and next fall and winter when the hens will naturally be laying fewer eggs there may develop a shortage.

We all can pitch in and help assure an adequate future supply of eggs by eating more eggs now. They are among the best body-building foods, supplying protein, minerals, phosphorous, and vitamins. Eggs in some form should appear in family meals once or more every day. They can be stored at home by freezing, dipping in mineral oil, by use of waterglass, and by sealing them in glass jars filled with carbon dioxide gas.

THE LAND OF MIRACLES

If Kit Carson and his colleagues of the wilderness could look upon the nation they explored not so many years ago, they would think indeed that many miracles had come to pass in America. They would see miracles where we of today see nothing.

In Kit Carson's day, distance was a mountainous obstacle to be traversed painfully on foot. The journey sometimes took months. Now, airliners and express trains have made the mountain a molehill. When a housewife in the Middle West wants a dish of fresh strawberries or a crab cocktail or fish dinner, she has but to go to the nearest grocery store. If Kit Carson wanted them, he had to walk a few thousand miles to Maine or California.

The fact that nearly 8,000 carloads of fruit and vegetables were shipped by express to all parts of the country during 1943, is no miracle to contemporary consumers. But to the pioneers of a hundred years ago who were acquainted with nothing more speedy than a horse, the spectacle of a modern refrigerated express car loaded with delicacies rolling at sixty miles an hour across deserts and mountains, would have been overwhelming—the work of gods from another world.

The miracle of refrigerated express is not a creation of supermen, but merely the work of the American business men. It is only one of the thousands of miracles that make the United States a good place to live. During the next hundred years, thousands more such miracles will be created by the same kind of men—providing this country remains a land in which men are free to create miracles.

PHYSICIAN'S RESPONSIBILITY

One of the reasons why a majority of people are opposed to giving the Federal government complete control over the medical profession and the health of the nation, is that they place a high value on individualized service and freedom to select the doctor of their choice. Both of these advantages are inherent in the traditional American medical system. Both would be destroyed if the United States adopted the European idea of socialized medicine.

According to a reliable survey, 81 per cent of the people feel that the family doctor has a personal interest in them—as persons. When asked whether they thought this made him a better doctor, 63 per cent expressed the belief that the doctor's personal interest is often the deciding factor in the curing of a human being afflicted with disease.

The people have good reason for their faith in the personalized service of the American doctor. As the National Physician's Committee observes: "Under the American system, American physicians have developed the most effective and the most widely distributed medical care that has ever been provided for any comparable number of people anywhere at any time. Free men—with fearless minds—progressively provided a higher and higher quality of medical care. Many of the great historical killing diseases have been conquered. Many of the most deadly of the others are being brought under control. This most effective medical care is based on personalized service. It stems from the personal relationship between the person who is ill and his doctor. A life—a human life—is at stake. It is the physician's responsibility."

WORKING FOR UNEMPLOYMENT

This war, the most costly in history, with its constant threat to stable prices and civilian supplies, should have taught the country the utter necessity of an efficient retail distribution system. No other nation the size of the United States has a distribution system remotely comparable to ours for efficient, low-cost consumer service.

American retailing has made its greatest advances so far as scientific operation is concerned, within a comparatively few years. Its development would have been far slower but for the pioneers of the business who founded what have come to be known as chain stores. The chain stores deserve most of the credit for establishing the high volume, low-cost technique of today's merchants.

Strange as it may seem, the chains were forced to develop mass distribution in the face almost continuous political opposition. Even now, after the improved system has demonstrated through more than two years of chaotic war conditions, that it is instrumental in maintaining price stability and an equitable flow of goods to every far-flung corner of the nation attempts are still made in legislative halls to handicap it through special taxes against chain stores. A few weeks ago such a bill was submitted before the New York state legislature. Shortsighted politicians are agitating for similar proposals in other states.

There is one certain way that postwar unemployment and depression can be assured, and that is by crippling distributors responsible for passing on to the people the things produced in the factories and on the farms. Those who work against efficiency in distribution are working for unemployment and high living costs.

NEGRO WORKER HONORED

Washington, D. C.,—A large part of the Washington office of the U. S. Department of Agriculture virtually stopped and stood still the other day. Wartime food production, distribution and allocation of vital foods, and important agricultural research problems were pushed aside for a moment as Department employees from custodial workers to bureau chiefs filled into the Office of the Secretary to witness the presentation of a gift to a fellow worker who was transferring to New York, and to say goodbye to him.

There in the middle of the room, while camera bulbs flashed, Secretary Wichard fumbled in his pocket for a moment and then brought forth a leather billfold to be presented to the honored guest. No, it wasn't an administrator, or a division head who was being so honored upon his departure, although one or two Department officials in these categories were transferring this very week. The Secretary reached inside the billfold and pulled into view a fifty dollar bill. Then he said, "Some of the workers here got this together and asked me to present it to you."

Immaculately groomed in his blue uniform with five service stars on the left sleeve, David Diggs, elevator operator, received the gift and a warm handshake from the Secretary; who said, "We are going to miss you Diggs, and most of all we are going to miss your smile."

Mr. Diggs has been an elevator operator in the Government for more than 25 years, and he has operated the number 1 elevator in USDA Administration building the one which the Secretary rides, ever since the building was completed some 14 years ago. Last fall his wife was transferred to New York, So to keep his family together, (he has three youngsters) he asked to be transferred there, too.

FARM EMPLOYMENT LOWER

According to a regular Bureau of Agricultural Economics report on farm labor, there were only 8,562,000 people working on farms on March 1. This is the lowest on record for March 1, and 168,000 less than were working on farms on that date last year.

The decline this year is not due entirely to a scarcity of workers, bad weather shares the responsibility. However, there has been a definite decline in the number of persons working on farms in recent years as is evidenced by the fact that farm employment this year is four percent less than in March, 1940.

SOLVES LABOR PROBLEM

Many small farmers as well as large ones have been hit by the constant drain of manpower from the farm into the Army and into war industries. Joe Walston of Pinetops, North Carolina, said he felt like he had lost his right arm when his son went into the Army. The first impluse was quite, but the Government was calling for food and more food, so he thought he'd try to make the best of it.

But things looked pretty bad until his two sons-in-law went into the Army and his daughters and their children came to live with him. Well, everybody pitched in to help. Even some of the small children went to the field with short-handle hoes. The newly established curb market also saved Farmer Walston many hours of valuable time. Instead of peddling his truck crops and poultry up and down the streets, he sold them on the curb market.

So, despite the loss of his son to the Army, Farmer Walston produced last year 137 bushels of butter-beans and sold them for $342.50, a fourth of an acre of sweet corn which brought $152, a peanut crop of 57 bags which sold for $342.32, and in addition to this, he produced as his chief cash crops, six acres of cotton and six acres of tobacco. Of course, he raised his own food at home—milk and butter, meat, chicken, eggs, vegetables and even the wheat for his bread.

Trying further to help win the war, Farmer Walston bought $750 worth of War Bonds, sold another $1,500 worth, and raised $217.60 for the United War Fund Drive. In recognition of his service to the community, he has been made permanent chairman of all war activities for his township.

A VICTORY GARDEN FOR EXERCISE, VITAMINS

In addition to stretching the family budget as well as the ration points, the Victory Garden also provides wholesome out-door exercise and some extra vitamins, according to garden experts in the U. S. Department of Agriculture.

If you work all day in an office or in a classroom, then you'll welcome the exercise and relaxation that working in your garden will give you. Digging in the soil and watching things grow provides good recreation, plus a sure supply of fresh vegetables. And when vegetables are gathered fresh from the garden and prepared immediately for the table they not only taste better, but also contain more vitamins.

Growing your own garden is an important war service, too, because it helps to make more of the commercially grown foods available to our fighting men and our allies. This year the goals call for 22 million gardens, or two million more than were grown in 1943. It is also expected that these gardens will produce 10 million tons of vegetables, or 25 percent more than Victory Gardens produced last year. This is a direct challenge especially to town and city folks. Already almost every farmer is growing a garden; and with labor and farm machinery short, farmers cannot be expected to enlarge their gardens but very little. Therefore, the two million extra gardens, and the 25 percent additional vegetables must be produced largely by the people in towns and cities.

A Victory Garden may take up some of your extra time. You may miss one or two radio programs, and you may not be able to attend the movies as often as you used to, but it's nothing like crouching in a foxhole waiting for death. And besides, it's one of the ways by which we can speed victory and bring our boys home again.

Obey Your Parents

By Aurora Medford Shumate

There was a little girl,
Who did not like to mind,
Although she had a daddy
And mother who were kind.

The daddy and the mother
Were sorry as could be
Because their little daughter
Did not mind, you see.

Sometimes they punished her,
And made her do their will;
Then again she would not try,
And failed to mind them still.

One day this little girl
Heard God's Word, so true;
It said, "Obey your parents"—
And this she tried to do.

SUMMARY REPORT EMERGENCY CONFERENCE TO SAVE THE PRICE CONTROL ACT

Caucus Room, House Office Building Washington, D. C., April 19, and 20, 1944—The Emergency Conference to Save the Price Control Act met in Washington on April 19 and 20, at the call of Representative Thomas E. Scanlon of Pennsylvania, and nine other Congressmen, to voice the vast popular demand to extend OPA without crippling amendments. Coming in from every section of the country on the eve of Congressional debate on extension of the Price Control Act, the 350 delegates (representing over 200 national and local organizations) pledged their wholehearted backing to the Congressional Committee for the Protection of Consumers in its fight to save the life of OPA, and resolved unanimously to return to their own communities and organize all-out support for the Price Control program.

National Price Control Week was set from May 17 to May 24. All national organizations were urged to participate, and community groups were asked to call upon their mayors to proclaim the week officially in each city.

* * * * * * * * *

Opening Remarks by Congressman Scanlon. Representative Scanlon, Chairman of the Conference, opened the Conference with a brief message in which he stated that effective price control is today in serious jeopardy. "We are faced with a critical situation," he said, "'that threatens our war economy on the eve of the great military offensive. No one of course dares to suggest that we should abandon price control on June 30, when the present law expires. But there are a number of special interest groups down here who think that they have a chance of squeezing out a price or rent increase, who think that they can get the rules changed to delay or evade compliance with price regulations. These proposals are complicated and tricky. But all of them would have just one effect—to undermine or destroy the controls that stand between us and inflation."

Mr. Scanlon said that he and his colleagues had called the people in to this conference to give them a chance to speak to their Congressmen, and make clear their desire for a strong OPA, uncrippled by restrictive amendments engineered by special interest groups. "We don't believe the American people want any politics played with the threat of inflation," he told the delegates, "and I think that you are the ones to let Congress know that."

Keynote Address by Congressman Wright Patman of Texas. Representative Patman outlined the major threats to the Price Control Act, and warned that "all the amendments before the Banking and Currency Committee are amendments to emasculate the law and not to help it in any way. There is not one that will strengthen it."

The main threats to Price Control, as contained in these proposed amendments, are:

1. Proposals to increase rent by changing the standards on which ceilings are set, by leaving control to local determination etc.
2. Proposals to increase price through direct legislative action (corn, milk, cotton, oil, etc.)! through changes in computing parity; through elimination of subsidies.
3. Proposals to tie up OPA in endless litigation by permitting review and injunctions against price ceilings in the ninety-five Federal district courts instead of in the one Emergency Court of Appeals.
4. Proposals to raise ceilings to guarantee a profit on each product of each manufacturer regardless of how high his cost of production may be.
5. Proposals to limit price control to a few basic items while letting the rest of the prices run wild.
6. Removing the threat of triple damage suits against violators of price ceilings.
7. Proposals to scatter authority for price control among several agencies.

Spokesmen for the People. Congressman Scanlon introduced a series of delegates who spoke up for price control on behalf of various sections of the population.

FARM DELEGATES (representing National Farmers Union, National Catholic Rural Life Conference, National Agricultural Mobilization Committee, Farmers Union Grain Terminal Association, & Consumer-Farmer Milk Cooperative) united in stating:

"We as representatives of farm people in all parts of the country welcome this opportunity to join with representatives of organized labor, white collar, veterans, and consumers to assist our Congress in 'holding the line,' From our experience we know that farmers and their wives overwhelmingly want a continuation of strong price controls which can only be secured by re-enacting the Price Control Law without any jokers or welching____

"The commotion which was led by the so-called 'Farm Bloc' in the past two years over this issue did not and today does not in our opinion represent the farmers. Now that experience has proven the worth of the stabilization program, farmers hope there will be no more playing with the dynamite of inflation."

LABOR DELEGATES (representing A. F. L., C. I. O., and Railroad Brotherhoods) coming from all parts of the country, Kentucky, California, Wisconsin, etc., pointed out that if the cost of living soars while wages remain frozen millions of essential war workers will suffer a serious drop in living standards, and will be unable to contribute their full share to the war effort.

Velma Hopkins, tobacco worker from Winston-Salem, N. C., said: "I make 46 cents an hour, which amounts to about 17 or 18 dollars a week. Out of this I must pay $3 a week for the rent of a small apartment without bath. My food bills come to a minimum of $10 a week, if I buy only absolute neccessities. From my pay each week, I have $1 deducted for War Bonds, $2.10 for income tax, 25 cents for insurance, and 50c for Social Security.

You can see that my pay check is spent each week for only the barest necessities of life_____If prices go up we know that we won't be able to manage.

United in their contention that OPA was generally doing a good job, representatives of the A. F. L., C. I. O., and Brotherhoods declared it imperative that the Price Control Act be re-enacted without crippling amendments.

Joint activity toward this end was reported in many parts of the country by a united labor and farm population. One delegate discussed a recent price control conference in Wisconsin where more than 380 farm and labor members attended. Such work had already been under way in Michigan and California, others indicated. All labor delegates were urged to follow the example of these states by helping to set up joint farmer-Labor-Consumer committees in their own localities, and to carry back the message "NO CRIPPLING AMMENDMENTS TO THE PRICE CONTROL ACT."

Leader of **CONSUMER GROUPS** from Ohio, New Jersey, New York, Michigan, Illinois, and California, described how their community organizations were working to rally support of the Price Control Act. Among the successful projects reported were: **Radio programs** over local stations, especially on women's daytime programs.

Booths set up on street corners near markets to give information on price ceilings and rationing, to distribute postcards to be mailed to Congressmen, and to get signatures on petitions.

Posters in markets, clubs, union halls, churches, even poster on a rented horse and wagon!

Committees on housewives organized to visit markets and check ceilings.

Joint Committees on farmers, workers, and consumers to back OPA's enforcement program, work to tighten rent control, and push treble damage suits.

Cards listing price ceilings printed to be carried with ration books.

Every city was urged to set up a joint consumer council, uniting all major organizations and sections of the people behind the price control fight, and making plans immediately for meetings and other special activities for **Price Control Week** (May 17 to May 24).

The New York Consumer Council offered the following **theme song** for Price Control Week, already successfully used on its local radio program:

Keep the home fires burning,
Save the dough you're earning,
Don't pay more than ceiling price,
Keep the home front strong.

Help to fight inflation,
Stay within your ration,
Keep depression from our land
When the boys come home.

Representatives of **VETERAN'S GROUPS** (Disabled American Veterans, Veterans of Foreign Wars, and Jewish War Veterans) asserted that abandonment of price control would spell disaster for veterans and their families, already struggling to live on meagre allowances.

Christian Topal, wounded veteran, just returned from Cassino, asserted: "If we don't hold the line on prices, what will become of the dependents of servicemen We cannot break down the morale of the soldiers_____The soldiers are not complaining about the rain and mud and fighting they must go through on the fighting front. But OPA must be kept in effect and made to work, for the sake of their families."

PROFESSIONAL AND WHITE COLLAR representatives (including the National Education Association, Federation of Business and Professional Women's Clubs, League of Women Voters, National Federation of Settlements), speaking for 20,000,000 office workers, teachers, state, county, and municipal employees, etc., with low fixed incomes, stated that their groups welcomed this chance to join with others in fighting to keep down the cost of living by preserving a strong Price Control Act.

* * * * * * * * * *

Congressmen who Participated in the Conference: Scanlon, Weiss, Kelly, of Penna.; Patman of Texas; Lane of Mass.; Welch, Holifield, and Rogers of Calif.; Rowan and Busby of Ill.; Dickstein, Celler, Delaney, Fitzpatrick, and Klein of N. Y.; Wolverton, Norton and Wene of N. J.; Rabaut, Lesinski, and Sadowski of Mich.; Feighan of Ohio; Madden of Ind.; MacMurray of Wis.; Fernandez of N. M.; Sullivan of Nev.; Ellison of Md.; and Burdick of N. D.

The Following Congressmen also Supported the Conference: Hoch, Eberharter, Myers, Murphy, Wright, Bradley, and Furlong of Penna.; Forand of R. I.; Dingell of Mich.; Ford, King, and Tolan of Calif.; Cappozzoli, Heffernan, Pfeiffer, Buckley, Burchill, Lynch, Marcantonio, and Fay of N. Y.; Cochran of Mo.; Hendricks of Fla.; Randolph of W. Va.; O'Konski of Wis.; Coffee of Wash.; and Gordon of Ill. Also Senators Wagner, Barkley, Walsh, and Guffey.

During afternoon sessions, delegates interviewed Congressmen from their own state. Between 80 and 100 members of Congress were visited. Congressmen hostile to OPA were reported in most instances to be carrying on an attack on OPA, while saying that they were in favor of it. It was emphasized that local groups should concentrate on contacting their own Congressmen, and also members of the House and Senate Banking and Currency Committees. **(Copies of Congressmen's voting records on consumer issues are available on** request from Rep. Scanlon's office).

* * * * * * * * * *

A Statement of Policy was presented for approval by Donald Montgomery, Consumer Counsel, UAW-CIO. The statement was unanimously adopted by the Conference. (For full text, see separate page.)

A Resolution on the School Lunch Program was presented by Eleanor Fowler, Secretary, Women's Auxiliaries, CIO, which urged passage of a bill authorizing the reinstatement of the hot lunch program for school children. The resolution was passed unanimously.

"Prices Unlimited". The Conference concluded with a showing of the new Hollywood movie dramatizing the need for price control, entitled "Prices Unlimited."

(The film will soon be available in a 16mm. edition through the Bureau of Motion Pictures, Nontheatrical Division, OWI, Tempo V Bldg., 12th and Penna. Ave., Washington, D. C.).

A STATEMENT OF POLICY ADOPTED AT THE EMERGENCY CONFERENCE TO SAVE THE PRICE CONTROL ACT

Washington, D. C., April 20, 1944

The Citizens Conference called by the Conference to Protect the Consumer makes the following statement of policy:

"On behalf of the organizations we represent, farm, educational, white collar, veterans, consumers, community groups, labor organizations from all parts of the country, we go on record as demanding that the Senate and House of Representatives pass the Emergency Price Control Act without any weakening amendments. We also request Congress to supply adequate funds and authority for enforcement of this legislation.

We pledge ourselves to bring home to the American public an ever sharper understanding that effective control of prices is an essential part of our war effort, vital to keep our economy strong, our people healthy and our war production high, for victory. Interference with our price control program at this critical stage in the war is a direct blow to our war effort itself.

We recommend to those groups we represent and to all other groups in our communities that we join together in an immediate program to save the Price Control Act. To this and we also recommend, that the national organizations participating in this conference agree upon a "Price Control Week," May 17th through May 24th, when all groups in Communities throughout the country will hold joint public meetings to forestall the destruction of price control and will ask our mayors to proclaim that week as "Price Control Week" in our cities.

We shall report to the local groups whom we represent that our visit to Washington has persuaded us that a highly active but quietly operating lobby representing entrenched vested interests has been at work for many weeks. This lobby fears investigation but hopes to escape notice by supplying certain members of Congress with the tools to carry out this undermining operation. These tools are the carefully contrived weakening amendments.

We have learned that all members of Congress will say that they want to continue price control. But we have learned also that some do in fact support price control while there are others who favor "price control but." We know that those who vote for weakening amendments are the "price control but" members of Congress. They want a price control act, but they don't want it to control prices.

We recognize and we commend the courage and statesmanship of those Congressmen who have banded together in the Congressional Committee to Protect the Consumer, and of those Senators who have endorsed this undertaking. We urge their colleagues who are like-minded on the maintenance of price control to support these efforts in the House and the Senate.

SUMMARY OF ORGANIZATIONS REPRESENTED AT THE EMERGENCY CONFERENCE TO SAVE THE PRICE CONTROL ACT

__Washington, D. C., April 19 and 20, 1944

Farmers Union Grain Terminal Assn.
National Farmers Union
Consumer-Farmer Milk Cooperative.
Nat. Agricultural Mobilization Comm.
Nat. Catholic Rural Life Conference

Consumer Conf. of Greater Cincinnati
California Committee to Combat Inflation Consumer Union
Michigan Cost-of-Living Committee
D. C. Federation of Women's Clubs
Daughters of Isabella
Women's Division, Democratic National Committee
Young Women's Christian Assn.
Nat. Non-Partisan Council on Public Affairs, A. K. A.
Nat. Women's Trade Union League
Philadelphia Housing Assn.
Southern Conference for Human Welfare
Free World Association
Brooklyn Inter-Racial Assembly
American Dietetic Assn.
Union for Democratic Action
Wisconsin State Conference on Social Legislation
American Labor Party
People's Lobby
International Workers Order

Additional Organizations Endorsing Conference (partial list):

Western Cooperative Dairymen's Union
Kansas State Federation of Labor
Colorado State Federation of Labor
Screen Office Employees Guild, AFL
Central Labor Unions of Lynn, Rochester, and Charleston, S. C.
State Education Associations of South Carolina and Missouri
Paper Bag & Novelty Workers, AFL
Philadelphia Lawyers Guild

WHITE HOUSE AID ALERT TO PREVENT MORE RACE TROUBLE

Washington, May 18—(ANP)—A White House source has disclosed to the Associated Negro Press exclusively that the "concern" felt last year about racial tensions and possible outbreaks is no less existent now, what with the approach of summer, but that in contrast to last year, measures have been taken within government to cope with the problem.

There was no disposition on the part of this source to discuss at length the steps which have been taken except to say that "all agencies are vigilant." The hope was expressed also that "they (people in general) are scared to start anything."

It was admitted that the department of justice is one of the agencies that is exercising this vigilance. None other, however, was mentioned by name.

From another source within government the ANP has gleaned that some sort of organization among agencies most affected by racial disturbance and their causes will necessarily have to be worked out, implying thereby that the moves to this one have already been initiated. The remaining question appears to be this: "How formal should the organization be?"

It will be recalled in the new famous letter written to the President by Atty. Gen. Francis Biddle, employment, housing, and recreation were important contributing factors to the Detroit race riot.

Other agencies, both public and private, surveyed the various outbreaks of 1943 and came off with similar findings. Some, of course, blamed subversive elements for some of the disturbances.

The White House source which discussed the subject with the ANP did not feel that employment is much of a problem now as it was then. It was observed that unemployment among Negroes is spotty, and that what irritation there may be may be attributable to upgrading of Negroes rather than their introduction to plants.

Not much was said about housing or recreation although the acuteness of the housing situation here in the District of Columbia was keenly noted.

The justice department reportedly has been more on the alert than before in its desire to nip early potential threats to the peace.

MRS. ROOSEVELT IS PRAISED AT A. M. E. GEN'L CONFERENCE

Philadelphia, May 18—(ANP)—Sadie T. M. Alexander, wife of the prominent Philadelphia attorney, Raymond Pace Alexander, and herself a Philadelphia lawyer, made a brilliant response to Mrs. Roosevelt, when the latter appeared as guest speaker at the A. M. E. General Conference last Friday, before an estimated audience of 10,000.

Mrs. Alexander, speaking for the bishops and members of the A. M. E. General Conference, of which she is a delegate from the Philadelphia Conference, thanked Mrs. Roosevelt for not only standing for law and order and for equality and justice but told the audience that Mrs. Roosevelt herself had been "A force for law and order and a force for equality and justice." Continuing Mrs. Alexander stated, "You have by practice and not merely by precept, Mrs. Roosevelt, demonstrated to our church, our race, our nation and to the world, that you respect the rights and privileges guaranteed every man, not only by the Constitution of these United States, but endowed by God, the Creator of every good and perfect gift."

The vast assembly roared their applause, as this daughter of the church, a grand-daughter of Bishop Benjamin Tucker Tanner, declared "History proves that only those nations and men, as well as women, become great who value as great their moral obligations to mankind. Athens fell but the teachings of Socrates, Plato and Aristotle will never die. Rome fell into decay, but the voices of Justinian Tacitus and Quintilulian will forever live." The audience sat breathlessly as Mrs. Roosevelt by referring to that profound observation of Wendell Philipps: "How prudently most men creep into nameless graves, while now and then some bold man forgets himself into immortality." Said Mrs. Alexander, to Mrs. Roosevelt "the men and women of the African Methodist Episcopal Church regard your life as one that is destined to cast the name of Eleanor Roosevelt among the immortals."

DR. C. S. JOHNSON PUT ON NATIONAL TUBERCULOSIS BOARD

CHICAGO, May 25—(ANP)—Dr. W. Roderick Brown, Tuberculosis League hospital of Pittsburgh, and Prof. Charles S. Johnson, department of social sciences, Fisk university, Nashville, were elected to the board of directors of the National Tuberculosis Association which is holding its 40th Annual Meeting here this week.

Dr. Brown serves on the visiting staff of the Pittsburgh City Tuberculosis hospital; he is a member of the committee on medical information, American Trudeau society; member committee on Negro program, National Tuberculosis Association; senior surgeon, (reserve), U. S. Public Health service; medical consultant and lecturer on war medicine, U. S. Office of Civilian Defense, Washington; member professional advisory committee, U. S. Office of Vocational Rehabilitation, Washington; Fellow, American College of Chest Physicians; lecturer on tuberculosis, postgraduate public health institute, National Tuberculosis Association.

Dr. Johnson is one of the most distinguished sociologists in the country and a foremost authority on matters pertaining to race.

AGAINST THE WALL

Mrs. Luke Woodbury

Erect, cold, unrelenting, two soldiers stood with backs against the closed church door. The little old lady came, slowly walking toward the church. Bent from years of following in this path of service, she had no need of guiding her footsteps—they moved from sense of habit as she, with eyes cast downward, mused on the duties ahead of her. My heart broke with grief that she must face the soldiers and be turned away from the church door. "Get along your way," one spoke gruffly to her in foreign voice. She could not interpret the words, but she did understand their meaning, so she turned away and wept against the wall of the church.

Then I saw the Sunday School superintendent coming toward the church. "Will they let him in?" I thought. Not small things like rain, snow, sleet—only God's severe providences have stood between him and his duties. "What is the meaning of this?" he sternly asked of the soldiers. The answer was a drawn sword with the words, "Shall I show you or will you be gone?" He turned away, but hearing a voice against the wall—a voice pleading, begging—he, too, bowed his head against the wall in prayer.

Now the street was full—old, young, and little ones hurrying toward the church. The soldiers stared, unrelenting, as the crowd stood demanding entrance. Without success they turned away, God's seeking children—turned toward the voices against the wall of the church. In one accord, young and old and little ones blended hearts and voices in prayer, begging for God's help.

And I saw the shepherd of the flock approaching. Eyes looking upward, face beaming, his Bible in his hand—this was how he faced the soldiers standing against his beloved church door. The wail against the wall arose, climbing, marching toward God. "My friends," the musical voice of the shepherd, "you are at church early; is the door locked? Pardon me; I have a key; I will let you in; only allow me to pass." A soldier touched his sword, but for reasons unknown to me the hand froze in stillness. A key turned in the lock, the door opened. The cry against the wall, a steady crescendo, unwavering, undaunted on its way, had passed the stars. The shepherd turned quietly, naturally toward the soldiers, laid a gentle hand on the arm of each, leading them down the aisle and to the altar. "Do not sit but kneel, my friends." They knelt in helpless, contrite awe. The voices against the wall poured forth such pleading agony that the wall shook—with joy.

"My friends," and the spirit of the shepherd vibrated in a call to the lost, "you came today by command of those in darkness—you came an enemy to God, an enemy to his goodness and to his love for you and all mankind. Now God invites you to depart from hate, from fear, from chains of human imprisonment, and know and accept him, the Lord of peace and liberty."

The soldiers shook, facing the terrible, the agonizing moment of decision—oh, those voices against the wall! Would the challenge be too great? Would these soldiers bravely defy the ruler of their country, or dare defy the Creator of their eternal souls, my heart cried?

Now the voices against the wall had sighted victory, for sweet glorious expectancy sounded forth in the plea to God. The soldiers arose, crying the cry of the surrendered soul, "Peace—give me peace though death the cost!" And I knew the Christ had won! The voices against the wall came shouting a victorious song, "Praise God from Whom All Blessings Flow." The church was full, each in his own place. The face of the little old lady lighted the church with a heavenly glow.

The shepherd spoke, "My little ones, the prayer of the righteous is the means of victory. This is our Lord's church, and the gates of hell shall not prevail against it. My beloved, if you have faith and doubt not, the mountains shall be removed for your sake, for all things, whatsoever ye shall ask in prayer, believing, ye shall receive. Continue in prayer and watch in the same with thanksgiving."

Then I awoke from the sleep of the blind, and I was no longer fearful of war, of rumors of war, but my heart trembled lest I forget to pray—lest I forget to pray while the Shepherd leads, so I closed my eyes to the difficulties, even to the enemies of my church life today and prayed—against the wall.—(The Better Home).

USDA AND WFA PLAN TO AID RETURNING VETS

Returning veterans, white and colored, who want to get into the farming business won't have to feel around in the dark, basing their chances of success on the trial and error method. The U. S. Department of Agriculture and the War Food Administration are making plans for establishing special farmer committees in all the counties to give local farming information and advice to returning veterans who want to farm.

The farmer committees will be organized by the county agricultural agents. And they will work closely with the agents in advising veterans about types of farming suitable to different areas in the county, safe margins of indebtedness, sources of credit, amount of credit required for the type of farming, size of farm necessary to maintain satisfactory living standards, local leasing arrangements, good farming practices, and similar matters.

START TRAINING CLASSES FOR WASHINGTON VFV's

Special training classes for Washington, D. C. Negro youngsters, who are enlisting in the Victory Farm Volunteers to help harvest important crops in Maryland this summer, began last week at Phelps Vocational School under the direction of Roscoe G. Robinson, local VFV camp manager.

It is expected that 300 boys will join up for this important wartime vacation work. However, in addition to spending six hours a day harvesting beans and tomatoes, the boys swim, row, camp out, and play various games under the supervision of a teacher. Nationally about 1,200,000 boys and girls, white and colored, will be recruited and trained for farm work.

The local training classes are given instruction in farm work, outdoor camping, health, first aid, life saving, and citizenship.

The L. & N.'s Total Railway Operating Revenue for 1943, $208,799,302, exceeded the best previous year, 1942, by $39,974, 752, or '23.7 per cent.

Do you Dream About Hair Like This?

While dreams are not always fully realized, where one seeks the Impossible, such dreams do mean that you think a lot about your hair. If you crave hair that behaves, a normally, healthy scalp, why worry? Why fret and have nightmaros? If your hair is dull and drab and needs special care, do something. Dreaming is wishing, plus care. Enjoy giving yourself this treatment. Costs you less than 8c a week. Your pleasure is worth it. Enjoy seeing improvement right before your own eyes. Do what hundreds of women now do every day. Start now. Do this. See what Medalo can do for your hair.

Try it! If it doesn't help, you lose nothing. Write your namo and address on a penny postal card and send it to me. Don't mail any money now. Pay when you get all the goods. In a few days, you will get a six-month size supply of Medalogro Scalp Formula, Medalo Hot Oil, Cream Oil, Shampoo, Medalo Pressing Oil, full directions plus free samples of Medalo Face Powder and Perfume and the Medalo Booklet. Pay the postman only $1.98, plus few cents postage. Use as directed and if not absolutely delighted, your money back. Written Guarantee comes with all your goods. Write now.

NEGRO FARMER GETS BANKERS AWARD

(Continued from Page 1.)

tour. Crops of cotton, corn, cowpeas, soybeans, small grain, grain sorghum and Korean lespedeza are used in a rotation. Lespedeza, cowpeas and soybeans are grown for soil improvement.

These practices have increased crop yields one-third according to Mr. Marshall and are helping him to make a larger contribution to the war. Corn yields have jumped from 18 to 25 bushes per acre, oat production has increased from 20 to 30 bushels per acre and wheat and barley production have shown proportionate increases. He now uses lime and phosphate on his cultivated fields and pastures.

Luxuriant Bermuda and clover pastures have been established on 30 acres. The Bermuda was planted on contour strips about 15 feet in width. He has plowed to these strips each spring and the Bermuda covers the entire area at this time. Clovers and lespedeza have seeded in the Bermuda. Pastures are mowed each spring for weed control.

Farmer Marshall keeps 20 high grade jersey cows and milks an average of 10 head. During the past five years cream sales have averaged $35 per month. However, prior to establishment of the pasture only sufficient cows were kept to furnish milk for home use.

Two ponds have been constructed on the farm to assist in erosion control and provide a source of water for livestock. One of these ponds is stocked with fish which supplements the family's meat supply. About 50 laying hens are kept and he sells an average of 10 dozen eggs per week. "My hens like the clovers and black locust seed," he says. Two brood sows are kept to provide the family with meat and a few hogs to sell. Six Percheron mares furnish work power for the farm and an adidtional source of farm income.

Credit is given to technicians of the Soil Conservation Service by Mr. Marshall for his well-balanced program. "When every acre of the farm is planned to suit the land, it just naturally follows that the farmer will have a better balanced program of production and farm income," Mr. Marshall explained. He has been appointed conservation leader for his community by the soil conservation district supervisors.

VICTORY GARDENS URGED

(Continued from Page 1.)

of war conditions the supplies are somewhat limited.

Cryolite may be substituted for rotenone but in the use of this material care should be exercised to see that no deposits from the sprays or dusts are left on the edible portions of the plant. For instance when it is necessary to treat beans with cryolite after the pods have begun to form, the pods should be washed thoroughly in three changes of clear water before they are prepared for cooking.

In the home garden cabbage and tomato plants and those with similar stems can be protected from cutworms after they are transplanted to the garden by placing a cardboard collar around each plant. This should be done at the time of transplanting. Any delay may result in loss of plans as cutworms hide in the soil during the day and come to the surface to feed at night. Local gardening experts and your State College of Agriculture will be able to supply additional detailed information on insect control.

Gardeners are warned that wherever poisons are used to combat insects, great care should be taken to see that they are stored in a safe place where there will be no chance of persons or animals being poisoned. It is suggested that poisonous materials be applied as sparingly as is consistent with control of the insects. Such garden products as tomatoes, snap beans, okra, eggplant should not be sprayed or dusted with poison after the edible parts have formed. Early application often makes it necessary to apply control measures late in the development of the plant.

In some communities, several gardeners may buy a sprayer or duster together. The small 3 gallon capacity compressed-air type of sprayer or a duster of 2 or 3 pound capacity is adequate for small garden plots. It is made with a strap that fastens over the shoulder so that it is easy to carry.

800 JAMAICANS ARRIVE FOR FARM WORK

Eight hundred Jamaicans, representing the first contingent of some 12,000 to 15,000 whom the War Food Administration's Office of Labor plans to bring into the country this year for employment in critical farm labor shortage areas, have arrived, according to an announcement made last week by WFA. The entire number is expected to be here by the middle of July.

All of the 804 new arrivals are to be employed in the Hartford, Conn., area. A second group of 750 workers, due to arrive this week, will be assigned to farms in New Jersey, Pennsylvania, Ohio, Michigan and Illinois.

Last year WFA brought in 8,826 Jamaicans, and 4,698 Bahamians. This year it expects to bring in over 20,000 of these workers. The Bahamians began arriving the first week in March. As was the case last year, these workers will play an important part in America's wartime food production.

Some 2,000 Jamaicans, and about 3,500 Bahamians remained here throughout the year helping out in areas of critical farm labor shortage. Down in Florida, 1,700 Jamaicans spelled the difference between saving and losing 33,000 acres of sugar cane, or thousands of tons of sugar, and a large quantity of vital industrial alcohol. Having completed their assignment in Florida, they began moving north last week.

Both the Jamaicans and Bahamians are employed under work agreements which provide that they will receive the prevailing wage received by domestic workers for similar work in the same localities.

NEGRO FARMERS ENLARGE "V" GARDENS

Washington, D. C.—Despite the shortage of manpower, Negro farm families are not only planting more gardens this year to help assure an adequate wartime food supply, but they are also enlarging their gardens, and planning better gardens, according to reports received by the U. S. Department of Agriculture.

In Texas the Negro farm demonstration agents have held 81 training meetings in 23 counties in order to more effectively assist farm families with their Victory Gardens. The agents are training local leaders who will in turn assist their neighbors with their home gardens.

The Texas agents have spent considerable time emphasizing to the farm people the importance of preparing soil properly. They are urging the use of barnyard manure, and commercial fertilizer. According to recent reports, 966 families have already been aided.

The work being carried on in Texas is more or less typical of what Negro county agents are doing all over the South. For example, the agents in North Carolina have held training meetings and then followed them up with survey of Victory Gardens in various communities. The agent in Wilson county discovered that 17 colored farmers in one small community had enlarged their gardens; in another community whose population is only 17 families, 10 had enlarged their gardens.

These families know, just as the War Food Administrator has pointed out, that the present food situation is only temporary. They also know that the suspension of rationing on some food items does not mean that the battle of food has been won, and so they are preparing for next winter and for 1945 when food may not be so plentiful.

FROM LOGGER TO CONTRACTOR

By Nat D. Williams

The name, "John C. Claybrook," is almost legendary in the Mid-South. Stories about the wealth, business genius, interests, and activities of the 72-year old Negro planter and lumberman, are part of the folklore of the region.

For nearly half a century, he has engaged in the timber business in the Delta Section of the Mississippi River. He started from "scratch." He has come far . . . . so far, in fact, that currently some of the most important logging and milling interests of the Tri-States have rallied behind him to "spearhead" a prótest before the OPA relating to maximum prices for logs recently set by an Office of Production Administration directive.

Claybrook's long experience in the lumbering business . . . his carefully kept records, dating back over a period of years . . . his position as a symbol of the pioneer "timber contractor' 'of this area . . . are among the reasons why his position is considered of great weight in the protest which was filed last winter through one of the greatest and most influential law firms in eastern Arkansas.

The affidavit of protest filed by the veteran 'logger' sets forth in detail the highlights of a great career, and provides "inside" pictures of the operations of one of the most important war and peace-time industries.

Attention is called to the manner in which Claybrook got his start in the business. He began as a laborer in the cutting of standing timber; then as a laborer in the driving of mule teams and ox teams. Step by step he became a "timber contractor," operating his own outfits of mules, oxen, and log wagons. Now, he is engaged in operating a logging outfit wholly mechanized, consisting of caterpillar tractors, log trucks, and mechanical log loading machines.

His operations include the purchase and sale of both standing timber and logs produced therefrom, and dealings with sawmills, veneer mills, and other manufacturing consumers.

Own Bookkeeping System

Candidly admitting that he has never had a year of formal schooling in his life, the elderly but still extremely active "logger," as he likes to call himself, laughingly tells how on one occasion he employed a well known educator to set him up a system of bookkeeping.

A sheaf of well bound books was purchased, and elaborate explanations and directions given. Claybrook listened. Took the books. Kept them until the educator had gone. And then quietly but quickly "threw 'em out of the window."

He prefers his own system, which as he explains has two simple operations . . . . first, he has a lifelong habit of keeping on file every receipt of scrap of paper connected with his business operations. Second, he uses a simple system of "putting down" every day what he takes in and what he pays out in a handy, simple ledger.

Despite this absence of an intricate system of accounting to keep up with his myriad and large dealings, it was Claybrook's possession of such a complete record of his own transactions in the logging field over a period of years . . . a record which is a virtual 'history' of logging in the Mid-South covering great bearing is placed on his protest case before the OPA. And nearly fifty years . . . that such explains why so many other important interests in the field have watched his case with so much close attention.

It has long been a matter of much comment among Claybrook's associates concerning his ability to state a mathematical problem . . . orally . . . and ask the listener to put it down and figure it out with a pencil. In the meantime, he would have figured the answer out 'in his head' and on 'his fingers.' He says that's his way of figuring.

Good Mixer

One of the secrets of the success of this Negro industrial leader who still lives in the South where he was born . . . his fine farm home is less than a hundred miles of where he first saw the light of day . . . is his ability to get along with people.

He is a shrewd and keen judge of human nature. From the big muscled and unlettered black log cutters of the Arkansas back-lands, from whence he came, to the polished and sophisticated white business executives, with whom he deals, John C. Claybrook's ability to "read folks" has its range. The result has been that he has the respect and good will of an inparalleled cross-section of the numerous folk who know him.

He states his outlook on life and attitude towards others simply. . . "My idea is that we (the Negro) should do something for ourselves. Some things we must copy from the white man. We should select his best models to follow in matters of business and other lines. I do that . . . using my own judgment also, of course.

"I'm not a Republican and not a Democrat. I'm for the man who is for our country . . . I'm with that man regardless of race or color. I know we are in a country run by white people, but I want to stay here with them. I know more about this country than any other in the world . . . . it may be wrong in a lot of things . . . . but I'd hate to live in a country where there was no one but us.

"I've always tried to handle and run my own business. I've always believed in trying to run something on my own initiative. I've lain in tents and shacks at night when I could look up at the stars and moonshine and try to figure out how we could do things with nothing to do them with. And I realize that if we know enough we can do all right, especially if we use common sense. The Negro is "tops" in the possession of common sense. We need to know that and back up our common sense with other important knowledge and facts."

He had to "touch the pen" when he banked his first money. But he can give an expert estimate of the number of feet of lumber on one acre or on five hundred acres of land covered with trees. He gives credit for his first "schooling" in the logging field, in which he is a key figure today, to a white man, an Irishman whom he calls "Mr. Billy Triner," for whom he worked for three years and through observation and effort learned from the ground up the details of what is now a vital industry in the country's war effort.—Service Magazine.

NIGHT LIGHT FOR CHICKS

Chicks hatched in hot weather eat more and grow faster (when provided with artificial lighting at night) than chicks receiving only normal light and eating only in the daytime, the U. S. Department of Agriculture has found in experiment at its Southwest Poultry Experiment Station, Glendale, Arizona.

Typical lots of chicks raised with night lights weighed approximately 10 to 20 percent more at the age of 20 weeks than chicks raised in the usual manner. Night light was furnished by a 40-Watt electric bulb for 144 square feet of floor space.

With a mash at 3 cents a pound chickens selling for 25 cents a pound when 12 weeks old, the average profit above cost was 29.5 cents per chick for those lighted from midnight to daylight, 28.8 cents for those having lights all night, and 27.7 cents for chicks without lights.

Use of lights after the age of 12 weeks, either all night or from midnight to daylight, had little effect on the age or weight of pullets when thy first laid, nor did it influence the average weight of their first ten eggs. Department officials point out that the results of lighting tests would apply chiefly in regions where there are considerable differences btween day and night summer temperatures. Cost of the lights would also need to be considered.

THE MODERN FARMER

VOL. XVII. NASHVILLE, TENN., JULY 15, 1944 No. 6.

NEW YORK STATE COLLEGE OF AGRICULTURE LIBRARY

FOOD FOR AFRICA AND INDIES

United States Has Shipped Millions of Tons to Our Neighbors

Three years ago, May 31, the first lend-lease cargo of foodstuff from the United States arrived in London, when the British freighter "Egyptian Prince" dropped anchor at Tilbury Dock. Only a portion of her cargo was foodstuff, but it was the forerunner of millions of tons of food shipped since to all parts of the world.

Up to now over 11 million tons of foodstuffs have been shipped out of this country to our allies and friendly nations. Of this vast quantity, more than 900 million pounds have been shipped to Africa, North Africa, East Africa, West Africa, and to British and French possessions in other parts of the world. More than one billion pounds of food went to Puerto Rico and the Virgin Islands. A total well over a million tons or 2 billion pounds of food in the past three years has been shipped to areas where the need was great.

On the African continent, American foodstuffs helped the victorious campaign which rid Africa of Nazi and Fascist domination. And since has aided the successful allied occupation of North Africa.

In the Carribean area, where more than 90 percent of the total population is of Negro extraction, American foodstuffs have prevented starvation and bolstered morale.

These products from American farms have furnished food for civilians and soldiers both. Thousands of Negroes in various parts of the world have shared in this supply of food, which although immense in quantity, last year represented only about 12 percent of the total 1943 production of American farms.

Varied in kind and in methods of processing, the foods we have shipped under lend-lease included evaporated milk, dried skim milk; condensed milk; meat and meat prod-

(Continued on Page 8, Column 1.)

CONFUSION IN AGRICULTURE

A most amazing situation exists in the nation's field of agriculture, according to "The Farm Column," of Fortune for May. It shows we had 82,000,000 head of cattle as of January 1, as against a ten-year average of 69,400,000; and 83,800,000 hogs, as against a ten-year average of 51,600,000, and that the chief cash return to farmers is from livestock and livestock products, not crops.

It is estimated that the needs of dairy cattle, beef cattle, sheep and lambs, horses and mules, swine, turkeys, chickens and ducks, will be 145,794,000 tons of concentrate feeds for the feeding year, and that we are 12 per cent short of that amount.

"In essence the problem resolves itself down to the price of feedstuffs. 'Ceiling prices on feeds,' says Professor Cunningham, 'prevent prices from rising to sound the danger warning and check livestock production before feed supplies are exhausted. In a free market price situation, rising feed prices would taper off demand.'

"Under the circumstances it appears that a bad situation may become worse and could be extreme in event of the quick end of the war."

In the meantime, price ceilings, floors, subsidies, rationing and crop controls, confuse the farmer who is in a large measure helpless to meet his problems.

FARM WORKERS TO BE IMPORTED

More Than Nine Hundred Coming from Barbados for Harvesting

Washington, D. C.—The War Food Administration said today that arrangements have been made to bring approximately 900 workers to the United States from the Barbados, British West Indies colony, for agricultural employment during the summer and fall months.

Representatives of WFA's Office of Labor have gone to Bridgetown, the capital of the Barbados, to recruit the workers. All of the 900 are expected to arrive in this country about the middle of June. Present plans are to utilize these workers in the Middle West.

The agreement with the Government of the Barbados is similar to that which the War Food Administration has with the Governments of two other British West Indies colonies, Jamaica and the Bahama Islands. The workers will be transported at this Government's expense to and within this country, and back to the Barbados at the expiration of their contracts. They will be placed with employers under contracts providing for the payment of prevailing wages for the type of work performed in the areas of their employment.

Besides the three West Indies colonies, two other countries are supplying farm workers to the United States—Mexico and Newfoundland. Working on American farms at present are approximately 32,500 workers from Mexico, 5,250 from Jamaica, 5,100 from the Bahama Islands, and 450 from Newfoundland. Additional numbers expected to be obtained this year are 40,000 from Mexico, 20,000 from Jamaica, 1,000 from the Bahama Islands, and 1,000 from Newfoundland.

SERVICE UP, COST DOWN

The cost of fire insurance continues to come down. John M. Thomas, President of the National Board of Fire Underwriters, pointed out recently that: "Today, as for many years, there is a falling premium rate, not a rising one. To give 'more for less' is truly a remarkable achievement in this period of universal upturn in costs and prices."

Few people realize how essential fire insurance is to their existence, "Uninsured losses on small business and new ventures," said Mr. Thomas, "are tragic disasters because both savings and livelihood are lost_____This guarding of capital investments of small business has a greater and deeper significance in the postwar period than ever before."

He estimated that wage earners in small establishments—retail stores, amusement places, hotels and similar places—constitute more than 18 million employes. The continuity of these jobs depends on fire insurance. Let fire strike and if there is no insurance, a few or perhaps hundreds of workers find themselves faced with the probability that their employer will be unable to get back into operation.

The task of the fire insurance industry has grown to astronomical proportions since the beginning of war. New and strange hazards have developed with the growth of war industries. Fire insurance experts are responsible for preventing fire in all forms of military establishments from hospitals to explosive plants. None of the added activities have incurred a reduction in regular fire prevention services.

Fire insurance grows in value, even though its cost is going down.

NEGRO FARMERS AT WORK

All Members of Families Aid in Producing Large Garden Crops

Negro farm families throughout the South are growing larger gardens this year, according to official observers of the U. S. Department of Agriculture.

Ask the average farmer how much land he had in garden last year and he'll reply, "Oh about a half acre, but I have eight-tenths of an acre this year, besides a patch down in the field."

Take a look at these gardens and you'll find plenty of onions, tomatoes, and white potatoes. You'll also find beets, carrots, lettuce, cabbage, collards, spinach, turnips, squash, lima beans, string beans, and okra. Their sweet potatoes and corn are off in separate patches; in many instances there is an orchard nearby with peaches and plums, and sometimes pears, apples, and apricots. It looks like good eating for the farm folks, and something extra for our invasion troops and the city folks who are building the guns, tanks, and planes. Of course, supplies of vegetables for our fighting men and our city folks come principally from commercial truck growers.

Well, it's one thing to grow a garden, but it's something else again to see that nothing is wasted—making sure that all which is not eaten or shared with neighbors is saved by canning, brining, drying, or storing away.

Because increased war requirements are dipping down deep in our commercial pack of canned whole tomatoes and tomato juice, civilian supplies of this important food may be drastically reduced this year. So, the Department of Agriculture is urging both farm gardeners and urban Victory Gardeners to conserve this year's tomato crop carefully. Tomatoes too ripe for canning may be processed into delicious tomato juice.

The Department has just prepared a bulletin, "Home Canning of Fruits and Vegetables," (AWI-93). It not only explains how to prepare tomato juice, but it also gives detailed information on all phases of home canning. Seeking to reduce failures among home canners, the bulletin lists seven points to success. They are: (1) Can only fresh food, in tip top condition; (2) have food, jars, and everything used in canning thoroughly clean; (3) work quickly so as to can "freshness." (4) Heat food hot enough and long enough to make bacteria and other

LABOR SLACKERS UNLIKE FARMERS

Farmers in some sections of the country are equipping tractors with headlights so they can work nights to overcome adverse spring conditions. Many a farmer works 12 to 16 hours a day. He must contend not only with the problems nature lays upon him, but with man-made rules that run counter to the laws of nature.

With politics entering more and more into the field of agriculture, farming becomes an intricate business in which only the most competent can hope to make a success.

But in the face of all their problems, farmers do not strike. This is in glaring contrast with the tactics employed by industrial labor which destroys production to enforce demands. We would not win this war if farmers struck to cure their grievances.

THE ANCIENT ART OF POTTERY

Neglected Field of Negro History Is Revived In Interesting Address

By A. K. Nyabongo

IN OUR meeting of October in Detroit there were many interesting discussions, but the most interesting one to me was, "The Neglected Field of Negro History." Even though I led the discussion, I took notes because the speakers gave me something to think about and work upon. The most appalling fact was that the Western black man knows hardly anything about the background of his primitive economic life.

I thought it would be appropriate for me to make known the primitive industrial life of the black man. Savage as I am, I can write of the industries in which I was born and saw in the making. Although some of us have been exposed to so-called civilization, we have not lost our culture.

It is always good to know the culture of other peoples; then we can appreciate ours to a greater degree. Before we touch upon our own culture, let us peruse the cultures of other peoples. Here we shall take up only one branch; this discussion shall be confined to pottery. Later we shall discuss the different phases of industry one at a time.

To arrive at a better understanding of what is meant, the reader should examine a well ordered exhibit in a museum, but, if this is not feasible, he should read some of the special treatises on the subject.3

Pottery does not appear in Europe until the Neolithic period and is not found among many primitive people. To the archaeologist, however, as we have stated, it is as useful in establishing chronological and regional differences as are fossils in the work of the geologist. but the distinctions upon which the archaeologist bases his chronology are the secondary details of surface finish and design, rather than grass structure.4

While the ice was retreating for the last time on the European side of the Mediterranean, and while the north African plateau continued to dry up, influences from North Africa began to reach the European hunters toward the close of the Middle Stone Age. These influences entered Europe along three routes. There were the two land-bridges at Gibraltar and Sicily, which at that time still connected Africa and Europe. The North African hunters seemed first to have passed across these land-bridges carrying the bow and arrow, which they had probably invented, and accompanied by the wolf-like creatures which they had tamed and which later became staunch friends of man—the familiar domesticated dogs. Bodies of these prehistoric hunters, showing clearly their African origin, have been found buried in the cavern of Grimaldi in Italy. It is not impossible that later some of the men of the Nile gorge, with more moving tendencies than others, wandered across North Africa and passed over these same land-bridges into Europe, and it is highly probable that they took with them their domesticated animals. In this manner, no doubt, passed over to Europe from Africa also wheat and barley, linen and pottery, together with ground stone tools and implements, of which exactly the same styles and types are found both in

(Continued on Page 4, Column 2.)

FARM WORKERS MAY BE USED

Conditions May Necessitate the Use of Agricultural Workers in Processing Plants

The War Food Administration has issued three conditions under which interstate and foreign agricultural workers transported by WFA's Office of Labor may be used for temporary periods to relieve labor shortages in agricultural processing establishments.

These conditions as set forth in instructions just issued by the Office of Labor, are: (1) That the workers are already in the area where the need exists. (2) That the War Manpower Commission has certified such workers are needed to save substantial quantities of war-essential food which would be lost if such workers were not made available. (3) That the State Extension Service has made a statement certifying that transported agricultural workers can be released for use in processing perishable or seasonable agricultural products without seriously interfering with

(Continued on Page 8, Col. 2).

WE LIKE OUR DOCTOR

Sixty-six per cent of the American people consider their physicians tops, both professionally and personally, according to a nation-wide sampling of public opinion conducted for the magazine Medical Economics. The remaining 34 per cent either had no opinion in the matter or cited characteristics of their doctors which they found objectionable. Six per cent objected to the physician's personality, 4 per cent said he rushed patients too much, 3 per cent challenged his personal competence, 3 per cent called him indifferent. Other faults mentioned were too varied for classification. The main thing is that 66 per cent found nothing to dislike about their physician. Another point of outstanding importance is that only 3 per cent challenged their doctor's competence.

The good things said about the doctors summed up to what one might expect in an independent system of medicine where the success of a doctor depends upon his ability and character. They included pleasant manner, professional competence, thoroughness, promptness, friendliness, politeness, easy to talk to, sympathetic, helpful, cheerful, not pompous, etc.

Contrast such a personalized medical service with socialized medical systems where the patient becomes a cog in an impersonal machine. The human relationship between the American doctor and his patient is one of the greatest assets of medicine. It should never be debauched by political tinkering.

THE JUGGLING ACT

Feed payments (subsidies) to increase production of milk, encourages the War Food Administration to consider extension of production cost subsidies to other products. The dairy feed subsidy has been 50c to 80c a cwt. of milk, and 8c a pound of butter fat. This was reduced to a range of 35c to 65c for milk, and to 6c for butterfat during May, June, July and August. Then 60c to 90c for milk and 10c for butterfat through next March.

Dairying is being made dependent on government. If the system is extended to eggs and cattle, the "independent" farmer will be a relic of the past.
